For Forest and Stream.

Trout and Grayling Streams of Michigan.

OUR party has returned from its annual fishing excursion, this time to the trout and grayling regions of Michigan, about the northern terminus of the Indiana and Grand Rapids Railroad, and the waters that empty into Grand Traverse and Little Traverse bays. As this is comparatively a new "field of operations" for the trout fishermen, I send this pretty accurate transcript from my notebook for the benefit of brother sportsmen who may feel disposed to visit the waters we have just left—regretfully.

June 15.—Left Pittsburgh at 2 P. M. on special car on Pittsburgh, Fort Wayne and Chicago Railroad.

June 16.—Fort Wayne, 2 A. M.; Grand Rapids, 10 A. M.; Mayfield, Michigan, 6 P. M., where our car was run on a siding and we spent the night; previous to retiring we engaged guides and conveyance to the Boardman River, which we proposed to fish the next day.

June 17.—A rainy morning, nevertheless we started at 7 A. M. in a wagon, the bed of which was convertible into a boat or scow, for the Boardman River, at a point some five miles across the country. The rain continued and the weather was chilly and threatening when we got to the river, which we found to be a shallow, rapid, cold, clear stream two or three rods wide. It afforded good wading, but we found it convenient to have a boat along. There is little or no cover for trout in the Boardman, as the bottom is sandy or covered with very fine gravel, and the only shelter the fish have is under the logs that lie along the shores, and even these are worn and polished, and the interstices between them filled with sand by the long continued log driving that has been done on the river.

We fished down four or five miles with indifferent success; our party, four of us, taking only about thirty small trout, but I had the good fortune to catch a grayling, our first and only one taken in the Boardman. So much has been written about this fish that I will pass over any description of it; suffice to say that I subscribe in all respects to its gameness and beauty; and though I went West prejudiced against it, and jealous of the growing favor which the few fishermen who have caught them gave it, likening it to the speckled trout, yet I may as well confess that I fished for grayling ever afterwards during my stay at the waters of its habitat.

Our impressions of the Boardman River were not favorable for reasons that I have given. We were, however, assured by the guides and others that our bad luck was an exception to the rule and ascribable to the weather and a south wind.

June 18.—We determined to move to Boyne Falls. While attaching our car to the up train, a young man on it enthusiastically appealed to us to go to Torch Lake, if we would have fishing.

"The lake is full of them. Catch 'em from the dock."
"Trout?"

"Yes," "spotted ones." Jerome caught eight hundred."

We were persuaded. The appeal in the name of Jerome persuaded us. Plain Brown, or Jones, or even Robertson would not have moved us, but Jerome did it. Our canny Scotchman yielded to Jerome, and all agreed to go to Torch Lake. If Jerome should ever see these notes about him, I hope he will not be offended, for in our "subsequent proceedings" we frequently heard of him and his "eight hundred," and generally in the way of comparison, when "comparisons were odious." The change of plans were communicated to the conductor, our car uncoupled, and the train and Jerome's man left us. Soon the other train was signalled, stopped, our car attached, and at noon we reached Traverse City. We learned that the steamer would not go North till the next day, so we chartered a fisherman's boat and spent the afternoon sailing on the bay, visited his pound nets, in which we saw great numbers of lake trout, whitefish, and herrings, and called upon a small boy, though a big fisherman, who had twelve splendid

lake trout in his boat, which he had just caught with a hook and line, using a herring for bait. Our skipper estimated their combined weight at over seventy pounds, and bought them at the rate of five cents per pound. A finer lot of fish we had never seen. On our return a nice laker of four or five pounds was caught by trolling, which together with a whitefish was served up for supper in a capital manner by our *chef du cuisine*. At this place we were first told about a wonderful "speckled trout" that was caught in the Boardman near the city that weighed over five pounds and measured twenty-four inches, (and grew to twenty-six inches in an hour or so, we observed). The outline of the monster was drawn "very carefully and accurately" by a young lady and placed on exhibition, but she had innocently given the drawing the deeply notched tail the fish had certainly worn when it wandered up from the lake.

June 19, 7 A. M.—On steamer Van Raalte for Torch Lake. Torch Lake is only a long half mile from the Bay, accessible by a tram railroad, but we concluded to take the long route to it, some forty miles, *via* a chain of interior lakes, said to be remarkable for the beauty of their scenery. Therefore we left the boat at Elk Rapids, dined there and proceeded on board another steamer up Elk River, Elk Lake, Round Lake, Torch River, and Torch Lake to Lewis' Hotel, pleasantly located at the head of the lake. It is a first rate house, well kept and comfortable. After tea we caught some small speckled trout "off the dock."

June 20.—Fished at the dock, caught more small trout, crossed the lake to a stream where "Jerome had met with great success." Found the stream almost dry, and were driven back to the lake by mosquitoes. Here a man sent us to another stream that had a "mill dam full of trout." Jerome must have caught them all, we could not get a rise back, and fished the lake at the outlet; no fish. Then remembered it was Sunday, and we returned to Lewis'. At the landing found the whole population of the village on the dock fishing, occasionally capturing a trout, but more frequently a perch, each capture creating much excitement. They did not want us to carry away the few fish that Jerome had left behind.

June 21.—Chartered a tug to take us to Rapid River, eighteen miles down the Lake, and employed a guide to conduct us from the landing to the old bridge, a short distance up the river. The guide proved to be a blind guide, led us a wild-goose-chase seven or eight miles across a sand plain to a lone cabin, where he was convinced that we had gone astray directly from the river. Tired, thirsty and in an exhausted condition, we retraced our steps, and at length found the river at an unknown place to the guide, at a new bridge. The stream was deep and dark, covered with fallen cedars and brush, the bottom composed of vegetable soil and quicksand. Fly-fishing was impossible on it, and bait-fishing difficult, though probably good, but requiring the activity of a wild cat to climb over and under and around the cedars, the skill of Blondin to walk their half submerged and swaying trunks, and the hide of an Indian to endure the incessant attacks of the mosquitoes. As we were lost we struck for Torch River through the woods, and after a weary tramp reached it. Here we rested and lunched. A settler took us to the old bridge, where we fished and caught some handsome trout. Rapid River from this point to its mouth is navigable by small boats which are necessary to successfully fish it. It doubtless affords excellent sport, as the specimens we got there were large; and a string we saw in the hands of a native aroused our enthusiasm. The largest weighed two and a quarter pounds. But we were too tired to enjoy more fishing that day, so we walked to the landing and returned by the steamer.

June 22.—Concluded to go to the Boyne River, *via* Petoskey, to which place we telegraphed our car to be sent. Loafed around all day, there being no steamer north. It was a delightful day and we enjoyed the pure air as it came to us over Lake Michigan.

June 23. 1 P. M.—On steamer Van Raalte to Petoskey; 7 P. M. Petoskey; 8 P. M. train to Boyne Falls. At Boyne Falls Mr. T., of Grand Rapids, joined our party. By his

advice we reshipped our baggage and returned to Petoskey, where we spent the night.

June 24.—Steamer Van Raalte again to Charleroi, took dinner there, and employed guides and boats, and on steam tug went up Pine Lake by south arm to Jordan River, fifteen or eighteen miles and encamped opposite its mouth. Storm with much rain during the night.

June 25.—We feel this morning that our wanderings are at an end. Mr. T. is at home, and we are not dependent upon any one for directions or advice. At an early hour all hands, each with a guide and boat, cross the lake, and row and push up stream. Mr. T. and myself proceeded eight or nine miles, leaving the others scattered along the river at convenient intervals. Going up I observed that the Jordan is a deep stream of pure cold spring water and a "hard road to trabble," with pools and rapids, and a few places shallow enough for wading. It has hiding places for the fish among the cedars and logs, and like all the streams we have seen in this country, contains no rocks and but little gravel, and the bottom is composed of sand and quicksands, sometimes covered with a growth of water weeds. It is a beautiful stream, protected from the sun by dense forests, and wide enough for the longest casts. Above Grass Island we began to fish, and for several hours caught trout and some grayling to our heart's content, till the sport grew monotonous and degenerated into labor, and then we quit out of respect for ourselves as sportsmen, and floated down to Websters' landing, where we tied our boats, filled a bucket with trout and tramped through the woods to his cabin, where we remained all night.

June 26.—Started back to the river, pushed up a mile or so, and again began to fish, till fairly tired of catching them we pulled up our rods and swiftly floated back to camp. At camp we were rejoiced to learn that other members of the expedition had had good sport. We had more fish than we knew what to do with, so a barrel was purchased and the guides set to work to clean and pack them to take home. In some of the boats that were provided with wells that permitted a free circulation of water many fish were preserved alive till the day we started home.

The Jordan River nearly realizes the flattering description of it in the "Tourist Guide" of the Indiana and Grand Rapids Railroad, and no one who visits it with proper equipments will be disappointed in the number of trout it contains, though they may not average as large as some would be led to expect in such a stream. There seemed to be little choice in the selection of flies for this river, though we found larger flies than we were accustomed to use at home preferable, and here I found the red ibis a killing lure, having always heretofore looked upon it as only an ornamental feature in a fly-book. And now I may mention that I lost my only red ibis fly on a large trout, and extemporized an imitation with a piece of red flannel cut out of my drawers, and with the nondescript immediately took three large grayling and many trout.

June 27.—This morning we struck camp and moved around the other arm of the lake to Boyne River. We caught some fine trout in the morning. During the night we had a heavy storm with much rain.

June 28.—Boated up the Boyne River a mile or two, fished, but caught few fish on account of the condition of the stream, owing to the heavy rain of the former night. On our return we got some black bass by trolling.

June 29.—Fished again on the Boyne, took some trout and several grayling, but the river being still out of condition returned to camp.

The trout in the Boyne are fewer than in the Jordan but they average much larger, and are of that dark color with red and orange fins, which fishermen love so much. The water of this stream, unlike the others we visited, except the Rapid River to some extent, is dark colored. It is navigable only a short distance from the lake, but above we were told there are miles of it that have never been fished.

This day we started home. We were surfeited with trout fishing during the last few days, having taken upward of two thousand, and on our arrival home we found we

had more than Jerome's "eight hundred" to distribute among our friends.

I have hurried through our tour, and were my letter not already too long, would be glad to allude to many incidents that occurred, of interest at least to ourselves, and good enough to amuse others perhaps, and also to say something about the country in general which we visited, and hope to see again.

J. A. H.

For Forest and Stream.

DOWN AMONG THE BAY BIRDS—GOOD SPORT AT GOOD GROUND.

IT has always seemed to me that one of the most important features of your journal has been the seasonable information afforded to gentlemen, who, especially in our cities, are limited by their business to flying trips, and necessarily, in the absence of reliable advices concerning locations and facilities, exposed to grievous disappointment, or to the extortionate demands of native gunners, who frequently seem to regard the sportsman as a legitimate prey, and often succeed with bogus information and unwarranted praise of their respective grounds and abilities in implanting in the minds of metropolitan Nimrods a wholesome fear of the sport, which of all others should be furthest removed from any suspicion of fraud.

I am led to touch on this subject as I have just returned from a four days' trip, which marked my first, though I trust not my final experience, with the bay bird family. I am confident that nothing but the information furnished by your obliging staff and our mutual friend, Eaton, of the "Sportsman's Emporium," saved me from joining the noble army of martyrs who were my companions on the homeward trip, bearing heavy hearts in lieu of heavy bags, and lighter in pocket than in spirit, their mouths, so to speak, filled with the ashes of Sodom's apple, and their hands too often with trophies which reflected more credit on the bayman's financial acuteness than on the metal of the gun or the skill of its owner. The remedy for all this seems to be the frank indorsement or prompt exposure of men and places—good and bad—by those of your readers who can speak from experience, care being taken that the inspiration of success or the bitterness of failure may neither unduly praise or unjustly condemn.

My friend S. and daughter, with myself and better half, took the four o'clock train from Hunter's Point Tuesday evening for Good Ground, Long Island, having satisfied the grasping corporation with \$2.55 per head and seventy-five cents in addition for parlor car seats. Here we made a mistake, for we found afterward that we might have obtained excursion tickets good till September 15th for \$4 each, ignorance of which cost our party \$2.20. We were headed for Wm. N. Lane's, then a perfect stranger, but now a valued friend, and being deposited at the station after a comfortable but uneventful trip, we negotiated with Sereno Wells to the extent of fifty cents a head for transportation over the mile and a half that intervenes between Good Ground and our destination, where good Mrs. Lane endeavored by copious internal applications of clam fritters, steak, and bluefish to fill the acting void which a three hours' contemplation of Long Island scenery had helped to create. A short talk with our host convinced us that our chances for a bag on the morrow were none too brilliant, but we had arrived unannounced, and declined to accede to the manifestly fair proposition to charge nothing for our night's lodging and meals if we chose to return on the morrow to await advices. The "Duke's Motto" was ours, and we "were there;" so after loading a few shells we retired in anticipation of a three o'clock breakfast, which came duly to hand or to mouth, promptly, and piping hot, after which we were quickly stowed in a dry, roomy boat, and standing across the bay with the glowing disk of Shinnecock Light doing duty for the sun. Our worthy host was right in his prediction, and his lips found more employment in the interesting recital of twenty-five years' experience in shooting than in the exercise of his matchless power as a "caller," so sweet to the ears of the sportsman, and withal so essential to his success. We kept all that came; to the extent of a dozen, which our disgusted guide said was "just nothin'."

Thursday was but a trifle better, and was marked by the return of my friend, whose available time had expired. He took with him about two dozen birds, as our united product for a day and a half, and which formed nine-tenths of all we had seen. A drenching rain spoiled Thursday afternoon, but on Friday fortune seemed to relent a little; our stand was more musical and less prosy, and right gladly did I accompany friend Lane's melody with the heavy bass of one of Wm. Powell & Son's ten gauges.

Saturday morning's breakfast was "graced" by the remark, "If them snipe don't fly to-day I'll go hang myself," and as if to avert so dire a catastrophe, our stools were scarcely in position when a bunch of three dowitches stopped on their westward way to listen to a pretty tune, and accepted the bluff invitation of Mr. Powell's handiwork to stay. Or six big yellow legs that followed closely four became fixtures, while a pathetic solo by the mellifluous Lane so worked on the feelings of a plump little robin that he turned from his earthly migration to join the "innumerable caravan."

"Now's your time, and mind your head!" whispered my companion, as eight yellow legs, distrustful of their wooden prototypes, settled on a bog directly back of our blind. True to human greed I aimed between two and got neither with my first, but with the second stopped a hot driver to leeward as the words "Good shot! take that, darn ye!" prefaced the double report of Lane's fourteen-pound muzzle loader, to which three birds bowed submissively as he resumed his plaintive harmony, which the departing four heard and hesitated, and turned in time to catch the contents of two fresh shells, leaving a pair with wisdom taught by experience, who hurried westward, nor tarried to the furious whistling of a Quogue gunner ensconced half a mile to windward.

Ah! had we been able to "whistle in" the historical old party with wings and scythe I should be spared the pain of telling how we started away in the heat of the fun, about half-past ten, leaving Will Lane, Jr., "a worthy scion of a noble sire," to occupy our stand. As the reports of his gun came to our retreating boat it awakened just a tinge of rebellion against so unkind a fate, but this was somewhat allayed when, with our neat little bundle of fifty-three, we deposited ourselves in the cars to hear the owners of a couple of blanketed breech loaders hold converse thus: "Thunder and lightning, Bob! here we've been for over a week just to the eastward of that chap," at the same time

regarding a box about the size of a cigar box, whose dampened sides betokened at least as much ice as game. Nor was our pride decreased when we met a party from Great South at Jamaica, who, after "nudging" each other, broke out with:

"Where in blazes did you get these birds! We haven't seen more than that all told, and our gunner couldn't stop over a quarter of them."

We told them where and how we got them, then, as now, bearing willing testimony to Mr. Lane's qualities as a gentleman, and the kindness of his worthy wife. While it certainly seems one proof of his ability and judgment as a gunner in that despite an unaccountably poor flight, (which, however, we believe now to have fairly commenced,) we came back "at the top of the heap," with money left.

TEN GAUGE.

For Forest and Stream.

A WINTER ON THE ROUSSEAU RIVER.

IN the Winter of 1872, while serving with Her Majesty's North American Boundary Commission, I was ordered, to my infinite disgust, to take charge for the Winter months of a depot situated on the Rousseau River, some forty miles east of Pembina. When I say infinite disgust, it is not pleasant when you think you are settled in snug Winter quarters, (snug, at least, for such an atrocious climate as Manitoba,) to find yourself suddenly called on to face a Winter—that gave early symptoms of being most severe—in such a blighted spot as I knew by hearsay the banks of the said river must be. I was up in the same direction during the Autumn, when we were compelled to make a detour of some one hundred miles to avoid the exact spot on which my Winter habitation was to be located, it being at that time under water, and had been so during the entire Summer, being only approachable in the Winter.

One fine Winter's morning, I think about the 15th or 16th of December, 1872, (I shall never forget it, as the cold was about 24°), I was summoned at about 6 A. M. At this time daylight proper had not begun, but the daylight, (and I speak correctly,) of the glorious night still lingered in the heaven, and was informed that the teams I was to go in charge of were ready to start. I had a lot of provisions with which to keep the survey parties of the N. A. B. C. (North American Boundary Commission) in as good fettle as possible during their laborious Winter's work. A terrible survey it was, and performed in the teeth of a terrible Winter, and reflected credit on those engaged on both sides of the "line," English and American. I was summoned, as I say, by the man who was told off as my cook and general assistant, and full of the reverse of pleasing anticipations, turned out of my warm blankets and proceeded to roll them into a more portable shape, first taking my satchel in hand, and throwing my bag to my faithful retainer, I sought the train which was to bear "Cæsar and his fortunes" to his unknown home.

We arrived at the equipages destined to convey us there securely muffled in wraps of every description, and the march commenced. Oh, the dreadful cold of that Winter's morning, freezing one to the marrow; nothing ahead but snow, nothing but the "pure and beautiful snow," which I most certainly cursed in a lively manner. A dazzling gleam of it shot from the ground, was reflected in the air, and caught up and played with by the sunbeams, which tried to shine in a Winter's aimless sort of manner. Enough to know that we were nearing the primeval forests of pine that crown the river's heights, and until that same Winter, untouched by the axe of the lumberer. When we camped for the night and had lighted a rousing fire, I am not romancing when I say that the part of your person not actually exposed to that enormous blaze was literally freezing while the reverse was roasting. I even heard a man assert that he could not dry a pair of wet socks, for they froze one side while they dried on the other. I will not, however, vouch for the truth of this. After three days of this pleasant sort of work, making very slow progress, as no track had yet been made through the snow, we at length arrived at our destination. I chose a spot, according to directions received, on which to build a dwelling hut and store, and in the meantime had a tent pitched, in which my man and myself were to live till their erection—an erection which was to be effected by a gang of axemen, who were to be sent after me. In due time they arrived—in fact, two days after we did; and under a foreman, (who was destined to be my future companion for that lonely Winter,) commenced to build my future abode. Right well they worked, and soon under the strokes of their ringing axes a space was cleared, logs were cut, the hut commenced, and in due course was finished, plastered, stoves erected, a fireplace made in one corner, and, in fact, was an accomplished ditto.

This work concluded, the men departed, and left me and my worthy "henchman" alone and in our Winter's glory, like flies in amber. The day after they had left we were very agreeably surprised by the apparition of a train of wagons, and the arrival of the chief astronomer and his party on a tour of inspection. More welcome still, I am afraid, was the *cadeau* he brought us, consisting of a hamper of delicacies for our Christmas dinner, together with a couple of bottles of the "right sort" to make our cheer with. The commissariat officer who accompanied the chief astronomer having the next day to visit a surveying party, who were working a few miles from my depot, asked me to accompany him. This was the day before Christmas, and was registered by the chief astronomer's thermometer 34°. We had to plunge through heavy drifts of snow, and there was a fair chance of frozen feet. However, we attained the camp we sought, and were warmly welcomed, dined, and liquored by the hospitable commandant. After having transacted our business we decided to return by the river. The distance we had traversed in coming was not more than one mile from our camp, but by the river, owing to its tortuous course, it was good three, or even four. We started about three P. M., (it gets dark about four that time of year,) and on borrowed snow shoes; we went swimmingly for some miles, when we came to a regular facer; there were several channels to choose from, and we had not much time to choose in. "Right," I shouted, and right we went. We had not gone far when "halt!" was sounded by my companion, and far in the distance was pointed out to me the blue flag which marks the boundary line, and which in that case was a flag of salvation to us; for had we been out that bitter, black night, "enshrined in winding sheets of snow" would the morning have found us. However, being put on the right scent we rattled merrily home, our joy on reaching which was somewhat dampened on finding that

the chief astronomer, who had started to visit a party east of us, had not returned. Parties were organized to search for him, but before they were underway he quietly sauntered into camp, casually inquiring what the row was about, and was rather indignant when informed it was for his personal benefit. By no means a backwoodsman, but a delicately nurtured gentleman, alone with the stars which he studied and loved so well, he was as much at home on the tractless prairie as is the skipper of a ship at sea surrounded with his charts and all appliances that science can bring to assist him. After a convivial tea we retired for the night, I having first received instructions from the chief astronomer as to providing rations for his immediate party and some others that were expected. I cannot resist here paying my slight tribute of respect to the untiring energy, patience, and pluck shown by the officer I have mentioned, (I mean the chief astronomer,) who was at the same time commanding officer of the detachment of Royal Engineers sent from England for the purpose of making the survey. His uniform equanimity under the most trying circumstances; his courtesy to those under him at the time, and the talent which he brought to bear on the work he was engaged in, were beyond praise, and I think all engaged in the survey so allowed it. I have somewhat digressed, and must haste back to my original subject.

The next day was Christmas, and among the many curious places in which I have spent that day, (I was once off Cape Horn, once on the banks of the River Morrumbridge, in Australia, and once alone in a mosquito camp at Cawnpore, in India, being unfortunately on duty that day,) I do not remember a funnier place to celebrate it in than the place we were in. However, we did our best; we ate as much as we could, and drank, I fear, more than was good for us; toasted sweethearts and wives, and tried to be as merry as circumstances permitted. From after this I may date the commencement of our solitude—a solitude which lasted from the 26th of December till the 15th of March, as all the parties left next day. Occasionally the desolation we were plunged in was broken by some party sending for supplies, always accompanied by complaints about anything and everything. So I did not much care for that, and sometimes—days to be marked with the whitest of stones—a mail would come with a dog train and Indian runners. How the time dragged; books I had but few—Thackeray's "Newcombs," and Macaulay's "Essays"—I got to know them by heart, and few men could pass a better examination in the essays of Thomas Babington than myself. I had read both, of course, but never quite so much. My worthy assistant not being a literary character, found time still more heavy on his hands. He would sit for hours with his head buried in his hands, occasionally emitting deep groans, as of one in great pain and perturbation of mind, and would hardly open his mouth for a week at a stretch sometimes. When a storm was raging he would look out and remark on the genial climate in which we found ourselves. At other times, on a fine night, for instance—a still, solemn night, as bright as day, yet sad and silent as the grave, beautiful though in its awful majesty, the calm, cold moon shining down in pitiless splendor on the earth, asleep and shrouded in its spotless robes of snowy white, the aurora's opening and shutting with flare and glitter like the clashing of gigantic cymbals—on such nights as these he would look abroad, shake his head, and shut the door, saying, "Tis the blasted silence that fetches me," and again subside into melancholy and a pipe. I used to go out every day to see what I could shoot; there were lots of prairie chickens and partridges; the latter were very wild, and as you had to follow them up on snow shoes through the great depth of snow which lay in drifts in the woods, and consequently was much harder traveling than the open country, it was very trying work. Partridges you could get lots of, and sometimes I found them very acceptable when out of fresh meat, (which I had in store, frozen hard.) I also tried a little trapping, in which I was not very successful. I got one mink and several weasels (ermine) in the course of the Winter; also a few rabbits. I will give a more detailed description of such sport as I got, in my next.

For Forest and Stream.

GAME AND FISH NOTES FROM KENTUCKY.

YOUR enterprise seems to be recognized with favor in all parts of the country, and I observe a disposition to encourage it, even in this game-deserted and fish abandoned State. The time was, and not very long ago, when Kentucky of right might have claimed rank with any of the old States in the matter of small game and game fish, but of late years, the great latitude given to slaughterers with shot guns, traps, and nets, and vandals with seines and baskets, has almost been the means of depriving the real sportsman of every source of enjoyment. Very recently, however, the General Assembly of Kentucky has taken the matter in hand, and we have some assurance of protection, through sensible game laws. I am not much of a shot, but very fond of the rag weed in the Fall, and have managed some seasons to knock down a fair proportion. The grounds generally throughout the State are good, and in the Fall we have a very fair show of quail. Snipe and plover are not abundant, except in a few localities, and woodcock are rare. In the mountains a tramp after the pheasants (ruffed grouse) is nearly always successful. Turkeys, geese and ducks usually appear in the tributaries of the main rivers, and occasionally the blue grass hunters go after them, but such hunts are not common. The mallard and blue wing duck abounds in the Winter on all the streams and ponds, but I have never seen any white backs or teal.

My forte, if I have any, is with the fins and scales. I have had perhaps as large an experience as any man of my age with the fish of the western country, though to say the truth, there are many older and more confirmed fishermen, even in this city, than I am. It happens that at Frankfort the celebrated "Meek," or "Meek & Milam reel," is manufactured, and I venture to say there is hardly a twelve-year old boy in Franklin county who is not the owner in fee simple of one or more of these instruments. Even the colored brothers, who live by sweat and go half-clad, are not willing to forego this luxury. The Kentucky River winds through the cliffs at this place, and any day, when the water is in condition, its banks are clouded with dark gentry for five miles above and below the city. They are not always very particular about the kind of fish they catch, it is true; but they are nevertheless tricked out with all the superior accoutrements of a true fisherman. The river affords a small black bass, seldom weighing over

a pound, a few salmon, or pickerel, and a great many silver perch. The common sluggish fish of all kinds are abundant. Up near the head of the river, abreast the "Three Forks," the bass are larger and the pike abundant. In nearly all the tributaries the hard mouth fish are to be found in greater numbers and better size. In Red River, a short stream which reaches the Kentucky about fifty miles above Frankfort, any quantity of fine pike are to be found. I have taken several weighing from sixteen to eighteen pounds, and some have been taken exceeding twenty-five pounds. They require very strong tackle—a No. 4 or 5 reel, a heavy line and long wire snooding. We bait with what is known here as the sucker, a small striped fish from eight to ten inches long. Our bass, or black perch, in the upper streams take the same bait. Salmon(?) weighing from five to fifteen pounds are also taken there. Nearly all these streams are filled with mill dams, and I feel like damning every time I see one. We have no law, as yet, requiring fish ladders, but I hope, as the Legislature progresses in public spirit and intelligence, it will provide in every way for the preservation of the finny tribe. To my mind, the best stream for regular fishing anywhere in Kentucky, is Elkhorn, a small tributary of the Kentucky, entering it a few miles below this city. For many years it has been a favorite resort for our most accomplished rods-men. It has but one fish—the black perch, or bass, as it is commonly called—and that in great abundance. The stream is shallow and narrow, seldom exceeding three or four feet in depth, very rocky and hill-bound everywhere. It requires constant wading and faithful work, but the true fisherman is always handsomely rewarded. The fish range from half a pound to five pounds, a large number weighing two and three pounds being taken every season. It is a little singular that, though hundreds of persons visit this stream every day during the season, no abatement of the sport is noticeable. I have gone to one locality in an afternoon and taken fish until I thought the last one was in my basket, and on the next morning have been equally as successful.

Some day when I have leisure I will write up the incidents of an excursion or two, making the accounts as graphic as possible, and as agreeable as I can. Meanwhile I wish you the fullest success with your paper. Trout.

Frankfort, Ky., July 20th, 1875.

For Forest and Stream.

TWO WEEKS ON THE BLACKWATER.

ON the morning of the 6th of June, Mr. F., Mr. W., and your humble servant started in a light farm wagon for the Blackwater. Our provisions, blankets, &c., were packed in sacks and a large waterproof tent was put in the wagon in case of rain. The road which we chose was a good one, but very hilly, so much of the way we walked. For the first ten miles the scenery was not remarkable for its beauty, with the exception of one or two mountain views. About noon we reached a grist-mill owned by a man named Chisholm; here we ate our dinners, and if anyone on his way to Blackwater gets to Chisholm's mill near dinner time I advise him to take advantage of the fact. The hostess is a kind and intelligent woman and an excellent cook.

After leaving the turnpike, we traveled an execrable road through a drenching rain—the worst road I ever saw—once or twice losing our way, and at last came to the house of Mr. Conway, who volunteered to act as our guide. He went nearly a mile with us. He told us that he was the son of Porte Crayon's guide, and that he knew all about the Blackwater. He also said that he was employed by Mr. Alexander Kent, of Baltimore, to fish for him two years ago. Mr. Kent got large numbers of trout and shipped some of them to his ponds near Baltimore and some to the ponds of Mr. G. W. Delawder, of Oakland, Md., who has had considerable success in fish culture. We reached Mr. Kitzmiller's about dark, where we were kindly and hospitably treated.

Before proceeding I will say a few words about the way to get to Blackwater during the Summer and Fall. Mr. Kitzmiller will send a team and light wagon to Oakland twice a week and all persons who desire to go will do well to go with him, for they will be well treated and the charges will be moderate. If the parties wish to go on horseback he will charge them four dollars each way. The house called the "Dobbin Hotel" is under his charge, and he intends to keep it open for guests; he will give them good plain food and nice beds for \$1.50 per day, which is very cheap, as he has to pack all his provisions on horseback. The Dobbin Hotel was built by Judge Dobbin, of Baltimore, who was an enthusiastic sportsman who wished to have a place that was entirely out of the reach of ordinary pleasure seekers. The building is two stories high, containing eight rooms which are very large and comfortable. The frame is of hewn logs and covered with shingles for weather boarding. All through the clearing in which the house stands there are vast numbers of blackberry bushes and the crop in the Fall is enormous. Mr. Kitzmiller makes some wine from these berries which is much praised by his visitors. The shingles that are within reach are literally covered with the records of the various parties who have been there. I can without hesitation recommend Mr. Wm. Kitzmiller as a guide, as a host, and as an honest man.

The day after our arrival it rained very hard, so hard we deferred our start until next day. Wednesday morning was cloudy, but it did not rain, so we started, or rather we "went in." Our things were packed in sacks and put on two of Mr. K's horses, while we walked. We reached Dobbin's about an hour before dark, and after admiring the view from the mountain on which the house is situated we made a fire, and after eating our suppers, started for what our guide called "Point Lookout." After going down a very steep hill for a couple of hundred yards, we started out on to a rock which projected for nearly twenty feet from the side of the mountain. Three good sized hemlocks grow on the extreme outer edge, and leaning against one of these we can look without danger at the view. About three hundred feet below us the North Fork of Cheat is dashing over its rocky bed, while the roaring of its numerous falls is entirely in keeping with the wild beauty of the scene. Directly opposite is a mountain that looks higher than the one we are on, and the two together form an almost perfect V. To the right we can see nothing but the dense woods which clothe the two mountains. To the left is the same V shaped ravine, but at the end of it, not a mile away, another mountain rises very abruptly and here it is that the North and South Forks unite. Not far above us is the largest fall on the North Fork. I have

forgotten the exact height of it, but think it thirty-four feet. We threw some stones into the stream, and in exactly seven seconds we heard them hit the water. To anyone who goes to Dobbin's and who love the beautiful in Nature, I would give this advice: go to "Point Lookout" just before sunset and wait there until the shadows begin to steal up the mountain top. On our return we piled plenty of wood on the fire and bringing some straw beds from upstairs, retired to rest.

Next morning after breakfast we started for "Kent's Camp," (as it is called from the fact of its having been built by Mr. Alexander Kent) with about twenty-five pounds apiece, in packs which were strapped to our backs. The camp was in a very dilapidated state, and after fishing for a short time without any success we went to work on it. Before long a party of five, headed by young Conway, arrived at the camp. They were all neighbors of his. As soon as they saw the river they said it was at least three feet too high for good fishing, so after a short stay we returned to Dobbin's. The next day we fished in the North Fork from directly opposite the house to its junction with the South Fork, and up the latter for about half a mile, but we did not get a bite during all the time we were gone. We felt somewhat compensated, however, by the extreme beauty of the stream. At one place where we were fishing we suddenly and without warning found ourselves on the edge of a fall some twenty-five feet high. We felt confident that we would find trout in the large and black looking pool just below, but we were much mistaken. About dusk we reached the foot of the path which leads to the house from the stream. We wished heartily for an elevator to take us up the thousand or more feet of almost perpendicular mountain which is densely covered with that curse of all this region—laurel. The following day we started for "Kent's Camp," but took the wrong trail and came out a quarter of a mile above the falls on the South Fork. We entered the stream here, waded down to the falls and fished in the pool below. The falls are 63 feet high, and although the bed of the stream is over 100 feet wide, yet the falls themselves are not half of it, for they are separated in the middle by a promontory of rock which shows by its smooth surface that it is sometimes covered with water. We caught but eleven fish that day, as the water was still very high. On Saturday it rained, and on Monday Messrs. F. and W. started up stream, while I staid at camp, and as it turned out, I was glad I did, for the others took a trail which they thought cut across a bend in the river, but after walking for two hours through a laurel thicket of the most diabolical description, they turned and came back to camp completely tired out, and without a fish. In the afternoon I went up stream alone and caught 44 small trout.

Mr. D. S. Green, in a letter to the FOREST AND STREAM, attributes the deep salmon color of the Blackwater trout to the great number of crawfish which they feed upon, but I do not agree with him, for in the Soughiogheny River there are just as many crawfish as in the Blackwater, but the trout are very light colored. I think that the peculiar color of the water is what causes it, for I know of two small streams that are as dark as the Blackwater and in each of them the trout are of the same deep salmon hue that those in the South Fork of Cheat are. All three of the streams I mention flow through dense forests of hemlock, spruce and pine, and I think their color is undoubtedly owing to that fact. On Thursday the 17th, Mr. W. and myself went about two miles and a half up stream and had the only good fishing that we had while we were there; we got 170 in half a day—our total catch for the trip did not exceed 300. Our poor luck need not discourage anyone who wants to go there, for everything was against us; the water was too high—it rained a great portion of the time, and we did not know where to fish. Of one thing the angler may be certain, he will catch a large number of fish, but they will be very small, the average being about six or seven inches in length.

On Saturday, June 19, we walked from Dobbins' to Mr. Kitzmiller's, a distance of about fourteen miles, and on Sunday morning we started in our wagon for home. The road runs through one of the most beautiful forests that I ever saw; it is very dense and is an excellent place for deer. About five miles from Kitzmiller's there is the loveliest view I ever saw in these mountains; it is on the left hand side as we went out, just where the "National Pike" intersects with the road to Kitzmiller's. Some three or four miles further on we pass the old "Pendleton" house, and just below it on the crown of the hill which commands the bridge over the North Branch of the Potomac is Fort Pendleton, which was built during the late war and was occupied by what is known here as the "Bloody Sixth" Virginia Infantry. I asked one of the natives if the troops ever did any fighting. "Oh, yes!" said he, "there was scarcely a man in the regiment who did not have a black eye, or carry his nose in a sling!"

At the foot of this hill the North Branch flows, looking very different from what it did when we crossed it on the rode from Dobbin's, within five miles of its head. About six o'clock that night we reached home, three of the wildest looking men that were ever seen. When I looked at myself in a mirror for the first time in two weeks, I said, "can this distressed looking object be ALLEGHANY."

SOUTHWEST FLORIDA AS A GAME COUNTRY.

EDITOR FOREST AND STREAM:—

It has been my good fortune to be favored with several interviews with M. A. Williams, Esq., Surveyor General of the State of Florida. This gentleman has been personally engaged in surveying in various portions of the State for over a quarter of a century, and possesses a personal knowledge of each section thereof. In compliance with my request he favored me with his views, which you will oblige by publishing. I may remark that Mr. Williams has been engaged for the last six months in surveying the region between the Caloosahatchie, Big Cypress, and the gulf, and is personally familiar with the region referred to.

AL FRESCO.

FERNANDINA, July 29th, 1875.

DR. KENWORTHY—Dear Sir: I promised to give you what information I had with regard to South Florida as a game country.

If there is in the United States a district of country that can excel the Caloosahatchie and the country south and east from it to the Big Cypress and Everglades, in its attractions to the sportsman, it must indeed be a wonderful country for game. The quail, wild ducks, wild turkey and deer are as plentiful in this region as the most ardent sportsman could desire; and then the Caloosahatchie and Charlotte Harbor abound in fish—in fact it can't be excelled in the quantity, quality, and variety of the fishes. During Winter the climate is unsurpassed, cool enough for healthful exercise, and never cold enough for discomfort. The country

is open and the land firm. A horse at full speed can be ridden almost anywhere without roads or paths. Nowhere else that I know of can the sportsman have such variety. Upon the water there is good fishing, unsurpassed in any country; numerous water birds with rare plumage, and sea shells of great variety and beauty. Upon the land, if I were to attempt to describe the quantity of wild turkeys and deer, I should hardly be believed. I will give one fact: Three Indians who were hunting upon the borders of the Big Cypress, and in a short distance of my camp, killed, in fifteen days, ninety-seven deer, and as they killed these deer for the hides, they killed only such a were large, and the skins of which were saleable.

The sportsman, to enjoy fully a few months' sojourn in this region, should go prepared to take care of himself. It would be best that several gentlemen should unite, get a good boat, good tents, the necessary provisions, and a good cook; and for exploring and hunting in the country south of the Caloosahatchie, it would be necessary to have a light wagon and two mules for transportation. Nowhere else on the American continent could a party, supplied as I have indicated, find a better field for hunting, or a climate more pleasant, and greater attractions upon land and water.

With regard to poisonous snakes and insects, let me say that during the Winter months mosquitoes are not at all troublesome, and poisonous snakes are rare. During last Spring and Summer I traveled one thousand miles, and my entire party saw and killed only four rattlesnakes.

Yours respectfully,

M. A. WILLIAMS.

SOME RULES FOR SAFETY IN SAILING.

In our last issue we printed some suggestions with regard to boat sailing and the care necessary to prevent accident. We now give some practical rules for the management of sail boats and small yachts which we commend to the attention of our nautical readers. A close observance of them will prevent accident and add much to the comfort of sailing. They will be invaluable to the tyro at boat sailing and fill a want in this direction which has long been felt. They have been contributed by a valued correspondent:—

1. Know, before you leave your anchorage, or wharf, that everything is in order, especially your tack and pennant for reefing.
2. Always carry a compass. A whaleboat's compass answers nicely in a small sailboat.
3. Boats of any considerable draft—one and a half foot and more—should carry a lead line, the first fathom marked off legibly in feet. This will prove to be very valuable in finding channels in the night, and fogs.
4. Never make your halliards nor sheets fast by hitching or knotting. They should be made fast either by sufficient turns around the cleat, or by a simple draw-knot, which any boatman can show you.
5. When the wind is very strong and puffy, pass the sheet once around the cleat and hold the end in your hand.
6. Always keep the halliards and sheets in order, by carefully coiling them so that they will render from the top of the coil.
7. Never sit to the leeward of your helm, nor allow anyone else to sit where their position will interfere with the free play of your tiller.
8. Never jibe a sail when the wind is blowing freshly, unless it be a necessity. If you must jibe, do so with your peak settled.
9. Never jibe a sail with the sheet wide off. Trim in your sheet rapidly as you press up your helm, take a turn around the cleat, and ease the strain when the sail passes over, by letting go your sheet as your direction from the wind may require. As a rule, it is better to go about.
10. When, from a heavy sea, a boat refuses to mind her helm, and misses stays, to get her on the other tack you must perform what is called wearing. This is done by settling the peak of your sail, and following the directions above for jiving. Once jibed, haul up your peak, trim in your sheet, and bring her on her course.
11. In heavy winds and high waves a boat will sail better, and be safer with the sheet started a little. Very few boats sail well at any time, when the sheet is trimmed down flat.
12. Never luff a small boat in rough water and high wind, so as to stop her way. When a puff of wind is too strong for your safety, hold the boat on her course and ease off the sheet. The danger of stopping a boat under the above circumstances is, that they are liable to upset when you put up your helm and keep away to fill the sail again. If you boat has lost way, slack off your sheet, put down your helm, and let her fall off. When she has fallen off sufficiently to get a good full on the sail, up helm and trim in rapidly.
13. Always keep an eye to windward, watching the surface of the water for the approach of puffs of wind.
14. Being overtaken by a squall, settle your sail, and tie up snugly, waiting to make sail, until you have felt the weight of the squall, and know how much sail to make. If the squall promises to be very severe you had better come to an anchor.
15. In reefing, take in all sail; trim in your sheet perfectly flat and make secure. Then haul out your clew with your pennant and make fast. Next tie down your tack, then tie in your nettles or reef points with square knots, commencing at either end. In shaking out a reef, the sail being down, reverse this process, commencing to untie your reef points at the middle and working to the end. Keep to the windward of your sail.
16. In running off dead before the wind be careful not to jibe. If the wind is heavy it is safer to run with peak settled. In rough water, running off, look out that your boom, striking in the creast of a sea, doesn't trail aft and jibe your sail. This is called tipping. To prevent this bring her more on the wind by putting your helm down. If seas are liable to comb over on your quarter or stern they can be broken by trailing a buoy or basket, or two oars lashed together, about five fathoms astern. This drag will also steady the motion of your boat.
17. Never carry sail for the sake of carrying it.
18. Never sail strange waters without a chart, or what is better, without a pilot.
19. As a stranger to them, avoid tide-rips and whirls.
20. Be cool in emergencies. If sailing with company, do not let them distract your attention from the management of your boat.
21. Remember that on the wind the starboard tack has the right of way over the port; and that a vessel sailing on the wind has the right of way over one that has her sheet off.

These rules apply to cat rigged boats especially. In the main they apply to sloop rigged boats also.

SUGGESTIONS.

1. If alone it is convenient to have the peak halliard led aft.
2. The average of boats sail in moderate winds and smooth waters within four points of the wind.
3. A boat on the wind sails better with the gaff to the leeward of the topping-lift.
4. Keep your boom well set up.
5. The upper and outer half of your sail gives the most of your speed when you are on the wind.
6. If your boat carries a lee helm, watch her.
7. In keeping your boat off from the wind, where your room is limited, pull up your board and flat your sheet. Settling the peak also helps this movement.
8. Learn to work your boat by sitting down.
9. Finally, if you don't know that you know how to manage a boat in every particular, hire a competent man to go with you and teach you.

C. J. K. J.

THE ILLUSTRATED HOUSEHOLD MAGAZINE.—The practical value and influence of a home magazine serving the dual purpose of instruction and amusement is clearly shown in the widely extended circulation of the *Illustrated Household Magazine*—formerly *Wood's Household Magazine*. It is essentially a magazine for the household. The selections are made with judgment and the original articles (stories, &c.) written with taste and ability. The extremely moderate price of \$1.00 per annum places it within the reach of all classes, to whom it judiciously and ably caters. See advertisement.

—The Rome, Watertown and Ogdensburg Railroad is one of the best routes from New York to the Thousand Islands, time only about 12 hours, and close connections with the N. Y. Central Railroad.

Fish Culture.

FISH CULTURE:

ITS ORIGIN, DEVELOPMENT, AND PROGRESS.

BY ICHTHYOS.—NUMBER FIVE.

THE selection of a proper site for a fish farm is a matter of vital importance, in order to attain success in fish breeding. Indeed, if any mistake is made in the selection in which any natural feature is wanting, no possible application of art can remedy the defect. In locating a farm art may overcome a lack of soil elements, so that the land may be made adapted to the multiform products of husbandry through skilled labor. It is well therefore to make a careful and painstaking survey of different sites, and select that only which combines the most numerous and natural facilities for pisciculture. The American people are so easily fired with enthusiasm in the contemplation of any new enterprise that their zeal often gets the better of their discretion, and thousands of dollars are needlessly thrown away, which might have been saved by forecast, discrimination and patient investigation. They often rush into new and untried pursuits with no other results than defeat and loss.

It is not the plan of the writer to throw undue discouragements in the way of those who propose entering upon this new industrial pursuit, but simply to state facts as they have occurred in the experience of others. The assertion so often repeated by injudicious enthusiasts that any farmer who has a spring on any portion of his farm can enter at once upon successful fish culture, at little or no outlay of expense in time or money, must be taken *cum grano salis*, and pondered over some time before any investment of money or outlay is made, for nine times out of ten the most sanguine will become convinced that appearances are as deceiving in fish culture as in any other enterprise, and frequently more so. There are no doubt in many portions of the country, valuable springs, yet they do not all combine the necessary requisites for a first class fish farm. Probably in this new industry there are destined to be more failures than have occurred in any other field of labor in this country, without the observance of more caution than people are willing to exercise. It is well to give this matter careful thought before hazarding much labor or expense.

The principal points which should be sought for in a model trout farm are:—

1. An ample and unfailing supply of pure cold water is necessary, indeed indispensable.
2. Sufficient height of spring above the selected site, to give ample fall for the construction of tanks, ponds and race-ways.
3. Ample and constant protection from surface water, an absolute control of all overflow, derived from freshets and melting of snow.
4. Such railroad facilities, if possible, as will insure daily connection with large cities, in order to secure a ready sale of fish.

For ascertaining the average value of the water, the only proper time is during the hottest and driest portion of the season, when the flow of the water is at its minimum rate, and the temperature at its maximum. First examine the water as regards its temperature, and if too warm, further investigation or expense is unnecessary. If it is found to be above 65°, the stream is unfit for trout culture, and only fit for breeding bass, pickerel, or perch, which thrive in water at an elevation of 75°; though trout may thrive in water at a temperature still higher than 65° as has been demonstrated by the California Commissioners of Fisheries. It must be borne in mind as the distance increases from the spring through the series of ponds, the water is addicted to growing much warmer, that while the source of supply maintains constantly a temperature of 55° to 60°, the lower ponds may reach 70°. But if the fall is considerable, the water throughout may be kept aerated, and the fish will be lively though the temperature is materially increased. The rule is that the colder the water, the lower the temperature the spawn are subjected to during incubation, the more healthy the fry will be if the water does not become so cold as to form ice, in which case it would be fatal to the vitality of the eggs. Springs which supply the hatching houses of the most successful fish farms maintain a temperature of 45° to 55°. It is true the higher the temperature of the water, the sooner incubation is effected; but while this is evident, the increased temperature is supposed to favor fungoid growths upon the fishes, which in spite of the utmost vigilance, sometimes appear in the hatching trays or rearing tanks and destroy large numbers of the fry. Nothing is gained by forcing incubation, for the cold water seems by nature to agree with the small fry when hatched, and conspires to produce a healthy progeny if used in hatching. The salmonidæ all require cold and pure water, indeed their native haunts hint plainly to the pisciculturist that if he would succeed he must imitate nature in the selection of his springs and in the construction of his ponds.

In view of this fact, attempts on the part of fish farmers have been made to keep down the temperature by passing the water for hatching purposes through refrigerators filled with ice, but in the main all such experiments, besides being attended with great expense, have resulted in failures, even when practised on small scales.

Many fish require a high temperature. Shad eggs will not come to maturity in water in the process of hatching below 70°, and it is said that gold fish, (*Cyprinus auratus*), have been bred even where the thermometer indicated a hundred degrees. But trout, owing to their peculiar nature, require a temperature not higher than 55° if we would expect the spawn to produce healthy and vigorous young.

To be Continued.

THE VIRGINIA FISH LAW.—This law, one of the best on the statute books of Virginia, prohibits the catching of fish with seines in the waters of the State for the space of two months, from the 15th of June to the 15th August, and the fine for violation is \$500 and confiscation of boat and fishing tackle; but to secure conviction some one must first become an informer, and this is enough to prevent almost any honest man from interfering. Of course it is not to be supposed that the various Commonwealth's attorneys are to become spies and detectives; consequently the law is of no effect.

The Potomac River is protected by no such law, and constant seine-hauling has destroyed the fish supply of that river, and the fishermen from that section are now coming down the bay, fishing along the shore and violating the law of Virginia with impunity, and unless they are summarily dealt with, we may soon expect our waters to be like the Potomac, and one of the greatest sources of income of the State broken up. These fishermen come well equipped and armed to the teeth; they catch the fish, pack them in ice, and ship them to Washington city, Georgetown, Baltimore, Philadelphia, and other Northern cities in large quantities, and they are so bold that at times, when their stock of ice runs low, they come up to this city, purchase ice, repack their fish and ship them from here. This nefarious conduct is not only contrary to law, but it is breaking up an industry that brings millions to this city every year, and our own law-abiding fishermen will not be the only sufferers. Sometimes these poachers are arrested, but generally no one saw them lift the seine from the water with the fish in it, and the fact of the seine being in the boat, the fish on board packed, and all the usual preparations for seine-fishing, are not accepted as proof.

We call upon the proper authorities to see that the law is enforced, and our fishermen should assist them.—[*Norfolk Times*.]

If the Protective club, newly formed in Norfolk, will undertake the business of prosecuting offenders it will prevent odium attaching to individuals.—[*Ed*.]

—An article on fishing in the sports department of the Brooklyn *Eagle* last week made pointed reference to the fact that in order to afford a few ignorant fishermen the means of gaining a few more dollars by taking fish out of season and too young for market use, hundreds of people employed in the various occupations connected with the Summer angling business of the island were practically cut off from their employment. We could wish that a remedy for this state of things might be speedily reached. Angling this season along our island coast has not been encouraging by any means, and once favorite resorts, like South Oyster Bay and Coney Island Creek, yield no sport of any account.

Natural History.

CONFIDENCES OF WILD FOWL.—Mr. A. C. McIntyre, the well-known photographer at Alexandria Bay, St. Lawrence River, who takes such charming views among the Thousand Islands, succeeded this Summer in photographing a ruffed grouse on her nest, placing the instrument within a few feet of her. After her eggs had been laid, workmen proceeded to build a Summer cottage near the spot, but took pains not to disturb her, and in course of time she became so tame that she declined to leave her nest and hatched out a dozen chicks. Stereoscopes of these, which we consider desirable for a naturalist's cabinet, can be had by sending orders to Alexandria Bay.

Another even more remarkable case of confidence came to our knowledge last Spring, with reference to a woodcock that was found last May by the venerable sculptor, John C. King, of Boston, in the area under one of the windows of his studio, in a thickly settled part of the city, where it was supposed he fell after striking one of the numerous telegraph wires overhead. When picked up he was apparently unhurt and fed well until his death, six days after, eating earth worms which he would take from his flat water vessel after shaking them well to rid them of dirt, and swallow whole. He took his bath daily as regularly as a canary bird. Being allowed the run of the room he didn't beat against anything, and rarely flew at all, generally trotting around his corner of the room, not being afraid of people in the least. At daylight one day, he was heard taking his bath, and at breakfast time was dead.

PINNATED GROUSE IN ENGLAND.—Frank Buckland, Esq., makes the following reference in London *Land and Water* of July 17th, to the lot of eggs of pinnated grouse recently forwarded to England by the publishers of this journal for Richard Valentine, Esq., President of the Wisconsin Poultry Association. We regret that ill luck continues to attach to these experiments. Mr. Valentine has individually expended already more than \$100 in these ventures, and his perseverance deserves better success:—

PRAIRIE GROUSE EGGS.—I have received the following letter:—"I received, three days ago, a consignment of eggs of pinnated grouse (prairie fowl) from Mr. Richard Valentine, President of Wisconsin Poultry Association, with request to forward them to Mr. Price, Bala, in care of Mr. Cross, Liverpool, and did so. I have since received another small lot of eggs without instructions to their disposal, and believe that I can place them in no more appreciative hands than yours, and so forward them to you by to day's steamer England for Liverpool, also in care of Mr. Cross, 51 Aldhull street, Liverpool. Mr. Valentine, you will remember, sent the lots over last year, but the result was a failure. He hopes for better success this time."—CHARLES HALLOCK, (FOREST AND STREAM,) 17 Chatham street, New York, June 24. A boy arrived somewhere about one or two in the morning with a telegram from Mr. Cross, of Liverpool, to say the above-mentioned eggs were coming, and the next morning they arrived in due course, carefully packed, but the straw, etc., was covered with mildew, and some of the eggs were broken. I took the lot up to Mr. Bartlett, at the Zoological, and we divided those that promised to hatch out. Mr. Bartlett kindly put those I gave him under a hen, the others I sent on to Mr. Overton, Windsor Great Park, asking him to place them immediately under a sitting hen. I am afraid the result of either lot of eggs will not be very satisfactory, as I found in one of the eggs broken that in this instance the development of the chick inside had considerably progressed. The carrying of birds' eggs for a long distance is a subject which deserves much more serious attention than it has hitherto received.—FRANK BUCKLAND.

HARMLESS RATTLESNAKES.

EAST HAMPTON, Conn., August 6th, 1875.

EDITOR FOREST AND STREAM:—

There lives a fellow in this town, two miles from my house, who has caught and has in his possession a large rattlesnake. He handles and fondles the snake with impunity, putting it in his bosom, winding it about his neck, pinching its back until it seems angered or enraged. Al this is common with snake charmers, we know, but for this fellow, without any artificial means whatever, with the snake as lively, poisonous, and deadly as when taken from its den, we do not understand. Give us the secret. Yours respectfully, GEO. BEVIN.

The habits of the venomous snakes are by no means clearly defined, or intimately understood by naturalists; or perhaps we should say that their habits so vary in different seasons and localities, that authorities differ in describing their habits and peculiarities. The rattlesnake is slow in its movements, and seldom attempts to bite unless provoked—allowing itself handled without resistance. In the Spring of the year its bite is not usually fatal. Before biting it throws itself into a fighting attitude, and invariably gives warning. They appear also to form a sort of attachment for those who have the temerity to cultivate their acquaintance. Your neighbor therefore exercises no special power over them, beyond taking advantage of these peculiarities. In all venomous reptiles, such as the viper, rattlesnake, or cobra de capello, there are two large fangs or teeth that issue from the upper jaw, (aside from the teeth used in taking food) hanging out over the lower jaw, and connecting with the poison sac. If these fangs are extracted, their bite becomes harmless. Possibly the "fellow" referred to has extracted these fangs, and is thus enabled to astonish the natives with impunity. We do not by any means regard "foolin'" with snakes as a rational pastime to be encouraged. We once had a friend in Florida given to investigating the snake family, who was finally bitten by an insignificant little reptile of the viper species, and though he made light of the wound, it caused his death in a few hours.

—A burrowing owl, (genus *spheotyto*, Groger,) was captured last Sunday in this city in an up-town house, where it flew into the scuttle. It is a very fine specimen, and can be seen alive at the establishment of J. R. Wallace, taxidermist, 17 North William street. There is only one species of this bird in this country, but it is found in great abundance west of the Mississippi River. There is no evidence that this bird was ever caged. He appears to be merely a wanderer from his native prairie, at least a thousand miles due west. He is an active little fellow, and none the worse for his long journey.

THOSE BLACK SQUIRRELS.

CHICAGO, Ill., August 2d, 1875.

EDITOR FOREST AND STREAM:—

I would like to have the address of that Waukeegan gentleman, so that I can send him a mess of black squirrels this Fall, as I am positive I can. I was talking to one of the sons of the late Archibald Clybourn, whose widow lives near where I do, and he says he has seen black squirrels on his farm not five miles from the city limits as late as two years ago. CHICAGO SPORTSMAN.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, }
NEW YORK, August 8, 1875. }

Animals received at Central Park Menagerie for the week ending August 7th, 1875:—

- One Anaconda, *Eunectes murinus*. Hab. Nicaragua. Presented by Dr. Paul T. Ferrer.
- Two Gray Squirrels, *Sciurus Carolinensis*. Presented by Master Wm. A. Lilliendahl.
- Two Nonpareils, *Cyanospiza ciris*. Presented by Mr. James Moran.
- Five Horned Toads. Presented by Dr. Theophilus Kramer.
- Seven Sea Lions, *Eumetopias stelleri*.

For Forest and Stream.

THE AGRICULTURAL RESOURCES OF MARYLAND.

IT is somewhat surprising in these days of rash speculations, doubtful railroad enterprises, bank failures &c., that the attention of capitalists and persons seeking safe investments for their money, has not been more attracted by the numerous advantages held out by the fertile agricultural lands of the Southern States. It is true that such investments cannot hold out the unnatural inducements of large semi-annual dividends upon heavily watered stock, but the investor has the satisfaction of knowing that his money cannot be spirited away, and that with proper care and attention upon his part there can be no shrinkage in its marketable value although the revenue derived from it may not equal that received from his more fashionable investment for a few years only. The eyes of capitalists, however, are slowly and gradually opening to the realization that good land, returning a cash revenue of five and six per cent., with the priceless comforts, luxuries and independence of a country life are, after all, preferable to the constant constitutional wear and tear attendant upon the continual excitement of watching the sudden rise and fall of stocks or government securities.

With the close of the war, and its consequent revolution in the social, agricultural and financial status of the Southern people, came the vexed problem of, what shall we do with our large tracts of land? In a majority of these instances, owing to unfavorable location, or to a previous lack of works of internal and public improvement, this question has remained unsolved to the present day, but will, sooner or later, force itself prominently before

he public eye. The sooner this is done the better, and the sooner foreign or outside capital is induced to take hold of this immense, but not productive source of national wealth, the better it will be for the country at large and the people themselves individually. The old system of landed proprietor and overseer is strictly among the things of the past. The overseer of the past is, in many instances, now the moneyed man of the two, while the vast tracts of uncultivated land everywhere noticeable in the Southern States are in striking contrast with the thrift and enterprise which characterize the Northern and New England farms. Fresh capital must be induced and new blood, with a fresh set of ideas must be infused into the veins which have steadily plodded, or rather slumbered on in their well-beaten track for the past half century.

Of all the sections of country thus looking forward and inviting populization, none can offer greater inducements either to the capitalist or to the energetic farmer than can the Southern counties of the Western shore of Maryland. Enjoying as they do geographical and climatic advantages unsurpassed by any section in this country—with a rich, kind and fertile soil, it is astonishing that so little should be known about them. Washed on their Eastern boundary by the broad waters of the Chesapeake Bay—whose bottom abounds in exhaustless stores of oysters, and whose tributaries affording easy and ready access to the markets of New York, Philadelphia, Baltimore and Washington, are filled with every variety of fish, crabs and terrapins; they offer inducements unequalled by any other section of country in the South.

Previous to the war, and to the abolishment of the old regime of slave labor, land in Anne Arundel, Prince George, Charles, Calvert and St. Mary's Counties commanded prices ranging from a hundred to one hundred and fifty dollars per acre—and with but little offered in the market even at these figures. Very large farms, or plantations, as they were then styled, embracing from one to three thousand acres of land were numerous, and farmers raising from one to three hundred hogsheads of tobacco, with a proportionate amount of cereals annually found themselves in receipt of incomes ranging from ten to twenty thousand dollars.

The entire revolution consequent upon the close of the war, strange to say, found nearly all in this section in debt. What previously would have been regarded simply as a small matter, now assumed such huge proportions that the abolishment of slave labor necessitated the employment of hired labor, which was then scarce, and for which cash money had to be paid. Under such a state of affairs many of the oldest farmers succumbed, while for several years the younger ones plodded on, gradually diminishing in numbers as they became conscious of the necessities of the times and the only cure for the existing evil—work. Large tracts of land had to be divided up into small ones—desirable labor had to be introduced, and especially outside capital and energy had to be invited. Large quantities of land subject to mortgage were thrown upon the market with no purchasers, until land which a few years previous could not have been purchased for \$150 per acre was freely offered at \$40 and \$50 per acre. Such a state of affairs could not possibly exist for any length of time, and now at last the prospects of this section of Maryland are brighter than they have been for years.

Under a State government whose wise policy has been to open up this fertile section of country by works of internal improvement—these counties now offer great and special inducements to persons seeking landed investments. Within the past few years the Baltimore and Potomac Railroad has been completed, running from Baltimore to Washington, and with its main stem extending to the Potomac River at Pope's Creek, a distance of eighty miles, through the centre of Anne Arundel, Prince George, and Charles Counties. In addition to this about fifty miles of the Southern Maryland Railroad, extending from Washington to Drum Point, has been completed. The Washington City and Point Lookout Railroad is in course of construction, and the Drum Point Road—running from Baltimore via Annapolis, through Anne Arundel and Calvert Counties is also under contract. All along the line of the Baltimore and Potomac Road great improvements are manifest. Saw and grist mills have sprung up, while at many of the stations thriving little towns are beginning to appear. A number of Pennsylvania farmers, induced by the fertility and cheapness of these lands, have disposed of their farms in that State at high prices and have removed to this section where fine farming lands, with good improvements in the way of houses, barns, &c., can now be purchased at prices varying from \$40 to \$75 per acre. The soil is a kind, quick loam, easily cultivated, and especially adapted to the growth of fruits, cereals, &c. Labor is abundant at prices varying from \$10 to \$12 per month with rations, and taxes are almost nominal. Within fifty miles of either Baltimore or Washington the farmers are rapidly turning their attention to the cultivation of market supplies, and their experience so far has been very satisfactory.

The hunting and fishing in the counties of the Western shore of Maryland is probably unsurpassed in any section of this country. The waters of the Chesapeake Bay, with its tributaries, creeks, inlets, &c., annually hold out great and special inducements both to the sportsman and the fisherman, at all seasons of the year, owing to the great variety of game and fish which abound there. Oysters, shad, rock, white, and yellow perch, herring and catfish, with crabs and diamond-back terrapins, abound in exhaustless supplies in these waters.

From the middle of August until the first appearance of frost the marshes and low river lands are covered with countless thousands of ortolan and reed birds. Partridges are plentiful, and blue wing, canvass back, bald pate and red head ducks are annually killed by the thousands. With such luxuries, ever ready at hand, and such advantages of a healthful climate, good society, churches, schools, low taxes, proximity to four of the best markets in the United States, and rich lands at unreasonably low prices, is it not surprising that the thrifty New England farmers seeking new homes, and capital seeking desirable investments have not been more attracted by this section of Maryland, which is surely destined to become the garden spot of America.

NEDO.

THE MELON TRADE OF FLORIDA.—Notwithstanding the fact that the first venture of the Floridian fruit growers in shipping melons to Chicago resulted unsuccessfully, there are offered inducements to repeat the experiment with more prospect of success. The melon growers of Central Florida shipping direct to this market via Fernandina have met with better fortune. One gentleman has shipped \$10,000 worth, half of which was profit. The crop has averaged over forty cents per melon, or about \$400 per acre. But this is nothing to the performance of one man, who is reported to have netted \$1,600 from three-quarters of an acre of cucumbers. The capacities of Florida for fruit and early vegetable culture are unrivaled; early peaches could be shipped here as well as anything else, but this particular fruit does not appear to have received much attention. Although orange culture will probably always take the lead, there are other branches of fruit culture which would pay almost as well, and not require the long and weary waiting before results could be seen. The cork tree is said to thrive there, and specimens were exhibited at the recent Duval county fair.

Florida now has all the great West and Northwest for a market, and can draw her supplies, such as flour, bacon, etc., from these without their having to pass over the tedious route via New York. Melons are now shipped direct to Chicago via Thomasville, over the Atlantic and Gulf Railroad. The Thomasville *Enterprise* of a recent date says:—"The passing of these long trains over the Gulf road to Albany powerfully suggests the importance of the connecting link between Thomasville and Monticello, which would shorten the route more than 100 miles, and enable the Floridians to reach their markets in the great Northwest a day sooner than can now be done."

The Kennel.

THE FOREST AND STREAM CUP.—The above cut represents the ice pitcher presented by us at the recent Watertown Bench Show. We had selected as an appropriate engraving the picture of Mr. Raymond's fine Laverack setter bitch, Fairy, which a short time before appeared in our columns. It may be considered a coincidence the cup was awarded by the judges to Fairy.

CHICAGO BENCH SHOW OF DOGS.—Extensive arrangements are being made for the greatest show of dogs which has ever been held in this country, to be held in the exhibition building at Chicago from January 25th to 28th, 1876, under the auspices of the National Poultry Association and in connection with their show of fowls and pigeons. A list of premiums will in due time be published in our columns. We wish to keep this affair before the public. The judges in awarding prizes in the sporting classes will, if two dogs or bitches of equal merit are exhibited in the same class, one with pedigree and the other without, award the prize to the one which has a pedigree, but in no case will a dog or bitch with pedigree receive a prize over a superior one without pedigree. The following named gentlemen have consented to act as judges in any of the sporting classes in which they do not exhibit, viz.:

H. J. Edwards, Chicago, Ill.; E. F. Stoddard, Dayton, Ohio; Arnold Burges, Maysville, Ky.; L. H. Smith, Strathroy, Canada; Horace Smith, of FOREST AND STREAM, New York.

HOW TO EUCHEE DOG THIEVES.—John W. Munson, of St. Louis, had two cockers stolen from him in March. The Missouri Sportsmen's Club, of which Mr. Munson is Secretary, offered a reward of \$50 for information that would lead to the detection and conviction of the thieves. The notices appeared in all the papers of St. Louis the day after the dogs were stolen, and that night two cut-throat looking creatures came to Mr. M.'s house and informed him they had his dogs; had bought them from a boy who stole them; refused to deliver the boy up, and would return the dogs for \$50 cash down and no questions answered. Finding all attempts to argue any of the "moral" points with them

useless, Mr. M. signaled a policeman, and marched the fellows off to jail. The following day a detective recovered the dogs and returned them to their owner. It could not be proved that the two men who had offered to return them for the money had stolen them, and after keeping them in jail five days they were released. The Missouri Sportsmen's Club is empowered to offer as high as \$100 for the detection of dog or gun thieves, and its members feel safe in the possession of their dogs, as very few of the scoundrels will take the chances of detection, knowing that the club will prosecute to the bitter end of the law. It would be well for clubs in other cities to adopt some means of joint protection against thieves.

THE DOG ORDINANCE.—Mr. Bergh has done something very sensible in writing to the Board of Aldermen of this city asking them to repeal the dog ordinance of last Summer, by which all unfortunate dogs found loose, or that could be enticed from their owners, or stolen by roughs and street gamins, were delivered at so much per head to a dog-pound master, and by him tortured to death. Mr. Bergh, in his letter, advocates the theory that hydrophobia, if it exists at all, is the rarest of all diseases, and suggests that if anything could produce madness it would be the treatment to which dogs are subjected at this season of the year. Notwithstanding all the scandal of last Summer we fear Mr. Bergh's letter will have no effect; there is too good a "job" in this dog matter for it to be dropped, and the disgraceful scenes of last season are likely to be reproduced.

DOG FARES.—We print herewith copies of orders by Northwestern Railway and Illinois Central, which have been issued by the officers of the companies. The charges heretofore made by some of the baggagemen for carrying dogs have been unreasonable, and this is a step in the right direction. We are happy to state that the Washington City and Virginia Midland Railroad also carries hunting dogs free of charge. By and by we anticipate that all will do it.

(CIRCULAR NO. 17.)

ILLINOIS CENTRAL RAILROAD COMPANY,
GENERAL SUPERINTENDENT'S OFFICE,
Chicago, Ill., July 27th, 1875.

Train Baggage.

Until otherwise advised, Dogs will be carried in baggage cars free (provided their owners or party in charge present their own transportation ticket or pass), and you are not allowed to collect or authorized to receive any remuneration for their transportation.

You will inform persons presenting dogs that they will be carried only at the risk of the owner. Respectfully,

JOSEPH F. TUCKER, Gen'l Supt.

CHICAGO AND NORTHWESTERN RAILWAY COMPANY,

From this date and until further notice Dogs will be carried in baggage cars free, and you are not allowed to collect or authorized to receive any remuneration for their transportation.

You will inform persons presenting dogs that they will be carried only at the risk of the owner. Respectfully,

(Signed) M. HUGHITT, Gen. Supt.

"SHOT."

LAWRENCE, Kansas, July 25th, 1875.

EDITOR FOREST AND STREAM:

The pedigree of Plunket and the article on Ranger, in No. 24, of 22d inst, suggest my taking the liberty of giving you the pedigree of my dog, Shot, No. 1,762 Kennel Club Stud Book. Shot was brought out to me by a friend from England, and was bred by Dr. J. H. Salter, of Darcy House, Tolleshunt, Essex, and is by Macdonas's Mac, own brother to Plunket, whose pedigree, as given by your correspondent "Warwick," corresponds with that furnished by Dr. Salter. Shot's mother was Dr. Salter's Sal. Sal was by Capt. Wynne's Spark, out of Capt. Firth's Nell, by Mr. Wyndham Lewis' Major, out of Capt. Firth's Juno. Spark was by Mr. Coates' Rap, out of Ruby, by Hutchinson's Bob, etc., etc. Shot is the true blood red, or bay, and is of magnificent proportions. He and four brothers and sisters took prizes at good shows before they were eighteen months old. Shot has taken prizes at Halstead, Beery St. Edmonds, and Birmingham, in 1872, at Wolverhampton and Maldon in 1873, and at Stratford, first prize, in 1874, etc.

We give the extended pedigree of Shot, and some further particulars, as being of interest to our readers:—

Mac is own brother to Plunket from the next litter; ran in the Dinoring stakes, (puppies,) Vaynol trials, 1871, beating Mr. R. L. Price's Bee, after which Mac and Bee had a trial with Don and Ruby, and the prize was awarded to the latter brace. Mac was a small, compact wiry dog, blood red in color, excepting a small white speck on his breast; was offered to a friend for £30 in 1871, and was eighteen months old; he is now dead. Shot was awarded second prize at Malden in 1873, and other prizes at local shows, but was not awarded any prize at the Birmingham show in 1872, on that occasion Capt. Cooper's Ranger taking first, and Mr. Shorthose's Ben the second prize, and for bitches Capt. Cooper's Ellie taking first, and Mr. Llewellyn's Carrie, (although not a pure Irish,) taking second prize. Regarding our correspondent saying that Ruby was by Hutchinson's Bob, we cannot say if she was or not, but would be inclined to think that what he said was correct, as he is so correct in the other portions of the pedigree of Shot, excepting taking a prize at Birmingham in 1872. We would add that Shot was entered at the Crystal Palace Show in

June, 1873, in the Irish setter class. Did not receive any prize, nor was he commended, and was priced at £52 10s. At all English shows they are apt to put a high figure on their stock; for instance, Macdona's Ruth, priced at £1,000—a mere absurdity. Mr. A. W. Hall, of Claremont, Millbrook, Southampton, England, has an Irish setter bitch, sister to the above mentioned Shot, which is priced at £31 10, and was bred by Mr. J. H. Salter.

—From the kennel of Lord Downs, Danby Lodge, York shire, England, Messrs. Seeley & Stevens, of Burling Slip, of this city, have just imported a liver and gray and white pointer dog named Rap. This dog was bred by Jno. Armstrong, game-keeper to the Earl of Carlisle; got by Lord Carlisle's Rap out of his Bess; Lord Carlisle's Rap got by Lord Downs' Shot out of Wilson's Staffa; Bess got by the Hon. Noel Hill's Blunder out of Mr. Shaw's Helen; Shot got by Drake out of Spot, by Rap out of Dell; Spot by Brag out of Sal.

CAPT. J. P. WHITE'S KENNEL.

SAYANNAH, GA., July 25th, 1875.

EDITOR FOREST AND STREAM:—

A few days ago I with some friends, was invited by Capt. J. P. White, of this city, to take a look at his kennel of dogs, and thinking it might be of some little interest to your readers hereaways to know something about the best dogs we have, I send you an account of the same. Capt. White has his kennel arranged as well as could be, not only for the comfort of its inmates, but for looks also, each dog having his house separate from the rest, and under the sheltering shade of either a fine, large, fig or plum tree, with a large yard for them to run loose or for exercise when not taken out.

Taking the pointers first, we come to Snipe or "Old Reliability," a black and white dog who, though not the handsomest, stands at the head of all sporting dogs in this section for all the qualities that are requisite in a first-class dog, and I understand is of the same stock as Mr. A. C. Waddell's celebrated bitch, Dream, now dead, his dam being a full sister to that of Dream. Snipe is by W. C. Cozen's Snipe, out of B. B. Ferrill's Belle. We next come to Fan, a large English liver colored bitch, pedigree not known, and lastly to Shot, a very large orange and white dog, the property of Col. Clinch, of Georgia. He is a fine looking dog all over, with the exception of his tail, which does not taper as much as it should.

At the head of the setters we find Yock, a very large, deep chestnut and white Irish setter, an account of whom, with his mate, Gypsy, I wrote you some time ago. His pedigree is as follows: By J. W. Cunningham's imp. Yock, Sr., out of J. C. Craft's imp. Flora. Following him come Gypsy, a dark chestnut Irish setter bitch from imported stock. Juno, liver and white bitch, by Paul Haskill's orange and white setter, Grouse, out of R. H. Elliott's liver and white bitch, Rosa. Josie, white and red, by David Brook's celebrated dog, Bismarck, and for pedigree on her dam's side I would refer your readers to that of Allin's (H. Smith's) Gyp, in the list of Gildersleeve setters published in your columns under date of December 31st, 1874. Josie belongs to Major Geo. E. Alden, of this city. Dash, liver and white, by J. G. Butler's Sport, out of J. P. White's Juno, and the property of W. F. Scherff. Belle, liver and white; pedigree same as that of Dash, and belonging to Mr. R. Tunno.

Capt. White has also in his kennel quite a number of fine, handsome puppies, among them two black and white pointers by his dog Snipe, out of John Scholl's black and white bitch, Dora. Also three chestnut and chestnut and white setter puppies by Yock, out of Gypsy, four by Yock out of Juno, and five red and white and chestnut and white, by Yock out of Josie.

Grouse, the sire of Juno, was a dog noted for his great endurance, as well as sureness of nose and staunchness. His owner, Mr. Paul Haskell, one of our most thorough and enthusiastic sportsmen, frequently hunted him day in and out for weeks throughout the season, always in company with another dog, who, becoming broken down in a little time, would have to be sent back to the kennel and another taken to be hunted with Grouse, who, at the last, would be as ready to go as at the beginning. Capt. White is expecting to receive in a short time a brace—dog and bitch—of fine black and white setters from one of the finest kennels North, and also intends to get out this Winter from Ireland as fine a blood red setter for breeding purposes as can be got in the Emerald Isle.

GEORGIA.

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

Trout, *Salmo fontinalis*.
Salmon, *Salmo salar*.
Maskinonge, *Esox nobilior*.
Weakfish.
Striped Bass.
Kingfish.

Salmon Trout, *Salmo confinis*.
Land-locked Salmon, *Salmo Gloveri*.
Black Bass, *micropterus nigricans*.
Pike, *Esox lucius*.
Pickerel.
Bluefish.
Sheepshead.

FISH IN MARKET.—The stormy weather of the past week has driven the fish to sea, destroyed pound nets and seines, and disappointed the hopes of anglers. The market slabs have not had their usual full supply in consequence. Prices, however, have not materially changed from those of a week ago. We noticed some splendid specimens of striped bass at Blackford's stand, and some large sheepshead and weakfish at Middleton & Carman's. Three of the bass named weighed 87 lbs. Blackford has some specimens of hawkbill turtle for the Smithsonian Institution, which he always bears in mind.

—Andrew Clerk, Esq. of Maiden Lane, has just returned from the Grand River, in the district of Gaspe, Canada, having left there July 29, with a score of 46 salmon and one grilse to his credit, the largest weighing 28 pounds. Dr. Frank Clerk, his brother, remained behind, hoping to add to his already large tally (for this season,) of 92 salmon and three grilse. The doctor is credited with an achievement of an unusual character, authenticated instances of the kind being very few. He captured two fish that had previously carried away his flies! One fish had the fly in his lips, and the other in his throat. The latter fact is important as indicating that the fish was not incommoded by the hook. It helps to answer the question whether fish feel?

—A contributor in the August number of the *Atlantic Monthly*, treating on fly-fishing for salmon as an art, mentions an instance where he played his fish an hour and a half, during which time, he says: "So severe were the rushes of this fish that I found the brass ring at the end of my

rod-tip cut so nearly through by the friction of the line that I was afraid to use it again." This fish ran sixty yards at a time, and would sometimes keep the ardent angler following at a break-neck pace for 200 yards down stream, without halting. The unfortunate part of the business was that Mr. Sage did not secure his fish, his Indian having bungled in the gaffing. We never knew but one Indian living on the river referred to (the Restigouche) that could gaff a salmon decently, and that one is Larry Pecaie, a most intelligent and reliable half-breed.

NEW JERSEY.—*Carman House, Forked River, August 8.*—The last report sent you was detained *in transitu* so as to prevent its publication in time for your last issue. Since that time some improvement has taken place in the fishing, several parties happily succeeded in making good catches—the highest amounting to seventy-eight weakfish. The fish are taking the hook better than before, which gives some encouragement that there will at least be some good fishing yet. To-day the best catches were Mr. Duffy and Mr. Ives of New York, caught seventeen weakfish in the afternoon, fishing only an hour or so. Amos Bunnell, caught sixteen striped bass of good size, and Antony Parker, thirty-eight weakfish, average weight, two and a half pounds. Sheepshead are daily caught in lots of from two to twelve fish a boat, while bluefish are among the things of the past for the present. We look for good bass fishing every day.

E. H.

Barneget, Kinsey's Ashley House, Aug. 2.—On account of stormy weather and water being very thick the fishing has been very poor during the week. Sheepshead, very few boats out, best catch for one man, 12. On Saturday weakfish running very large (from 1½ to 3 lbs.) were taken in large numbers at the entrance of Double Creek Channel, some boats taking as high as 70. J. Harry Litchfield, of New York, and Mr. Wm. Williamson, of Philadelphia, took 37, 16 and 55 sea bass on three tides off the Stone Piles; they run from ¾ to 2 lbs. E. V. Comeley, M. D. Bailey and Wm. A. Yardley, of Yardleyville, Pennsylvania, 35 of same place. R. N. and J. R. Valentine, of Woodbridge, N. J., 26 weakfish. Eleven members of the Americus club, of Reading, Pa., are among the arrivals to-day.

THE FISHERIES.—The number of fishing arrivals for the week ending Aug. 5th was 93—35 from Georges, 49 from mackereling, and 9 from the Banks. Amount of Georges codfish brought in, 575,000 pounds, halibut 30,000 pounds; Bank cod 1,180,000 pounds, halibut 30,000 pounds fished. Mackerel 1,500 barrels. The seiners continue to bring in very light fares of mackerel and the supply does not begin to meet the demand. Number 1's have advanced to \$18 3-4 this week, and if the scarcity continues, still higher prices will be realized.—*Cape Ann Advertiser, Aug. 6th.*

THE WININNISH.

SPRINGFIELD, Mass., August, 1875.

EDITOR FOREST AND STREAM:—

Having ended a short season of salmon fishing on the St. Jean, one of the tributaries of the Saguenay, and finding myself so near their haunts, I determined to have a look at the wininnish and see what it was like. The previous week I had met a gentleman at Tadoussac, who had, in a day and a half, killed 43 of these fish; so that my sporting fervor was kindled, as well as my curiosity, to capture a few of this somewhat unfamiliar member of the salmon family. I found them existing in abundance at the headwaters of the Saguenay, at the foot of the Grand and Petit Discharge, where the river discharges from Lake St. John. The fish were in the great eddies on the margin of the rapids and swift water, lazily floating about on the surface of the water, showing their dorsal fins, and feeding on the natural flies which settled on the white, frothy water. They took little notice of the canoe; sometimes we could approach within ten feet of them, and, generally speaking, little notice of our flies. Altogether myself and a friend took over twenty. Nine we took weighed over 3½ pounds, although we plainly saw several much larger. It is said they are often taken as large as 6 and 7 pounds. I should mention that the two days I fished there the weather was very hot—so oppressive that I was not inclined to fish much, and for the same reason the fish may have been disinclined to bite. My guides attributed their indifference to this fact. Now, what are the wininnish? My learned friend, Mr. Whitcher, of the Bureau of Fisheries of the Dominion, says they are a "long-finned trout," or, as Agassiz called them, the "Great Northern Char." To my eye they are the same fish as the Schoodic salmon, which the latter mentioned authority called a "land-locked" salmon. And if there is such a thing as a land-locked salmon, I think the wininnish is one. They look wonderfully like their sea-going relatives lower down on the river, except in point of size. Mr. Whitcher says that the same fish exists all up through the northern water systems as far as Hudson's Bay.

I will only add for the benefit of anglers that an excursion for the wininnish is a perfectly easy and pleasant one to make. Twenty-four hours from Quebec—generally on the same steamboat—finds one at Chicoutimi, the head of navigation on the Saguenay. Here provide subsistence for camping out. Crossing the river, take a buckboard and drive eighteen miles to the house of Tommy Savard. Anglers are hospitably received by Tommy, and taken into his patriarchal family of eleven children. The next day himself, and enough of the eleven to help, will man the birch canoe and take one fifteen miles up the river to the camping and fishing ground at the foot of the Grand Discharge. Of this last birch voyage there is a portage, going up, of one mile over rocks and stones—it seems two. Returning, we left the camping ground at 8 A. M., and at 4:30 P. M. arrived at Chicoutimi. It is desirable, though not necessary, to speak a little French. Most of the *habitués* of that region speak only French. The month of July—probably the first half—is the best time to go.

B. F. BOWLES.

[The wininnish is undoubtedly identical with the land-locked salmon of the Schoodic and Sebec Lakes. It is more common in Canada than is generally known. We ascertained that they are taken freely with the fly in the Stoney Lake chain of waters, back of Peterboro, Ontario, in the month of May only, and were surprised to learn that they reach a size of ten or twelve pounds. We have photographs of these fish.—Ed.]

PERCH FISHING AT BETTERTON, ON THE CHESAPEAKE.

EDITOR FOREST AND STREAM:—

At the mouth of the Sassafras, twenty miles below Havre de Grace, is found the best white perch fishing in the country. It is a favorite resort of Philadelphians, who leave the wharf on the upper side of Chestnut street any day, at 4 P. M., by the Baltimore propellers, which, although not large, furnish excellent accommodations, arrive at Betterton by sunrise, spend a day on the fishing ground, and return by the evening boat, reaching home by six or seven o'clock next morning, being absent only an afternoon and a day. These are the white perch (*Labrax pallidus*), and here, in their natural habitat, are much more game than the same fish in northern waters, and run from a half to a pound and a half

in weight. They breed and spend the early Summer months in the fresh tributaries, but by the first of August drop down to water slightly brackish, where they remain in large schools until October. In August it seems that the bottom is covered for acres with them. The lubberly way is to fish for them with dippy bow lines, or ordinary hand lines, but the angler prefers a springy rod of ten or eleven feet, with a stiffish tip, reel, an easy running multiplier; line small and of flax; hooks long shanked and about the size of a No. 7 O'Shaughnessy trout hook. Three of the latter on snood four or five inches long, are attached to the line by loops, beginning a foot above the sinker, and are five feet apart. The sinker varies in weight from an ounce to three ounces, according to the strength of the tide. The baits are earth worms; pieces of soft or hard crabs, or even slips cut from the sides of the perch. There are known resorts of the fish, and an hour or two before high or low water, until the same time after the turn of the tide, is the time for taking them. As soon as the boat is anchored the rod is extended from sides or stern; the sinker with the baits runs the line from the reel and finds the bottom. There is a pull downward by the perch, a pull upward by the angler, and the tip of the rod is lowered; then another pull, and another perch hooked, and then a third in the same manner, when the angler reels up and lifts his fish on board. On a good day it is not uncommon for three or four fishers to kill from fifty to eighty dozen. The boats are staunch and roomy, and will, with plenty of room, hold four or five anglers. The house at Betterton—a peach port, where the boats stop—is kept by a jolly little fellow named Tommy Crew. He has made a large addition to his house, and has airy, pleasant rooms. His charges are very moderate. With the high bluffs on the eastern, and the islands (Spisutia, a celebrated one for ducks, being one of them) on the western, the fine bay for sailing, and the good fishing, it is a pleasant place of resort.

THADDEUS NORRIS.

"THIS FLY AND THAT FLY."

DAVENPORT, Iowa, July 26th, 1875.

EDITOR FOREST AND STREAM:—

I take a special interest in anything relating to the use of artificial flies, or the making of them, having used them for half a century, and for the last forty-five years made thousands of them. The article under the above caption in a recent number of the *FOREST AND STREAM*, by Thaddeus Norris, was quite to my taste, and especially so as the writer evidently understood what he was writing about. Mr. Norris thinks that Mr. Pennell "runs the thing into the ground" by reducing his variety of trout flies to the number of three. I am strongly inclined to agree with Mr. Pennell, if he will allow me to vary the size of each of these three flies so as to suit wind and water. I should not fear to compare baskets with those who want a different fly for every month. Some old practical trout fishers in Scotland would dare to curtail the varieties from three to only one, viz., a lark wing and hare's ear body, (for a small fly,) with which I have heard them say they could kill through all the season; and I have no doubt of it. Experience and observation have demonstrated to me that on certain streams to be successful you must use a small, spare fly of sober color, while on other streams you will kill better with a larger and fuller made fly of gayer tints; for instance, on the River Clyde, in Scotland, above the falls, the above first described fly is essential to success, whereas on the west coast, in those streams that come from the highlands and run right into the sea, you will be more successful with a fly two or three times the size of the former; or on any of the small lakes which abound in that country, the most of which contain trout, a good sized fly is not objectionable, regulated always by the roughness or smoothness of the surface of the water. The little experience I have had in fly fishing in the West for trout has been in small brooks in Wisconsin and Minnesota, and near to the Mississippi River, and that experience has led to the conclusion that the trout in those localities are not so nice about either the size or color of the fly offered to them as those I was accustomed to fish for in my early days elsewhere.

In reference to flies for bass fishing, I doubt not there are differences of opinion among anglers as to what is the best colors to use. I presume all who fish for bass with the fly will admit that a large fly is what is wanted. I will state, however, that the first good take of bass I had with fly was with small flies; they were some I had used for sea trout in Scotland, and they were not more than one-third the size of those I now use. As to color, I am not very particular; I would, however, prefer always having more or less bright red in them. I have been successful with a bright yellow body and light gray drake wing and red hackle. Anything that will make a good show will not fail if the bass are at all disposed to bite. For the information of the less experienced anglers who read *FOREST AND STREAM* I would state that the bass is not the only (though the principal) fish we take in this locality with the fly. During last Summer, from this time of the year till cool weather set in, I caught four varieties of bass—black, Oswego, white or striped, and rock bass—the last one not plenty, the three former very common; also pickerel, wall-eyed pike, and sunfish, and, for a variety, can't help hooking a gar sometimes. To all who desire to enjoy angling to perfection, strive to acquire the art of fly fishing for any fish that will take a fly. It has a great advantage over bait fishing, especially fishing on the bottom, where you are liable to get fast to stones, roots, and other matter, which is very annoying. Then you can always have your lure at hand—a few flies in an envelope in your pocket, (unless you wish to carry a regular tackle book.) You are saved the labor and trouble of carrying a bucket of water with your minnows, and sometimes when you want to go fishing minnows are not convenient to be had; and a further recommendation to many is that it is a great deal more genteel.

WM. GRAY.

MUSKOKA FISHING.

PORT COCKBURN, Ont., August 2d, 1875.

EDITOR FOREST AND STREAM:—

I have been spending a couple of weeks in the Muskoka Lakes, making this my headquarters, and if any of your readers want good sport they can find no better place. Maskinonge can be had in abundance by traversing a few good portages with a canoe, and Mr. Wm. Ness, of Bolton, our guide, Mr. Wm. Bowers, and myself brought home from Blackstone Lake eight fish, varying from 12 to 25 pounds in weight, in two mornings' fishing, whilst at certain hours of the day bass can be caught in any quantity, ranging from 1½ to 3½ pounds in weight. In fact we were obliged to put them in again as fast as we caught them, as we were not fishing for such small fry.

Duck, partridge (grouse) and deer are in abundance in season, and if any of your readers will put up at Hamilton Fraser's, at Port Cockburn, they will find good guides, good canoes, splendid sport and excellent treatment, at very low rates. By-the-bye, Lake Joseph abounds with salmon trout, but the Fall is the time to troll for them. Yours truly,

L. PERCEVAL.

PETERBORO, Canada, August 6th, 1875.

EDITOR FOREST AND STREAM:—

The general monthly meeting of our Fish and Game Protective Society was held at the Hoffman House, on Wednesday evening last, the 4th inst. President Ludgate took the chair at 8 o'clock, when the secretary read correspondence from Mr. John Turner, of Blairton, making enquiries for trout spawn to stock waters in that section; from Mr. Chas. Gilchrist, fishway overseer for the Rice Lake section, giving information of contemplated breaches of the game law, by parties who intend killing ducks on the Otonabee River before the 18th inst. The Society have taken action in this matter, and will place a special police on the spot at once. With other letters read was one from Mr. T. Herbert Marsh, of Toronto, informing us that a society was about being formed in that city, having for its especial object the protection of fish and game. We hope soon to hear of its successful organization through the columns of *FOREST AND STREAM*. Our Society decided to extend an invitation to Lord Dufferin, as its patron, to participate in a hunt on our back lakes this Fall, to be organized in his honor. We should be pleased to hear, through your columns, what other fish and game protective societies in Canada are doing. Respectfully yours,

C. A. POST, Sec'y.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

Aug. 18	eve. 32	10 06	9 00

THE NEWBURG REGATTA.—The Central Hudson Yacht Club held their second annual regatta in Newburg Bay on the 4th inst. The day was delightful, with as much, or more wind than was desired. The course was about twenty miles in length, and the following fine fleet of yachts started:—

FIRST CLASS.			H. M. S.		
Eureka	12 24 03	Fidget	12 31 50		
Journeyman	12 29 14	Le Roy	12 32 20		
Lorelei	12 30 50				

SECOND CLASS.			H. M. S.		
C. B. Knowles	12 12 55	Ripple	12 18 17		
Four Brothers	12 13 00	Argonauta	12 18 30		
An Revolt	12 13 55	Minnie	12 19 20		
Fidget No. 2	12 14 30	Teresa	12 19 35		
Mabel	12 16 14	Mary Emma	12 20 00		
Annie	12 16 30	Hap	12 21 36		
C. G. Davison	12 18 00	Osprey	12 22 25		
Edith	12 18 08	Clytie	12 23 45		

The Eureka and Annie met with mishaps before the ten mile stakeboat was passed. When turning the seventeen-and-a-half mile stakeboat off New Windsor, the Lorelei, of Newburg, met with her second accident this season, and was knocked on her beam ends. The following is the result as for as those yachts not thrown out of the race is concerned:—

FIRST CLASS.			Actual time.			Corrected time.		
Yacht.	H. M. S.		H. M. S.			H. M. S.		
Fidget	3 44 20		3 43 26			3 43 26		
Journeyman	3 54 22		3 54 22			3 54 22		
Le Roy	4 01 45		4 00 45			4 00 45		

SECOND CLASS.			Actual time.			Corrected time.		
Yacht.	H. M. S.		H. M. S.			H. M. S.		
Mary Emma	3 53 15		3 53 00			3 53 00		
C. B. Knowles	4 04 35		4 01 35			4 01 35		
Fidget No. 2	4 06 12		3 59 57			3 59 57		
Argonauta	4 18 30		4 15 40			4 15 40		

The prizes were awarded as follows: First class. First prize—Fidget; colors added. Second prize—Journeyman. Second class. First prize—Mary Emma, and colors added. Second prize—Fidget No. 2.

—The race between the Mary Emma, of New York, and the Fidget, of New Hamburg, for the champion pennant of the Central Hudson Yacht Club, was sailed over a twenty mile course at New Hamburg on the 6th inst., resulting in a victory for the Mary Emma. The actual time of sailing was as follows:—Fidget, 3h. 14m. 37s.; Mary Emma, 3h. 20m. The Fidget gave the Mary Emma 6m. 13s. time allowance.

ROCKAWAY YACHT CLUB REGATTA.—This is gala week at Rockaway Beach, it being the annual festival of the Rockaway Yacht Club. The rush by steamer and sail has tested the capacity of all available modes of conveyance, while the crowd has been most respectable and orderly thus far, and the programme wholly satisfactory. On Monday the first race of the day was a pair-oared race open to all, entrance free; also double seventeen feet working boats, no outriggers. The contestants being Tommy and Tatford, Bartlett and O'Donovan, Fohey and Walden, McCarthy and Raeg, and Gurnford and Murray. Tommy and Tatford got slightly the best of the start, Bartlett and O'Donovan being about a length behind, and Fohey and Walden not more than four boats lengths in the rear of the leading boat. The other two crews were close behind, and in this order, with hardly a perceptible alteration, the race was rowed to the finish. The second and last event of the day was to be a shell race between Messrs. Biglin, Ten Eyck, and Bell, for the championship of the State of New York and money prizes, the course a mile and a half and return, but as Bell did not appear at the Stakeboat, the race was virtually between Ten Eyck and Biglin. Biglin fouled at the lower stakeboat, which gave his opponent the race and the prizes. The betting was heavy on Biglin at the start.

On Tuesday the yacht club had a clam bake and ladies picnic, and yesterday a regatta for ferry and excursion boats, open to all all-comers working boats in Rockaway Bay. Of this we have no report. In addition to the attractions offered in the week's programme those at the hotels were very acceptable, each one being provided with a band, and dancing being in order. All in all, Rockaway has been voted a very desirable place to visit.

BEVERLY YACHT CLUB.—This club held their twenty-first regatta on the 2d inst. at Nahant, Boston Harbor. The wind at starting was northeast, but before the yachts reached the buoy the wind came from the southward, giving the first class a free sheet to the Granes and the second and third classes a run home before the wind.

The courses were for first class, from judge's yacht, leaving Red Buoy No. 2, off Winthrop Head, on port hand; Bell Buoy, off Granes, on port hand, to judge's yacht, 10½ miles. Second and third classes, from judge's yacht, round buoy off Winthrop Head and return, 7 miles. The result was as follows:—

FIRST CLASS.			Actual Time.			Correct Time.		
Name.	Owner.		H. M. S.			H. M. S.		
Eva	Wm. H. Bangs, Jr.	2 14 42	2 09 59			2 09 59		
Waif	E. W. Codman	2 54 05	2 52 46			2 52 46		
Queen Mab	W. H. Halsall	3 04 10						
Thecla	H. H. Buck	Not timed.						
Arrow	H. B. Jackson	Not timed.						
Ariel	W. L. Lohier	Not timed.						

SECOND CLASS.			Actual Time.			Correct Time.		
Name.	Owner.		H. M. S.			H. M. S.		
Water Lily	P. Grant, Jr.	1 45 57	1 35 04			1 35 04		
Ibis	H. C. Leeds	1 44 44	1 36 16			1 36 16		
Thetis	A. B. Denny	1 56 55	1 48 02			1 48 02		
Peri	George Lee	2 01 43	1 54 15			1 54 15		
Avis	W. C. Haskell	2 03 44	1 52 28			1 52 28		
Monarch	H. B. Richardson	2 03 45	1 53 42			1 53 42		

THIRD CLASS.			Actual Time.			Correct Time.		
Name.	Owner.		H. M. S.			H. M. S.		
Tulip	Vice Com. Ruggles	2 06 47	1 54 52			1 54 52		
Virginia	C. H. Plimpton	2 24 13	2 21 57			2 21 57		

The Frolic, N. H. Gibbs, sailed over the course with the

others; her time being nearly six minutes better than the Tulip's; but as she was not sailed by a member of the club, she could not claim the prize.

The prizes were awarded as follows: First class to Eva, Solid Silver Waiter; second to Waif. Second class to Water Lily, Solid Silver Vase; second to Ibis. Third class to Tulip, Pair Solid Silver Napkin Rings; second to Virginia. First class.—Pennant, for best actual time, won by Eva; second class, Pennant, for best actual time, won by Water Lily; third class, Pennant, for best actual time, won by Tulip. Judges: Charles Whitney, Edward Whitney, H. G. Otis, Wm. D. Hodges, W. L. Jeffries. Judges Yacht: Halcyon.

THE NEW YORK YACHT CLUB.—The Squadron passed Sunday at Newport. The run from New London to that port is said to have been the finest the club ever made. The Schooners Columbia, Mohawk, Wanderer, Dreadnaught, Idler, Alarm, and Rambler participated and arrived in the order named. Besides these, there were also the Vindex, Eva, Meta, Restless, Addie, Vision, Windward, and North Star. The fleet left New London at 11 o'clock and at 3 the leading schooners had anchored in Newport harbor.

REGATTA AT MARTHA'S VINEYARD.—Arrangements are being made for a grand regatta at Martha's Vineyard, to take place about the 20th inst. Invitations have been sent to about 200 yacht owners in different parts of the country. The course for schooners is thirty miles, and for sloops twenty miles. The prizes are a cup valued at \$1,000, to be known as the "Vineyard cup," and an elegant piece of plate. In addition to the yacht race there is also to be a purse for whale boats.

SOUTH BOSTON, August 9th, 1875.

EDITOR FOREST AND STREAM:—

One of the best races of the season came off on Saturday, that being the date of the third championship regatta of the South Boston Yacht Club. The contest was among the boats of the second class, the prizes in the first class having already been awarded to the Eva and Starlight. The breeze throughout the race was a very strong south-wester, necessitating single and, in many cases, double reefs. All the boats behaved well, and there were no accidents, although the rule prohibiting shifting ballast caused some annoyance to the smaller craft. No light sails were allowed, and even if they had been it would be hardly possible to use them with safety. Appended is a summary of the race:—

Yacht.	Owner.	Actual time.	H. M. S.
SECOND-CLASS CENTRE BOARDS.			
Queen Mab	Halsall	1 36 10	
Ripple	Macomber	1 36 01	
Posey	McKee	1 37 00	
Fannie	B. Dean	1 38 00	
Mabel	Roberts	1 39 00	
Niagara	A. Dean	1 40 00	
Unique	Stewart	1 41 00	

SECOND-CLASS KEELS.			
Unknown	Chambers	1 38 06	
White Wing	Charnock	1 44 02	
Uncle Moses	Dolbear	1 44 05	
Banshee	Orcott	Not taken.	

As will be seen above, the Ripple was the first boat in, but by time allowance the race for centre-boards goes to the Queen Mab. The Mabel and Posey each having won a race, however, one more race will be necessary to decide which is champion. For the keels, the Unknown, having won in the previous regatta, takes the prize.

The next race will probably come off some time in the latter part of the month. It looked somewhat like old times to see the old rivals, the Ripple, Fannie, Queen Mab and Posey once more sailing together. Many were of the opinion that the Ripple had a sufficient lead at the close to be declared the winner, and were much surprised at the decision of the judges to the contrary.

READY ABOUT.

PHILADELPHIA, August 5th, 1875.

EDITOR FOREST AND STREAM:—

By publishing the following you will oblige the Southwark Double-end Yacht Club and many readers of your estimable paper:—

On Monday evening, July 19th, the owners and crews of double-end yachts met at the house of G. W. Carley, No. 1227 South Second street, for the purpose of forming a yacht club. Representatives were sent from twenty yachts, and succeeded in forming the club under the most favorable auspices. The following gentlemen, well known in yachting circles, were elected as officers for the year ending March 1st:—Commodore John H. Roach; Vice Commodore, John Saunders; Rear Admiral, Valentine Schech; Secretary, John S. Pomeroy; Treasurer, Isaac Sharp; Measurer, Geo. W. Bugam.

The yachts of the club are graded into two classes, the first class not to be over fifteen feet three inches long, or over four feet six inches beam. The yachts of the first class carry a black block letter in peak of sail, the second class a red letter in the same place. Both classes carry but one sail, of any size they may deem proper.

The following yachts, with their letter attached, are now entered in the organization:—First Class (black letter)—Dot, A; A. T. Florence, B; W. R. Caldwell, C; Clara, D; Maid, E; J. Mitchell, F; Red Jacker, G; Spurt, H; J. Brugam, I; G. Fletcher, J; Wm. Thompson, K; Maggie, L; Tony T. Brown, M; John Hazzlett, N; Dido, O; Lavinia, R. Second Class (red letter)—R. Morgan, A; J. Hagan, B; G. W. Johnson, C; Josephine, D. The second class same length as first, but not over four feet two inches beam, and having round sterns.

The first regatta of the club takes place on Monday, August 23d, to Chester buoy and return—a distance of thirty miles. The prizes consist of two handsome silver pitchers for first class and one for the second class.

As we propose to give an International Regatta in 1876, we would like to hear from other clubs of like dimensions of boats. All correspondence to S. Y. C. Rooms, 1227 South Second street, Philadelphia.

JOHN S. POMEROY, Secretary.

THE INTERNATIONAL REGATTA.—This event will take place under the auspices of the Saratoga Rowing Association at Saratoga Lake on the 24th, 25th, and 26th of this month. The programme has been issued and comprises, for the first day, a single scull race for the New York State Championship and the Empire Diamond Sculls; two miles with one turn. The junior single scull race for a gold medal will be rowed the same day. On the second day will be rowed the single sculls, senior, for the President's Cup (challenge) and President's Medal; same course; also pair-oared shells, for the Interlaken Cup (challenge) and two presentation cups; three miles with one turn.

On the last day the races will comprise the double-scull shells, senior, for two gold medals; same course; also four-oared shells, for the Saratoga Cup (challenge) and four presentation cups; same course.

The total value of the prizes is \$5,000. The races are open to members of all regularly organized amateur boating clubs in the United States and Canada. Entry, \$20, at the time of entering; money returned if the boat rows. Entries must be made to the Saratoga Rowing Association, Saratoga Springs, on or before the 20th.

Amateurs only will be allowed to row, and the oarsman to be a member of a regularly organized amateur rowing

club, and one who has not rowed for money, been willing to be matched to row for money, entered or rowed in a regatta open to all comers since May 1, 1874, been engaged to instruct or train any person in physical exercises or rowing for any compensation whatsoever, been engaged professionally in connection with boats or in the use of the oar upon the water.

—Our correspondent, "Blue with a Gold Castle," writes from Nahant correcting an error in our report of the Isle of Shoals regatta. The Fearless, Corning, Foam, Halcyon, Romance, Gracie, and Shadow should have been credited to the Eastern club, and the Viva and Ray, only to the Portland.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

J. M. H., Boston.—Paper boats are made by E. Waters & Sons, Troy, N. Y. Send to them for circular, giving prices, etc.

C. S. R., Fulton, N. Y.—Will you please inform me where I can obtain a pocket map of Nova Scotia and New Brunswick? Ans. Of McMillan & Co., St. John, N. B., and McKinley & Co., Halifax, N. S.

G. G., Brooklyn.—I have a black and tan dog, and he is much annoyed with fleas. Can you inform me of a remedy? Ans. By thoroughly lathering your dog with common hard or soft soap you can exterminate the fleas.

J. H. B.—We have ascertained that the address of S. H. Hammond is Watertown, N. Y. His profession is that of the law. His two volumes on the Adirondacks, for a long time out of print, may be procured of the Waverly Publishing Company, Syracuse, N. Y.

J. H. W., Fort Wayne, Ind.—Can you send me some Creedmoor pattern targets for use from 100 to 500 yards? I want the new regulation. Your attention will oblige. Whose work on rifle practice is the best? Ans. Have sent you the Remington Score Book, containing pattern targets. Wingate's "Rifle Manual."

J. C. C., New York.—Will you kindly say in your next if Ben Butler's yacht, America, is not the same as won the Queen's Prize in England in 1853, and also beat Mr. Ashbury's yacht a few years ago? Ans. The same yacht. Her history since she was sold in England has recently been published in this paper.

S. T. T., Nashville.—Will you please inform me where the Baldwin wad is manufactured, and if manufactured in a foreign country, who is their agent in America? I cannot get them here. I like them better than any other wad for brass shells. Ans. Baldwin's wads are imported, and are sold in all gun stores in the Northern States.

T. B., Newark, N. J.—How many gentlemen compose the Oquossoc Club, what are the terms of membership, and to whom should one apply? Is game to be had about the lakes in season, and what kind? Ans. About seventy-five members at present. Initiation fee, \$300. Shepard Page, 10 Warren street, city. Deer and ruffed grouse.

J. W. A., Catskill, N. Y.—It is rumored around here that there has passed the Legislature a law preventing the shooting of rail until Sept. 1st. I have seen no notice of it, and will be much obliged if you can inform me in your next issue? Ans. We can find no law to prevent rail shooting in this State. The State of New Jersey has a good law upon the subject; the close time ends Sept. 1st.

BLUEFISH, New York.—Please state route to Little Egg Harbor, N. J., where, with whom to stop for first rate fishing; what kind; probable expense of a week's trip? Which is the best point on Jersey's shore for weak and bluefishing? Ans. Take N. J. and Long Branch Railroad, connecting at Red Bank with N. J. Southern Railroad. 2d. Bluefish. 3d. Including boats, say \$40. 4th. Barnegat Bay.

J. B. H., New York.—What kind of tackle will it be best for me to take for a week's stay at the Nonquitt Beach House, Buzzard's Bay? Also what kind of sport (fishing) may I reasonably expect there the last week of this month? Are striped bass taken near there at that time? Ans. For latest fishing news always see our weekly reports. For Barnegat Bay, see issue of August 5th.

FRANK, Cleveland, Ohio.—Will you tell me where tip-top prairie chicken shooting can be had? If near Burlington, Iowa, or St. Paul, Minn. I never saw a chicken get up, and I am anxious to find one. Ans. You can find good pinnated grouse shooting west of Burlington and at Cedar Rapids, Iowa. Our Field Editor has shot at Rudd, Floyd county, Iowa the past few years, finding good sport.

H. E. R., Harrison, N. J.—Can you please inform me where I can get a dog collar set with sharp spikes, to protect a dog against a lot of worthless curs who pitch into him everywhere? Here they are very numerous, there being no dog law. Ans. From W. T. & J. Mersereau, 62 Duane street, N. Y., you can get dog collars, which are intended to protect dogs, but any harness maker should be able to make a spiked collar.

D. C. B., Indianapolis.—Three of us wish to take a deer hunt about October 1st in Michigan or Minnesota, within two or three hundred miles of here. If some brother sportsman will drop me a line as to his knowledge of a good locality to visit, I will be under obligations. Ans. We take the liberty to refer you to Fred Pond and Richard Valentine, Wisconsin, and to J. H. Page, Grand Rapids, Mich. See also our columns this week.

CONSTANT READER, Boston.—I have a valuable setter dog about four years old whose hearing seems to have been affected lately, and I have been at a loss to account for it. On examining his ears a few weeks since I found quite a collection of dark brown substance, which I took to be wax. I then thoroughly cleaned his ears as far as I could see, supposing that was the cause of his deafness, but since that time he has not seemed to improve much, if any, in hearing. Lately I have syringed his ears with tepid water, occasionally dropping in a few drops of sweet oil, but this does not seem to have done much good so far, the collection in his ears continuing, only it is of a softer nature, and at times has the appearance of mattering or running, and has a very offensive smell? Otherwise the dog appears perfectly healthy, and has a good appetite. Can you tell me what the matter is, the cause of it, and the best course to be pursued in doctoring it? Ans. Your dog has canker of the ear. After cleaning it with castile soap and tepid water pour into the ear a solution of sulphate of copper. Thirty grains of the sulphate to four ounces of water. One application a day for a few days generally effects a cure.

P. W. T., Washington.—I have a single barrel, French breech loading shot gun, very light, which shoots Ely's No. 16 brown paper shells. What powder ought I to use to gain the greatest penetration with the least possible recoil and dirt? Ans. Without knowing the weight of your gun we would suppose that you use 2½ drachms powder and 4 oz. shot. Coarse powder makes better penetration and least recoil. None better than Hazzard's and Laffin & Rand's. What is the price of the long range, Creedmoor, breech loading rifle? Ans. "Creedmoor" rifle—Remington, \$100; Sharp, \$125. What rifle would you advise me to buy for short range target practice? How much would it cost? Ans. Frank Wesson or Maynard; price for former, \$23; for latter, \$40. What outfit would I need for fishing and hunting at Deer Park? Ans. No camping outfit is necessary. Is Ralston a better place for fishing and hunting than Deer Park? Ans. Yes. Could I get cheap board at either place? Ans. Yes. What outfit would I need for fishing at Cobb's Island? Ans. Rod and reel, bluefish squid and trolling and hand line. What double barrel breech loading gun would you advise me to buy; don't want to give over \$60? Ans. Remington, \$45.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,

[Post Office Box 2832.]

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, AUGUST 12, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, August 12.—Rockaway Yacht Club Regatta—Trotting at Rochester, N. Y., and at Burton, Ohio—Athletic vs. St. Louis, at St. Louis.

FRIDAY, August 13.—Aquatic sports, Rockaway—Trotting at Rochester, N. Y., and at Masillon and Delphos, Ohio.

SATURDAY, August 14.—Beverly Yacht Club Regatta—Creedmoor, Turf Field and Farm Badge—Base ball, Athletics vs. St. Louis, at St. Louis—Rockaway Yacht Club.

MONDAY, August 16.—Athletic vs. St. Louis, at St. Louis.

TUESDAY, August 17.—Creedmoor, Eighth Regiment Rifle Club—Trotting at Utica, N. Y., Mendota, Ill., and Orono, Me.

WEDNESDAY, August 18.—Long Island Yacht Club—Trotting at Utica, N. Y., Delaware, Ohio, and Covington, Ky.

VERY LIKE A WHALE!—The news of the remarkable accident to the steamer *Scythia* in the Irish Sea, in which her propeller blade was broken by coming in contact with an immense whale, was received with derision in Liverpool, and attributed to the fertile invention of some Yankee newspaper correspondent on board, or the result of contact with a rock when the ship was out of her course. But when the yacht *Killmany* found the whale dead off Ballycotton, the scene of the collision, and with the assistance of a tug towed the monster into Queenstown and alongside the *Scythia*, the doubting Thomases were convinced. Subsequently the whale was towed across the Channel and into the Mersey and beached, where the citizens of Liverpool could have an opportunity of examining the big fish that undertook to measure strength with a Cunader. The whale was fifty-six feet in length.

TO BUFFALO RUNNERS.—We have just been handling one of Remington's army pistols, and cannot but regard it as just the weapon to use on horseback in running buffalo out West. It is not only light and effective, a central-fire six-shooter, of heavy calibre (44) well sighted, and all that, but it also has a swivel attached to the stock, from which to sling it to the saddle or over the shoulder. It is very cheap, too—costing only \$15.50. Some 20,000 of them have been sold to a foreign government for army use.

—Fish food does not create brains; it merely strengthens them.

ANCIENT CANALS IN FLORIDA.

OUR special correspondent, Dr. Chas. J. Kenworthy, who explored Southwestern Florida last Winter, and under the *non de plume* of "Al Fresco," wrote a dozen long letters of detailed narrative for this journal, has repeatedly pressed upon the attention of our scientific men, through these columns, the importance of thoroughly examining the ancient canals and mounds that exist in that part of the Floridian Peninsula. Others of our contributors who have visited Florida, have urged the same work, and even offered to aid it with money. We are not aware that the proposition has been presented in any more direct way to those most likely to be interested. At all events, they have manifested no sign, and taken no steps toward investigation. Possibly other fields of exploration too fully engross their attention at present. What has been printed in our journal, however, has had the effect to create no small stir in Florida itself, and at a special meeting of the Florida Branch of the International Chamber of Commerce, held in Jacksonville last month, Dr. Kenworthy was invited to furnish what information he possessed relative to the canals and mounds in question. From the Secretary's report, as printed in the local papers, we gather that the long lines of unfinished canals were undoubtedly undertaken to connect the waters of the interior, including Lake Okeechobee and the Everglades, with the Gulf of Mexico, via the Caloosahatchee River and Charlotte Harbor for purposes of transportation, and also to reclaim the overflowed lands adjacent by drawing off the water. Some of these canals were on what are now islands in the harbor, having a direction in a line with the Caloosahatchee above Fort Myers, and the ends of these canals had never been open so as to admit water into them, but they are opposite and in a line with the best passage from the gulf to the harbor. The canals at the head of the Caloosahatchee had the same direction and extended some fourteen miles or over in a line to connect the Lake Okeechobee with the Caloosahatchee. Earth-works are also found in some of the streams emptying into the lake, such as the Fish-eating creek, on which Fort Centre stands.

The excavation of one canal on Pine Island, in Charlotte Harbor, is eight feet deep and forty feet wide, but had not been completed at either end, so as to communicate with the waters of the bay. At the southwest end of the canal, six very large mounds exist, which the Doctor is inclined to believe have been constructed since the excavation was made, and if a future and careful examination should establish this fact, it will lead to the conclusion that a race existed on the peninsula antecedent to the mound builders. These mounds may have been used for sacrificial or religious purposes, or for sepulchre, as there have been examined in other parts of Florida several mounds, some of which proved to have been for burial and others were connected with their religious rites and ceremonies. Some excavating tools were found along the lines of the works, made of conch shells, having a perforation through which the thumb passed while the fingers grasped the convex surface of the shell, when in use. The presence of these implements has suggested that the Indians might have been the laborers upon the works, if not the designers; but the engineering skill with which the works are planned would indicate a higher grade of intellect. All traces of iron or wooden implements would have long since been destroyed by time, whatever might have been their state of civilization. The age and size of the trees growing in and on the banks of these excavations, negative the possibility of their having been made by the early Spaniards.

Dr. Kenworthy, in a private letter to the FOREST AND STREAM, urges that it is the duty of the Smithsonian Institution to follow up this matter. It is even now solicited by circular, specimens of aboriginal weapons, pottery, skeletons, etc., to be exhibited at the Centennial, and if an examination of the Ancient canals and mounds of the Peninsula of Florida was made, might it not result in the discovery of much that would interest the thousands from afar? Compared with results, the cost of the expedition would be trifling. The Doctor has reason to believe that the Institution could secure the coöperation of the Navy Department in carrying out the investigation, and that Florida steamboat owners and railroad officials would only be too happy to extend courtesy to such an expedition. If a naturalist accompanied it many valuable specimens might be collected, more especially of birds and fishes. In Charlotte Harbor, near Pine Island, is the largest rookery on the coast, and the waters swarm with an infinite variety of fish. With regard to the canals, they might even be finished by the Government or the State and utilized, should an examination prove that the advantage to be gained would justify the expense of the undertaking.

Indeed we learn from the Jacksonville *New South* that two competent surveyors have been engaged for several months in performing the field-work in carrying out a contract with the United States Government for the survey of the lands in the neighborhood of Charlotte Harbor and the vicinity. It states that they have just returned, and bring the curious intelligence that the Everglades were dry, and that Tiger Tail and others of the Seminoles are detained on the eastern coast by the impossibility of making way through the Everglades with their canoes. Such a fact as this goes very far to prove the possibility of so reclaiming these literally swamp and overflowed lands of the Everglades—all of which, upon survey and selection, must inure to the State—as to rescue from desolation and uselessness the best sugar region of the world, all things considered.

The Jacksonville, Fla., *Press*, in noticing Dr. K's lecture, as above, says of this journal:—

"We must pay a merited compliment to the publishers of FOREST AND STREAM (the leading sporting paper of the United States, if not of the world) for the interest they have always taken in our State, and for their efforts to send us settlers, visitors and sportsmen. Its correspondents have visited, carefully examined, and honestly and accurately described the most unfrequented and inaccessible portions of our State, and to them we are indebted for much valuable information regarding what has heretofore been considered a *terra incognita*."

A PLEA FOR THE SEA SERPENT.

IN a brief paragraph last week we noticed the appearance of the sea serpent at two different times within the past fortnight, once near Cuttyhunk, off the Massachusetts coast, and again off Seguin, where it was seen by the passengers of the steamer *City of Portland*, plying between Portland and St. John, N. B. Since then we have found in the Boston *Advertiser* a letter dated at Swampscott, July 31st, the writer of which is vouched for by that paper, stating that a serpent (possibly the same one,) was seen near that place by a yachting party of six persons on that day. We quote from the letter:—

"Our party consisted of my reverend brother, Miss Mary F., L., and myself, with two sailors. We were sailing in my yacht about half way between Swampscott and Egg Rock, the sea being quite rough, when we espied a school of blackfish, or small whales, between Egg Rock and Little Nahant. While we were watching their movements through our glasses the head of an immense fish or sea monster suddenly emerged from among them, remained above water for some seconds, and fell again, causing the water to boil for some distance around it, and this performance, it repeated at intervals of perhaps two minutes.

We at once headed the yacht for the creature. When first seen it was at a distance of about two miles from us and heading toward us. I had on board a small breech loading Ballard rifle, calibre 44, conical ball, and as soon as we were within 300 yards I fired at it, but without effect. We chased it about the bay for two hours, and during that time I fired at it about twenty times at distances varying from 100 to 300 yards. Once we distinctly heard the ball strike it, but with no perceptible effect. Finally it started out to sea, and when last seen it was heading in a southeasterly direction, some four or five miles out. During all this time it was accompanied by the blackfish, some fifteen or twenty in number, one of which seemed to keep close alongside of it.

Its description, as nearly as I can give it to you, is as follows: The head reminded me of a lizard's head, long, flat on top, from two to two and a half feet across, with eyes large and prominent, set well back on the upper part, a large mouth, which we could see open occasionally. This head it raised about eight feet from the surface of the water, bringing it up slowly, and keeping it up five or ten seconds, when it would plunge back with a quick motion like a dive, and showing a small portion of the back, where we could see a pointed fin about one and a half or two feet long, standing straight up, and in front we could see the upper part of what looked like short legs, or the flippers of a seal, but it never raised the extremities from the water. Its color was a smooth, glossy black, except the under part of the lower jaw, and as much of the breast as we could see, which was white, with a distinct line of demarcation between the two colors. I could see nothing that looked like scales. We could, of course, tell nothing about the length of his body, but there must have been an immense power somewhere to enable it to raise such a head and neck slowly such a distance above the surface, and to hold it there for so long a time."

Among the many stories told of late concerning this strange creature the one mentioned by Mr. Frank Buckland deserves most attention. It was published in a late number of *Land and Water*, and the writer says, speaking from personal observation:—

"The animal resembled a serpent, and its length was about ninety-six feet. The body was thrown in a succession of undulations, or covers, eight in number, in addition to the head and neck. The motion of the animal was caused by the undulation of these curves, and was extremely rapid, and in fact it made a hissing rush through the water, quite audible from the vessel of the observer. The sea being quite still, and no wind blowing, the party observing the animal were in a sail boat, and at one time within one hundred yards, at which distance, by means of opera glasses, it could be seen very distinctly; when nearest, the sea could be plainly noticed running off its back, neck, and the back of its head, as it does from a low, flat rock which has been submerged by the waves. The curves into which it threw itself were supposed to be for the purpose of exposing as much of the body as possible to the air, as when it moved rapidly it appeared to be perfectly straight."

The writer calls attention to the close resemblance of this animal in its general character to the sea serpents so frequently reported as existing in the Norwegian fiords, and states that the resemblance to a string of barrels, one after another, hitherto noticed, was very striking. This comparison is the same as that given to the well-known Lynn Bay snake, mentioned hereafter. The snake of Mr. Buckland's is indigenous to Loch Howen. Norway has always been particularly identified with these curious tales, and if we are to believe the Bishop Pontoppidan, and the drawings of the creature published in his "Natural History," (1752,) the matter needs no further discussion, as he gives them full credence, and even describes their habits.

In the year 1845 articles appeared in the Norway papers describing a monster snake, and a full and minute account is given, and the veracity of the statement is proved (?) by the names all the prominent men, including scientists, who viewed it, being appended. The monster was seen in the vicinity of Christiansand, and also at Molde and Lunde. It entered the fiords on calm days, and was supposed to be from seventy to one hundred feet long, of a black color, smooth, and about two feet in circumference. It moved through the water like an eel, and came so near the shore that the waves broke on the beach as if a steamer had passed. On the neck hair was observed that waved like a mane in the water. Archdeacon Deintoll, in his report,

says that the people who witnessed this remarkable sight were not frightened, but observed it *carefully*, and fired shots at it, which must have taken effect, as it dove and did not appear for some time. Here certainly a mistake in observation would seem almost impossible, and we must believe that some huge creature was seen that differed from the generality of marine life known in that locality. The supposition is not in the least improbable, and it is our belief that the numerous tales that are told from time to time bearing such close resemblance to each other have in their meaning some truth yet undiscovered. Who knows but what in the far recesses of the great ocean, perfectly adapted by nature for its depth and pressure, still exists a creature allied to some of the huge monsters that ages ago roamed and spread terror on the primeval seas, the remaining link between some of the old marine reptiles and a form adapted to this later epoch, and so changed that only the eye of the scientist can perceive it? By some provision of nature this creature is enabled to live in the depths of the ocean perhaps miles from the light of heaven, seeking its food in the uttermost parts of the sea, and only at rare intervals approaching the land to reveal its huge form to the wonder of the landmen and the terror of the toilers of the sea.

It will be noticed that all the descriptions agree in the *main*. The long snake-like neck, small head, and peculiar serpentine movements are points mentioned by all who have seen the "great unknown," and this strongly points that well-known saurian, the *Plesiosaurus*, and in this connection the late Professor Agassiz writes:—

"By its disproportionately long and flexible neck, and its small, flat head, it unquestionably foreshadows the serpent's, while by the structure of the backbone and the tail, it is closely allied to the Ichthyosaurus, while its tail is shorter in proportion to the whole length of the animal. It seems probable, from its general structure, that the Ichthyosaurus moved like a fish, chiefly by the flapping, aided by the fins, while in the *Plesiosaurus* the tail must have been much less effective as a locomotive organ, and the long, snake-like, flexible neck, no doubt rendered the whole body more agile and rapid in its movements. In comparing the two it may be said that, as a whole, the Ichthyosaurus, though belonging by its structure to the class of reptiles, has a closer external resemblance to the fishes, while the *Plesiosaurus* is more decidedly reptilian in character."

Again:—

"If there exists any animal in our waters not yet known to naturalists, answering to the description of the 'Sea Serpent,' it must be *closely allied* to the *Plesiosaurus*. The occurrence in the fresh waters of North America of a fish—the *Lepidosteus*, which is closely allied to the fossil fishes found with the *Plesiosaurus* in the Jurassic beds—renders such supposition probable."

So it will be seen that the great naturalist thought it not at all unlikely that some degenerate form of primeval greatness still coursed the seas, ever and anon appearing as the sea serpent. Five years ago Hugo and his "Cuttle Fish" were laughed at, and although his tales are exaggerated, these creatures have been found within a year so huge and powerful as to establish anew the waning respect and belief in the old glories and myths of the sea, and if these huge creatures, with their arms thirty and forty feet long, have so long remained concealed and only known by the doubted legend, it is plain that hordes of huge saurians may yet roam in the heart of the sea unknown and unseen, working out their destiny to some hiatus that we know not of.

The following facts were taken from observation at the request of Sir Charles Lyell, F. R. S., F. G. S. L., etc., and are given by him as they occurred:—

"In August of 1845 there was seen at Merigomish, in the Gulf of St. Lawrence, a *sea monster*, which was estimated to be about *eighty feet* long. It was aground in still water about one hundred feet from the shore, and after showing itself for over an hour it got off into deep water and disappeared. One of the gentlemen mounted a high bank and overlooked it. It raised its head frequently from the water, and its back was either covered with humps, or they were caused by the movements of its body. The skin was dark and rough; it writhed about continually, and would bend its body into a circle and unbend it with great rapidity. It soon disappeared, and left a long, wide wake, although no fins could be seen.

In the year before this a huge creature swam past a wharf at Arisaig, near the northeast end of Nova Scotia, and was observed by Mr. W. Barry, of Pictou, who swore that he was within twenty-five feet of it, and that it was over sixty feet long and three in width. The back, like the one above, was covered with 'humps' or 'ridges,' and it moved in long undulations."

In the years 1817 and 1820 these strange appearances were quite common on the New England coast, and so much excitement was caused by it that the Linnæan Society of Boston appointed a committee to investigate the matter. It was done, and the following is the report of two well-known gentlemen, Dr. Bigelow and F. C. Gray, who were among the party:—

"The monster was party from eighty to ninety feet long, his head usually carried about two feet above the water; of a dark brown color, the body with thirty or more protuberances, compared by some to four gallon kegs, by others to a string of buoys, and called by some 'bunches on the back,' motions very rapid, faster than those of a whale, swimming a mile in three minutes, and sometimes more, leaving a wake behind him, chasing mackerel, herrings, and other fish, which were seen jumping out of water hundreds at a time as he approached. He only came to the surface of the sea in calm weather. A skillful gunner fired at him from our boat, and, having taken good aim, felt sure that he must have hit him on the head. The creature turned toward him, then dived under the boat, and reappeared about one hundred yards on the other side."

This creature was seen at a distance of *thirty feet* from the boat, and was named by the scientific men aboard the *Scoliopteryx Atlanticus*. Sketches of it were made on the spot in various positions by Col. Perkins, of Boston. He saw fourteen projections, six feet apart, and described them as being vertical flexures of the body when in mo-

tion. In color, etc., it resembled the others described, and the drawing was to the life, like the drawing made by Bishop Pontopiddan in Norway in 1752. This is without doubt the most authentic account ever given, as every man who saw it can be relied upon as making a clear statement of facts. This creature or a similar one was seen soon after in Gloucester Bay by a Mr. Mansfreid and wife. They saw it in six feet of water, and were standing on a cliff. They could not agree upon the length, one stating it at eighty feet and the other at one hundred. They judged from a pier that was near which measured one hundred feet. This gentleman afterward saw it off Lynn and Nahant, (see "History of Lynn,") and was one of thirty people who ran along the beach while the snake swam along the shore. It raised its head repeatedly as it moved along, and the gentlemen who observed it are still living and well known.

In the *Illustrated London News* of October, 1848, may be seen sketches of a huge monster, supposed to be a sea serpent, seen by the crew of H. M. ship *Daedalus* in the South Atlantic, off the coast of Africa. According to the account of Capt. McQuhae, sent to the Admiralty, the animal was seen, not in bright and fine weather, but with a murky atmosphere and a long ocean swell. It was swimming rapidly, and with its head and neck above water, and it passed so close under the lee quarter of the vessel that its features were easily recognized. The diameter of the serpent was about fifteen or sixteen inches behind the head, and the animal was never during the twenty minutes it continued in sight once below the surface of the water. The color was a dark brown, with yellowish white about the throat. It had no fins, but something like the mane of a horse, or rather a bunch of seaweed washed about its back." This statement, coming from such a source and in the form of a letter to the highest authority, caused no small stir in scientific and wonder-loving circles, and so much interest was taken that Professor Owen found it necessary to publish a long letter in the *Times*, in which he tried to prove, and undoubtedly did satisfy himself that the existence of such a creature was impossible, as no remains, bones, or other parts had ever been found to uphold it. But, notwithstanding this strong disclaimer, popular sentiment was in favor of a modern "Midgard," and every mariner longed to become a "Thor." So the two sides waged a war of opinion until 1857, when the serpent appeared again to the officers and crew of the ship *Castilian*, bound from Bombay to Liverpool. This event occurred about ten miles from St. Helena, at six in the evening, and the following is an extract from the personal report of Capt. Hovington, who did not claim that it was a sea snake, but that it was some huge marine form as yet unknown to naturalists:—

"While myself and officers were standing on the lee side of the poop looking toward the island we were startled by a huge marine animal, which reared its head out of the water within twenty yards of the ship when it suddenly disappeared for about half a minute, and then made its appearance in the same manner again, showing us distinctly its neck and head, about ten or twelve feet out of the water. The diameter of the head was about seven or eight feet in the largest part, with a tuft of loose skin circling it about two feet from the top. The water was discolored for several hundred feet from its head, so much so that on its first appearance my impression was that the ship was in broken water, produced, as I supposed, by some volcanic agency since the last time I passed the island, but the second appearance completely dispelled these fears, and assured us it was a monster of extraordinary length, which appeared to be slowly moving toward the land. The ship was going too fast to enable us to reach the masthead in time to form an estimate of its extreme length, but from what we saw we judged that it must have been over two hundred feet long."

At this "snake stock" left par in the dim distance, and has continued to rise and fall periodically ever since.

In the Bible we find mention of a sea serpent, showing that the ancients, at least, had their legends of such a creature, and in Isaiah xxvi., 1, we find: "In that day the Lord with his sore and great strong sword shall punish Leviathan, the piercing serpent, even Leviathan, that crooked serpent, and he shall slay the dragon that is in the sea." And so we might continue compiling evidence of the existence of this wonder. It is quite possible that we have not yet exhausted the sources of discovery. Every hour brings forth some new point in the workings of nature. Huge remains of primeval greatness are shown us that far exceed the complexity of our subject, and with the magic wand of science the geologist spreads before us the picture of lost eras, when each epoch swarmed with its monsters of form so stupendous that were legacy and hearsay alone our proofs, the tale would be received with no little doubt. So we know not what the sea may yet give up, and the time may come when these monuments of by-gone greatness, if so they are, may appear to us, bringing truth and conviction out of the rumors of their greatness that have gone before.

PRESERVATION OF GAME.—Among the public acts of the late session is the one relative to the preservation of game. It provides that woodcock shall not be shot except in the months of October, November, and December. Few of these birds come through this State in December or later than the middle of November; so that the law really confines woodcock shooting to about six weeks in the year. So far as the birds are concerned we cannot see the object of the law. Woodcock are migrating birds. They go South in immense numbers in October, and some in the early part of November, and if not shot in Connecticut, more of them will be taken south of this State. They fly principally at night, and comparatively few of them could be shot here under any circumstances. Some of the best—the young birds—are found here in July. Possibly the ob-

ject of the law is to prevent the trampling of corn and grain fields rather than the preservation of game. Part-ridges (the pheasant of Pennsylvania and the South) ought not to be taken till about the 1st of October; and so far as the law relates to them it is well enough. Prairie chickens are also included, but there are none in Connecticut, except those brought from the West in boxes and frozen. The shooting or taking of quail is prohibited till the 20th of October. This is quite late for shooting these delicious birds, but it will be gratifying if they can be protected. It is the hard Winters, however, when the cold weather and deep snow continue late in the season, that kill off the quail wholesale rather than the gunners.—*Hartford (Ct.) Times*.

It is only until this season that we have advocated the passage of laws prohibiting Summer woodcock shooting. During the past two seasons just about the time of the hatching of the woodcock late heavy falls of snow prevailed over the country, and most of the young birds were destroyed. And then again, the high price paid to market shooters for this game during the Summer, when the birds are young and easily killed, is an encouragement for them to kill off the few birds that have weathered the storms. Another objection to Summer woodcock shooting is the fact that many shooters are disposed to kill young ruffed grouse and call them woodcock.

UNLAWFUL SHOOTING.

MONMOUTH COUNTY, N. J., July 18th, 1875.

EDITOR FOREST AND STREAM:—

You can rest assured that I have been a very indignant sportsman at the frequent and open violations of the woodcock law during the past month of June. Indeed, it seems to me that neither city or country sportsmen have had any respect for the law regulating the close season in our county this Summer at all. There were many violations last season by resident sportsmen, and I was informed of two parties who boasted of killing from fifty to seventy-five birds before the 4th of July. This Summer it is much worse. I am glad to say, however, there are a few honorable exceptions, and from this excellent material it is hoped an efficient organization can be evoked which will do much to remedy the present system of violating the law with impunity. Many sportsmen contend, in justifying their unlawful acts, that the present law, as it affects our section, is defective, as the game leaves for its more northern feeding grounds before the 4th inst., and stoutly insist that the 20th of June should be the limit of the close season. This may be the case in some extremely dry seasons and places, yet this I am not prepared to admit. My experience in the field has been considerable with "dog and gun," and gives me ample opportunity to judge in this matter correctly, and my candid opinion is that this is not invariably the case, if at all. For the correctness of my position take this season for example. It certainly has been very dry with us during the past Spring and so far this Summer. Many streams and springs in my neighborhood are dried up, which, I am told, has not been the case before for the past twenty years. Woodcock have not left us yet, I am happy to say, as I have been out and killed a few since the 4th. It is true they are not very plenty, but the scarcity is not owing to the fact of migration but entirely to another cause, which I think it my duty to expose. If I am not greatly misinformed the birds have almost all been killed off before the 4th of July in the few choice localities we have for this noble and exquisite game bird. I am a farmer-sportsman, and after our busy season of "hay and harvest" take my vacation, enjoying my favorite amusement, and then having faithfully observed the close season, when you see young woodcock within a stone's throw of your residence almost any day as you walk over the fitting places for the beautiful birds on your plantation, and to have them mercilessly and unlawfully slaughtered in their "unclean" and helpless condition, I ask you, Mr. Editor, if I have not just cause for "righteous indignation and outcry." I say "unclean," and I think I use the word advisedly after reading your able essay upon "Unclean Creatures." By the way, I have earnestly recommended a number of so-called sportsmen to read your paper, and especially your excellent article upon that subject. I say helpless, and it is true that many young broods cannot hardly fly out of harm's way before the 4th of July. It certainly does not require much skill or afford real pleasure to kill them in this condition. I can see no good and sufficient reason to change the present law as to the time of killing Summer woodcock, but if anything is done let Summer shooting be abolished altogether, and see if it will help the condition of the case any as to violations or preservation. It will surely help the condition of the game for the table, and the skill of the marksman. One Fall woodcock is worth two Summer birds in either case.

One can do nothing single handed to prosecute violators, some of whom are your friends and neighbors—this for obvious reasons. I know one man who frankly confessed that he had killed four woodcock last Spring while shooting English snipe. He and his boys are said to be market gunners, and if they should be fined the individual doing it would be likely to receive some personal injury. I am told of another party that killed twenty-nine woodcock one day in June, and sold them for \$1 per pair. The proprietor of the farm on which they were killed was extremely indignant, and threatened prosecution, but has done nothing. I could mention other cases of resident sportsmen equally guilty of the most flagrant violations, but will forbear. These facts come to my knowledge unsought and undesired. I must speak of still another case—that of a gentleman high in authority in your city, and his companion, who were out killing woodcock in June, as I was informed by a friend that saw and knew them. I speak of these gentlemen more particularly, because it is my desire and that of other resident sportsmen to cultivate friendly and fraternal feeling between city and country sportsmen and sportsmen and farmers. Now, if these sportsmen will persist in shooting game out of season and before those having equal if not superior game rights can get an opportunity to kill a fair share of the game lawfully, it is but natural and proper a strong prejudice will be engendered against non-resident sportsmen shooting at all, even in season. I know of many farmers who will not allow strangers to put their feet upon their farms with dog and gun. These violations are a fruitful source of much of the ill feeling which exists between the farmers and sportsmen, and particularly non-resident sportsmen. It is not pleasant to allude to these parties or to these things, but something ought to be done to correct existing evils, and to protect the game and to preserve and increase it, which, if faithfully persevered in, must eventually promote the best interests of all concerned.

Expressions of individual opinions are useful, and a description of the game conditions of different sections of our country will render assistance in throwing light upon the subject and afford in time, perhaps, material and valuable correction. Permit me to commend your indefatigable efforts in connection with the International Association, and the wholesome influence your paper has exerted in forming local societies for the laudable protection and propagation of game and fish all over the country.

The *Hartford Times* says that the Sharps Rifle Company will soon remove from that city to Bridgeport, Ct., and contracts have already been awarded for the construction of the company's new buildings there. The main building is to be 250 feet long, 40 feet wide, and four and one-half stories high. The engine house will be 50 by 40 feet, the boiler house 50 feet square, and the annealing building 100 by 40 feet.

The Rifle.

CREEDMOOR.

The principal event decided at the ranges this week was the contest for the Crouch "bullseye" badge, which was shot on Saturday last. Mr. Geiger, of the Remington works at Ilion, was successful for the second time. Mr. Jewell's score was higher, but he had one less bullseye than the winner. The day was comparatively fine, the wind, although inclined to be variable, blowing down the range most of the time. The terms of the match were: fifteen shots, by members of the Amateur Rifle Club only, at 800, 900 and 1,000 yards. The following are the scores:—

Yards.	Score.	Totals.
800.....	4 5 4 4 3 3 5 5 5 4 4 5 5 4.....	65
900.....	5 3 5 5 5 3 4 2 3 3 5 5 4 5.....	62
1000.....	3 0 3 5 4 4 5 3 4 3 5 3 2 2.....	49
Bullseyes, 18.		176
800.....	0 3 4 3 3 3 3 5 2 4 5 4 5 5.....	51
900.....	4 3 5 4 5 4 4 3 4 5 4 4 4 4.....	61
1000.....	5 4 5 3 3 3 3 5 5 5 5 4 5 5.....	65
Bullseyes, 17.		177
800.....	3 5 4 3 5 4 4 4 5 3 3 4 4 5.....	62
900.....	4 5 4 5 5 4 5 3 3 4 3 5 4 4.....	61
1000.....	3 3 2 4 5 4 3 0 4 5 4 3 3 0.....	46
Bullseyes, 15.		172
800.....	0 3 5 5 3 5 5 5 5 3 5 5 5 3.....	62
900.....	2 0 4 5 5 4 5 3 0 4 3 5 3 4.....	50
1000.....	3 0 5 4 4 3 0 0 0 2 2 3 3.....	32
Bullseyes, 15.		144
800.....	2 2 3 5 4 5 2 3 2 4 5 3 5 5.....	45
900.....	4 4 3 5 4 5 0 0 3 5 4 3 2 4.....	46
1000.....	4 4 3 4 5 3 3 0 0 0 5 2 3 0.....	33
Bullseyes, 11.		134
800.....	0 2 0 0 3 3 4 4 5 4 0 4 3 0.....	32
900.....	4 0 3 5 4 0 5 3 4 4 3 0 4 4.....	48

Bullseyes, 8.		130
800.....	0 2 0 0 3 3 4 4 5 4 0 4 3 0.....	32
900.....	4 0 3 5 4 0 5 3 4 4 3 0 4 4.....	48
1000.....	3 2 4 4 5 5 0 0 4 3 5 3 4 3.....	50
Bullseyes, 8.		130

On the same day the Irish-American Club held their monthly competition for a challenge cup valued at \$50. The conditions were seven shots each at 200 and 500 yards, the first standing and the last in any position. Mr. B. Burton has been the winner on the two previous occasions, but this time he was beaten by his son, Sergeant Wing Burton, of Company K. 12th Regiment. The following are the scores:—

W. G. Burton.....	200.....4 4 4 2 4 3 4.....	25
B. Burton.....	500.....3 4 4 5 3 5 5.....	29
Gen. F. F. Millen.....	200.....4 5 3 3 4 4 3.....	26
W. H. Murphy.....	500.....5 0 3 4 5 3.....	25
E. Browne.....	200.....5 0 3 4 4 4 3.....	23
	500.....5 4 3 3 3 4 2.....	23
	200.....4 3 3 4 4 3 3.....	24
	500.....3 4 3 2 4 0 3.....	19
	200.....3 3 0 3 2 4 2.....	17
	500.....5 0 2 0 5 0 0.....	12

The ranges have been extensively used for National Guard practice. The Eighth Regiment have been particularly regular in attendance and will send a strong team to contest for the Nevada Badge. The Second Brigade commenced practice on Monday. The Fifth Brigade used the targets on Friday.

THE AMERICAN TEAM ABROAD.—A dispatch from Paris dated the 7th inst, reported the American Rifle Team in that city. They were received on the evening of the 6th, by Victor Hugo at his residence, in the Rue de Clichy. The American gentlemen were presented to M. Hugo by Theodore Michaelis in a complimentary speech, in which he alluded to their recent achievements in rifle matches in Ireland and England. M. Hugo, in welcoming the Americans, said he was very proud of America and grateful for the recognition it had given to him and his works. Col. Gildersleeve, in response, said their meeting with M. Hugo was the most pleasureable one of their trip.

—The American team and their friends arrived in London on the 9th from Paris. Several of the party were to visit Sir Henry Halford the next day at Wistow Hall, his country seat in Leicestershire, where they were to meet a number of distinguished guests. To-day all will go to Liverpool to embark for home on the steamer City of Berlin, except Mr. Bruce, who remains on the Continent.

THE AMERICAN RIFLE TEAM IN FLORIDA.—Our frequent correspondent, Major Alden, writes:—

"You may think we are so far from civilization that we would not get excited over the victory of our American team. If so, you are much mistaken, for on the eve of the 6th we had the *Evening Telegram*, the *New York Herald*, and the *FOREST AND STREAM*, all of which had a diagram of the targets and the glorious news. We can shout with your mass meeting—"Glory Hallelujah." Our bets on the result have been small, mine being one gallon of the best quality of *snake antidote*, and I only wish that I could have the pleasure of giving the team a "right smart" bumper. The result is glorious, and as the Irish have given our men such a royal welcome, let us be prepared to reciprocate. Wishing ere another year Florida may have a representative on the team, I remain, truly yours, A.

PROVINCIAL RIFLE ASSOCIATION.—We have received the programme of the meeting of this Canadian organization, which commences on the 24th of August. The prize list embraces eleven matches, of which but one, however, is open to all comers, the rest being open only to riflemen of the Dominion of Canada. The rules adopted are those in force at Wimbledon.

—The National Rifle Association of California has decided to hold its Fall meeting in September, the opening matches to be shot on the 25th of that month, at the Presidio Reservation. The Principal match will be open to teams of six from every company in the California National Guard. Two all comers' matches have also been adopted,

one at 800 yards, open to military guns; the other at 1,000 yards, any rifle within the rules.

—The delegation of Canadian Volunteers who visited Wimbledon not only carried off the cup presented by the Rajah of Colahpore and the \$400 accompanying it, but won also \$550 in money prizes, two of them taking \$60 each in the Queen's prize, and five of them \$15 prizes.

—Mr. Schoesze, of Vicksburg, Mississippi, has won a silver cup in the rifle shooting tournament just concluded at Stuttgart.

[FROM OUR SPECIAL CORRESPONDENT.]

THE WESTERN CREEDMOOR, Etc.

CHICAGO, August 4th, 1875.

EDITOR FOREST AND STREAM:—

Trap shooting among a certain class in this city is the absorbing question now. Dexter Park is being well patronized by the several clubs, and challenges are flying to and fro. As fast as one club gains the victory another throws down the gauntlet.

Speaking of trap shooting gives me occasion to refer to the Dittmar powder, which I am inclined to think, notwithstanding so much has been said in your columns through correspondents against its use, has more virtue than the conservative shot is willing to concede. That there have been accidents in its use I do not deny, but may they not have occurred with the Oriental or any other black powder? It is my impression that these accidents would have been averted had the guns been properly loaded. Mr. Edwin Thomas, gun dealer, No. 79 Clark street, George Sherman, Abner Price, and others, all first class shots, are using the Dittmar with great success, and all declare that they want nothing better. Certainly for double birds it works to a charm. Mr. Thomas says he can make up cartridges, and does every day, that none need fear to shoot. If one don't know how to work it to the best advantage it is not the fault of the powder. I am led to these conclusions from the fact that I often meet with practical men who have succeeded in its use, and will have nothing else. Besides, it is comparatively a new thing. Let us have patience. If one has succeeded others may. May not much depend upon the compactness with which the powder is driven into the cartridge? You will find if you explode a little of it in the open air that the combustion is comparatively slow, but if under confinement very quick to ignite. Is there not a happy mean in its manipulation whereby its use can be universally indorsed?

The long talk of forming a shooting club in this city has at last culminated. A very enthusiastic meeting was held at the Sherman House on the evening of the 3d with a view to a permanent organization. There were present Judge Bradwell, a well-known marksman in this city; A. G. Alford, agent of the Remington manufactory; Messrs. Blackmon, Mills, S. B. Sexton, H. H. Hardy, T. D. Williams, W. C. Dyer, John Ennis, Charles Fuller, H. H. Thale, C. H. Arnold, W. H. Roney, and others. Judge Bradwell presided, and Mr. Sexton officiated as Secretary. A committee of three, consisting of Blackmon, Alford, and Cleveland was appointed to prepare a call for a general meeting, at which the organization could be perfected. A committee of five was also appointed to draft a constitution and by-laws, to be submitted to the next meeting; also to collect information respecting the selection of a range, purchase of rifles, and other requisites. Mr. Gale offered the club the use of his grounds at Galewood, on the Chicago and Pacific Railroad, about eight miles from this city, and other places were tendered. The matter will have to be submitted for further consideration at the next meeting. This action has awakened an active interest where it was not expected. Many not supposed to have any penchant for the rifle have signified their intentions to take a place in the team; so much of this having been advanced already that its success is thereby guaranteed beyond peradventure. The West has taken up the lead thrown out by the National Association at Creedmoor. The victories in Europe of the gallant team from New York is sounded from every hill-top and echoed in every vale. The spirit is contagious, and ranges will be the order from ocean to ocean, when we may be truly called a nation of sharpshooters. B.

—An organization to be known as the Boston Highlands Rifle Club has just been formed and the following officers elected: President, M. W. Costello; Vice-President, P. O'Brien; Secretary, P. Shea; Treasurer, R. Timmons; Captain, B. Bevelander.

HOLYOKE, Mass., August 9th, 1875.

EDITOR FOREST AND STREAM:—

The report of the fourteenth field meeting of the Holyoke Rifle Club, on Saturday, August 7th, is the following:—

Name.	Score.	Total.
D. H. Smith.....	3 4 2 5 4 0 5.....	23
E. C. Smith.....	0 3 4 5 2 3 4.....	21
H. A. Smith.....	3 0 4 3 3 2.....	15
C. P. Chase.....	2 0 2 0 2 3.....	9
A. Knight.....	4 0 3 4 3 4 4.....	22
S. Chapman.....	0 3 2 2 4 0 0.....	11
H. White.....	4 5 3 3 4 5 3.....	27
G. Parker.....	0 0 2 4 3 3 3.....	15
J. Snover.....	3 2 2 0 3 5 0.....	15
R. McDonald.....	3 0 3 0 4 0 5.....	15
D. Kelton.....	4 4 2 4 0 3 0.....	18

Range, 200 yards; position, standing, off-hand; seven shots, with a possible count of 35.

In the meeting, July 31st, Mr. White made a perfect string of five bullseyes. On Thursday, the 5th, he scored 94 out of a possible 100, at 400 yards, making 16 bullseyes, (13 in succession) two 4's and two 3's. He has been using a Remington-10-pound gun, and considers its shooting qualities perfect; but the expense of shooting it puts it out of the reach of many of the members. Mr. White claims he can make equally as good scores with the 9½ pound Maynard, and the expense of cartridges is less by one-half.

RHODE ISLAND RIFLE RANGE.

PROVIDENCE, R. I., August 6th, 1874.

EDITOR FOREST AND STREAM:—

A notice was given in one of our daily papers that a meeting of all persons interested in organizing a rifle club, held at the First Light Infantry Regiment's armory, on Wednesday evening, August 4th, and agreeable to the call about one hundred and fifty of our rifle shooters were present. The meeting was called to order by John B. Anthony, Esq., President Providence Tool Co., and committees were chosen for the purpose of selecting a 1,000 yards range. Many signed a document, which shows the interest taken in securing the rules of the National Rifle Association, although not binding upon any person until the association assumes a more promising success, which it will, no doubt, in time, as it is now in the hands of the right gentlemen. A meeting will soon be called to adopt by-laws and constitution. Rifle shooting has taken a firm hold among some of the military companies, and Company C, First Light Infantry Regiment, made an excursion yesterday to Oakland Beach for a target shoot. The prize offered was a silver goblet, and was won by a member of the Boston Base Ball Club, who were there to defeat the Rhode Islanders, and they did it. WHAT CHEER.

Game Bag and Gun.

GAME IN SEASON IN AUGUST.

Woodcock.
Curlew.
Squirrels.

Snipe.
Bay birds.
Pinnated grouse, *Tetra cupido*.

Pinnated grouse, or "prairie chicken," are in season in Missouri, Illinois, and Indiana, August 15th; Wisconsin and Iowa, August 20th; Ohio, Maine, New Hampshire, New York, and Pennsylvania, September 1st; Connecticut and Kentucky, October 1st. In Massachusetts the season is close until 1876, and in New Jersey until 1880.

RHODE ISLAND.—*Providence, August 6th 1875.*—Our Summer woodcock shooting during July was very good; our friend Anthony getting about thirty in two week's shooting, and many more were taking by others in different parts of the State. We have a great many wing shots among us, and our Fall shooters are making extensive arrangements to visit the Western States for grouse and quail shooting. Our bay has not, as yet, been visited by shore birds. A few plover were seen a few days since, but they have not as yet become very plenty. The last of this month, will no doubt, bring them along. Several pigeon matches are to be tested soon, one to be shot next Monday, August 9th, at Newport, R. I. The contestants comprise many of the Summer visitors who are stopping there for the season. A few of our gentlemen shots from this city propose going down to take a hand, and if the New Yorkers don't shoot pretty well, our representatives will warm them. WHAT CHEER.

NEW JERSEY.—*Carman House, Forked River, August 2d.* The birds have not settled fairly to the feeding grounds yet, but are doing so every day, and should nothing occur we certainly will report big shooting this week. Yesterday we observed going over a bunch of large snipe about the size of curlews, marlin shaped, long bill, long legs, and perfectly white body. They passed over our heads within thirty yards; can any of your readers state what they were? Their appearance created considerable comment among baymen and others who saw them, and all agree that their "like was never seen before."

Aug. 8th.—Snipe shooting has been variable during the past week. Some days we have enjoyed good luck and others bad. The birds have not yet taken to the Fall flight, although every day large numbers pass over us. Yellow legs, marlin, curlew, dowitch, and plover come hourly in good flocks, but for some reason have for the last two or three days failed to take the stool as they should. By the latter end of this week the shooting no doubt will be first rate, and it will pay to risk a visit here about that time. The best bag was made yesterday by Messrs. Taylor, Carter, and Frame, from this house, Mr. Taylor killing without decoys over forty birds. Several other good bags were made yesterday, and all good birds. We have here to-day over fifteen gentlemen from New York and Philadelphia waiting for sunrise to-morrow for the fray. Of their success I will keep you informed. What about those white marlin (?) I asked you about last week? What were they? E. H.

PENNSYLVANIA.—*Blooming Grove Park, Aug. 10, 1875.*—The prospects for good shooting here are very encouraging. Ruffed grouse are well grown and very abundant. The recent fires in the woods have driven deer and other game into the park grounds, and they are seen in all directions. Mr. Myers took 10 black bass yesterday in Lake Giles, the largest 2½ lbs. They take live minnows greedily, but are rarely caught on artificial baits. To-day a party will start for Lake Laura to spend a few days in camp.

A duck with a curious bill, or rather with no bill at all, haunts the shores of the lake; it is a dark brown, with a ruff on the head. When followed it takes to the woods and conceals itself. Can you give us a name for it? ANCORA.

—The Norfolk Game Protective Association has just been organized at Norfolk, Virginia, and it is the intention of its promoters to secure the formation of similar clubs all over the State where they are much needed; the game laws of the State being utterly inadequate for the purposes for which they are framed. The following gentlemen were elected officers:—President, S. R. White; First Vice President, S. P. Moore, of Portsmouth; Second Vice President, W. H. Seabury; Secretary, J. C. Adkisson; Treasurer, Nathaniel Burruss; Attorney of Association, Judge Garnett; Executive Committee, Messrs. Hardy, Joseph Hobday, L. W. Tazewell, and John B. Corpew. Messrs. W. E. Taylor and J. T. Allyn have been energetic in this matter, and will endeavor to secure the passage of suitable laws by the Legislature that meets next Winter.

—A Rifle and Sporting Club has just been organized in Putnam, Connecticut, with about twenty men, including several prominent business men and some of the best rifle and shot gun experts in Windham County. The officers of the club, which is named the "Putnam Rifle and Sporting Club," are as follows: President, E. T. Whitmore; Vice-President, C. C. Walker; Secretary and Treasurer, W. A. Green; Captain, E. P. King.

The object of the club will be to bring rifle and shot gun practice to a higher standard of perfection than now exists here (which is good now); also to back up our new State law, just passed, in the protection of game. The law gives the close time for woodcock and partridge until October first; quail, October 20.

CAPTAIN BOGARDUS.—We give elsewhere a graphic account of the match in which the Captain defeated Mr. Stevens. Since then the correspondent of the New York Herald announces a match to come off at the Welsh Harp, Hendon, on the 2d of this month, between Bogardus and Shaw of Manchester, said to be the best trap shot in England North of the Thames, on the following terms: £200 a side, at 21 yards rise, 100 birds, one oz. shot, and each man to find birds and traps, and handle against his opponent. *Bell's Life* rules to be adhered to, with some slight modifications, and Mr. Edward Smith, of that journal, to act as referee. The Manchester men, who consider Shaw the best professional shot in England, have made him a favorite in the betting, and when Bogardus beats him, as he surely will, they will fall heavily. While at Manchester, Bogardus gave one of his exhibitions, astonishing the natives by killing 27 birds in 2:55. At Sheffield the Captain won a small sweepstake and made a match with a considerable landed proprietor, merely for £25, 30 birds, 21 yards rise. He also put out a challenge to shoot any man in Sheffield or vicinity for £100, and it is supposed he will be taken up by some one of the many crack shots around Sheffield.—*Turf, Field and Farm*, Aug. 7th.

—A pigeon match was shot on the 27th of July at Brownsville, Mo., between a number of experts of that place and Sedalia. The conditions of the match were five birds each, 20 yards rise, 80 yards boundary. The score on the first round was as follows:—

A. Farnham.....	5	T. J. Cummings.....	3
C. T. McElvaney.....	5	J. R. Hupp.....	3

The four gentlemen who had killed all their birds then shot off at 26 yards, and Mr. McElvaney killing two birds took first money. In shooting off the ties of four Dr. Major was successful, and the last prize fell to Mr. W. B. Parsons. The birds being limited in number, the sport was not as good as it might have been, but all were well satisfied. The Sedalia Sportsmen's Club has been challenged by that of Jefferson City, and the match will probably be shot this week. A rifle team is also in contemplation in Sedalia.

LEXINGTON, Ky., August 4th, 1875.

EDITOR FOREST AND STREAM:—

On last Tuesday a match was shot off between a few amateur sportsmen who had never shot over a trap, to decide which was the best shot. Eight single birds, 26 yards rise, 80 yards boundary.

Al Harris.....	6	R. Gilmore.....	6
M. W. Smith.....	2	C. W. Bradley.....	6
D. Fancher.....	6	J. Lamphor.....	4
S. McChesney, Jr.....	6	J. G. Yellman, Jr.....	6
D. Knoble, Jr.....	6	A. G. DeLong.....	5

Seven having tied it was decided to shoot off at one bird each at 31 yards.

Four tied again, with the following result: McChesney, 0; Fancher, 0; Harris, 1; Gilmore, 0. Harris declared the best amateur shot in the city. The boys think we are the best "scrub club" in the State. Jaubert's annual tournament commences the 10th inst. Your truly,

ONE OF THE SCRUB CLUB.

BLACK'S CARTRIDGE VESTS.

COLUMBIA, Pa., August 4th, 1875.

EDITOR FOREST AND STREAM:—

I notice in your paper of the 29th of July, among the Answers to Correspondents, that "S. W., Springfield, Ohio," wants to know the best method for carrying cartridges for a Maynard rifle. Tell him to go to Schnyder, Hartley & Graham and get one of Black's cartridge vests made to order. They are undoubtedly the best for all breech loading arms. I only wonder the Government does not adopt them. I think a man's outfit, owning a breech loader, is sadly neglected without a cartridge vest. I think you should give them a special notice in your paper.

Yours truly,

G. E. MIFFLIN.

THE DITTMAR POWDER.

DITTMAR POWDER COMPANY, OFFICE 55 KILBY STREET, }
BOSTON, Aug. 2d, 1875. }

EDITOR FOREST AND STREAM:—

We have been experimenting during the past week with our new sporting powder at the works, and the results may be interesting to your readers. After repeated trials we are satisfied that it is exceedingly difficult to burst a muzzle loading gun, even with extraordinary charges both of the powder and of shot. We are also satisfied that while a breech loader will not bear so heavy an overcharge, either of the "Dittmar" or of black powder, that the new powder is perfectly safe in the hands of the sportsmen using such guns, provided they do not heavily overload and pound and hammer down their charges. We have quite a number of correspondents who write that they have fired the powder without shot and without using a large sized wad, and the explosion did not force the wad out of the barrel. Now, if this wad was left in the barrel when the shell was reloaded, the result of the next firing, either with the Dittmar or black powder, would be a bursted gun. Several heavy rifles, loaded with black powder, one at Creedmoor, have been shattered by a small piece of rag being allowed to remain in the barrel. Accidents with firearms have been common, black powder being used all over the country, the fault being in careless handling or loading, or from some radical defect in the barrels, and not from the powder, and we are perfectly satisfied that the new Dittmar powder when used, even with a moderate degree of attention to our instructions, is in reality safer than the black. Letters are now pouring in upon us from all parts of the country from intelligent men, who are enthusiastic in praise of the new article, and we are satisfied that the few persons who have been unsuccessful in their trials have either used shot gun powder instead of the rifle, or the reverse, or have failed to comprehend the wording of our "instructions" as regards loading. We have this morning received proof beyond question that the actual strain upon a gun with the new powder is from 20 to 25 per cent. less than with black, and we hope soon to be allowed to give this proof publicity in your paper. Meanwhile we submit the following:—

JULY 24th.—Gun, muzzle loader, "Harper's Ferry," barrel, 41 inch. bore, 69-100 inch.; weight, 94 pounds.

First Trial—Powder, four drachms measure, shot gun S. A.; wads, two

large; shot, 1½ ounces No. 4; wads, two large over shot. The above charge was hard rammed with a steel rammer. Result, good.

Second Trial—Powder, six drachms measure, shot gun S. A.; wads, two large; shot, 1½ ounces No. 4; wads, two large over shot. All hard rammed. Result, good.

Third Trial—Powder, eight drachms shot gun S. A.; wads, two large; shot, 1½ ounces No. 4; wads, two large over shot. Very hard rammed. Result, good.

Fourth Trial—Powder, ten drachms shot gun S. A.; wads, two large; shot, 1½ ounces No. 4; wads, two large over shot. Hard rammed. Result, good.

Fifth Trial—Powder, twelve drachms shot gun S. A.; wads, two large; shot, 1½ ounces No. 4; wads, two. Hard rammed. Result, good.

Sixth Trial—Powder, fourteen drachms shot gun S. A.; wads, two large; shot, 1½ ounces No. 4; wads, two large. Each four drachms hard rammed with steel rammer, and last two drachms same. Result, good.

Seventh Trial—Powder, eighteen drachms shot gun S. A.; wads, two large; shot, 1½ No. 4; wads, two large. Each four drachms hard rammed with steel rammer, and last two same. Result, good.

Eighth Trial—Powder, twenty drachms shot gun S. A.; wads, two large; shot, three ounces No. 4; wads, two large. Each four drachms hard rammed with steel rammer. Result, good. Gun entirely uninjured.

JULY 27th.—Gun, breech loader; barrels, 32 inch.; bore, No. 12; brass shells; weight, 8½ pounds.

First Trial—Powder, 3½ drachms S. A.; wads, two large; shot, 1½ ounces; wad, one large. Not hard rammed. Result, good.

Second Trial—Powder, four drachms S. A.; wads, two large; shot, 1½ ounces; wad, one large. Hard rammed with a mallet.

Third Trial—Same as No. 2 only harder rammed. Result, good.

Fourth Trial—Powder, five drachms S. A.; wads, two large; shot, 1½ ounces; wad, one large. Not rammed. Result, good.

Fifth Trial—Powder, same charge of good quality black; shot, 1½ ounces; No. 12 wads. This charge injured the action by its recoil.

Sixth Trial—Powder, five drachms S. A.; wads, two large; shot, 1½ ounces; wad, one large. This charge was rammed down very hard with a mallet. Result, good.

Seventh Trial—Powder, six drachms S. C. shot gun, fine grain; wads, two large; shot, two ounces; wad, one large. Ordinary pressure in loading. Result, good.

Eighth Trial—Powder, seven drachms S. C. shot gun, fine grain; wad, one large; shot, 1½ ounces; wad, one large. Hard rammed with mallet. Result, good.

Ninth Trial—Powder, six drachms S. C. shot gun, fine grain; wads, two large; shot, two ounces; wad, one. Hard rammed and pounded. Result, good.

JULY 29th.—Tenth Trial—Powder, four drachms S. C., four drachms S. A., eight in all; wads, two large; shot, 1½ ounces; wad, one large. Very hard rammed. Result, good.

Eleventh Trial—Powder, 8 drachms S. A.; wads, two large; shot, two ounces; wad, one large. Powder rammed very hard with mallet. This finally burst the gun at the breech.

All the above trials were made in the right hand barrel.

Twelfth Trial—Left Hand Barrel—Eight drachms S. A. powder; two large wads; two ounces shot, loaded by the muzzle as shell was full; wad pressed down, not rammed. Result, good.

We also fired eight drachms S. A. powder, two ounces shot, and two large wads in a small muzzle loading single barrel gun, which cost \$7.50, ramming the powder down as hard as possible with a steel rammer; result, good; and also tried five drachms S. A. powder, with three ounces shot, and seven drachms S. A., with 2½ ounces shot with the same result.

Our experiments would seem to indicate that the "Dittmar powder" is quite as safe in a gun as the black, and that unless extraordinary pains are taken to damage the gun accidents would be solely attributable to gross carelessness and ignorance. We still adhere to our instructions not to ram the powder too hard, and advise our friends to use the same as they do of black powder. We remain respectfully yours,

THE DITTMAR POWDER CO., Boston.

Rational Pastimes.

BASE BALL—THE PROFESSIONAL ARENA.

Some very interesting and finely contested games marked the play in the championship arena last week despite the heavy fall of rain, which interfered so much with the week's programme. The Hartford club games were noteworthy contests, as the scores—1 to 1, ten innings, and 3 to 1, eleven innings—fully show. The Chicago nine showed marked improvement in their play, having one game with the Mutuals—1 to 1, five innings—and winning games from the Philadelphia club—2 to 0—and the Athletics, the latter being a ten inning game. The championship record for the week ending August 9th shows another change in the order of position of the contesting nines, the Chicagos taking a step up in front of Philadelphia, while the Mutuals fall to seventh place again. The Hartfords, too, once more tie the Athletics in won games, the latter having lost two matches last week, while the Hartfords gained two. The record is as follows:—

CLUB.	Boston.	Athletic.	Hartford.	St. Louis.	Philadelphia.	Chicago.	Mutual.	New Haven.	Atlantic.	Red Stockings.	Games Won.
Boston.....	1	5	2	5	4	5	6	3	4	1	38
Athletic.....	1	1	2	1	6	1	4	7	6	0	28
Hartford.....	0	2	1	3	2	4	5	8	3	2	28
St. Louis.....	1	1	2	1	4	3	6	2	2	2	23
Philadelphia.....	0	1	2	1	1	4	1	3	5	1	18
Chicago.....	1	1	2	3	2	1	2	2	1	4	19
Mutual.....	0	1	2	0	4	3	1	2	3	2	17
New Haven.....	1	0	1	1	0	1	0	1	0	0	4
Atlantic.....	0	0	0	0	0	0	0	2	0	0	2
Red Stockings.....	0	0	0	0	1	0	0	0	0	0	1
Games Lost.....	4	11	16	12	22	19	22	26	29	13	178

The noteworthy professional matches of last week were as follows:—

Aug. 2—Mutual vs. Chicago, at Brooklyn (5 innings).....	1 to 1
Aug. 3—Athletic vs. St. Louis, at Philadelphia.....	3 to 2
Aug. 4—Boston vs. Philadelphia, at Boston.....	4 to 3
Aug. 5—Chicago vs. Philadelphia, at Philadelphia.....	2 to 0
Aug. 6—Hartford vs. Mutual at Brooklyn (10 innings).....	1 to 1
Aug. 7—Hartford vs. Mutual, at Brooklyn.....	3 to 1

THE AMATEUR ARENA.

—The best amateur games of last week were as follows:

Aug. 2—Star vs. Buckeye, at Covington, Ky.....	3 to 2
Aug. 3—Pavonia vs. Hoboken, at Hoboken.....	9 to 7
Aug. 3—Rochester vs. Livingston, at Rochester, N. Y.....	9 to 4
Aug. 4—Chess vs. Checkers, at Hartford.....	7 to 4
Aug. 4—Rhode Island vs. Olympic, of N. Y., at Providence.....	7 to 2
Aug. 5—Boston vs. Rhode Island, at Providence.....	4 to 0
Aug. 5—New Haven vs. T. B.'s, at Bridgeport.....	6 to 0
Aug. 6—Olympic vs. Pilot, at Providence.....	7 to 0
Aug. 6—Amateur vs. Blue Stockings, at Cincinnati (11 in).....	2 to 1
Aug. 6—Lowell vs. Grafton, at Lowell (10 innings).....	6 to 6
Aug. 7—Fly Away vs. Nameless, at Hoboken.....	5 to 5
Aug. 7—Burlington vs. Archer, at Burlington, N. J.....	8 to 4

—The Centennial teams, both professional and amateur, promise to be the strongest nines that have ever entered the arena. It will be the most brilliant base ball season on record, and all the clubs seem to be making preparations already for the following season. It will be a season of ex-

periments in one sense, as the Chicagos will for the first time place a representative team in the field.

—The New York World, in an article on the coming nines, says:—"Since the Boston secession business came before the base ball public any quantity of rumors have prevailed in regard to the formation of nines for 1876. The disposition of pitchers and catchers made by Dame Rumor is in many instances as surprising as contradictory. Bond—the coming pitcher *par excellence*, it is said—has been sent to Philadelphia at \$3,000 a year by one rumor and to Boston by another. The fact is, however, that Hartford is not going to let Tommy leave, neither will they part with Allison. These two are to be fixtures, whatever else may be done in the way of changes. The great need of next season will be third basemen. There are but few up to the requisite mark, and these are Sutton, Ferguson, Warren, Fulmer, Nichols, and Gerhardt, both the latter having been showing up in fine form recently. The St. Louis have no one at third base equal to the status of the remainder of the nine, neither have the Bostons. Pitchers are looming up quite numerous of late, but the material is of the crude order as a general thing. Catchers of the White, Allison, Hicks, and Clapp order are in active demand, with but a limited supply, but the other positions can very readily be supplied from the amateur organizations. What are wanted most, however, are reliable players, men of temperate habits withal. Now that Chicago 'fancy prices' are being offered probably a full supply of all the staple articles will be forthcoming."

SYRACUSE, N. Y., July 28, 1875.—A match game of base-ball was played here to-day between the Arlingtons, of New York, and the Stars, of this city (both amateurs). The following is the score:

	Innings.	0	0	0	0	0	4	1	1—6
Arlingtons.....		0	0	0	0	0	0	4	1—6
Stars.....		0	0	0	0	0	2	0	0—2

First base by errors—Arlingtons, 5; Stars, 1. Runs earned—Arlingtons, 1; Stars, 1. Time of game—1 hour and 40 minutes.

Umpires—C. W. Hovey and J. F. Connelly. Rox.

—At the first meeting of the Seabright Athletic Association, held at Seabright, New Jersey, July 31, 1875, the events were as follows:

One Hundred Yard Race Heats.—Merrill, 12 seconds; Abbott, 11½ seconds; Merrill, 12 1-16.

The One-quarter Mile Walk.—Alexander, 1 minute 54 1-16 seconds.

High Running Jump.—Ward and Shipper (tie) 4 feet 1 inch.

Standing Jump.—Ward (won easily) 4 feet 1 inch.

One quarter Mile Run.—Merrill, 66 seconds.

One-half Mile Walk.—McCarter, 5 minutes 9 seconds.

One-half Mile Walk (for Fathers of Families).—Dr. Parmly, 5:04½; Mr. Abbott, 5:16; Mr. Shiff, distanced.

One-half Mile Run.—Kobbe, 2:39½.

Running Broad Jump.—Merrill, 15 feet 11 inches.

Hurdle Race, (150 Yards, 6 Hurdles, 3 feet 6 inches high).—Won by Merrill in 25 3-16 seconds.

Umpires: Parmly, Drayton, Princeton Athletic Club.

Committee on Arrangements: S. Alexander, J. L. Abbott.

THE TOLEDO REGATTA.—The races of the Northwestern Amateur Rowing Association commenced on the 5th inst. at Toledo, Ohio. The river was obstructed to a severe extent by driftwood, but the weather and conditions generally were most favorable. Fully ten thousand persons were present. The first race, for eight-oared barges, was a failure, only one boat, that of the Grand River Club, of Lansing, Michigan, putting in an appearance; they "walked over" the course in 14:54½. The Wah-wah-sums, of Saginaw, had entered, but withdrew.

Montgomery and Barnard, of Chicago Scullers' Club, and the Sterling Brothers, of the Floral City Club, Monroe, Mich., were the only starters for the junior double-scutt race. When about half a mile out, the latter broke at oar, leaving the Chicagos a walk over. Time, 15:49½.

For the senior sculls, two miles, Yates, of the Chicago Scullers' Club, went over the course alone in 16m. 38½s.

For the junior six-oared shells, three miles, four Detroit clubs competed. They got away in good shape and kept nearly even to the turning stake, when the Wataugas fouled on the buoy, breaking an oar. In turning the Zephyrs fouled the Excelsiors, tearing away the rudder of the latter. The Zephyrs came in first in 20m. 47½s., the Detroit second in 21m. 54s.

The four-oared junior was the next race, in which ten were entered. Seven started. A good start was effected. The Amateurs broke an outrigger half a mile out. The Farraguts had the lead to the turn, when the Sho-Wal-Cal-Matte, of Monroes, Mich., took the lead, and kept it to the finish, winning by three lengths. Time, 20m. 48s. The Farraguts were second, and the Excelsiors third.

Next came the four-oared open-to-all race. Seven entered and five started. The Duquesnes, of Pittsburg, took the lead at the start. The Excelsiors and Scullers drew out before reaching the turning stake. The Duquesnes crossed the line first. Time, 19m. 31 2-5s; Wah-wah-sums second in 19m. 52½s., and the Undines third in 21m. 30s.

The event of the day was the senior four-oared shell race, three miles. Out of seven entries six started. Half a mile from the start the Undines fouled the Detroit and caused a detention of several seconds, the Detroit turning back. The Chicagos took the lead and kept it, coming in first in 19:40½. There was a very close race between the Wah-wah-sums and the Excelsiors, of Detroit, for the second place, which was won by the former by half a length. Time, 19m. 59½s.; Excelsiors, 20m. 51½s.; Spring Lake, of Spring Lake, Mich., 20m. 31½s.

On Saturday the river was in much better condition. The first race was for the senior six-oared shells, and was won by the Wah-wah-sums, of Saginaw, in 19 minutes 18 2-5 seconds, beating the Detroit and Excelsiors, of Detroit, and the Undines, of Toledo. For the junior single-scutt four started, viz.: Standish, of the Excelsiors, of Detroit; Barnard and Montgomery, of the Chicago Scullers, and Alexander, of the Wah-wah-sums. They kept pretty even at the turn, when Montgomery took the lead, increasing it all the way down, and crossing the line five lengths ahead. Time, 20m. 53 1-5s. Standish was second, 21m. 12s.

—The Sea Cliff Yacht Club held a regatta on Wednesday last in Hempsted Harbor; open to all boats between fifteen and thirty-four feet in length. The race was sailed under Corinthian rules. The Anna won, beating the Halcyon twenty seconds, the course being twelve miles in length. The prize was a handsome set of colors presented by Mr. Beebe.

SARATOGA ROWING ASSOCIATION.

THIRD SEASON.

Grand International Regatta

ON

LAKE SARATOGA,

TUESDAY, WEDNESDAY AND THURSDAY,
August 24th, 25th and 26th, 1875.OPEN TO THE MEMBERS OF ALL REGULARLY
ORGANIZED AMATEUR ROWING CLUBS
IN THE UNITED STATES AND
BRITISH PROVINCES.

RACES.

FIRST DAY, August 24th.—Single scull Shells,
(New York State Championship.) Single-Scull Shells,
(Junior.)SECOND DAY, August 25th.—Single Scull, (Se-
nior.) Pair-oared Shells.THIRD DAY, August 26th.—Double Shells, (Se-
nior.) Four-oared Shells.All the races will be free, but an entrance fee of \$20
for each boat will be required at the time of entering,
to be paid to the Treasurer as an evidence of good
faith, to be returned if the boat entered rows in the
race.Entries must positively be made on or before the
20th day of August, addressed.SARATOGA ROWING ASSOCIATION,
Saratoga Springs, N. Y.The distance in the Scull Races will be two miles,
one mile to a stakeboat and return. In the pair and
four-oared races the distance will be three miles, one
and a half miles to a stakeboat and return.

PRIZES.

State Championship, Single Sculls—"Empire" Dia-
mond Scull, (challenge) and Presentation Cup.
Double Scull—"Two Gold Medals.Pair Oars—"Interlaken Cup," (challenge,) gift of
Frank Leslie, Esq., and two Presentation Cups.Single Sculls (Senior)—"President's Cup," (chal-
lenge,) and Presentation Medal.

Junior Sculls—Gold Medal.

Four Oars—"Saratoga Cup," (challenge,) and four
Presentation Cups.

TOTAL VALUE OF PRIZES, \$5,000.

The New York State Championship Race is open
only to members of Amateur Rowing Clubs located
in the State of New York.The Association will provide transportation for
boats and crews, from Saratoga Railroad Station to
the Lake and return, free.Good board at the Lake, for contestants, will be ar-
ranged in advance of their arrival, at the price of
\$10 to \$15 per week, according to bill of fare and ac-
commodations.

REQUIREMENTS.

Individuals or crews entering must forward a cer-
tificate, properly authenticated, containing their name
or names, name and location of club to which they
belong, class of boat and dimensions, club rowing
colors, and copy of their club by-laws, if printed.No member of a club will be allowed to compete
unless his membership dates in such club previous to
July 15th, 1875.

Amateurs only will be allowed to row.

The Association defines an amateur oarsman to be
a person who is a member of a regularly organized
amateur rowing club, and one who has not rowed for
money; been willing to be matched to row for money;
entered or rowed in a regatta open to all comers since
May 1st, 1874; been engaged to instruct or train any
person in physical exercises or rowing for any com-
pensation whatsoever; been engaged professionally in
connection with boats or in the use of the oar upon
the water.The Junior Scull Race is open to those only who
never won a Senior Scull Race.The rules of the regatta shall be those laid down in
Engelhardt's American Rowing Almanac, governing
American regattas.Protests and charges against any entry must be
verified by sworn affidavit and presented to the Qual-
ification Committee before the 25th of August.The winner or winners in every race are expected
to present to the Association their photographs, of a
suitable size for framing.

OFFICERS.

Geo. L. Ames, President; J. C. Shepherd, Vice
President; P. McDonald, Secretary; C. H. Tefft, Jr.,
Treasurer; L. H. Cramer, Ensign; W. A. Hamilton,
Captain; Wm. H. Bockes, Corresponding Secretary.

COMMITTEES.

tioner and General Agent, 39 Liberty street, New York.

Patent Pigeon "Agitator."

This AGITATOR is constructed to overcome the
trouble and annoyance caused by pigeons not rising
when the trap is pulled. By its means every bird
must rise and fly directly the trap is pulled. Every
club should have them. No ground traps are complete
without them. State rights, or the whole U. S. Pat-
ent for sale. Send for illustrated circular. jyl4t

Miscellaneous.

THE HAZARD POWDER CO., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of
strength and cleanliness. Packed in square canis-
ters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb.
kegs. A fine grain, quick and clean, for upland and
prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters
and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very
clean, shooting remarkably close, and with great
penetration. For field, forest and water shooting
it ranks any other brand, and it is equally serviceable
for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25,
12 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFG is also
packed in 1 and 1/2 lb. canisters. Burns strong and
moist. The FFG and FFG are favorite brands
for ordinary sporting, and the "Sea Shooting" FG
is the standard Rifle powder of the country.SUPERIOR MINING AND BLASTING POWDER.
GOVERNMENT CANNON AND MUSKET POW-
DER; ALSO SPECIAL GRADES FOR EXPORT,
OF ANY REQUIRED GRAIN OR PROOF MAN-
UFACTURED TO ORDER.The above can be had of dealers, or of the Compa-
ny's agents in every prominent city, or wholesale at
our office.

88 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1
to 7, packed only in sealed 1 lb. canisters. The coarser
sizes especially are recommended to owners of fine
breech-loading guns, giving great penetration with
very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to
5. Packed in metal kegs of 6 1/2 lbs. each, and in canis-
ters of 1 and 5 lbs.

AUDUBON POWDER,

Very quick. For woodcock and quail Nos. 1 to 4.
Packed in metal kegs of 12 1/2 lbs. and 6 1/2 lbs., and in
pound canisters.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes.
Sizes F.g., FFG, FFG, the last being the finest and
most used. Packed in wood and metal kegs of 25
lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and
1/2 pound.All of the above give high velocities and less resid-
uum than any other brands made.

HAVE FOR SALE

Dittmar's Gunpowder

For Shot Guns and Rifles.

Secured by Letters Patent.

FIXED AMMUNITION FOR ALL VARIETIES OF
RIFLES AND SHOT GUNS FUR-
NISHED AT SHORT NOTICE.The new patent Sporting Powder does not soil the
gun; cleans it, when you use one charge of it, after
many with black powder; no smoke—little recoil—no
loud report—high velocity. The best ever made in
this line; not to be confounded with Schultz' or En-
glish Wood Powder, or Sawdust Powder, as it is su-
perior to each.

SPORTSMEN SMOKE VANITY-FAIR.

CUT CAVENDISH

Shaved from the finest Natural Leaf, and expressly
for Meerschaum and Cigarette Smoking. Does not
make the tongue or mouth sore. Unlike any other
Tobacco.No Sportsman's outfit is complete without it. It
is now generally adopted and considered the best
smoking tobacco ever produced.

Liberal samples sent on receipt of money.

THREE MEDALS AWARDED.

Vienna, Grand Medal of Merit, 1873.

Sold generally throughout the United States.

Manufactured only by

C. Scott-breech loader, 32-inch, 10-gauge, lami-
nated steel, fine quality, with all loading tools, brass
and paper shells, etc. Imported and sold by Read &
Sons, Boston. Cost \$225, without case. Is in per-
fect order, and not sold for any fault. Has double
bolt; top snap and compensating lump; rebounding
locks. Price \$150. Can be seen at Forest and Stream
office. jelo14t

SCOVILL'S

Blood and Liver Syrup

All cutaneous eruptions on the face or body indicate An Impure Condition of the Blood, and this may or may not be SCROFULA; but in either case is nothing more than an insidious poison, that

BURNS LIKE A TERRIBLE FIRE

as it courses through the veins, sowing seeds of death with every pulsation. In this condition of things something is needed at ONCE TO CLEANSE THE BLOOD; and

Scovill's Blood and Liver Syrup

will positively effect this desideratum, expelling every trace of disease from the blood and system and leaving the skin

SOFT, FAIR AND BEAUTIFUL.

Hundreds of certificates attest its value. Price \$1 a bottle.

FOR SALE BY ALL DRUGGISTS.

Dr. Rogers's
VEGETABLE WORM SYRUP

A brave man may suffer pain, when inflicted upon himself, heroically; but he

Cannot see his Child Suffer.

There is no other malady incident to childhood that is accompanied with more indescribable wretchedness to the little sufferers than that

Produced by Worms;

and when the parent fully comprehends the situation he will not delay a moment in securing the most prompt and efficient remedies to insure the expulsion of the intruders. The remedy may be found in

Dr. Roger's Vegetable Worm Syrup.

Please bear in mind that ROGERS' WORM SYRUP is the reliable preparation.

ROGERS' WORM SYRUP is a palatable preparation.

ROGERS' WORM SYRUP is liked by children.

ROGERS' WORM SYRUP positively destroys worms.

ROGERS' WORM SYRUP leaves no bad effects.

ROGERS' WORM SYRUP is highly recommended by physicians, and is unquestionably the best WORM MEDICINE IN THE WORLD.

Price 25 cents. For sale by all druggists.

HENRY'S
Carbolic Salve.

FOR SALE BY ALL DRUGGISTS.

The wonderful celerity with which this combination of Carbolic Acid with other soothing and Curative Emollients acts, is something akin to the marvelous.

It is with pride that the proprietors call attention to the gratifying fact that

Physicians give it the highest meed of praise,

and use it and prescribe it in their practice.

NEW YORK, Dec. 22, 1869.

JOHN F. HENRY, Esq.:

Your CARBOLIC SALVE proves an excellent article, and I thank you for it. This is another evidence of the great value of the discovery of Carbolic Acid. Yours truly,

GEO. B. LINCOLN,
Pres't Board of Health.

Price 25 cents per box.

REV. R. B. LOCKWOOD'S

Catarrh Cure!

The Best Remedy Known, and Endorsed by all the Principal Physicians of the Country.

Rev. R. B. Lockwood's Nasal Douche will be found valuable in obstinate chronic cases.

Rev. R. B. Lockwood's Liver and Stomach Pills

indispose, receive the endorsement of thousands.

Price 50 cents each.

JOHN F. HENRY, CURRAN & CO., Proprietors,
8 and 9 College Place, New York.

HENRY'S
SEWING MACHINE OIL

A PURE OIL that does not gum up and has the endorsement of the principal Sewing Machine Companies.

Price 25 Cents per Bottle.

MOTT'S LIVER PILLS

It is easy enough to make a pill, but to make a good pill, ah! that's the difficulty. There are cheap, harsh, drastic pills, that are of even less benefit than a dose of salts. But a good medicine, like Dr. Mott's Liver Pills, which penetrates to the seat of disease, is a desideratum indeed. Will positively cure all diseases of the Liver. Sold everywhere. Price 25 cents per box.

Green's Oxygenated Bitters.

At certain periods of life a tonic is a necessity; but there is danger in using stimulants that injure the organs of digestion while giving temporary relief. To obviate this and present to the public a tonic free from Alcoholic Poison, Dr. Green prepared the Oxygenated Bitters, a sure cure for dyspepsia and all kindred complaints. Sold everywhere. Price \$1 per bottle.

Packer's All-Healing Tar Soap.

It cures all kinds of Skin Diseases with a most wonderful certainty; it promotes cleanliness, personal purity and general health; it is a preventive of many kinds of disease, and it is an absolute necessity in the nursery. Price 25 cents.

Miscellaneous.

Breech Loaders.

W. & C. SCOTT & SONS.

Winners of the "Turf, Field and Farm" Gun Trials.

(See issue October 3d, 1873.)

In which competition the committees have awarded our guns, First and Second for POINTS OF MERIT OF ACTION, MATERIALS, PROPORTION, AND SHOOTING QUALITIES combined, in all the four classes.

THE PREMIER GUN.

W. & C. SCOTT & SON call attention to their very FINEST weapon, combining all their recent improvements, marked on the rib between their name and London address the brand—"THE PREMIER QUALITY."

Medium and fine guns bear full name and address, and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped with name and trade mark.

W. & C. SCOTT & SON, sole makers of the Patent Top Lever, solid, Double Locking Bolt Breech Loader, bearing the full name of the firm. W. & C. SCOTT & SON caution sportsmen against imitations of their patent and name. Guns bearing the name abbreviated, or with different initials, are not genuine.

TRIAL OF SCOTT & GREENER'S NEW SYSTEM OF BORING, BY THE EDITOR OF "THE FIELD," LONDON.

(See The Field, January 30th, 1875.)

"From a comparison of the two tables it will be seen that with Walker's shot, Messrs. Scott's guns showed a marked superiority over Mr. Greener's, both in average and in the highest score made. Indeed, with the left barrel, in his third shot, Mr. Scott got a selected group pattern of 239 and a penetration of 37, equalling the highest pattern made by Mr. Greener, and exceeding the penetration of that particular shot by eight sheets."

THE GREAT

London Gun Trial,
1875.

W. W. GREENER begs to inform his numerous clients in the United States that he has been very successful in the above trial, having secured the first prize, a silver cup, value 40 guineas—class 2 for 12 bores; also winner in class 1 for 8 and 10 bores, and class 4 for 20 bores. He has won in all the classes for improved boring, which is upon a different plan to any other maker, and is far superior in the three most essential points, viz., PATTERN, PENETRATION, and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Cortlandt St., New York, is now importing my DOUBLE-CLOSE-SHOOTING GUNS to order, an invoice of which will be shipped to him on the 1st July, and can be examined about the 15th. All special orders given to Mr. Squires will be carefully filled. A full report of the GREAT TRIAL, showing the marked superiority of my guns over guns made by Dougal, Pape, Westley Richards, Tolley, Scott, and others, will shortly be published, and can be had on application at No. 1 Cortlandt St.

W. W. GREENER,

Champion Gun Maker,

St. Mary's Works, Birmingham, England.

\$10 to \$1,000 Invested in Stocks and Gold pays 200 per cent a month. Pamphlet free. Tumbidge & Co., Bankers, 2 Wall street, N. Y.

Miscellaneous.

J. D. DOUGALL'S
EXPRESS SHOT GUNS.

(Title registered.)

SHOWN by trials at Wimbledon by Editor of the Field to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thus: Circle, 30 inches; 300 pellets; average, 191; penetration, 37. The Editor's trial of Greener guns with 340 pellets of same shot and same charge of powder, gave 180, and penetration 30, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is our own invention (though founded on the American idea) and is DURABLE, a fact remarked on by the Field, that the guns tried had been in use during last season, and references permitted to the owners. Send for Illustrated Circulars to

BROWN'S
ESSENCE OF
JAMAICA GINGER

PREPARED ONLY

—BY—

FREDERICK BROWN,

PHILADELPHIA, PA

THIS RELIABLE PREPARATION, one of the oldest of American Pharmaceutical Products, still maintains its enviable reputation, and finds a steadily increasing sale without advertising, and in spite of piracy.

Its high reputation has tempted the cupidity of parties, whose only excuse for their unfair simulations, exists in the great popularity of the original, and accidental similarity of their names.

BROWN'S ESSENCE OF JAMAICA GINGER is protected by the private Proprietary Stamp of the manufacturer, which is incorporated with the steel plate label.

The attention of Druggists and the Trade generally, is called to the Price List of

ENGLISH & FRENCH
MEDICINES & PHARMACEUTICAL
PREPARATIONS,

Which will be mailed on application.

FREDERICK BROWN,

Hotels and Resorts for Sportsmen.

MOUNT JULIAN SUMMER HOTEL,
Lakefield and Stoney Lake.

VIA THE MIDLAND RAILWAY.

Health, Pleasure and the Comforts of Home Combined. This Hotel is now Open for the Summer.

This Summer resort is situated on the shores of Stoney Lake, in the county of Peterborough, Canada. Stoney Lake has lately been set apart by the Department of Marine and Fisheries for the protection of fish, and for scenery, hunting, and fishing it is superior to any of the back lakes of Canada which are easy of access. The principal fish are Salmon Trout, Maskinonge, Bass, Herring, and Perch, for which fishing permits will be granted. The game consists of Duck, Deer, and Partridge. The Lake is covered with islands, and presents the same appearance as the Thousand Islands of the River St. Lawrence. It is about twenty-five miles long and three wide. The hotel is commodious, and fitted with every appliance of comfort; it is the property of the Company, and will be managed to please its patrons in every particular. The charges are moderate, being \$1.50 per day by the week, and \$2 per day under that time. Children under twelve years of age, half price. Liquors are kept for the use of guests only, no bar being kept open for the public. The hotel is reached by the Midland Railway from Port Hope to Lakefield, thence by steamer Chippewa to Julian's Landing. E. Beatty's boats and canoes are always kept on hire. George Cochran and F. Kane will always be on hand with their guides to paddle and accompany sportsmen.

The steamer Chippewa leaves Lakefield for Julian's Landing every Monday, Wednesday, and Saturday, on the arrival of the morning train from Port Hope. On Thursdays it will connect with the excursion train on the Midland Railway.

The steamer Norseman arrives from Rochester every morning at Port Hope at 8 A. M., in time to connect with the Midland Railway, leaving Port Hope at 10 o'clock A. M. Parties from Rochester can reach the hotel in eighteen hours by water and rail for \$3.80.

Time Tables—Midland Railway leaves Port Hope at 10 A. M. and 5:30 P. M., arriving at Lakefield at 1 P. M. and 8:15 P. M. Returning, leaves Lakefield at 5 A. M. and 2 P. M., arriving at Port Hope at 7:45 A. M. and 7:35 P. M. Steamer Chippewa leaves Lakefield at 1:15 P. M., arriving at Julian's Landing at 3:15 P. M. Returning, leaves Julian's Landing at 5 P. M., arriving at Lakefield at 7:30 P. M.

Attractive Route

To the Trout and Grayling Fisheries of Northern Michigan, VIA GRAND RAPIDS AND INDIANA RAILROAD, MACKINAW GRAND RAPIDS AND CINCINNATI SHORT LINE.

The attention of SPORTSMEN and TOURISTS is invited to the many attractions offered by this line, now completed from Richmond, Ind., to Traverse City, on Grand Traverse Bay, and to Petoskey, on Little Traverse Bay. The waters of the Grand Traverse region and the North Woods of Michigan are unsurpassed, if equalled, in the abundance and great variety of the finny tribe. BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING, now attracting the attention of Sportsmen everywhere, is found only in these waters. BLACK BASS, PIKE, PICKEREL, and MASCALONGE are also found in great numbers in the many lakes and creeks of this territory.

LUXURIOUS SLEEPING AND CHAIR CARS run through from Cincinnati to Traverse City; also PULLMAN PALACE SLEEPERS from Detroit over Michigan Central and Grand Rapids and Indiana road, via Grand Rapids, to Petoskey, with SPLENDID STEAMER making DAILY CONNECTION at latter point for the Island of Mackinaw.

For Tourists' Guide, containing complete and accurate maps, with full information as to Fishing Grounds, transportation facilities, and in short all that could be desired by Sportsmen or Tourists, send to Forest and Stream office, or to the undersigned. Low Round Trip EXCURSION TICKETS good until SEPTEMBER 30th.

Tourists' and Sportsmen's Route.

THE ERIE RAILWAY.

THE ROUTE OF THE ERIE RAILWAY is peculiarly rich in the variety and extent of its scenery, and while the tourist has alternating glimpses of the beauty of rivers, gaps and mountains, the sportsman has within easy reach many localities that afford him every facility for the enjoyment of the sports of the field and stream. We enumerate a few of the pleasure resorts which crowd the line of the road.

Rutherford Park.—9½ miles from New York. Fine hotels and boating pastimes on the Passaic.
Clifton.—13½ miles from the city, overlooking the picturesque Lake Dundee.

Lake Mohonk.—A beautiful body of water 1,200 feet above the Hudson—splendid hotel accommodations.
Orange Lake.—Six miles West of Newburgh, and noted for its fishing attractions.

Milford, Pa.—About eight miles from Port Jervis. Is noted for its trout fishing, woodcock shooting and superior hotels.

Avon Springs.—Celebrated for 20 years as a resort for invalids, the waters possessing many valuable healing qualities.

Watkins Glen.—This beautiful gorge is distant 294 miles from New York, via Erie Road to Elmira. Its wild and picturesque attractions are second only in reputation to those of Niagara.

Chautauque Lake.—18 miles long, 3 miles wide; said to be the highest navigable water on the American continent, being 730 feet above Lake Erie and 1,290 feet higher than the Atlantic Ocean.

Niagara Falls.—This great cataract is reached by the direct line of the Erie Railway.

There are along the line of the road no less than Ten Large Lakes, abounding with Fish, and affording most delightful sport for black bass and pickerel. Their names are—Lakes Greenwood, Orange, Mohonk, White, Osego, Cayuga, Seneca, Keuka, Silver and Chautauque.

The following schedule will afford a partial guide to the numerous fishing localities reached by this road:

Trout Fishing:
At or near Southfields, 42 miles from New York.
" " Oxford, 52 " " " "
" " Middletown, 67 " " " "
" " Otisville, 76 " " " "
" " Port Jervis, 88 " " " "
" " Monticello, 112 " " " "
" " Milford, 96 " " " "

Black Bass and Pickerel.
At or near Slottsburg, 36 miles from New York, including Lakes Truxedo, Potague and Cedar Pond.
At or near Monroe, 50 miles from New York, including Round, Long, Mombasha and Cromwell's Ponds.

At or near Florida, 64 miles from New York. The famed Mirror Lake, is distant 1 mile.
At or near Otisville, 76 miles from New York.
" " Guymard, 80 " " " "
" " Port Jervis, 88 " " " "
" " Monticello, 112 " " " "
" " Cen. Valley, 48 " " " "
" " Seneca Lake, 291 " " " "

Tickets for sale at the General Offices of the Erie Railway Company, 124 Washington street Boston; 241, 401, 529, or 957 Broadway, New York; and 732 Chestnut street, Philadelphia. Express trains leave New York from depot foot of Chambers street at 9 A. M., 10:45 A. M., and 7 P. M.

Chicago, Milwaukee and
St. Paul Railway

Traverses a finer country, affords views of grander scenery, and passes through more business centres and pleasure resorts than any other Northwestern line. Its forests, prairies, lakes and streams, abounding with game, present unequalled attractions to the votaries of Nimrod and Walton. It is the only railway route along the valley of the Upper Mississippi. It is also the shortest as well as best route between the great metropolitan centres of the Northwest—Chicago, Milwaukee, St. Paul, and Minneapolis. Track and equipment unequaled, and its trains of palace-coaches and sleeping cars run through without change.

DIXONS & HAWKSLEY'S SHOOTING TACKLE
STURTEVANT BRASS SHOT SHELLS,
BUSSEY'S PATENT GYRO PIGEON AND TRAP,
WITH CASE, AND 100 BIRDS.

Black's Patent Cartridge Vest.

This Vest affords the best arrangement yet invented for carrying cartridges. The weight is so evenly distributed that it is scarcely felt. Cartridges can be carried with the heads down in this vest, which is of great importance when brass shells are used, as when carrying them with the head up the weight of the shot often forces the wad forward, when bad shooting is the result. In ordering send measurement around the chest. PRICE \$7.50.

The Mountains of West Virginia

Of recreation there is none
So free as fishing is alone:

I care not, I, to fish in seas;
Fresh waters best my mind do please;
Whose sweet calm course I contemplate,
And seek in life to imitate.

And when the tim'rous trout I wait
To take, and he devours my bait,
How poor a thing, sometimes I find,
Will captivate a greedy mind;
And when none bite, I praise the wise,
Whom vain allurements ne'er surprise.

FRIDAY, JUNE 4, 1875:—The Doctor and myself started from Baltimore on our annual expedition to the mountains of West Virginia, taking the 6:15 A. M. train, on the Baltimore and Ohio Railroad. We arrived at Sir John's Run about midday, and proceeded to fish the Potomac for black bass. Our intention had been to go up stream towards, if not to, Dam No. 6, but hearing that people were shooting and netting there every day, we thought we had better fish down. The Doctor used for a stretcher a silver gray fly which we found most successful last year, and for a drop fly, one which was recommended by Col. Ferguson, our Fish Commissioner, while I put on the Ferguson fly as a stretcher, and for a drop tied a yellow fly made by Captain —, of Canada, and said by him to be very good for small salmon and large sea trout, the result being that nearly all the fish took the Doctor's drop and my stretcher. We concluded that Colonel Ferguson had discovered the right fly for the Potomac at least. It is made by Abbey & Imbrie, successors to Andrew Clerk; and yellow and green colors predominate. Twice I caught two fish at one time, from which, it will be justly inferred, their size was not large. We fished down one mile, and had no rises after the sun left the water. People assured us that small salmon have been taken this Summer, which, if true, proves that these fish, placed in the Potomac by Col. Ferguson a year ago or more, are doing well so far. We saw several trot lines and felt very much tempted to follow the example of Mr. — who, we were told, while fishing here the preceding *Saturday*, whipped out his knife whenever he came across one of these abominations.

Score: 25 bass, 2 fall fish and 4 sunfish; total weight, game, fish, and all, only 11½ lbs.

At 10:20 P. M. we took the train for Oakland (Garrett Co., Md.) arriving about 3 A. M. Tuesday, June 8.—Took the 8:50 A. M. train and reached Grafton before midday. Finding that Col. C. J. Faulkner and another gentleman wished, like ourselves, to go to Phillippi, we four sought to engage a hack. However, Col. Faulkner changed his plans, and our other partner, who seemed to be a drummer, found a customer to detain him at Grafton, so we were thrown on our separate resources. We might have taken the train further on to Webster Station, but as the distance was only four miles, and the cars would not leave until three o'clock, we determined to walk, not only to that point, but to Phillippi, also, twelve miles from Webster. Our trip was intended to be a pedestrian one, and we thought we might as well settle down to the work at once. We walked the railroad track to Webster, at which point the road turns off to the South or Southeast. We now passed through a fine grazing country, and the condition of the farms, style of buildings, &c., gave evidence of a very fair state of prosperity. About sundown we reached the brow of a mountain overlooking Phillippi and Tygart's Valley river. We had passed a woman, some distance back, who asked if we were "showmen," and now, turning a corner in the road while descending the mountain, we came face to face with a man on horseback, who threw up both hands, exclaiming "Hello, boys! you look jest like a few years ago!" And so we did, particularly the Doctor with his snuff-colored fishing suit and haversack. The Valley river is a noble stream, and we were glad to learn that it was stocked with black bass a year or two ago. At the same time it was a disappointment to us to find they

were not native to this part of the river; it seems they have been prevented from ascending by a fall below Grafton. We had been taken for traveling showmen and likened unto returning Confederates; but in Phillippi various new characters were attributed to us. "Are you men in the lumber business?" "Are you drummers?" "Are you pedlars?"

JUNE 9.—The Doctor had put on a new pair of brogans yesterday and both feet were badly rubbed. To-day's walk of thirty miles aggravated the mischief to such an extent that the sores did not begin to heal for a week afterwards, and few would have had the nerve to keep on under such painful difficulties. I had worn a pair of canvas shoes, reserving my brogans until they should at least be softened and adapted to the feet by wading, and my experience determines me always to have a pair with me on these occasions. Crossing Laurel Mountain (the same which extends into Pennsylvania, and is so often mentioned in the history of Colonial times) we descended into the long and beautiful valley watered by the Upper Valley river. It must be fifty miles in length, and varies in width from a quarter of a mile to two or more, having the lofty Cheat Mountain range on the East, and Laurel, with its continuation, known as Rich Mountain, on the West. I have never looked upon a lovelier scene, particularly when the sun is low, so as to bring out more clearly, and yet, more softly, the undulating lines of the summits, and the spires and intermediate hollows, all bathed in richest blue or purple light. Beverly is rather a quaint old place, and the square, with court-house on one side, and a long, low tavern on another, makes it like one's idea of some English villages. "Are you men pedlars? &c., &c."

JUNE 10.—Started up the valley at 7:15, and soon had to cross the river, which we did by wading, as the bridge has never been rebuilt since its destruction during the war. At Huttonsville we stopped to lunch. "What goods have you men got?" Shortly after sundown we reached Jonathan Grouch's, only 18 or 20 miles from Beverly, sore feet having made this a hard day's march, however. A breast-work extending almost if not quite across the valley at this point, reminding us of a "few years ago." Here it was that Gen. Lee, in 1861, laid his plans for the capture of a large Federal force, but the disobedience or remissness, it is said, of a subordinate, enabled the enemy to escape. Near by, under an oak tree, Col. Washington, the former owner of Mt. Vernon, was killed, while reconnoitering. Col., afterwards Gen. W. H. F. Lee, had his horse killed at the same time, but mounted that of his less fortunate companion, and escaped.

JUNE 11.—About one mile further on we left the Huntersville pike and the valley, "taking up" a stream called "Elk Water." Near its head we crossed the Brady place, an open farm on the summit of the divide between the waters of the Valley and Elk rivers, and descending the road or path following the course of the Valley branch of the Elk, we finally arrived at the river at Jerry Cowger's. It will be observed that there is one Elk Water branch of Valley river and a Valley branch of Elk river, both small sized tributaries, heading a short distance apart and running in opposite directions. I need hardly state that (Tygart's) Valley river is one of those which form the Monongahela, while the Elk flows westward into the Great Kanawha. The Upper Valley river and its tributaries once abounded in trout, but they are pretty well fished out, we are told. We were now at length on our fishing ground, but Jerry Cowger gave a most disheartening account of the fish, saying there were fewer this Spring than he had ever known, and they ran smaller. He told of a party from Beverly last Summer who poisoned the stream with fish berries, and said the dead or frenzied trout were floating down for days afterwards. We heard much of these murderers during our stay, and although the people of West Virginia generally seem unconcerned at the rapid depletion of their streams, the settlers along Elk showed a great deal of indignation over this instance of wanton destruction. These fellows will yet receive a good tongue lashing at least, should they venture into this region again; unfortunately, they had cleared out before their evil deeds were

known. Cowger and his wife, an old couple, were both sick with the influenza, which seems to have been prevailing as an epidemic throughout these mountains, and we were advised to go three miles lower down, to John Hamrick's, for quarters. Encumbered as we were with all our baggage, we determined to fish on the way and were soon in the water, which we found very cold. Besides many very pretty rapids, we found fine pools, notably at the "Whittaker Rock" and "Falls of Elk," and this is probably as good fishing ground as there is on the stream. We fished rather carelessly and killed only 35 trout, weighing altogether 7½ lbs.; in size they ranged from 8 to 12 inches. We caught, it is true, many others below 8 inches, but made it a rule while on this river to keep none under that size. Putting up our rods just at the most favorable hour for fishing, we went to secure our quarters and supper, at John Hamrick's.

JUNE 12.—In the morning it rained quite hard, but we did a little fishing before dinner, and more after. For at least two hours I steadily whipped the magnificent pool below the falls in the hope of striking at least one of the large trout which are said to congregate there waiting for a rise in the water. I might have been successful had I persevered, but left the pool before sundown, which is the time when these big fellows begin to forage. My best sport was in securing two ten-inch trout at once, which I succeeded in doing after many minutes' careful work. Passing down, my stretcher fly caught on a rock quite across the stream, and not liking to sacrifice another fine cast (I had already left one on a sunken log at the falls), lost the time between sundown and dark in endeavoring to get free. Meanwhile the Doctor had taken supper and then visited the pool nearest the house, catching several very good fish in rapid succession, the largest (14 inches) weighing over a pound, and the others not much smaller. Score for the day, 36. So far we had fished carelessly and rather in the way of experiment, having made up our minds to get to work in earnest the next week; when, however, we were to be disappointed.

SUNDAY, JUNE 13.—Hamrick announced his intention of going to Beverly with his oldest son for two days, and hinted that the women folk did not altogether like the presence of strangers during the absence of their natural protectors, so we passed down the river seven miles, to his brother's, Ben Hamrick, sometimes called "Trigger Ben" or "Little Ben," to distinguish him from "Big Ben," the former living on and near the mouth of Burgoo creek, and the latter on Leatherbark, which comes in two or three miles below. Elk river here becomes so large and we saw so many bass and other kinds of fish that we argued little prospect for trout.

JUNE 14.—After breakfast I retraced the path for a mile and tried a noble pool we had observed the day before. I spent a couple of hours here, changing my flies until I had nearly exhausted the resources of a well stocked book, but in vain. Black and red gnats, spinners, cochy bondhu and duns of all kinds would not provoke a rise. I also put on a small English minnow with no better success. Finally I tried for bass, both with the fly and Buel spoon, but there was no response. I then waded down, casting alternately for trout and bass, but caught only one chub. By dinner time I was at the mouth of Burgoo, with an empty basket, and only took two or three on my way up. The Doctor had also taken a couple just by the house, having remained there to nurse his sore feet. I reported there was no fishing in this part of the river, in which opinion he concurred on general principles and observations. After dinner I thought I might as well seek some amusement up Burgoo, which was said to swarm with fish, seldom exceeding the length of ten inches, however. I went up about three miles and found no pools, the stream being a uniform shallow rapid. I was told afterwards that less than half a mile beyond the stream became a succession of deep, dark holes which were fairly alive with trout. As it was, I returned with 39, between six and nine inches, (having set aside our rule for once for the sake of meat), and I am sure I threw back as many as one hundred, most of which were about six inches. By the way, our practice

of returning small fry to the water gave great amusement to the mountaineers—and friend Collins in particular, who was working on the place, would break out at regular intervals, after "studying" for a while, with "And so you throw back the little fellows! Ha! ha! ha!" I doubt if exhortations—which were constantly made—to the people to do likewise, had any serious effect. Shortly after my return the Doctor came with four fine trout, taken in the Elk near the house. He had gone down without his net, not expecting sport, and found trout of large size rising all over the pool. He had struck a number which he had lost in wading ashore to land them in the absence of his net. We went to rest, therefore, with bright anticipations for the morrow.

JUNE 15.—Alas, it began to rain shortly after we commenced to cast, and poured steadily all day, and at night besides. In vain I stood, and sometimes sat, on a ledge with my legs dangling in the water, protected as to my other parts by an immense overhanging rock, casting and resting by turns. Evening came, but even then the trout would not come to the surface with such a rain beating it. Score, 1 trout and 1 chinquepin perch.

JUNE 16.—Still raining, and the streams a "booming" torrent. Talked about bears, "painters," rattlesnakes, potato bugs, &c. There are few settlers in this part of Webster Co., and they are nearly all along Elk. Up Burgoon, for instance, there are no settlements whatever, the country being an unbroken wilderness for thirty or forty miles to Greenbriar or Greeley, the latter river being only eight miles, however, in another direction. Bears are therefore very numerous and often play havoc with the sheep. Hamrick's family had had a fine view one moonlight night of a bear in full chase after his sheep on the hill-side just opposite the house. Deer, of course, abound, and there are many "painters" and some wolves. Elk are no longer seen. Rattlesnakes are often killed, particularly by singing parties (*i. e.*, getting ginseng). Wonderful sang patches found in the mountains and lost again, although carefully sought, form the staple of many of the simple legends of these parts. The bear and panther stories were of the usual sort. Heard of a device for deceiving the potato bugs. "You make your patch with the hills nice and sharp, and then slip away and plant your potatoes somewhere in the woods; the bugs will sit on the nice sharp hills until they starve watching for the potatoes to come up."

JUNE 17.—The period of our banishment having expired, we concluded to return to John Hamrick's, hoping that by evening the stream would be low enough there for the fly. We could not have crossed the first ford, but fortunately Ben Hamrick was going to Valley Head on "Pete," a stout mountain horse, and after crossing himself, with his load of sang, &c., Pete was driven back and carried us over, riding double. Here we parted from Ben Hamrick—as fine a fellow as we have seen in the mountains. At the next ford we passed over in a canoe, but we managed to wade the last crossing, although the people thought we could not possibly do so. We reached John Hamrick's before dinner time and held a council of war. It seemed certain that the Elk would not be low again for a day or two, and as we had marked out rather an extensive programme, and our time was limited, we reluctantly decided to turn our backs on this stream and push for Dry Fork. We did not, therefore, have one-half the fishing we anticipated on Elk, but had the satisfaction of proving it to be a fine stream, and reasonably hope for much better luck on our next visit. The people all agreed, however, that the stream is sadly altered from what it was a few years back, when one needed only to skitter a coarse naked hook on the water to take all the fish he wanted, and when trout of fifteen, sixteen and eighteen inches, or more, were not very uncommon. Elk river runs entirely underground for a distance of five miles (except when swelled by rains) reappearing like a vast spring just above Jerry Cowger's. Very many streams in West Virginia are like it in this respect. After dinner we set our faces in the direction of Dry Fork of Cheat, leaving Elk at Jerry Cowger's passing up its valley branch and descending the Elk water, which, as before stated, is not a tributary of Elk but of Valley river. A raven had croaked over our left in a most dismal way while we were crossing the Brady place, perhaps an omen of the storm which presently gathered fast and dark. First we had a violent wind, making us apprehensive of falling trees, and then a heavy rain, with thunder and lightning. It was nearly dark when we once more entered the valley at the mouth of Elk Water and knocked at the door of our former host, Mr. Crouch. He had retired for the night, but fortunately Mrs. Crouch had not, who quickly set before us a supply of bread and butter and milk, with a dish of fragrant wild strawberries for desert. We had made to-day about 25 miles.

JUNE 18.—We reached Beverly about four o'clock (distance, 18 or 20 miles) and were glad to find Baltimore newspapers for one week awaiting us at the post office. Here we were told of a new road, part cut out and part just blazed, to the sinks of Gandy, and this we straightway determined to take, instead of crossing over from Beverly to Soldier White's, on Dry Fork, fifteen miles lower down—for Gandy is simply the main branch of the upper Dry Fork stream. Leaving Beverly at 5 P. M., therefore, we pushed on, six miles, to Billy Pritt's, some distance up the Cheat Mountain. We had walked to-day about 25 miles.

JUNE 19.—Cheat Mountain is rather ugly to cross, but we descended the other (Eastern) side in good condition. Here we met a party of four or five horsemen returning from the work of blazing out the new road, and as they agreed that we could not possibly ford Cheat river on foot, we engaged one of them to ride back a couple of miles and put us over. We found the river formidable enough from the strength of current, but think we could have managed it, as we did Elk. The main branch of the Cheat, or Shafer's Fork, is very long and rough, being hemmed in between two mountains, and does not receive a single tributary of any considerable size in all its course, differing notably in this respect from the Dry Fork, which is formed by or receives half a dozen streams of nearly equal size, Gladly, Laurel, Gandy, Red creek, Otter and Blackwater. Higher up there are trout, but it has been much fished, while at the point where we crossed, and below, black bass abound, called perch throughout this State. We had no time to try any experiments on them, for we knew our walk to-day was to be a very toilsome one over a succession of parallel mountain ranges. First, therefore, we went up Shafer's Mountain and descended to Gladly Fork, and finding on it the last (and only) settlement in this direction, (it requires but one settler to make a "settlement") we stopped a while for dinner. We saw some fishermen "packing" fish back to Philippi or its neighborhood, but they

reported the trout in Gladly neither numerous or large. To pack fish, is to salt them on the stream and carry them home to be eaten leisurely for two or three weeks afterwards like herrings, and this practice is one cause of the deterioration of the West Virginia streams. We were constantly asked how we intended to pack our fish, being on foot. After dinner we ascended Middle mountain and on the other side crossed Laurel Fork, out of which hundreds of small trout in a day have been taken this Summer by parties from Beverly and beyond. We finally got on Rich Mountain (a different range from the Rich Mountain mentioned before as a continuation of Laurel) and lost our way from the new road, so that it was nearly dark when we reached Spanagle's, half a mile from the sinks of Gandy. "Thought you men were pedlars, &c." We had made 25 miles or more. The elevation of this region may be judged from the fact that there was a white frost the morning before, and, indeed, in some places a skim of ice.

JUNE 20.—Our original intention was to wait until Monday and then fish down Gandy from the sinks of Armentrout's, our stopping place in former years, but we were so strongly advised not to do so, the distance by the stream being from 17 to 20 miles, and the way, in places, very rough, with not a settlement between, that we reluctantly abandoned the idea, particularly as we would be much hampered by our baggage. We therefore determined to spend an hour or two in examining the sinks and then take the short path to Armentrout's down the Dry Fork valley proper, which runs nearly parallel with the Gandy Valley, the two coming together just at Aaron Armentrout's. Now the sinks of Gandy deserve a better examination than we made and a longer description than I have space for here. Next year we propose to pass through, and I may do more justice to the subject then. We found to our surprise that one may pass entirely through with little inconvenience, there being only a few places where it is necessary to stoop. We first went in about one hundred yards, where the stream runs under a shoulder of Alleghany Mountains, and found the cave so far to be about twenty feet wide and as high; in some places much wider and higher. We afterwards entered the mouth, a mile below, and the cave was of the same character, having also many side chambers, and we saw a fine specimen of the whole. There are many large caverns throughout this region, some well known and more or less intimately explored, and doubtless many more remain to be discovered. None, however, are like this in being a natural channel for a stream also. At the lower mouth and lying just inside is a long dark pool, which I felt tempted to try for a large trout, but our rule was to make no casts on Sundays. We were told that the stream and cave were discovered by a man named Gandy from the South Branch, who here spent a year during the revolutionary war in order to avoid military service. At ten o'clock we left the sinks, passed over a "low place" into the Dry Fry Fork Valley and went leisurely down, arriving at our old friend Armentrout's about five o'clock and meeting a cordial reception.

JUNE 21.—Dry Fork and Gandy come together in Armentrout's meadow. Above this point the Dry Fork runs underground for half its course and therefore affords little fishing, although trout are said to pass freely in and out. Below the junction the stream goes by the name of Dry Fork (from its still sinking in the ground in places) until it unites with Shafer's Fork, or main Cheat, thirty odd miles down. We spent to-day fishing about one and one-half miles up Gandy and back. I think the trout have fallen off both in numbers and size since last Summer, and particularly since our first experience of the stream two years ago. The Doctor admits the difference in size, but not the falling off in numbers. Our rule on this stream is to throw back all fish under seven inches, and we therefore saved only 78 which toed this mark. We are credibly informed that some years back trout might be taken twenty inches long, but fourteen inches is a rather unusual length now. It is sad to hear of the way in which the trout streams of West Virginia have been depleted, and soon they will be nothing like even what they now are. And no wonder. Last Summer the water was unusually low, and everywhere we found the pools filled with green bushes where the fish had been penned and the last one ignominiously captured. At one place we saw six men and boys standing in a circle "dulling" them out, (*i. e.* with a wire loop on the end of a long pole), a horseman below driving the school back whenever they would break through. The ring leader of this party was a man who commanded a company of "Swamp Angels" during the war, composed of certain fellows of the baser sort, who, under the pretence of military service, kept the whole Dry Fork Valley and adjoining regions in a state of terror and wretchedness. One of them communicated to us the information that if a stick be peeled white and laid on the bottom, a trout cannot be induced or made to pass it.

The people here assert that the black snake is a mortal enemy of the rattlesnake, and that encounters have been witnessed, in which the former has been uniformly successful.

JUNE 22.—We went down to Isaac Roy's, about fourteen miles, fishing occasionally, but not doing justice to the stream. Trout fishing ends some five or six mile above Roy's, and it is said the black bass are yearly ascending higher, which, if true, I take to be a sign, and not a cause, of the gradual disappearance of their betters. I have already mentioned that the Dry Fork, although now quite a stream, sinks and runs underground, in places, except when the water is high. In Summer, both above and below Soldier White's, you may pass for two or three miles seeing nothing but a dry rocky bed. After several preliminary showers, the rain set in steadily at four o'clock, and we and all our belongings got a good soaking before reaching quarters. Score, 60. Fish are nowhere so well cooked as at Roy's.

JUNE 23.—About a mile below, Dry Fork receives Red creek, so called, and well named, from its color, even the foam having a reddish tinge, particularly in high water. We had fished a part of this stream hurriedly last year with very good success and we were relying on it for some of our best sport this Summer. Unfortunately, the unprecedented lateness of the season and the recent heavy rains spoiled our calculations, and we returned to Roy's before dark with but 23. In one of the lower deep pools, towards evening, I struck a fish which carried away my entire cast, but whether it was one of the two or three pounders which are said to inhabit here, or whether I was indebted to the strength of the current, (it was at the head of the pool), or my own unskillfulness for the loss, I will not undertake to say. I should have mentioned before, that both on Elk and Dry Fork we made a fair trial of the

Mullaly flies, and our experience was that the arrangement of the feathers over the point often prevented the hook from taking hold in striking. We had some very small and neat flies, made for us by Captain —, of Canada, but the water was not fine enough to prove their excellence, and we held them in reserve, except the coachy bondhu and haro's ear and yellow. The flies, which were obtained from Poultney & Trimble, in Baltimore, answered all our purposes on this trip. Both on Elk and Dry Fork the people believe in the existence of valuable lead mines, and Roy says that his grandmother, (I think) who was held in captivity for some time, reported that the Indians were in the habit of going up Red creek and returning with lead which they moulded into bullets. On my narrating to him the story of the boy who was about starting from a block-house to kill a turkey gobbling on the mountain side, when he was stopped by an old hunter who went instead, and came back with an Indian scalp (see History of Virginia), Roy exclaimed "Yes, yes; I know all about that; it was my grandfather," or other relative. There are two small mounds just by his house, from one of which bones have been dug.

JUNE 24.—We passed down Dry Fork to Goff's, a mile below the mouth of Black Fork. The country is so rough that for twelve miles nothing but a bridle path has been made as yet, and traveling is very fatiguing, especially over the Flannigan Mountains. Saw two coons and several pheasants. Last year we saw a duck swimming out from shore with three young ones perched on its back, a mode of locomotion I had never seen used before. I also observed a large eagle hovering over another duck cowering among the stones. Here we considered our trout fishing ended, for after our late disappointment in Red creek, we did not feel much in the humor for trying the only other stream within our reach, Otter Fork, a very rough stream some three miles distant, in the heart of the mountains. Elk Run, Roaring Run and Coburn, it is true, contain a good many trout, mostly of small size, but they are unsuitable for fly fishing. As for the Blackwater, which here empties into Dry Fork, we had last Summer, ascended it five miles from its mouth, but found no trout in that part of this famous old stream. Nor do I think the Falls, six or seven miles up, worth visiting any longer, except for the sake of magnificent scenery, and it would have cost us a hard day's journey to get there—indeed, the way is almost impracticable except at low water. The last time I was there (in 1873) I had poor success—none with the fly, and I think its glory has departed. At its head, away up in Canada, in 1871, I found the fish to swarm like minnows, but they were, without exception, as small. Now the remaining part of our programme was to fish for bass, down Dry Fork three miles, to its junction with Cheat, and then down Cheat to Rowlesburg on the B. & O. R. R., but an hour's experiment and observation of the condition of the water, which was very black and swollen, convinced us that to carry out our plan would result in a mere waste of time, and we determined, therefore, to put up our tackle and endeavor to make the entire distance to Rowlesburg next day so as to take the evening train.

JUNE 25.—Started from Goff's at 5 A. M. without breakfast, taking the mountain road. On the Backbone we flushed a brood of young pheasants, (ruffed grouse) and the old bird charged me so vigorously, to my very feet, in the huckleberry bushes, that I instinctively brought my rod down to the position of "Guard against infantry." At Nicholas Parson's we breakfasted and started again at 8. An hour later we passed through St. George, which is the county seat of Tucker, and waded Cheat for the last time. At midday we stopped to take our favorite and only refreshment, a quart or so of milk, (see Tyndall's "Hours of Exercise in the Alps"), and the good woman of the house thought we were making off with the pitcher. "Now, I say, Mister, I want that pitcher." She apologized with the explanation: "I thought you were pedlars." In attempting to take a short cut, some miles lower down, we got entirely away from the road, and on the summit of one of the loveliest mountains in these parts. We gained an extensive and magnificent view, but with the almost certain prospect of reaching Rowlesburg too late for our evening train, were scarcely in the mood for enjoying it. We found it as difficult to get back into the road as it had been easy to lose it, and our day's walk was certainly increased four or five miles by this mishap. Finally, we arrived at Rowlesburg at 6:45, having traveled quite thirty-five miles. We belonged in former days to Jackson's foot cavalry.

JUNE 26.—Took the morning train to Oakland. And so ended our tramp of two hundred and fifty miles, from Grafton to Rowlesburg. It may be objected by sportsmen that we show a record of comparatively few and small fish taken for distance traveled, and the criticism is so far just. Not only, however, were we too early in the field in this backward season, especially for bass, but the weather was persistently hostile. Our success certainly was not commensurate with our expectations. But even if everything had been propitious, instead of the reverse, the fisherman on Rangely and other Northern waters would have had no cause to envy us, while we do envy them their superior advantages. The country is also rather difficult of access, and, although the people cheerfully give the best they have, accommodations are rough. Still, our trout, if small, are nimble and vigorous, the climate is bracing, the mountains and valleys are both wild and beautiful, their streams of the purest, and we only regret that the cares of the world do not permit us to look forward to another visit earlier than a twelvemonth hence.

May pure contents
Forever pitch their tents
Upon these downs, these meads, these rocks, these mountains,
And peace still slumber by these purling fountains,
Which we may every year
Meet when we come a fishing here. H.

QUICKEST STEAMSHIP PASSAGE ACROSS THE ATLANTIC.—The White Star Line, a new vessel belonging to the White Star Line, arrived at New York this morning from Liverpool, having made the quickest passage on record, the time being 7 days 19 hours and 35 minutes from Queenstown, thus excelling the remarkable voyage of the City of Richmond of the Inman Line just two weeks ago, when the latter came over in 7 days 19 hours and 58 minutes. The time in favor of the Germanic is 23 minutes. Before these recent passages the Baltic of the White Star Line led the Atlantic fleet in point of speed, her famous run from New York to Queenstown in 1873 having been made in 7 days 20 hours 9 minutes (mean time.) The next quickest was the passage of the Adriatic of the same line, which run from Queenstown to New York in 1872 in 7 days 23 hours 17 minutes.—*Boston Journal*, 7th.

TROUTING IN NORTH CAROLINA.

MORGANTON, N. C., July 23d, 1875.

EDITOR FOREST AND STREAM:—

An article in last week's paper entitled "Camping on Lycoming Creek" was very entertaining, principally on account of the long list of home comforts the writer seems to think essential to a trip into the woods. We do differently in this country, and, as an illustration, I will give you a short account of a trip I made to the South Tow River in June. The party numbered four, and our outfit consisted of one coffee pot, one frying pan, one tin kettle to boil water in, an axe, hatchet, matches, two gum blankets, four woolen blankets, a change of clothes each, one pound of coffee, two of sugar, three pounds of bacon, one pound of salt, and some hard bread. Add fishing tackle and you see us ready for the field. We only intended staying out four days; it is true, but I would add nothing but a little more provender if I intended to camp for a month. Much baggage is a delusion and a snare. We were on horseback, and crossed the Blue Ridge by the roughest trail I ever saw. In fact, I would not have believed it possible for a horse to travel over it if ours had not demonstrated it. We reached the river at 4 P. M., having left home at 8 A. M. Picketed our horses, and while one of our number caught some trout for supper the rest of us built our shanty, collected enough wood to last through the night, and built a fire, and after a good supper spread our blankets, and with our saddles for pillows, lay down with our feet to the fire, smoked our pipes, and drank in the quiet of the woods. Next morning at 7 o'clock three of us walked up stream two miles, and waded it back to camp, reaching there at 4 P. M. with 141 trout.

The South Tow is a beautiful but exceedingly rough stream. The trout are small; the average weight being less than half a pound, but are a very active, gamy fish. I am told this stream is fished almost constantly, in season and out of season. I was gravely told that I must "fish it in the Fall, for then I would catch big ones." As we came home we fished for two hours in Buck Creek, and caught forty-seven good sized fish, and that reminds me of an article published some time ago called "The Hot Country of Georgia," in which it is stated that with one exception there are no streams running east from the Blue Ridge which contain trout, from Middle Virginia south. The writer must take a trip down here next season and convince himself of his mistake. One day last May the Rev. Mr. H. and I fished Broad River near its source, and from 7 A. M. till 3 P. M. caught 121 trout. They are small, only an occasional one reaching a pound in weight, but give excellent sport. Since then some "scalawags" seized it, and in one day caught 420. Buck Creek, another stream flowing east, affords good fishing also. Three weeks ago the same friend and I arose at 3 A. M., rode eleven miles, and having found a good place to leave our horses, walked up stream a mile further, waded down, and in four hours caught sixty-three trout, all of one size nearly, and averaging about half a pound in weight. I have heard of several other streams running in the same direction (east) which are said to contain trout, but these two, viz.: Broad River and Buck Creek, are the only ones I know of from experience. I wish I could persuade some of the brotherhood to come this way next season; from the middle of May till the last of June is the best time. They would find a beautifully picturesque country, streams as clear as crystal, lofty mountains—Mount Mitchell, you know, is higher than Mount Washington—and among them solitude as profound as any one can desire.

G. H. M.

SALMON FISHING IN THE BONAVENTURE.

MONTMORENCI FALLS, P. Q., August 7th, 1875.

EDITOR FOREST AND STREAM:—

Have just been reading your welcome paper of 5th inst., and see therein some notes on *Salmo salar*. Although a tyro myself at the noble sport of salmon killing, still I thought I would give you a report of another river in the Bay of Chaleur. On Tuesday, July 20th, my friend and self left Quebec in the Gulf Port steamer *Secret* for Paspébiac, having, through the kindness of Hon. James Domville, of St. John, N. B., M. P., a permit to fish the Grand Bonaventure River. Reports of fishing from "below" had been fearfully discouraging, but having some leisure time on my hands I determined to "wet a line" at all events. We had a glorious time, and were most kindly and hospitably received and entertained during our visit to that hitherto (to me) unknown region, our thanks being mostly due to the good fortune of making the acquaintance of Mr. John R. Hamilton, of New Carlisle, who was a fellow passenger on the steamer, and to whom we are under many obligations. But of the salmon. We learned that a Montreal gentleman had just left the river after about a week's fishing, with only five fish. We got into camp late Friday evening and left Wednesday noon. Saturday it poured all day. Sunday fishing is *contra bonos mores*, and Tuesday it rained nearly all day. Monday was the only fishing day we had. We were in luck in one respect, however; there was a fine run of fish come up the river with the flood, and could we have waited another week I think we should have been able to show a good score; as it was we were content as having made the best of our opportunities. Our score was as follows:—12 salmon; weight, 7½, 10, 18, 12, 11, 8½, 9½, 10, 7½, 9, 11½, 9; total, 123½ pounds; average, 10½ pounds; 3 grise, 4, 3½, 7½; total, 14 pounds; average, 4½ pounds; total 15 fish, 187½ pounds; average, 9 1/6 pounds. The killing flies were Yellow Drake, Jack Scott, and Silver Doctor. I used a greenheart rod made by Dingee Scribner, and do not care for a better; believe it to be as good a rod as can be made of wood, and the best rod for the money I have yet seen. Still I am too much of an amateur at this sport to be infallible.

Of the Grand Bonaventure I can only tell you what I saw. It is a beautiful river, perfectly clear of obstructions, no bad rapids, and the coldest, clearest water I ever fished. The river rose over four feet while we were there, and even then one could see bottom in six or eight feet of water. The only fault—if fault it be—is that the salmon pools are what I should call "rapids." There is no place so far up as we went, (say ten or twelve miles,) where the water is even comparatively smooth. It is a continuous sharp descent, and you have to kill your fish in very heavy water, especially when there is a flood on. As our fish were all fresh run, you can imagine the sport they gave us better than I can describe it. I have had a taste of salmon fishing before, but when I landed that eighteen-pounder after more than an hour's hard fight I felt as though I had never known true happiness before, and did not care if I never killed another fish. I had an experience worth my whole trip. I suppose you will laugh at my enthusiasm over such small game, but how did you feel, Mr. Editor, when you killed your first large salmon?

For a wonder sea trout did not trouble us much. They do not run up that river until August in any numbers. We killed, however, all we could eat, and sometimes more than we wished to. The universal report from every fisherman I have seen is that it is a "beastly year for salmon," both for net and rod.

I may try the trout in this section; if so will send you score if it is good enough.

Mac.

NEW CURE FOR WOUNDS.—A correspondent writing to the *Scientific American*, says:—

"As soon as a punctured wound is inflicted, get a light stick (a knife or file handle will do), and commence to tap gently on the wound. Do not stop for the hurt, but continue until it bleeds freely and becomes perfectly numb. When this point is reached, you are safe; and all that is then necessary is to protect it from dirt. Do not stop short of the bleeding and the numbness, and do not on any account close the opening with plaster. Nothing more than a little simple cerate on a clean cloth is necessary. I have used and seen this used on all kinds of punctures for thirty years, and never a single instance of a wound becoming inflamed or sore after treatment as above.

Fish Culture.

FISH CULTURE:

ITS ORIGIN, DEVELOPMENT, AND PROGRESS.

BY ICHTHYOS.—NUMBER SIX.

THE question in connection with the location of a fish farm, is when a choice has been made, how shall we calculate the capacity of the water selected; and about to be utilized? To answer this intelligently we find no authority but Dr. Slack's work on Trout Culture. After a series of experiments he found that for each gallon of water per minute at the temperature of 50°, ten pounds of trout can be sustained, "thus" he says, "the Troutdale spring delivers a volume of water which at the driest season has been proved by repeated experiments to measure twelve hundred and fifty gallons per minute: as each gallon will support ten pounds of trout, twelve thousand five hundred pounds weight can be sustained by the water of our spring."

Dr. Slack further says, "when sufficient fall can be obtained by proper aeration the capacity of the water may be still greater increased." The following rule has been adopted by enlightened fish culturists and has been found to be the most simple, and sufficiently accurate for all practical purposes. "Measure the width and depth of the stream where for a short distance the banks are nearly parallel and the depth as nearly as may be uniform; between these parallel banks throw a float, chip or a cork into the water, and note the distance it drifts in a quarter of a minute, multiply the product of the depth and width of the stream by the distance traversed by the chip or cork, and the product when diminished by one fifth will give the number of cubic feet delivered in a quarter of a minute. The one fifth to be deducted, as the rapidity of the flow on the surface is greater than at the bottom of the stream. Thus, suppose the depth of the stream to be two feet and its width four, and that the chip has traveled ten feet in one quarter of a minute. Twice four are eight. This multiplied by ten, the distance traversed by the float, will give eighty, from which deduct one fifth, (16) and we have sixty-four cubic feet as the amount delivered in a quarter of a minute, or two hundred and fifty-six feet per minute. Therefore as a cubic foot of water contains about six and a quarter gallons, we multiply the number of cubic feet (256) by six and a quarter, and the result 1599, will be the number of gallons furnished per minute by the stream." The truthfulness of this mode of measurement will depend upon the uniformity of depth and the parallelism of the banks over which the float traversed.

For the proper arrangement of ponds, a sufficient fall is of paramount importance, a prime necessity. Indeed the constant maintenance during the hot Summer months, of proper temperature depends almost entirely on the rapidity with which the water runs through the entire chain of ponds. A dull, sluggish stream becomes rapidly heated. A swift current may flow over a long distance without the water becoming perceptibly elevated in temperature. The native place of the trout, is the swift running brook, and consequently all artificial ponds for the propagation of this beautiful and toothsome denizen of the mountain stream, should be close imitations. Four feet is calculated to be the least allowable fall, which will render a location suitable for the construction of ponds for breeding trout. Overflow or influx of surface water has undoubtedly proved a source of greater annoyance to pisciculturists, and the means of producing greater losses than any and all other untoward contingencies. Freshets gully and destroy the banks of the ponds, and cause the escape sometimes of large quantities of fish, thereby greatly reducing the profits of fish culture. Especially are such disasters liable to overtake fish farmers who select streams for farms, instead of springs, which are greatly to be preferred, for the reason that the overflow can be controlled more substantially. In all cases should the site for operations be selected, other things being equal, where stiff clay predominates, as this material only will form enduring banks. Sandy loam or gravel with proper care in construction and protection of the banks by sodding will do tolerable well, but stiff clay is preferable. If a cold and pure running stream can be found which possesses every natural facility, is constant and unabating in its flow, the necessary head may be obtained by damming the rivulet, which will give the requisite fall, and the same life and vigor to the current coursing from pond to pond that may be obtained from a spring. The series of ponds may be constructed either side of the foot of the dam, and sluice-ways may be excavated so that the water may be made to feed others lower down and then discharge into the stream below, thus affording the same facilities for fish breeding as in the use of a first-class spring.

If a pisciculturist is desirous of entering largely upon this industry, considerations connected with easy access to market should prompt a selection of site near a railroad, where shipping facilities will place him in daily connection by rail with large cities, where alone are found customers for the expensive luxury of brook trout. The location of a fish farm near a large city should be avoided, as roughs, a restless and vagabond population, to be found in every city, have a special fondness for trout, and the desire of poaching is so bred in their bones that nocturnal visits from such individuals are usually frequent and attended with unpleasant results and with great losses, and constant vigilance is required to prevent such forays. In fact, stealing trout from a private pond is too often regarded by even persons who rank in the so-called better classes, as a very trivial offence, and in many States it is considered in law, only as a trespass, and subjects the perpetrator to merely a nominal fine. Poaching and the slight punishment therefor has deterred many from engaging in fish farming. No distinction is made between fishes artificially propagated, grown with great labor and expense, and those wild denizens of the mountain stream, or those of the deep forest shade; all wherever found being regarded as *feræ*, whether wild or domesticated, and their captors being liable only to a small fine, and the market value of the fishes captured. It is said that a large percentage of the trout sold in New York markets bear certain and unmistakable marks of gill nets, in which they are caught. They are stolen from the magnificent fish farms on Long Island, and from others near the city. This feature must continue for some time to be the greatest drawback to America fish culture, at least it must operate as a discour-

agement until public opinion takes advanced ground, is educated up to a moral status capable of sustaining more stringent laws against pot hunting and poaching. We must take a higher stand against these vile crimes, or the products of our toil will continue to be taken from us, regardless of their value or intrinsic worth and without fear of punishment. Trained bloodhounds are used on some fish farms, and they soon put an end to night depredators. Too much stress, we repeat, cannot be placed upon the proper selection of the site for a fish farm; indeed the success of the enterprise depends entirely upon a judicious location. Should a site be found to combine all the natural advantages which prefigure success, then to perfect the work must commence the labor of human hands, must begin the exercise of skill and art, so blended with nature's efforts, artless art, as to appear the work almost of nature herself.

To be Continued.

FISH FOR THE CENTENNIAL—SPECIMENS IN PLASTER.—Since the appropriation by Sweden of \$100,000 for the sole purpose of exhibiting the fish of its waters at the Centennial, the zeal of the United States Commissioners in that direction, in the interest of their own country, has greatly increased. Professor Baird, of the Smithsonian Institute, is at present engaged at Wood's Hole, Mass., in making an exact counterpart in plaster of paris of every species of fish that swims in waters contiguous to the United States. A mould of the fish is first taken, afterward the copy is painted directly from the originals. Mr. Eugene Blackford has at present at Fulton Market three specimens of this work, which were sent him as a compliment by Professor Baird, who has received from Mr. Blackford 300 different species of fish, for the advancement of science at the Institute which he represents.

FISHWAYS FOR THE POMOMAC.—We understand that the Great Falls of the Potomac have been surveyed with a view to plant a fishway there, and that Prof. Baird and the Maryland and Virginia Commissioners decide its establishment practicable.

—M. A. Wilmot, Esq., of Newcastle, N. B., the agent of the Dominion Government, for propagating fish in the rivers and streams, is making a tour of Nova Scotia to determine upon the best streams in that Province to stock with young salmon, trout, bass, whitefish, etc.

SETH GREEN.—The people of New York State are becoming aware of the fact that Seth Green is one of the greatest benefactors of the age. The Hudson River will again be stocked with sturgeon. It is not many years since the river was full of this fish, and it was very popular as an article of food; but of late years they have become very scarce. Mr. Green has been endeavoring for some time to procure sturgeon, in order to secure the spawn to hatch. This he finally succeeded in doing, and on Thursday some thirty or forty thousand sturgeon were hatched. The spawn was placed in the shad-hatching boxes; and hatched in four days at a temperature of 72°. The experiment was conducted at the New Hamburg grounds by Mr. A. D. Marks, under Mr. Green's supervision. Several thousand more young sturgeon are confidently expected, as the result of this movement; and the Hudson River will in a few years again be full of this fish.

Not only will plenty of sturgeon follow from this experiment, but plenty of shad also. Mr. Green has been laboring for some time to secure the passage of a Sunday law, to prevent shad fishing on that day; but the influence of the New York stake fishermen has thus far been too much for him. These fishermen stick their stakes for from thirty to forty miles above New York down into the harbor, and reaching entirely across the river. And these stakes are planted so closely that their gill nets are sure to catch the fish, so that scarcely any can pass them. But if Sunday fishing was prohibited, they would have one day to escape these nets, and would subsequently be caught by the up river fishermen. What cannot be accomplished by law, however, can sometimes be done by strategy, as the stake fishermen will find; for when the Hudson River once more abounds in sturgeon, the fish will force their way through these nets, tearing them to pieces and liberating the shad, thus saving the New York harbor police from doing it for them.—*Albany Argus*.

CALIFORNIA FISH PLANTING.

SAN FRANCISCO, August 5th, 1875.

EDITOR FOREST AND STREAM:—

We are advancing rapidly in stocking our rivers and lakes with a variety of food fishes. What sport is in store for anglers in coming time! Indeed, we cannot even now complain of want of amusement in this line. It has lately been discovered that the Schuylkill catfish, or "lady cat," which were placed in some of the sloughs and streams of the Lower Sacramento and San Joaquin have greatly multiplied, and in one slough that was drained for some purpose thousands of these valuable fish have been taken. I believe these catfish, which are favorite breakfast fish in Philadelphia and its suburbs, and which afford recreation there for some anglers, are not the same as the channel catfish of the Ohio and some other of the Western rivers, but a variety of the genus. I understand some yellow catfish, or bull-heads, have also been put into the Lower Sacramento and San Joaquin Rivers. These Schuylkill and Ohio catfish are a very active, lively fish, and a nice addition to the cuisine, being sweet, and the flesh white. Genio C. Scott states that "the Ohio channel cat ranges from five to fifteen pounds in weight, is symmetrically formed, with a smaller head than the brown or black, or yellow catfish, and finer in general outline than the others, and is also lighter and brighter in color. It remains in the swiftest waters of the channel, and feeds on the chub, wach, and other small fry. It is one of the greatest delicacies of the fish kind, and in play it affords the disciple of rod and reel a treat long to be remembered. When hooked its run is very swift, and it is hard to turn and coax out of the channel, or to the gaff and landing net." My experience verifies this description, only that I do not agree with the writer that it can be compared for the table with the trout and the salmon, particularly when the latter is in its grise state. I understand that some of these fish, too, have been planted in the Sacramento and San Joaquin.

Mr. Throckmorton, our zealous and enlightened Fish Commissioner, informs me that the young salmon (*Salmo gairdneri*) put into our fresh water lakes not communicating with the ocean change in many respects their nature, becoming longer and slimmer, preserving, if not increasing,

their gameness, and they spawn on the sandy flats of the lakes. As I observed in my former communications, these salmon, as well as trout from Lake Tahoe, are affording excellent sport in Lake Merced, near this city; also young salmon in Lake San Andreas, a few miles beyond Merced. Late in the season most of them are taken with the spoon bait trolling from boats. Some shad have been taken in nets in the Sacramento River, where they were placed a year or two since.

E. J. HOOPER.

FISH CULTURE IN WISCONSIN.

MILWAUKEE, August 11th, 1875.

EDITOR FOREST AND STREAM:—

The Board of Fish Commissioners of Wisconsin met in this city a few days ago, and agreed to suspend for the present the experiment of introducing the several varieties of salmon into our waters—which has engaged their attention for the past year or two—and to confine their operations to the introduction into the interior lakes of the various species of lake trout, whitefish and herring of the great lakes. These varieties are hardy, and can be easily propagated in lakes having a depth of fifty feet, and a temperature not exceeding 65° Fahrenheit. Nearly all of the lakes in the State can furnish these requisite conditions, and it is expected that eggs enough can be procured this Autumn to stock them. Mr. H. F. Dousman has undertaken to do the hatching for the lakes in the vicinity of Oconomowoc.

OCONOMOWOC.

RIVER PROTECTION IN NOVA SCOTIA.

HALIFAX, August, 1875.

EDITOR FOREST AND STREAM:—

The new Inspector of River Fisheries for Nova Scotia, P. S. Hamilton, is prosecuting his duties with vigor. He has visited most of the rivers in the province, and has found many in the most deplorable state, obstructed by mill-dams without the appearance of any fish ladder or pass, and in some instances the waters so polluted by sawdust and mill rubbish as to render it impossible for the fish to pass up. He has had some of the mill owners up before him for the infraction of the laws and fined them, but they have appealed to the Supreme Court. They are wealthy, and have powerful influences at work, and it will be a hard battle to fight with them. I send you a copy of our amended game laws.

FITZ CULMER.

Natural History.

ORNITHOLOGY OF THE TRANSIT-OF-
VENUS "CENTENNIAL."

BY DR. COUES.

THAT affair which the celebrated planetary divinity has just satisfactorily concluded with the sun, has led to other results than those in which the astronomers and mathematicians who officiated at the ceremony are interested. In the occurrence itself, we see nothing very remarkable, as certainly there was nothing to prevent the goddess from being as intimate as she pleased with the solar orb; and we trust she found that mass of incandescent hydrogen and iron as warm as even her ardent temperament could desire. We cannot be expected to be very enthusiastic over anything ninety-five thousand miles off. Kerguelen Island is about as far as our affections will reach; and while the astronomers are on the "ragged edge" of the parallax, we are in serene content with some of the perquisites which have fallen to our share of the job.

For it seems that the affections of our excellent friend, Dr. J. H. Kidder of the Navy, like our own, rested upon Kerguelen Island, instead of wandering through planetary space; and thus focussed, resulted in something more tangible than sines and cosines. Dr. Kidder was the judicious selection of the Navy Department to investigate the natural history of Kerguelen Island, one of the observing stations; and the scientific matters intrusted to his charge could hardly have fallen into better hands. His collection of objects of natural history has reached Washington in excellent condition, and is already being worked up. The Doctor himself is now at Wood's Hole, where all good naturalists go, or want to go, about this time every Summer, following the example of one whom it is needless to mention by name. But before he went his specimens and plethoric note books were compared, with such satisfactory result, in one department of natural history—at least, that a memoir on the ornithology of Kerguelen Island is already about issuing from the press.

Dr. Kidder's collections of bird skins and eggs are a very nearly complete exposition of the avifauna of the island. It is the first and only considerable series of specimens which have reached the United States from this locality, embracing several species which are among the desiderata of American collections, and consequently valuable acquisitions to the National Museum. Among the eggs, particularly, are some kinds not before seen in this country, if not also entirely new to science. But the contributions which Dr. Kidder is enabled to make to the life history of these little-known birds, in the elaboration of his carefully prepared notes of personal observation of their habits and manners, is, to our way of thinking, the better half of his operations. We have the best possible means of knowing whereof we speak, on stating that the treatise which Dr. Kidder has prepared will be found of unusual interest to ornithologists.

Kerguelen Island must be a "demnition cold, moist, unpleasant" place, to judge from the accounts of how "first it rained and then it blew, and then it snowed, and then it friz." To be less poetical and more precise, it is a land of almost continual precipitation; a delectable piece of antarctic property, with volcanic bowels and a glacier for a backbone. Moreover, there are no less than ninety miles of Kerguelen in one direction, and fifty in the other. A part of it is called Desolation Bay—but why this invidious distinction? The chief vegetable productions of the Island seem to be "tea" and "cabbage;" but the tea is not of the kind we drink, nor would the aroma of the latter revive grateful reminiscences of a Washington boarding house. There are no indigenous mammals, excepting some marine monsters that make a virtue of Kerguelen necessity. In short, the Kerguelen is a good place to remember an engagement in, and get away from as soon as convenient, especially if, like Dr. Kidder, we carry away with us a splendid lot of specimens in lieu of fond regrets.

The redeeming feature of Kerguelen is that thither resort vast bands of various birds to breed, and that among these birds are some that ornithology cannot slap very familiarly on the back, and say how are you my dear old friend. In fact, there are some among them with whom we are on formal terms. They were introduced to us, it is true, a century ago by such men as Sir Joseph Banks, Gmelin, and Latham, but we have somehow lost sight of these chance acquaintances. Such birds are *Procellaria desolata* and *Sterna vittata*. Then there is a duck that is extremely rare, and only known to inhabit Kerguelen, with questionable taste; this is the *Querquedula eatoni*, dedicated to the naturalist of the English party, only since the return of that expedition. There is another curiosity in the way of a petrel, which neither ourselves nor any other American naturalist ever saw before—a dark gray bird, about the size of the Cape pigeon, with an extremely thin, hooked bill. It was described in 1823 by Kuhl, and subsequently by Schlegel, as *Procellaria grisea*, but as it is not, apparently, the bird so named by Latham, a new designation seems to be required, and the bird will be known as *Estrelata kidderi* [Coues, n. sp., = *P. grisea*, Kuhl, nec Lath.] The species will be fully characterized in Dr. Kidder's forthcoming paper.

There does not appear to be a single land bird on Kerguelen Island. There is one wader, the curious *Chionis minor*, a near relative of the longer known *C. alba*, first described as distinct by Dr. Hartlaub, and apparently confined to this region. The duck tribe is represented by the single species already mentioned. The wreathed tern, *Sterna vittata*, a large black-backed gull, *Larus dominicanus*, and a skua-gull, *Buphagus antarcticus*, represent another family. A single kind of cormorant, *Graculus carunculatus*, is found in abundance. Several different species of penguins, familiarly known to the sailors as "johnnies" and "rock-hoppers," abound on the shores. The remaining birds consist of various representatives of the oceanic family *Procellariidae*—petrels. Among them are two or three kinds of albatrosses, a "mutton bird" (*Puffinus*), the singular little diving petrel, (*Pelecanoides urinatrix*), several members of the genus *Estrelata*, besides *C. kidderi*, and other kinds.

But as we have no intention of poaching on Dr. Kidder's premises, this incipient treatise on Kerguelen birds must be stopped. Still, it may reasonably be inquired how the eggs that were collected by Dr. Kidder came to be found, since his visit was in Winter. The simple fact is that all these Kerguelen birds lay their eggs at this season or late in the Fall. This may sound odd to us who are accustomed to associate the singing and mating of birds with the sighs of the zephyrs of Spring, and all that sort of thing. Nevertheless it is a way they have at Kerguelen, in consequence of the flatness of this stationary earth, which also obliges the people on the other side to walk like flies on the ceiling. Dr. Kidder himself informs us that it comes a little hard at first, but that it is nothing when you're used to it. The unsteadiness of gait frequently observed in sailors ashore after a long cruise may be due to the same cause.

—At the Jardin d'Acclimatation, in Paris, the Seyyid of Zanzibar exhibited surprise at the zebras being so tame as to draw the water carts and make themselves otherwise useful. This is the first place, indeed, at which this has been accomplished.

—A Boston correspondent says that the blackbirds which are usually accounted mischievous and destroyed by farmers like vermin, have destroyed millions of army worms this month in Massachusetts. They settled upon the crawling masses in clouds.

—A correspondent suggests that the towl referred to by "Ancora," of Pennsylvania, under date of August 10th, is an immature specimen of the hooded merganser.

—The Geographical Congress has awarded medals of the first class to the Statistical Bureau at Washington and Professor F. V. Hayden, the American geologist.

ROBINS AS DEPREDATORS.

EDITOR FOREST AND STREAM:—

I think that we ought to have a better law in Massachusetts against the depredations of robins. As the law is now no robins are allowed to be killed at any time. Within the last two weeks the robins have made my cherry trees their home, staying there from morning till night. Scarecrows do not disturb them, as they soon become accustomed to the presence of these. Not only do they eat cherries, but they destroy apples, pears, grapes, strawberries, etc. Now, I think that if a few of these were shot perhaps the others would take warning from the fate of their companions and leave for parts unknown. In New York they are allowed to be shot while engaged in stealing fruit, and I hope Massachusetts will pass an act whereby it shall be lawful to kill any robins on one's premises in the act of destroying Summer fruits or grapes.

M. W. D.

[The New York law has our approval. Robins are often gregarious, and when they go in large flocks, are often very destructive to trees, both fruit and branches.—Ed.]

BAYSIDE NOMENCLATURE.

SALEM, MASS., August 14th, 1875.

EDITOR FOREST AND STREAM:—

Noticing the remarks of "E. H.," under date of August 2d, induces me to write as follows: To some of those who have been in a "booth" or "blind" with the blocks set for shore birds, these notes of mine will perhaps call forth a smile, as they think of some similar incident. It's the "white marlins" E. H. saw that make me say this. At times when sport runs slack, one takes notice of the least thing; for instance, a few peeps heave in sight and all is quiet, except a jargon of noises from all kinds of whistles; all heads are ducked, both barrels cocked ready for them summers—no, grass birds—no sir, they're summers or snipe, and along they come. Sometimes they catch fits, and again they are found out without shooting to be only "darned peeps." "Didnt they look big?" "Yes, yes; I guess its the atmosphere makes them look so—curious!" Then again you take a person who has studied up the ornithology of his locality; he goes down on the "marsh" or up the creek to try his luck; he knows what he is likely to see—perhaps godwits, hey! "Oh, you mean black tails," the bayman says. Well, perhaps you call them black tails, but the right name is Hudsonian godwit. What's the result of this confab? Why, the bayman thinks the other is a fool, and sure of it, if he be a youngster. Says he "reckons he knows what birds

is," etc. Then again, ducks are ducks—that is about here; whistlers are whistlers, and coots are coots. The young man asks why isn't a whistler a duck? "Well, cause 'taint." "But why not?" "'Cause a whistler's a whistler and a duck is only a black one or a gray one." "But why are they not all ducks?" "'Cause I know they aint." Then again, every season some one gets either a new species of fowl or bay bird, "never seen afore," or else it's a "furriner strayed in," and so it is. If our local gunners would study up the fanna of their respective localities, they would save their own reputation or add to it, and learn something, too. I might write further, but fear I have now encroached upon your good nature. Suffice it to say that it seems strange a bunch of birds so funny in appearance should pass anyone within thirty yards and not get serenaded. Yours, TEAL.

THE WININNISH.

WASHINGTON, D. C., August, 1875.

EDITOR FOREST AND STREAM:—

A few weeks ago I addressed to a prominent official of the U. S. Fish Commission the inquiry, Is the wininnish identical with the grayling? His reply was that, as yet, he knew of no one who could satisfactorily answer that question. I notice, however, that in a late number of your journal you effectually dispose of my interrogatory, if not of my doubts, by naming this hitherto unclassified denizen of the Saguenay, who yet is every inch a king, whatever we may call him, an undoubted *Salmo gloveri*. Ergo he is not a grayling. But is the wininnish "undoubtedly identical" with the land-locked salmon of the Schoodic and Sebec Lakes? His small mouth, fine teeth, and the unusual size of the dorsal fin are certainly the distinguishing characteristics of the grayling. The real salmon is found in the same waters of the Saguenay with the wininnish, and they deposit their spawn in its tributaries; yet the latter fish is never found in the St. Lawrence. Correspondents of FOREST AND STREAM have identified as a grayling a fish found near Quebec, known by the local name of "spearing." Are not the spearing and the wininnish the same? Inquiringly, UPHOME.

We will endeavor to have the identity of the wininnish so completely established ere long, by proper data, as to satisfy the Smithsonian naturalist, or any other man. We will say here, however, that it is no more a *thymallus* than it is a *coregonus*.—Ed.

Woodland, Farm and Garden.

PINEAPPLE CULTURE IN FLORIDA.

PINEAPPLES can be grown at a profit much further north than is generally supposed. A pine plant will bear to be frozen solid, even the roots, and if thawed in the dark (gradually) it will preserve its vitality. No other tropical plant will bear congelation, except a few cactuses of the same family. Pineapples are grown pretty extensively in the British Islands, without much expense. In the south of England a very simple pit is all that is required, while in France they are cultivated in the open air by covering with mats occasionally during the Winter months. North of the equator the fruit ripens during the months of July, August and September. In places subject to sudden changes of temperature, the plant grows very little in the Winter season. The lightest hoar frost will kill a pine if permitted to fall on the leaves; but if the plant is covered and kept in the dark before and after the freeze, the soil may be frozen, as well as the plant, and still it will sustain no injury. The soil should be very rich, and, if possible, it ought to be clay. Any stimulating manures can be applied unsparingly. Peruvian guano is the best, and if properly fertilized the sets from the fruit can be made to bear in two years. The pine produces no seed, but around the base of the ripe imported apples miniature plants are to be found, and on the top (or bloom end) of each apple there is a good plant also. In the plantations suckers are generally used, as they are larger and easier to plant. The suckers grow around the main stalk above the ground, and can be pulled off at any time and transplanted. Either tops, suckers, or sets are planted by simply setting the base in the soil, deep enough to prevent its blowing over, and it is injurious to remove any of the lower leaves. Frequent watering forces the plant.

The great reason why so many are unsuccessful in growing pines is, that the plant will not thrive if any impurities are permitted to remain in the bud, or in the leaf joints. In sandy soil the plant needs washing after every heavy rain or wind till the plants are high enough to admit a good mulching of corn husks (shucks) or straw. To wash the pines any vessel can be used that will admit of pouring a solid stream into the heart of each plant from a height sufficient to give force enough to wash out the sand and dust completely. On a plantation of any great extent a barrel on a hand cart with a small hose adjusted to the bottom of the barrel, and a nozzle to direct the stream of water, would be a complete machine. The barrel being about three feet from the ground would give a force to the stream, and no water would be lost. In pouring from the spout of a watering-pot, it would have to be held so far away from the plant that a great deal is wasted. Cleanliness is indispensable. When the plants are first set out, if fine, rotten wood can be obtained, and the ground thoroughly mulched, a great deal of trouble would be avoided; but great care should be taken to use only what is thoroughly rotted. Anywhere that three feet head of water can be controlled, and freezes are not longer than forty-eight hours' duration, and an abundance of water can be had, there is no trouble in growing pines to any desired extent. It makes no difference how hard it freezes, the pines will not suffer, as the temperature of the water will be high enough to preserve them. Care should be taken, however, to let the water off as soon as the frost ceases, as the plant would suffer if too long submerged. Where water cannot be controlled, dig a pit say two feet deep and four feet wide, and as long as desired; put one foot of good top soil mixed with half stable manure at the bottom. If the soil is not stiff enough, board up the sides and end three feet high, set in one row of plants two feet apart, and in Winter, during the cold weather, cover well with straw, always being careful to not uncover too soon after a hard freeze.

Any person who will take the time, anywhere from Charleston to the Rio Graude, can have a pine patch in his garden, and when you eat a pineapple ripened on the plant, you will pronounce it the most delicious of fruit. Imported pineapples are gathered green, and give one no conception of the delightful fragrance of a ripe pineapple.—J. A. Macdonald, in Florida Agriculturist.

LENGTH OF ROOTS.—Prof. Beal, of Michigan, who has given special attention to this subject, furnishes the *Country Gentleman* with the following interesting facts from his forthcoming Report:—

"The nature of the soil has much to do with the length and number of roots. In light, poor soil, I find roots of June grass four feet below the surface. People are apt to under-estimate the length, amount, and importance of the roots of the finer grasses, wheat, oats, etc. A young wheat plant when pulled up only shows a small part of its roots. They often go down four or six feet, or more. The roots of a two-year-old peach tree in light soil were found seven feet four inches long. In dry, light soil, this season we pulled up one parsnip three feet and a half long. Of course smaller roots went down still farther. The noted buffalo grass on the dry western prairies is described in the agricultural reports at Washington as having very short roots; but Mr. Felker, one of our college graduates, found, where a well was being dug, that the roots went down seven feet. The roots grow best where the best food is to be found. They grow in greater or less quantity in every direction. If a root meets with good food, it flourishes and sends out numerous branches. Roots do not "search" for food, as vegetable physiologists now understand it. Many of the smaller roots of trees die every Autumn when the leaves die, and others die in Spring.

Near a cherry tree in my yard was a rustic basket, without bottom, filled with rich soil. On removing the basket and earth which had been there several years, cherry roots were found in large numbers in this rich soil. Roots in such soil will grow up just as well as down.

FORESTS AND CLIMATE.—The question as to the nature and extent of the influence which forests exercise on climates commands the thoughtful attention of many careful observers. Among the more recent presented with a view to establishing the affirmative of the argument, viz: that the climate and other physical conditions of our globe are certainly modified by the existence or removal of forests, is that of M. J. Clave, in the last number of the *Revue des Deux Mondes*. After repeating with renewed emphasis the well-known points regarding the prevention of evaporation and sudden snow-thaws where the land is wooded, the writer suggests a possible effect which forests may have on producing rain, which is certainly worthy of consideration. Forests are obstacles to atmospheric movements, hence, when rapidly-moving air-currents come in contact with them, their onward course is checked, and they are forced upward. As a result of this movement, the layers above are compressed and so compelled to yield up some of their moisture. Another interesting fact is noticed with regard to the influence of forests upon hailstorms, which is to check them. An instance of this is given, to the effect that during one of these storms in France, it was observed that when, during its onward course a forest was encountered, the hail was changed to rain, the hail being resumed in the unwooded country beyond.

LIQUID MANURE FOR POT PLANTS.—Continuous waterings, especially when the pots are small, and the plants comparatively large, have a tendency to make the earth poor. An occasional watering with liquid manure is a benefit in such cases. Decayed cow manure is excellent for the purpose, but the kind is of no great moment. Do not make it strong. Use enough manure to make the water the color of weak tea. This is the best rule for making it that we can give. Only growing plants are benefited by its use.

The Kennel.

ANOTHER DOG SHOW.—A preliminary meeting in reference to holding a bench show of dogs was held at Newark on Saturday evening last. Some of the most prominent citizens of that city were present, and after the appointment of an executive committee, the meeting adjourned, to meet again the first of October at the Park House in Newark. Full particulars of the meeting will be given in our next issue.

—There will be a bench show of dogs at Manchester, New Hampshire, 7th, 8th, 9th, and 10th of September. The premium list in 22 classes of dogs, is very large.

—We have just received from Mr. L. H. Smith, of Strathroy, Can., a very fine picture of his famous imported field trial setter dog, Paris. It is a rare thing for us to see a picture presenting finer points.

FREE TRANSPORTATION FOR DOGS.—In addition to the three Railroad Companies which we mentioned last week as having decided to carry sportsmen's dogs over their lines free of charge; we are now enabled to give that of the Chicago, Burlington and Quincy. We print a copy of a recent notice of the company to Hon. J. V. Le Moine, President of the National Sportsmen's Association, who has been greatly instrumental in bringing about this new order of things, so much to be appreciated by sportsmen. We hope the Railway Companies will be gainers by their liberality:—

[COPY.]
GENERAL SUPERINTENDENT'S OFFICE,
CHICAGO, August 9th, 1875.

J. V. LE MOINE, Esq.

DEAR SIR—Orders will be issued to Train Baggage-men to carry free in baggage cars dogs belonging to passengers.

Yours truly, (Signed) R. HARRIS, Gen'l Supt.

FOLLICULAR MANGE.—Last year you published a letter of mine referring to a new skin disease in dogs, which had attracted the notice of Dr. Sparks, and from whose paper thereon you made some extracts. The conclusion then arrived at was, that the disease was due to a minute parasite found in the hair follicle, and that it was incurable. I then mentioned that we were experimenting with a view to find a remedy, and I now offer the result of our work to your readers. In conjunction with Mr. Duguid, the veterinary surgeon to the Brown Institution, I have seen and treated a number of cases, and we have reason to believe we have found a radical cure. Having tried sulphur, mercurial

ointment, green iodide of mercury, carbolic acid, iodide of sulphur, and other agents with no success, we adopted creosote, but not at first with much benefit. Thinking that possibly a strong alkali might, by softening and breaking up the cuticular layers of the skin, facilitate the penetration of the drug, we used a mixture of oil and creosote, to which was added a strong solution of caustic potass. This dressing seemed to be efficacious, and after a few experiments we adopted the following formula: Creosote, 1 part, olive oil, 14 do., solution of potass, 2 do. This acts admirably, and has cured every case, save one, upon which we have used it. The exception was a very small toy terrier, and suggests that no small or weak dog may be able to stand a dressing of sufficient strength to destroy the parasites. All cases of follicular mange are obstinate, and require time to cure. It is safe to allow twelve weeks as the minimum, so that we can decide at once whether or not a dog is worth the trouble and expense. Some extreme cases may require seven or eight months to effect a radical cure, though only rarely. All cases must have allowance made for the renewal of hair on those parts which the disease has left bare. The proper treatment of follicular mange requires not only the regular use of the parasiticide above mentioned, but occasional thorough washings with warm water and plenty of soap. A dog generally requires dressing about twice a week, and each dressing should be applied after the dog has been well washed, and become dry. To limit the disease and prevent its spreading, the hair around each spot should be shaved off for an inch or so on the sound skin, and in very bad cases it is good policy to shave the entire animal. The skin diseases of the dog, though usually described under the single term mange, are many and various. To detect this particular disease the parasite must be sought for with the microscope, and then treatment can be carried out rationally and systematically. Diagnosis of skin disease without the microscope is very uncertain, and even tolerably experienced persons may confuse red mange, common mange, and follicular mange, all of which require separate and different treatment. I must in fairness add that the chief credit of the treatment found so successful is due to Mr. Duguid.—*Wm. Hunting, in Land and Water.*

A GREAT LOSS TO THE AMERICAN KENNEL.—We record with marked regret the death of the beautiful, affectionate, and finely bred red Irish setter bitch, Bess, owned by that thorough sportsman, "Ajax," which occurred in Brooklyn on the 1st inst. Bess, imported by her owner in 1874, was by Halian's Pat (lately a prize winner in Ireland), and her dam was by the celebrated Hutchinson's Bob. But her chief fame in this country was won through her progeny by "Ajax's" celebrated red setter, Dash, and it is probable none better were ever bred here. Dash and Bess took the two first prizes at Watertown Show, 1875, as best Irish setter dog and bitch. We sympathize with "Ajax" in his loss, which indeed is a loss to American sportsmen.—*Turf, Field and Farm.*

COLOR OF THE SETTER.

SAVANNAH, GA., July 31st, 1875.

EDITOR FOREST AND STREAM:—

I have seen in your issue of July 8th a letter from Mr. Arnold Burges, with reference to color in setters, and I must say I am surprised to read such a communication from so learned a gentleman. First, he condemns liver and liver and white in setters, and gives his authorities—authorities whose theories are without any foundation, as I can prove. One of these, Stonehenge, he says, considers liver, liver and white, and liver and tan as low grades of color; that they too often indicate a cross with either the pointer or water spaniel. Now, of what color is there a setter that you cannot find a pointer or some other breed of dogs which has a similar color, and if a cross is indicated in the one case, why not in the other? I would as soon look for a cross in a black and white as in any color, for there are black, black and white water spaniels, springer spaniels, cockers and pointers, and I can find as many setters of impure blood of any color you can mention as there are of liver, or liver and white. "Dinks," another of Mr. Burges' authorities, omits even mentioning black, orange and white, and lemon and white, as well as liver, and liver and white, while Stonehenge considers them first-class colors. With this exception one is only a copy of the other's theory, without any base to build upon, each having his favorite color, none other being good in his opinion.

Our dog judges and would-be teachers of this country and England too often take their own or their friend's kennel as a base to build their judgment upon. English writers admit that their setters have been crossed with pointers and other breeds of dogs, so much so that as far back as the year 1800 they differed entirely from the land spaniel or Irish setter, and in the face of this they take certain colors as a basis to indicate the purity of blood of an English setter, which any one of good judgment would deem ridiculous, seeing they try to condemn one of the oldest colors of the setter, which is liver and white; and the reason why no fancy breeder in England has adopted this color is, that it was too common for any one of them to claim as his strain, and this is why the dogs so marked have no noble title, such as the Gordon and Laverack. Pride of the Border is the one swallow which would have been condemned had it not been for his noble name.

Lord Gordon bred for color, and this color, according to English judges, must be black and tan. English writers state that in the best strains of the Gordon, red, orange, and black and tan, with white feet and frill will appear. On the bench, red, orange, and black, tan and white would not be considered, and a black and tan from the same litter might take the prize. The judges stick to color, but Lord Gordon could not. Laverack also bred for color; black and white, and black, tan and white, and after forty years there comes one of the condemned color—liver and white.

Mr. Burges says that our sportsmen will be constantly imposed upon by unscrupulous dealers, if color is not adopted in this country as in England, or words to that effect. If color is to be the standard of good setters the unscrupulous dealers will profit considerably by it, for they can palm their black and tan for Gordons, red for Irish setters, and black and white for Laveracks. I have seen red dogs sold, and that very recently, for Irish setters, and at extremely high prices, that would require a microscope to find the Irish in them, possessing not a single point, save their red color, to show they were such.

Dinks places black and tan among the best bred. If color is to be accepted as the standard for well bred dogs, this color, and black, white and tan—which are not the colors of a setter, as a careful examination of Mr. Burges' authorities will show—will be sufficient in itself to show that the English writers and judges take to color as to fashion or prejudice. The old writers, as well as those of the present day, admit that the English setter is a cross of the land spaniel and Spanish pointer, and the Irish setter is the land spaniel. Dinks, Frank Forester and Stonehenge do not claim black and tan for the Irish setter, and say if tan is one of the markings on a pointer it indicates a cross of the hound. If this be the case, how is it that black and tan is such a fine color, and indicates a pure English setter, when this color and the feather would indicate there was a cross of the spaniel, pointer, hound, and Newfoundland dogs. There must be Newfoundland in him to give him this long feather, for it is longer than the spaniel's, and could not be had from

the pointer or hound. This is the mixture that the learned authorities quoted by Mr. Burges place at the head of the list of colors. They never stop to consider whether the dog's actions belie his color, but raise him up to a high standard over the liver and white, which, as a color, do not possess these qualities which the black and tan and black, white and tan possess, as I will show. These setters are, as a class, (those with tan, I mean) gun shy; the liver and white are not. The tan marked are hard to break and easy to forget, unless constantly worked, which is not the case with the liver and white. Then, too, they have a greater variety of positions in pointing, and can go longer without water than a setter of any other color. Had the authorities of Mr. Burges taken such points as these to condemn the liver and white, there would be some foundation for their theories.

Frank Forester says the Irish setter is the original type of the English setter; that he—the English setter—is found of all colors, and that the colors of the Irish dog are red, red and white, or yellow and white spotted. In this he contradicts himself; for if these be the only colors of the Irish dogs, how can the English setter be black, black and white, black and tan, or entirely white? Liver, and liver and white, he thinks, indicate a cross of the pointer or water spaniel; here, too, he contradicts himself in this way: He condemns the dropper, and states that in a well kept kennel such whelps would be consigned to the horse pond, and with the Irish sportsmen, who are very choice with their setters, a cross even with the English setter would be regarded as a blemish. It is a fact well known that there are a greater number of liver and white setters in Ireland than there are of any other color, which proves them to be of the best blood. Richards, author of the "Irish Fossil Deer," states that liver and white are the usual colors of the English setter, and with this we will leave him and take up the Irish dog.

Mr. Burges states that the Irish setter cannot be liver and white, and that there is no authority in the world which gives him this color; which shows he has not examined all the authorities that can be referred to. In answer to a letter written by me to a gentleman who spent over forty years in Ireland, traveling all over the country—one well posted on the Irish setters, and a good sportsman—I received the following with reference to the color: "I have seen," says he, "full bred setters red, red and white, black, liver, liver and white, and yellow. You cannot determine an Irish setter from his color. My friend, you ought to know and to be a good judge of such an one, for you have seen fine ones yourself in Ireland." A gentleman, writing from North Wales to the *Spirit of the Times*, under date of June 23d, 1872, says with reference to this subject: "Such cast iron rules as to what should be the color of an Irish setter, would leave us few good ones, and would exclude some of the very best of that breed. Facts show us that Irish setters of the very purest blood can be and very often are of almost every color." As for liver, and liver and white, what is it as a color when applied to dogs, English setters or pointers? It is any shade of brown, from a dark bay to almost black; chestnut is one of the shades included in the colors of an Irish setter, and comes under the head of liver. "Old Calibar," one of the oldest writers for the London *Field*, advertises full-blooded, chestnut Irish setters for sale. In "The Dog," by William Youatt, we find: "Many Irish sportsmen were exceedingly careful to preserve the breed pure; nothing of the pointer can be traced in them, although different in appearance from the English or Scotch setter. The Irish sportsmen are, perhaps, a little too much prejudiced with regard to particular colors: their dogs are very red, red and white, lemon colored, or all white, patched with deep chestnut. The 'Field Book; or, Sports and Pastimes of the United Kingdom,' compiled from the best authorities, ancient and modern, by the author of 'Wild Sports of the West,' published in 1833, places dark chestnut and white, or all red, as the colors of the Irish setter. R. B. Thornhill's 'Shooting Directory,' published in London in 1804, (page 66) says: 'There is not a country in Europe that can boast finer setters than Ireland. They are there called English spaniels, and differ widely from the setters of England and Scotland. They are not esteemed in Ireland unless their color is either a deep chestnut and white, or all red. A black and white setter, or any color but red, or red and white, would not be looked upon or reputed well bred, allowing them to be ever so good.' This work was written in 1801—seventy-four years ago—and as to color ought to be considered the best authority.

All of the authorities quoted by Mr. Burges admit that red is one of the colors of the Irish dog. Dinks and Frank Forester give no particular shade of red. Stonehenge gives blood red, strained with port wine. This is all the English judges give to base their opinion on, which opinion must be only as to the shade of red. The union of crimson with the color of port wine would give a mixture in color very much like liver, and not one of Mr. Burges' authorities deny liver red to be one of the colors of the Irish dog. R. B. Thornhill, already quoted, says that chestnut is the shade of red. Examine a chestnut and you will find it to be liver color, or a shade darker. Webster's definition of red is, that it is the color of blood. Now, there are different shades of blood—dark and light—for he considers liver as red. If liver, then, is one of the shades of red, as Webster says it is, it becomes only a matter of name, red, liver, or chestnut being only different names for the color of the Irish dog. Further, the red of former times, as applied to dogs, and the so-called red of to-day, are entirely different. One is a deep chestnut, or liver red; the other is a light red—a cross from the orange and chestnut. I have never seen a dog of the pure liver red, except the Irish setter. The so-called liver of the water spaniel and pointer is not really a liver color, for it lacks the peculiar shade or tinge of red which the liver has, and no cross from them would produce the liver red of the Irish setter, so much admired by Irish sportsmen; so much so that as far back as 1790, two hundred and fifty guineas were paid for a brace of them, that being a common price.

I am the party referred to by Mr. Burges, in speaking of the brace of Irish setters purchased by a gentleman in Georgia, the dog liver and white. I have a brace of imported Irish setters, the bitch dark chestnut with every mark of full blood, the dog deep chestnut and white, and as fine a specimen of the Irish setter as I have seen in this country or in Ireland. His dimensions are as follows, and you can judge for yourself; Nose to end of stern, 4 feet 4 inches; girth behind fore shoulder, 2 feet 4½ inches; round top of fore leg, 10½ inches; round cranium, 1 foot 5 inches; length of head, 10 inches; inner corner of eye to end of nose, 4 inches; length of stern, allowing 3 inches cut off, 1 foot 3 inches; height, 2 feet 1½ inches; ears reaching to the end of the nose. I have one litter of whelps from this pair of dogs, and I want no better evidence of their purity of blood than to see these puppies point and stand steady at five weeks of age. I bought the dogs from Mr. Wm. G. Parker, of Mt. Palatine, Ill., and to-day I would not take three times the amount I paid for them. Were I to place my dogs on the bench and the judges were to rule them out because they were entered as liver and white Irish setters, it would not be the first time I have seen judges more ignorant than exhibitors.

Understand me when I say that the liver red, or chestnut, is the pure color of the Irish setter. I do not condemn any color. With me, if a dog has all the qualities of a good one, color will not make him bad.

J. P. WHITE.

LANCASTER, Penn., August 9th, 1875.

EDITOR FOREST AND STREAM:—

Having noticed some communications in the late issues of your much valued paper in regard to fleas on dogs, and the best mode of destroying them, I have concluded to give my experience, which has never failed, having two fine pointers as subjects. In the first place, if the dog has fleas they are also in the kennel. The first thing to do is to clean out his domicile; throw away or turn the bedding, and whitewash inside and outside, then put in new bedding (pine shavings are the best), and get ten cents worth of Persian Insect Powder from the nearest drug store, and distribute it over the bedding; so much for the kennel. Take your dog and give him a thorough washing with Irish washing soap (manufactured at Zanesville, Ohio, and for sale by all grocers and soap dealers). I can guarantee that the above will kill every flea, and by renewing the washing about every two weeks and the powder once a month, you will never be troubled with fleas. There is nothing in the soap or powder that can injure the dog.

POINTER.

THE "ROWE" ON COLOR TEXTURE.

EDITOR FOREST AND STREAM:—

As an old sportsman, with a warm sympathy for everything connected with the noble art of venery, I regret much to see a gathering storm in the papers devoted to my favorite pursuit, incited by Dr. Rowe and Mr. Arnold Burges. These, compared with myself, are both young men, and with the centennial Field Editor of the FOREST AND STREAM, Squire Smith (called by his friends the Nestor Methuselah of American sportsmen), and the venerable Col. Skinner, of the *Turf, Field and Farm*, are mere infants. Under these circumstances, why should they disturb the harmony of our fraternity?—What do they, after all their noise in the papers, know about Irish red setters? How many have either of them owned, or even seen? When they answer this plain question in a satisfactory manner we old outsiders will know what weight to give to their juvenile opinions. Nature in her wisdom afflicts blindness upon puppies before they can bark. Trusting this color question will soon meet with a solution, I am, very respectfully,

CANONICS.

DEMUTH'S LAVERACK.

MAYSVILLE, Ky., August 5th, 1875.

EDITOR FOREST AND STREAM:—

As I see that there has been considerable discussion regarding the number of pure Laveracks in this country, and especially whether there are any outside of Mr. Raymond's fine kennel, I wish to say that Mr. Demuth's bitch, Pickles, is as pure as the best. I have before me a draft of her pedigree, signed by Mr. Buckell, showing that she is by Llewellyn's Prince, out of Lill 2d. Prince is brother to the celebrated bitches, Countess and Nelly, and to Mr. Reid's Sam. He is by Dash 2d out of Moll 3d. Lill 2d is by Dash 2d out of Lill 1st.

Apart from the evidence above, I know that Pickles was sent to this country from the Llewellyn Kennel, as Mr. Buckell mentioned her name in a list of dogs purchased from Mr. L. by American gentlemen. She was lined by Rock, now owned by Mr. Luther Adams, of Boston, before leaving England, and I believe came over in the same vessel with Rock. There can be no doubt of her purity or origin.

Your printer made a mistake in the age of my bitch, Queen Mab. She was ten, not fifteen months old when I wrote.

ARNOLD BURGESS.

WEST TROY, N. Y., August 16th, 1875.

EDITOR FOREST AND STREAM:—

I wish to claim the name of "Daisy" for my orange and white setter bitch pup, whelped March 26th, 1875. Daisy is out of Mr. Glass' Fan, by the late Mr. Kelsey's Sport. Fan is out of Bass (owned by Mr. C. R. Smith, of Scranton, Penn.) by Jack, and of the Gildersleeve strain. Sport is by imported stock, both sire and dam. Daisy is a beautiful pup, and at the age of four months would find and retrieve a woodcock splendidly.

JOHN H. FITCHET.

KENNEL PRODUCE.—Baltimore, August 8th, B. W. Jenkins, Owner.—Eleven pups, six living, five dogs and a bitch, all perfectly marked and very like the dam, out of imported black and tan Gordon setter bitch, Alice, by imported black and tan Gordon dog, Hero. The mother won first prize at every place where exhibited in this country—Watertown, Springfield, Mineola. Hero was highly commended at Watertown in a good class.

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

Trout, *Salmo fontinalis*.
Salmon, *Salmo salar*.
Maskenonge, *Esox nobilior*.
Weakfish.
Striped Bass.
Kingfish.
Sheepshead.
Salmon Trout, *Salmo fontinalis*.
Land-locked Salmon, *Salmo Gloveri*.
Black Bass, *micropterus nigricans*.
Pike, *esox lucius*.
Pickerel.
Bluefish.

Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—Fish still continue scarce and high. Salmon season over; none but the frozen in market, selling at 45 to 50 cents; bluefish, 8 cents; striped bass, 25 cents; blackfish, 15 cents; sheepshead, 25 cents; Spanish mackerel from Long Island, 40 cents; large whitefish, 12 cents; sea bass 20 cents; fresh mackerel 20 cents; halibut, 20 cents; soft crabs plenty at \$1 25 to \$1 50 per dozen; green turtle, 15 cents; lobsters, 10 cents; a few whitefish and salmon trout selling at 20 cents. We noticed some fine striped bass and large sheepshead on the stand of Middleton, Carman & Co., also some extra large flounders from the eastern end of Long Island.

THE GREAT SOUTH BAY.—Fishing during the past week has been very fair both inside and outside the inlet. A large number of bluefish have been caught, by chumming, in the channel inside of Fire Island. On Thursday last one boat took 140 fish. They are quite small, however, not averaging over two pounds in weight. The fish taken outside, say five miles off shore, are much larger, ranging from five to eight pounds. There is a most unaccountable scarcity of weakfish in the Bay this season; in fact none are being taken with the hook, and but few in the pounds. Whether they are kept away by the bluefish or whether the destructive fly net fishing has driven them away is uncertain. At this season they are usually to be taken in abundance, but now the rod fisherman is deprived of one of his principal sources of amusement, and were it not for the bluefish it would no longer pay to wet a line in the waters of the Great South Bay.

Hon. Alvah P. Hyde and son, O. W. Stowe, and Frank Pratt, all of Connecticut, have just returned from the Miramichi River, in New Brunswick, where they caught eighty salmon and grilse.

The Hartford, (Ct.) Fishing Club have been cruising in the vicinity of Block Island, Nantucket, Provincetown, and vicinity for a week past, but we do not learn that they have caught more than the average disciple of the olden time.

A correspondent speaks of Drake's Brook, that runs near the base of the Ossipee Mountain, in New Hampshire, as abounding in small trout of one pound weight and less. The season thus far has been very favorable to angling, the constant rains having kept the streams well filled.

The largest trout caught with fly at Rangely Lakes, Maine, last Fall by any of the Oquossoc fishermen was taken by L. L. Crounse of this city. It weighed seven and a quarter pounds.

Mr. Douglass, son of Sir Charles Douglass, of London, in a letter dated August 6th, says that in about three weeks on the Restigouche, Matapedia and Rimouski Rivers, he only got seventeen salmon—and he is an A. No. 1 angler.

LONG ISLAND.—Greenport, Aug. 16th.—The fishing in the waters of Eastern Long Island this year has been unusually poor. The weakfish, bluefish, blackfish and porgies, have been scarce. In Peconic, Gardiner's and Noyac bays, fish are scarce, and I attribute it to the numberless pounds that fill the bays and line the shores, entrapping all the good eatable fish that come in. At Jessup's bar, the best place for bluefish in these waters, the fishing has been poor; very few being taken. I live very near it and would know if any were taken. Last week the bunker fishing was poor, one boat has just come in and took but 10,000 fish and it requires 40,000 fish to pay expenses.

MAC.

MAINE.—A letter from S. C. Clarke says: "I have just returned from the woods of Maine, where I went into camp with Dr. Wm. Read and Hon. Charles Allen, of Boston. Trout not plenty; black flies very much so. Dr. Read killed a bear swimming the Penobscot."

MASSACHUSETTS.—New Bedford, Aug. 14th.—Our markets are filled with sword fish, (18 arrived to-day) bluefish, squeteague, tautog, scup, and bonitas, with a few Spanish mackerel and stripped bass, although the latter are smaller and scarcer.

Gloucester, Aug. 14th.—The mackerel made their appearance in our harbor on Tuesday last, (10th inst.) and since that time fishing in that line has been briskly carried on; they average in size, No. 3's, though occasionally a lucky fisherman hauls in a No. 1; most of them are sold on the spot for \$5 per barrel. The fishing still continues, though with less success, as the school is fast going out to sea.

J. S. W. JR.

THE FISHERIES.—The number of fishing arrivals for the week ending August 12th, was 70—39 from Georges, 10 from the Banks, and 21 from mackereling. Amount of Georges cod brought in, 470,000 pounds; halibut, 40,000 pounds. Bank cod, 675,000 pounds; halibut, 210,000 pounds. Mackerel continues very scarce, only about 1,000 barrels having arrived the past week.—Cape Ann Advertiser, August 14th.

NEW JERSEY.—Perth Amboy, August 12th.—The weakfish are biting readily to shrimp, crabs, and mussels. The first caught this season was on the 15th of July by Isaac C. Ackus, Esq. He and his grandson caught in one tide (low water) seventy-two. I have been out with this old and skillful fisherman several times, always with good success. Perth Amboy has afforded, so far, the best weakfishing within easy distance of New York. Staten Island boat to Third Landing, cars to Tottenville, ferry to Perth Amboy; fare whole distance, twenty-five cents. Boats and bait at Tottenville or Perth Amboy.

Carman House, Forked River, August 16.—The fishing for the past week has improved greatly, and several parties have made fine hauls. Among them—Wm. H. Florence and party; best catch, 51 weakfish, 13 kingfish; Mr. E. C. Taylor, 38 weak and kingfish, 2 bluefish; Messrs. Hadley, Howell, Wolf, and Bennett, caught 42 and 53 in two days. Other parties caught from 15 to 30 each. There is every indication of good sport the coming week, and visitors may expect full lines.

Barnegat, Kinsey's Ashley House, Aug. 16.—Fishing has been poor during the week, except for sea bass—owing to storms and high winds very few boats out. The house has been well filled with guests who were very much disappointed. Only catches worth reporting are Messrs. Horton, Marshall, Swain, Lane, Travis, and Robertson, of Peckskill, N. Y., 25 sea bass, 5 weakfish, 2 shark; Wm. Rose, W. W. Twaddell, James N. Galline, of Philadelphia, 35 sea bass, 2 sheepshead; Thomas R. Green, of New York, 15 sea bass; J. M. Atwater and son, New York, 30 sea bass, 1 bluefish.

Later, Aug. 16th, 2 P. M.—J. M. Atwater, of New York, has landed from the sheepshead ground with 15 sheepshead averaging ten pounds. Our sheepshead fishing will be good again. Harry Atwater caught this P. M. 8 sea bass, 3 blackfish, 1 bluefish, and 1 weakfish.

VIRGINIA.—Leesburg, Aug. 15th.—The Potomac has been in bad condition for angling nearly the whole of this month. I have taken a few bass and some fall fish with the fly, but the water has never been clear, and is generally very muddy. Major Ferguson, however, took three at a cast this season, a repetition of last year's exploit. He takes them principally with the Ferguson fly (a green fly) tied by Abbey & Imbrey, Maiden Lane. Eight or ten young men from this place made a pleasant trip to Shannondale Springs, on the Shenandoah River, not long since; took cooks, cooking utensils, and camp equipage, with rods, etc. They caught bass with the fly and with live bait. I have been alternating experimental fly-tying and toothache, while the Potomac emulates the yellow Tiber. T. W.

NOVA SCOTIA.—Halifax, Aug. 1875.—The salmon, although late, have been rather plentiful this season. A gentleman who has just returned from the Margaree River, in Cape Breton, tells me that, although he had to wait some time, he was rewarded with twenty-three fine fish during the last ten days of his stay. They have also been caught within the last few days at Indian River, St. Margaret's Bay, Halifax county, twenty-one miles from this city, where sea trout of from one and a half to two pounds are now running. Good accommodations, and guides always on the spot.

FITZ.

PETERBORO, August 12th, 1875.

EDITOR FOREST AND STREAM:—

In your issue of the 29th ult. "Camper" is surprised to find that some of your correspondents use a preparation for killing and keeping away black flies and mosquitoes, viz.: tar, oil, etc. I am equally surprised to learn that the mixture I referred to in my communication of the 15th ult. was ever intended to kill black flies, etc. "Camper" is no doubt aware that tar and the oil of Jamaica tar are quite different, the latter being what is used in the fly preventive I had in camp. We only used it on the hands, and did not find it either disagreeable or unsightly, nor did it varnish the skin, a little soap and water removing every particle of the mixture at once. When we wish to beautify the cuticle, however, we resort to rouge, cosmetics, etc., but in this case had no ladies with us, and rather invited the rays of Old Sol to impart a healthy color. C. A. P.

FLY BOOK AND FLY HOOK.

NEW YORK, August 6th, 1875.

EDITOR FOREST AND STREAM:—

I observe in your paper of this week an allusion to "Mr. Hyde's fly book," and to Mr. Brainerd as a maker of the same, which gives a wrong impression of the matter. A former item of the same tenor led me to call on Mr. Hyde, and although I have no reason to regret having done so, as I was treated with the greatest courtesy, and received much information and pleasure from the call, yet I think it would be well to have the facts properly understood and spare Mr. Hyde the trouble of entertaining too many interviewers. Mr. Hyde has not invented any fly book, but only an ingenious little contrivance for holding the flies by the bend of the hook. It is itself a sort of book made of thin white metal and provided with two little spurs, which are pushed through the parchment and bent down at the back of the leaf. They can be placed at a convenient distance apart, and as many rows as the page will accommodate. Mr. Hyde has a book which contains eight hundred flies. He uses a book arranged in the usual manner with parchment leaves, having three and four pockets on a page. About an inch and a half above each pocket is a row of the metal fly-holders, which receive the books, and the gut, each length coiled separately, is placed in the pocket. This makes a book of great capacity, and the advantages over the ordinary arrangement are—that the flies are all handsomely displayed, and any fly can be easily and quickly taken from and returned to its place without disturbing the others. To suit my own ideas of convenience I have arranged a book with only two rows of holders on a page, one row at each end and parchment loops in the middle of the page, through which pass the gut lengths. These are all the same length, about four and a half inches. By having them no longer than the book I avoid the necessity of coiling, and the gut is always straight and ready for use. Now, as to Mr. Brainerd, he does not make fly books, but at Mr. Hyde's suggestion, as I understand, he has made a die to stamp out the fly-holders, (I don't know that they have any particular name,) and purely from a sportsmanlike desire to add to the comfort of the angling brotherhood, makes and furnishes the article to those who may wish to try the improvement. Mr. Hyde is an importer of watches, and Mr. Brainerd is of the firm of Brainerd, Steele & Co., 9 Maiden Lane, jewelers, and, of course, fly books are entirely out of the line of either of these gentlemen as an article of sale. Should any of your correspondents wish to try their hand at fitting up a book in the new way, let them send to Mr. Brainerd for as many fly-holders as are wanted and go to work. They are easily applied, and can be used in the ordinary fly books by taking out the parchment so as to get at each page separately. The cost is seventy-five cents per gross.

LITTLELL.

[In our last issue fly book should have read fly hook—a typographical error.—Ed.]

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

THE NEW YORK YACHT CLUB CRUISE.—One of the most interesting events connected with the present cruise of this club was the race on Friday last for the two cups presented by Commodore Kingsland. The only competing yachts were the schooners Idler, Mohawk, Restless, and Clio, and the sloops Addie V., Vindex and Windward. The Rambler was entered, but did not cross the line within the appointed time, and was, therefore, out of the race. The course was from Fort Adams to and around the buoy off the north end of Block Island and return to starting point. The Clio, although the last to start was the first vessel around the buoy, and owing to her long start on the homestretch and time allowance, won the schooner prize. The Windward took the prize for sloops. The corrected time over the course for each yacht is as follows: Clio, 6:6:22; Idler, 6:19:00; Mohawk, 6:34:18; Restless, 6:35:00; Windward, 6:42:30; Addie V., 6:49:25; Vindex, 7:18:20.

THE NEW YORK YACHT CLUB have had a series of sailing and rowing races within the past week, off Newport, notwithstanding unfavorable weather. On Monday last, in the sailing regatta, the winners were the Rambler in first-class schooners, the Restless in the second, the Vision in the first-class sloops, and the Genia probably in the second. The races for the Bennett cup was to be sailed yesterday.

CHICAGO YACHT CLUB—Chicago, August 9th.—I send you a list of the officers of the Chicago Yacht club, chosen last Saturday at a meeting of the club in the Sherman House: Commodore, J. Poindville; Vice Commodore, T. M. Bradley; Rear Commodore, W. T. Higgin; Secretary, C. E. Kennealy; Treasurer, Louis Wahl; Measurer, V. W. Bates; Executive Committee, W. C. Lyon, chairman; J. A. Farrow, W. E. Miller, J. Fergus, W. Barnum; Regulation Committee, J. B. Lyon, chairman; A. C. Ducat, F. Wentworth, F. W. S. Brawley, E. Brant. Uniform—Members to wear a frock of navy blue cloth, with two rows of large-sized yacht buttons on the breast, nine in a row; pants of same material; vest of same, single-breasted; standing collar, buttoned to throat; black silk neck cloth, cap of navy blue, with letters C. Y. C. in silver, and a gold anchor in front. The constitution and by-laws of the International Yacht Club were adopted, with slight changes. The initiation fee was changed from \$10 to \$5, and the annual dues from \$8 to \$4. The club is to have another regatta on the 21st inst., over the same course as previously. The Board of Trade have offered to give a purse in addition to the club prize.

CUTTER.

GRAND HAVEN REGATTA, Michigan, second annual, occurred on the 11th inst. There were fully 5,000 spectators. In the senior scull race there were four contestants: Corn-ing first, in 15:38; C. A. Pearson second, in 15:43; H. W. Pearson third, and T. A. Allcock fourth. In the duck boat race, half mile and turn, there were seven entries. James Welch won easily in 9:29. Junior scull race, five entries; C. A. Barnard first, in 16:6; J. A. Wilson second; P. B. Kelsey third, and F. H. Watts fourth. S. B. Humphrey drew out. Senior double scull, three entries: Beauty, Lotos and Ferry. Time, Beauty, 15:4; Lotos, 15:13; Ferry broke down.

BEVERLY YACHT CLUB.

Boston, August 14th, 1875.

EDITOR FOREST AND STREAM:—

The twenty-second regatta of the Beverly Yacht Club took place to-day at Swampscott. Owing to the fact that several of the owners of yachts which usually race, are off on a cruise, as well as to the light wind which prevented some of the yachts from arriving in time, the entries were not so large as usual. The wind through the morning was only a series of light airs, varying from southeast to southwest, and alternating with calms. However, by 12 M. it had settled down to a light S. E. by S. breeze. The course lay from the judges' yacht and the Clochette of the N. Y. Y. C., moored off Phillip's Point, leaving a stakeboat off Egg Rock on the starboard hand; a stakeboat off Little Nahant on the starboard hand, to the judges' yacht, the first class to go twice round. The yachts got away with a flying start as follows, the Frolic's time being taken, although as she was not sailed by a member of the club, she could not compete for the prize:

Yacht.	Owner.	Starting time.		
		11.	12.	1.
Queen Mab.	W. F. Hallsall.	12	17	46
Ariel.	W. D. Sohler.	12	16	13
Waif.	E. W. Codman.	12	16	42
Fanchon.	Arthur Burgess.	12	16	22
SECOND CLASS.				
Water Lily.	P. Grant, Jr.	12	20	25
Avis.	W. C. Haskell.	12	27	03
THIRD CLASS.				
Nora.	R. P. Snelling.	12	25	56
Virginia.	C. H. Plimpton.	12	26	53
Tulip.	Vice Com Burgess.	12	27	17
Bluebell.	W. L. Jeffries.	12	27	38
Frolic.	N. H. Gibbs.	12	28	00

After a long sail that was by no means satisfactory, by reason of the light winds, calms, showers, and at last, as it happened in the case of the rear boats of the second and third class, head winds, which changed the home stretch from a free run to a beat, the Clochette was rounded as follows, the first class going off on the second round:

Queen Mab, 1:30:40; Waif, 1:33:06; Fanchon, 1:34:23; Ariel, 1:35:46; Water Lily, 1:39:06; Avis, 1:48:55; Virginia, 1:54:45; Tulip, 1:55:07; Frolic, 1:59:40; Nora, 2:02:37; Bluebell, 2:02:55. On the second round the Ariel caught the N. W. breeze first, and ran up on the leaders, and when the wind came out from the original quarter—but very light—she slipped into the second place. The boats reached home as follows: Queen Mab—2:12:53; Ariel—3:27:03; Waif—3:37:41; Fanchon—3:31:45. The following is the actual and corrected time:—

Yacht.	Actual time.			Correct time.		
	H.	M.	S.	H.	M.	S.
Queen Mab.	2	55	06	2	46	01
Ariel.	3	10	56	3	04	22
Waif.	3	10	59	3	09	43
Fanchon.	3	15	03	3	10	45
Water Lily.	1	18	41	1	12	20
Avis.	1	27	55	1	19	52
Tulip.	1	27	20	1	19	04
Virginia.	1	27	52	1	19	06
Frolic.	1	31	40	1	23	23
Bluebell.	1	35	17	1	27	00
Nora.	1	36	41	1	27	55

The first prizes—pieces of solid silver plate—were taken by the Queen Mab, Water Lily and Tulip; the second prizes were taken by the Ariel and Virginia, none being given in the second class, as only two yachts started. The champion pennants were taken by the Queen Mab, tying with the Fanchon and Eva; the Water Lily, who wins it for the second time, the Ibis having taken it once, and the Tulip who wins for the third time and holds it. The judges of the race were Messrs. J. Jeffries, Jr., Harcourt Armory and E. B. Russell. The next regatta takes place August 26th. Yours,

COULTER AND MORRIS.—A five-mile race between Harry Coulter and Evan Morris for a stake of \$1,000, and the championship of America has been arranged. The articles of agreement, which have been signed at Pittsburg, stipulate that the race shall be rowed on Saturday the 11th of September next on a course yet to be named, but which must be within twenty miles of Pittsburg. Coulter now holds the title of champion, although the late George Brown, having defeated both William Scharp and Evan Morris, had some claim to it, but being a Nova Scotian and the title not having been included in his matches with the last named men, it has lapsed into the possession of Coulter, who will defend it for the first time.

O'NEIL AND ENGELHART.—These gentlemen, the particulars of whose match, fixed for the 21st of September on Saratoga Lake, we gave in our last issue, are both in active training; O'Neil at the Lake and Engelhart on Newtown Creek under the mentorship of John Biglin.

—It is now said that the report of a match made at Boston between John Shea and Evan Morris for \$1,000, and telegraphed all over the country, was a fabrication.

—There was a race on Saturday, 14th, at Yonkers between the six-oared shells "Old Pres" and the new eight-oared barge Resolute, of the Palisade Boat Club: won by the barge in eleven minutes, two miles straightaway.

The Vespers of Yonkers have declined to row with the Palisades this year.

Philadelphia, Aug. 11th.—There is no boating going on on the Schuylkill, except the Quaker City's four getting ready for the National Regatta at Troy. They will perhaps enter at Saratoga, and will probably be the only Philadelphia representative at either place. Their crew will be, (I think), McBeath, Henderson, West and Stinson.

It is much regretted that owing to the inability of the boat to leave his business at that time, the Vesper will not send their double scull crew that made such a noble fight against Yates and Curtis.

PROVIDENCE, R. I., August, 1875.

EDITOR FOREST AND STREAM:—

On Saturday last a friendly pull came off on the Seekonk River, between the Holmes and Davis crews, of the Pawtucket Boat Club. Both crews have been in training for some time. The course was one mile and return. The water was smooth as glass, and at the signal given at six o'clock the crews got away, the Davis crew consisting of McKelvey, Leonard, Bucklin, Read, Knight and Davis; Holmes crew—Holmes, Whitaker, Pierce, Wilboer, Taylor and Davenport. The Davis crew got off at the start with a little lead, pulling a very quick stroke, but very imperfect and short-lived. The Holmes crew with a long, steady, winning pull, passed the Davis crew after the first half mile. The race was won by the Holmes crew in 13 min. 24 sec, the Davis crew being 13 sec. behind. Two of each crew belonged to the crew who won the race with the Narragansetts recently. The Davis crew being the challenged had the choice of boats, having the one used by the Holmes crew—the heavier lap streaked boat—both boats being with stationary seats, the champion boat not being used by either crew.

The Pawtucket Boat Club have some hardy men amongst them, and they propose to enter the field with money and friends, and pull against any crew in the country. I understand that a purse is soon to be gotten up and challenges thrown out promiscuously around the country.

WHAT CHEER.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

MORTIMER.—Your letter on Summer Woodcock is deferred one week.

N. T. G., Niagara Falls.—Packard's "Guide to the Study of Insects" can be obtained at the Naturalists' Agency, Salem, Mass.

HUNTER, Oswegatchie.—You are right. Colvin's Lost Lake is not a newly-discovered lake. It was known to people in your section thirty years ago as "Big Deer Pond."

HONOKUS, Brooklyn.—Will you please inform me the derivation and meaning of the name "Hohokus"? It is the name of a place in New Jersey. Ans. Don't know. Ask Joe Jefferson (Rip Van Winkle.)

H. R. C., Holyoke.—Will you be so kind as to inform us through your paper where we can get a trigger tester, and the cost of same? Ans. A common small spring balance, which can be purchased for a few shillings will answer your purpose fully.

J. T. O., Philadelphia.—I would like to know through your columns if there is a rifle club of any note in this city, and if so, who are its officers? Ans. You can get the information you need from Mr. Anschutz, rifle maker, Third street, below Walnut, in your city.

D. H. B., Honeoye Falls.—Can you inform me how to preserve the skulls of animals, etc., and keep them white? Ans. After you have cleaned them as thoroughly as possible let them remain in the nests of the large black ant until perfectly clean, and then scrape and varnish.

L. H. B., Troy, N. Y.—You will find the best book on rowing to be the "Oarsman's Manual," published by Waters & Sons, Troy, N. Y., or at least to be obtained of them. "Argonauts," "Rowing and Training," to be had in this country of Mr. James Watson, New York, is also first class.

A. W. H.—Is there any place in the immediate vicinity of New York where swimming is taught, except, perhaps, at the free baths? Ans. Instruction is given to both males and females at the private bath foot of Sixty-third street, or in that immediate neighborhood. We forget the names.

H. C. A., Grand Rapids, Mich. We wrote you a letter, July 8th, giving names of reliable game dealers in this city, viz.: A. & E. Robbins and Smith & Lewis, Fulton Market. The letter has been returned to us "unclaimed," and we now answer herewith. The last named firm deals also in skins and hides.

MONMOUTH, Atlanta, Ga.—How are the spears used in India in "pig sticking" made? Please answer for the benefit of our wolf hunters on the plains. Some of the cavalry ride the wolves down, I hear. Ans. We shall have to look to some of our correspondents who are British officers for an answer to this question.

W. A. R., New York.—Will you please inform me of some locality convenient to New York where I can get good striped bass fishing? Have tried Kingsbridge, Kills, and around Hell Gate, and poor luck. Are bluefish running well at Fire Island, or if not, where? Ans. For latest fishing news, always see our weekly fish reports.

DUCKS.—You say you wish to know where to spend a two weeks' vacation, but do not say when or what kind of sport. For seaside we would recommend you to E. H. Frame, Forked River, New Jersey, or Wm. Lane, Good Ground, Long Island, for shooting and fishing combined. For upland sport, try the region of White Sulphur Springs, Virginia, twenty-four hours from New York.

D. F. L., Granville, N. Y.—Which of the three following books is the best for teaching the art of fly-fishing, the "Fishing Tourist," by Hall-ock, the "American Angler's Book," by Thaddeus Norris, or "Fishing in American Waters," by Genio C. Scott? Is there any other work better than the three spoken of? Ans. Buy Frank Forester's "Fish and Fishing" and Norris' "American Angler's Book."

A. M., Nyack, N. Y.—Can you tell me where two persons can get cheap board at or near Sloatsburg, Rockland county, and if that is a good place for fishing and hunting? Ans. One hotel and two Summer boarding houses at Sloatsburg. Good Spring House, six miles distant, accommodates thirty boarders. Bass and pickerel in Truxedo Lake, Potogue Lake, and Cedar Pond, all within three miles. Some woodcock, snipe, etc.

J. B. H., New York.—Nonquit is a Summer resort at the mouth of Buzzard's Bay, accessible from New Bedford by land and water—six miles by land and twice a day by steamer, a nice, quiet place for pic-nics, clam bakes, etc., with a good hotel. You can fish directly from the rocks for tautog, scup, and bluefish, and it is only a short distance from Cuttyhunk Island, where the famed New York Club holds sway. You can always obtain at New Bedford boats and boatmen.

SCHWEDE, New York.—The "strawberry run" of sea trout, as it is called, occurs in the eastern rivers of Nova Scotia the latter part of July, the fish moving east as the season advances. Those wishing full sport should begin at Tangier, say about sixty miles east of Halifax, to which place a good coach runs three times a week, and then keep on to Sheet Harbor, Moses River, and so on. Accommodations, with good substantial fare, can be had at the farm houses, with guides always at hand.

FRANK, Brooklyn.—What seven-shot 22 cal. revolver would you get? 2d. What makes a revolver spring upward when you discharge it? 3d. Please inform me of a good place on the sea shore where I can get cheap board and good fishing; also surf bathing? Ans. 1. Smith & Wesson is the best seven-shooter. 2. Practice crooking your trigger-finger without moving your hand. 3. Cannot answer as to cheap boarding house. There are good hotels, fishing and surf bathing all along Long Island.

ACQUAINTANCE, New York.—I expect to leave New York about the 1st of September to stay away for two or three weeks. I want to go somewhere where I can have good duck and snipe shooting, and am not particular about where I go, or how far I go, if I can reach New York in two or three days from time of starting. What size shot would be best for duck and snipe with a ten bore breech loader? Ans. Take steamer from Rochester to Port Hope, Canada, and thence rail to Rice Lake, 12 miles from Cobourg. Ducks, No. 4 shot; snipe, No. 12.

S. C. B., Madison, Wis.—Would you be so kind as to inform me whether there is to be found in the United States such a bird as pheasant, and where I see mention made in your paper of "partridge," please explain what bird you mean. Ans. The quail strictly belongs to the *perdix*—partridge family. Of the seven species known in the United States only one (*Telraus columbianus*) is known east of Wisconsin. The ruffed grouse (*Bonasa umbellus*) is a pheasant, though we believe it is claimed that there are no pheasants in the strict scientific acceptance, in this country.LAPSTREAK, Brooklyn.—Will you please inform me if the time made in the recent race at Halifax by the Smith-Nickerson crew was better than that made by the Taylor-Winship crew in 1874. Ans. According to the St. John *Globe* the Winship-Taylor crew during the aquatic carnival of 1874, rowed six marine miles in 44 minutes 28 seconds, being an average of 7 minutes 24½ seconds to the mile. In the last race the Smith-Nickerson crew made an average of 7 minutes 11 seconds, being a difference of over 13 seconds in their favor.

H. B., Brooklyn.—Can you inform me of any places on Long Island suitable for shooting or fishing, or both, where a party of four would be allowed to camp out? We would like to go early in October. Ans. If you wish quail and grouse shooting, of which there is very little, you must obtain permission from some land-owner, in order to insure yourself against molestation, although the barrens are hunted all over like wild lands, except where trespass notices are discovered, objection being seldom made. There is no inland fishing in October. You can camp anywhere on the coast almost, for wild fowl shooting and sea-fishing, the Great South Bay, and the Peconic and Shinnecock regions being the favorite localities, both for wild fowl and sea fish.

F. W. M., Syracuse.—In buying a gun which would you advise me to buy, a rifle or shot gun? Which manufacturer of guns makes the best gun for neatness of finish, simplicity of construction, strength, durability, rapidity, and ease of manipulation, close shooting, range, and penetration? Would it be safe to fire on a bear at a distance of thirty-five to forty yards, using a shot gun loaded with buckshot? Ans. We would recommend a double-shot gun of about 8½ pounds weight, with which you could shoot buckshot or ball cartridge effectively. All makers claim superiority. Any of those advertising in our columns will supply you with a good one. We cannot advise about the bear, as "circumstances might alter cases," very much.

S. H. W., Washington, D. C.—I have recently received a genuine Gordon puppy, now about three months old. She is pure black and tan, except toes of front feet, which are white. Her ears are quite large and covered with long, fine, and somewhat curly hair. A friend of mine asserts that the long ears are an indication of mixed blood. Please give me your opinion on the subject. Is the Gordon considered as valuable for the field as other leading English strains? Ans. Without seeing your dog we can form no opinion as to the purity of his breeding. The Gordon setter is about as good as any other strain of setter. Those we have shot over were generally high strung, and required much work to keep them steady.

E. W. C., Chambersburg, Pa.—I own a pond covering some twenty acres, about a mile long, with an average depth of four feet, and stocked with black bass, catfish, suckers, etc. Please advise me as to the best plan to catch the fish. Last week I tried catching them with a seine, but the bottom of the pond is very uneven, rocky, etc., and there are but few points around the pond suitable for drawing a seine. I am inexperienced in fishing, and have no acquaintance with nets adapted to catching fish in ponds such as mine. In reply please also state price of net I want, and by whom made. Ans. Address W. W. Cherry, of Columbia, Tennessee, for nets such as you want.

C. C. T., Beacon Falls, Ct.—We want to find some place within a day's march of civilization where we can find both food and fur animals; we have fixed upon the country about the Rangely Lakes. Do you think it a good locality? Ans. The Rangely region, pretty fair in itself, is contiguous to the Coos and Megalloway country, which, though considerably hunted, will doubtless afford a compensating return of skins and fur. The headwaters of the Connecticut River and all along the boundary line is a good fur country. The Aroostook region of Maine contains vast wildernesses, through which two stage roads run. You will have to locate your lines according to your judgment.

J. J. L., Brockport.—Please inform me in regard to the oystering business on the Great South Bay, Long Island, N. Y. When in season, how is it in comparison with fifteen or eighteen years ago? Then it was a good business. What can land be bought for about the bay shore, near Patchogue say? Ans. The oystering business in the locality named has never been so good as it is now, although the locality where the oysters are most abundant has changed somewhat, and there are many more persons engaged in it. The bottom of the bay opposite Sayville and the greater portion of Islip township is one immense oyster bed from shore to shore. We question if there is a similar piece of water in the known world productive of so much natural wealth, when the fishing and clamming are included. Land along the bay shore is worth from \$100 to \$500 per acre, according to locality.

T. O. M., Indianapolis.—What is the proper color of a thoroughbred Russian setter? I would be much obliged for a full description? Ans. The only Russian setter we have ever seen which we feel assured was thoroughbred was a full sized black and white dog, which much resembled a cross between a Scotch terrier and Newfoundland. The "Encyclopedia of Rural Sports" says: "It is needless to describe the Russian setter, which was common enough thirty years ago, as it is now seldom met, and has no advantage to recommend it. It is a long-haired animal, resembling a poodle in coat, except that it has not so much curl." We have no doubt there are setters of all colors in Russia.

J. A. H., Boston.—I am thinking of camping ten weeks on the St. John's River, N. B., above Woodstock. Can you name a couple of reliable guides? How is the fishing there, and is there any shooting? How long will it take to make the trip from Mooshead Lake via Allagash River to Fredericton, N. B.? Ans. Woodstock is an old settled place. Don't know of any good fishing or hunting within twenty miles of it. Sabanis and Noel, at Tobique village, are good Indian guides, and none is better than Gabriel, whom you can find at Fredericton, where every one knows him. Inquire at the Barker House there. You will have to go to the Upper Tobique or Nashwaak headwaters for fish and game. Don't know the Allagash route. Stage from Mooshead to Guilford on European and N. A. R. R., and thence all rail to Fredericton; time, say thirty hours.

C. D. C., New York.—What conditions are favorable to trolling for pickerel. After trying several times unsuccessfully on a lake, from which in Winter thousands of pounds of pickerel are taken, I conclude there is something wrong in my method. Is cloudy weather preferable to fair? What length of line should be used, in trolling from a keel row boat, and what speed? What months are best, and what time of day? The waters of the lake in question are very clear and deep, mostly sand and rock bottom. Ans. We have generally found the best trolling for pickerel to be on the edges of lakes or ponds—as near the weeds or lily pads as it was possible to go. In such water as you describe still fishing with a minnow for bait would probably be more successful. In trolling a moderate speed should be used, sufficient to keep the spoon near the surface. About 100 feet of line should be out, and the early morning is generally the best time. The season depends somewhat upon locality. July is a good month, but the largest fish are generally taken toward Fall.

MESSINGER, Boston.—The black bass are quite plentiful in the Connecticut River, between Brattleboro and Bellows Falls, Vt., so much so that when the water is clear they are often seen in great numbers. The inhabitants are not successful in taking them. An occasional one is taken with the minnow and also with the grasshopper. The fly has been used but little, and with no better results as yet. Why is it? Ans. We can attribute it to nothing but caprice. Probably the bass would be found to take the fly on certain days or times of day, and not on others. This is our experience. We cannot account for the fact that bass are taken in some places and not in others. We have fished this year for bass in several Canadian lakes, at the Thousand Islands, St. Lawrence River, and in Pennsylvania, and never failed to take bass with fly, a mixture of grey and purple. In Canada we found the fly successful in the ratio of 2 to 5 with minnow, spoon, crawfish, worms, or other bait.

AUGUSTINE, Pittsburg, Pa.—I wish to ask your advice regarding my pointer dog, three years old. I shot over him three succeeding days, commencing July 5th, and gave him some pretty hard work, stiffening him up very much. Since then he has not been himself at all. He is almost constantly digging at his skin, (though he has no signs of mange,) and his ears discharge quite offensively. He also coughs slightly if I let him go into the water, although he has no signs of distemper. His general appetite is good, but his hair looks quite rusty, and is disposed to come out. Some of my brother sportsmen here tell me that I have overheated him, but I would rather have your opinion than any one I know. I also wish to ask your opinion of the cross of a young setter of mine. His sire is out of a thoroughbred Irish setter bitch by a thoroughbred Gordon setter dog. His dam is a thoroughbred Davenport setter bitch—quite a rare animal? Ans. There are but few dogs ever in good condition for hard work when the Summer cock shooting opens, and no doubt your pointer was entirely overworked, and too much exposed for a pointer. Setters can stand much more such rough work. And then, too, he has canker of the ears. Give him a few doses of flour of sulphur, and after cleansing his ears with tepid water and castile soap pour into them a solution of sulphate of copper, forty grains to four ounces of water.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCUCLATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.]
127 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty percent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, AUGUST 19, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, August 19th.—Trotting at Utica and Delaware, Ohio.

FRIDAY, August 20th.—Trotting at Utica and Georgetown, Ky. Regatta at Martha's Vineyard.

SATURDAY, August 21st.—Creedmoor competition for Luther Badge; do. Seventh Regiment "shells." Chicago Yacht Club Regatta. Base ball, Athletic vs. Chicago, at Chicago.

MONDAY, August 23d.—Creedmoor, Seventh Regiment "rifles." Base Ball, Athletic vs. St. Louis, at St. Louis.

TUESDAY, August 24th.—Trotting at Springfield. Racing at Monmouth Park. Provincial Rifle Meeting at Fredericton, N. B. International Amateur Regatta at Saratoga. Trotting at Morrisville and Bethel, Vt., Earlville, Ill., and Lawrence, Mass.

WEDNESDAY, August 25th.—Trotting as above. Regatta at Saratoga continued. Trotting at Simcoe, Canada.

ANOTHER LONG BOAT VOYAGE.—Canoeing voyages are becoming popular since our friend N. H. Bishop set such a notable and brave example. Our readers will see by the following note that there is another long cruise already in progress, the voyagers contemplating a trip from Kansas to Florida and back. What makes the adventure more interesting is, that there are *two ladies* in the case; their courage will command the admiration of all. The total length of the round trip is about 4,000 miles:—

ITHACA, N. Y., August 12th, 1875.

EDITOR FOREST AND STREAM:—

I have recently arrived here from Alexandria Bay, having rowed that distance in a small, Clayton-built boat, accompanied by Mr. Howard Wilson of Leavenworth, Kansas, where we both reside. We came via the St. Lawrence River and Lake Ontario to Oswego, and thence by Oswego River, Erie Canal, Seneca River and Cayuga Lake. The trip was novel and delightful beyond our expectations, and so well pleased are we with its results that we have arranged to prolong it indefinitely. Mr. Jarvis, the well known canoe builder, formerly of Watkins, is building us two 18-foot Baden Powell canoes, and with these, accompanied by my wife and daughter, and Mr. A. C. Carpenter of Ithaca, we hope to reach Jacksonville, Fla., and if no serious obstacle presents itself we will return to our homes in Kansas in the Spring by the same mode of conveyance. We will start about September 1st, going down the Susquehanna and Chesapeake Bay to Norfolk. From that point our course is undetermined, and we are forced to fall back upon your apparently exhaustless fund of information. Will you be kind enough to advise us as to the most practicable route, or refer me to some party who can do so? Is the route along the coast from Norfolk practicable, or is there not an inland course by river or canal? Respectfully,

D. F. FAIRCHILD.

Mr. Fairchild is Secretary of the Great Western (steam engine) Manufacturing Company, of Leavenworth, Kansas. We have provided him with such information as will undoubtedly serve his purpose. Success to the voyage!

SHOOTING OUT OF SEASON.

THE violation of the game laws is now constant and general throughout the country, notwithstanding severe legal penalties, the multiplication of protective clubs, both State and local, and the sweeping jurisdiction of the National Association. It is just the season of the year when such violations may be expected—when they become frequent by the temptation and opportunity that exist to provoke them. Nearly all kinds of four-footed and feathered game are approaching maturity. The fawns are large and weaned, the old deer are foraging for their fall fat, and the birds are on the wing, old and young together, and whenever any of these come within gun range there is a disposition to pull the trigger, even among the most conservative of us. Who will deny it? This is the temptation. Who will not justify to himself the act by a special plea for the attendant circumstances? It may be the necessity of the larder, the insatiate desire of the epicure, the instinct of the sportsman to pursue and kill, or the avarice of the market-shooter; the poor man may be starving, the sportsman in camp may be reduced to short commons; the market-shooter who chooses to depend upon his gun for a livelihood, may be out at the elbow and in debt for ammunition. Many and diverse are the conditions when a man may compromise with his conscience. "He tempted me and I did eat:" this was the primitive excuse. "I had my gun with me and I could not resist:" this is the modern. It is evident that something stronger than moral suasion, or moral force is needed to compel even ourselves to observe our self-imposed restrictions. We must put on a straight jacket. When we go into the field or into the cover, the gun must be left on its pegs or in its case. Then it will kill no game. The well disposed and law abiding can check themselves in this way. For the rest there should be a penalty, if they are found about the woods or prairies with a gun at unlawful times.

The opportunity that is offered to kill game out of season with comparative impunity is afforded by our imperfect game laws, which vary so much that some persons are totally ignorant of close times and open seasons, while others can evade their provisions by a plea of ignorance. Almost daily instances of violation are brought to our notice by correspondents, who seem to be vigilant, but are either reluctant or powerless to prevent. We are begged to take the matter in hand, or asked for information how to proceed. The fact is, no individual is willing to incur odium, and often personal risk, by becoming an informer, especially if the offender be an acquaintance. In the words of the immortal Tweed, "We know how it is ourselves." It is obvious that a total reconstruction of the laws is needed, before much can be done in the matter of preservation. For that we must wait, willy nilly, hoping that it may soon come. We, with thousands of others, will anxiously await the action of the Legislatures this Winter upon drafts of new laws that may be offered from several sources—chief of which are the National and International Associations. Summer heats and Summer vacations now retard the efforts of committees, but colder weather will be productive of things accomplished. Meanwhile, under the present laws, the easiest way to prosecute offenders is through club organizations. Let the club as a body be recognized as the informer or prosecutor, and defend its members as it would its honor and integrity. Where clubs do not exist it is well to organize them.

We alluded in a recent issue of this journal to the open sale of partridges at Saratoga, or rather to those birds being served at the fashionable hotels at unseasonable times. Referring to this statement, a correspondent has informed us by letter that the whole northern country, from Amsterdam to Northville is infested with pot-shooters, who hunt for the Saratoga market. "All is game that comes in their way," he says; "robins, meadow larks, woodcock, and partridges. Their boxes of game pass through our express office daily, marked for their respective landlords at Saratoga, and I have noticed the Monday morning stage bringing its ice-packed boxes, a pretty sure sign of Sunday hunting."

There is no trouble here to determine the real culprits, who aid and abet the violation of the law by giving employment and profit to the hunters. They are accessories before the fact. How to punish and check these powerful offenders, with their own wealth and the influence of their potential guests behind them, has been the problem that puzzled. The solution is to be reached through club organization. Saratoga is to have a game protective club, which will be composed of weighty numbers and influential men. When this is formed, a prosecution may obtain. The woodcock law seems to interpose a serious obstacle to the enforcement of the general bird law, for our correspondent says that "everything that flies is included as woodcock, regardless of size or color, and as the pot-hunter's game is generally picked, drawn, [bills cut off?] and packed on ice, it is hard work to tell just what they are."

It is very discouraging for gentlemen who maintain kennels of fine dogs, as our correspondent says he and several of his neighbors do at great expense, for the sake of hunting during the few weeks of the open season, to know that game birds for miles around them are being shot off by market hunters for weeks before the law permits them to participate. Nevertheless, we trust that they will keep the law in all things and abide their time, which will surely come. Another contributor reports that rail, which are not in season until September 1st, have been shot near Philadelphia for two weeks past. We are personally

aware that deer have been shot in John Brown's Tract previous to the 1st of August.

In this connection a New Jersey correspondent writes:—"I am happy to inform you that one of the parties alluded to in a previous letter as having violated the woodcock law, came to grief during last month. He and his companion were prosecuted and fined three (\$3) dollars per head for killing forty-three woodcock in the month of June. The whole bill they probably had to pay amounted to \$140. These unfortunate parties owe much to the leniency of the jury, and yet I can't see how the jury got over carrying out the spirit and letter of the law to its fullest extent of \$5 per bird. I think other punishments in other cases will follow swift and sure, if this unlawful shooting is not stopped. This is a move in the right direction, and the only effectual way to correct the evil. The infliction of the penalty in this single case will exert a most salutary and wholesome influence through our sporting fraternity, and cause a more sincere and general respect for the observance of the game laws. I trust all sportsmen interested in this locality will make a note of these facts and figures and govern themselves accordingly, and than we will all have an equal chance to enjoy our shooting." M.

ASSISTANCE TO SHIPS IN DISTRESS.

SOME years ago we remember to have seen noticed in the English press the necessity that existed for a systematic plan being formed for the purpose of rendering assistance to distressed ships at sea. If the thing were deemed urgent then, how much more so now, when the ships, both steam and sailing, have increased to such an extent! The proposition was, if we remember rightly, that there ought to be established by the chief maritime nations a complete surveillance over the most frequented parts of the ocean; that a number of fast steamships should be put in commission (to form what, in want of a better term, we would denominate the "Police Force of the Sea,") and should be ably officered and well manned, as they would be expected to cruise the North Atlantic continually, particularly that portion lying between New York and the entrance of the English Channel, which constitutes the great ocean highway traversed by the mercantile marine of Europe and America. This scheme appears feasible, and pending its adoption, doubtless the proposition would be just, that the countries owning the greatest number of ships and possessing the most trade should furnish the chief contingent of this Flying Squadron. The home-bound or European part of the fleet would of necessity, by traverse sailings, narrow to very close limits, and cross in every direction the intermediate sections not sailed over by the outward-bound or American part, and *vice versa*; so that the probability is that but very little, if any, floating material could elude the scrutiny of so many watchful eyes and powerful telescopes, at least under favorable circumstances. The vessels' hulls and spars to be painted of a uniform color, and that, too, of a shade the most distinguishable at long distances. This oneness of outline, to the practiced eye of the seaman, would at once indicate the proximity of the mariner's friend, and create a certain feeling of security in those who navigate the American Ferry, (or, as Lieut. Murray termed it, the Steam Lane,) akin to that experienced in a populous city, where the guardians of the public weal ably and willingly perform their duties. Many lives, we admit, have been saved and much valuable property picked up casually by ships crossing the Atlantic; but how much more efficiently would the plan proposed be found to operate—how many more pining, perishing castaways would run the certainty of rescue, under the closer and continuous persistency of this higher development of the life-boat system! Besides, what a number of valuable derelicts might we not expect to be secured and towed into ports—a great gain, verily—instead of floating in the pathway of ships, presenting a lurking and uncharted danger, of whose neighborhood the mariner has no warning! On the first blush the inauguration of this nautical novelty might seem Quixotic; but when we observe that an expedition much less practical (although decidedly scientific in its aims) and costing thousands of pounds, has been launched into the unknown and dreary Arctic seas, we do not despair of the one under discussion meeting favor in some quarters; for what, after all, have the two ships—H. M. S. Swallow and the Commodore—of this port, been attempting of late but what would have been done more efficiently by the agency of the Flying Squadron? It would be no more than we might fairly expect from the wealth, intellect and energy of England and America, at least, that they would create one such safety system for the greater security of those who are found upon the sea, as the Atlantic is pre-eminently the inheritance of these nations and doubtless will be that of their children. On the line of lurking rocks and hidden shoals that fringe the seaboard, we find the lightship moored, with her various colored lights and signal guns, which prevent many a fatal collision in the dark and stormy hour. But out upon the pathless deep, anomalous though it seem, the same forethought is not brought into action; there the treacherous berg and the more extended ice field, equally treacherous, are to be met, unsignalled, unlighted, and unbuoyed, and the only intimation the mariner has of their advance is, in many instances, the sad experience that befel the unfortunates of the ill-fated Vicksburg. A great deal has been accomplished in the cause of humanity, but much more remains, and a scheme similar to what we now advocate is a necessity and the chief maritime desideratum of our times.—A. M., St. Johns, Newfoundland.

—Florida is preparing for visitors next Winter, the number of which multiplies yearly. One hotel to accommodate 200 guests is to be erected in Jacksonville; another will be built at Green Cove Springs with a front of 400 feet and two wings of 200 feet each; W. Ansley, of St. Augustine will put up a new hotel there, and the old St. Augustine Hotel is to have an immense addition.

ROWING EVENTS TO COME.—The two great rowing events next in order are the regattas of the Saratoga Rowing Association, to be held on the 24th, 25th, and 26th of this month, and that of the National Association of Amateur Oarsmen, which is fixed for the 13th inst. and 1st of September over the Troy course. The latter organization will hold its fourth convention in the rooms of the Young Men's Christian Association at Troy, N. Y. on the 31st inst. at 10 A. M., when the advisability of holding two regattas next year, and also the position of the Association with regard to the Centennial regatta will be discussed. At Saratoga the list of entries is not expected to be as large as that of last year, and it will be suggested to the committee to make the races straightaway instead of with a turn as heretofore.

A number of crack fours are in training for both events, including the Beaverwycks of Albany, the Argonauts of Bergen Point, the Neptune Club of Staten Island, and the Atalantas of this city. The two last mentioned crews will be particularly strong this year, as the Neptunes include two of the winning Cornell University crew, Ostrom, stroke, and C. C. King, who rowed No. 5, while the Atalanta crew will be comprised entirely of college men, W. H. Downs, H. W. Rogers and J. A. Eustis, of Wesleyan, and John Gunster, of Williams. Among the other crews expected to compete will be one from the Pilot Rowing Club of Chicago, and others from Buffalo, the Potomac Boat Club of Georgetown, the Duquesne crew from Pittsburgh, and the Mutual Club of Albany.

At the Troy regatta the races will be the same as those of last year, viz: single sculls, double sculls, pair-oared shells and four-oared shells, and in addition to the challenge and individual prizes, a handsomely embroidered silk banner will be given to each club whose representatives shall be winners.

A GOOD MOVE.—In view of the constant destruction of fish in Bristol county, Massachusetts, by means of nets, trawls, and other devices, contrary to the laws of the State, and the necessity for increased effort and more summary means on the part of those who are pledged to sustain the law, the protective society known as the "New Bedford Sportsmen's Association," has sent out invitations to all interested in seeing the game laws enforced, to join the society. In Fall River they obtained the names of seventy-seven of the most prominent citizens in a brief time. A correspondent assures us that the enthusiasm is so great that all who meet him on the street present their names for membership, and he believes that they could have 1,000 in the club. He adds, "If too many hand in their names, instead of joining the New Bedford club we shall be obliged to have a separate organization, of course co-operating entirely with them." This society evidently means business, and no doubt the influence it will exert will extend far beyond its immediate sphere of action. It has already been instrumental in prosecuting and fining offenders against the law. If the example thus set could be generally followed, an end would be soon put to mischief.

—The Philadelphia Sportsmen's Club have recently purchased an eligible plot of ground of thirteen acres, about ten miles below that city, whereon they are about to erect a handsome club house, where their future social meetings will be held, and where their famous planked shad dinners and marsh rabbit suppers will be gotten up. Uncle Dan Wells, the proprietor of a kind of sportsman's headquarters in the vicinity of the club house, is one of the originators of those marsh rabbit suppers, so called. Before we had the pleasure of knowing and shooting with uncle Dan, marsh rabbits were called muskrats. But now, those animals, when gotten up under the auspices of our friend Dan under the name and style of marsh rabbits, make a delicious repast.

—One of our correspondents complains of the roughness of the Magnetewan country. It is rough, we admit, but we have taken a delicate woman over roads far rougher. A thoroughbred sportsman accepts without a murmur the vicissitudes of his chosen life as they occur; those who can't endure heat, cold, and storm, and an empty larder, should content themselves with shooting hand-fed pigeons from a trap. We retract nothing that has been printed in these columns respecting the value of the Magnetewan as a deer and trout country.

—An "association," as the name goes, have bought the island lying between Old Inlet and New Inlet, in Little Egg Harbor, known as Short Beach, where a town has already been laid out in squares, and christened Ocean City.

TO EXCHANGES.—Our list of exchange newspapers has become so unwieldy, burdensome, and expensive, that we are obliged to prune closely. We retain but a few of especial service to us.

—The following books can be had from this office:—

Manning's "Yachting Annual," Commodore's "Signal Book," Vanderdecker's "Yacht Sailor," Hunt's "Universal Yacht List."

—Only dogs not properly cared for have fleas. Constant washing with common soap will keep them free.

The Rifle.

CREEDMOOR.

The second contest for the new challenge-badge presented by the *Turf, Field and Farm* Association occurred on Saturday last. There were sixty-eight entries for the match, including an unusual large number of national guardsmen. One of these, Corporal T. W. Linton, of Co. B, Seventh Regiment, was the winner by a score of 44 out of a possible 50. The weather was fair, a gentle wind blowing down the range. The conditions of the match were, any rifle; two sighting and ten scoring shots at 200 yards; position, standing. Mr. W. B. Farwell was the last winner. The total scores were as follows:—

Names.	Total.	Names.	Total.
T. W. Linton.....	44	L. Cass.....	35
W. J. Oliver.....	41	Samuel Hersey.....	35
J. P. Burrell.....	41	G. H. Pettit.....	35
W. A. French.....	40	J. T. B. Collins.....	35
W. C. Reddy.....	40	F. Hyde.....	34
E. H. Madison.....	39	John Beattie.....	34

The ranges during the week have been devoted extensively to National Guard practice, principally by detachments from the Eleventh and Fifth Brigades of Brooklyn. On Thursday, portions of the Twenty-third, Thirty-second and Forty-seventh Regiments, all under command of Maj. Fetrie, of the Thirty-second Regiment, practiced at the 100 and 150 yards targets, a fair percentage of the men qualifying. On Friday squads from the Thirteenth, Fourteenth, and Twenty-eighth shot at the 300 and 400 yards targets.

So much carelessness has been displayed and so many markers injured at the butts that orders have been given to the Inspector of Rifle Practice of the Second Division to prefer charges against the men to whom the carelessness is traceable, and measures have been taken to devise some system by which accidents may in future be prevented. Numerous improvements are now under way at Creedmoor, including a magazine intended for the storing of National Guard ammunition, capable of containing 144,000 rounds. A row of flag staffs is also to be placed along the east side of the field, which, during matches, will fly triangular flags of red bunting, twenty feet long by six feet in width at the staff, the object of which is to assist long range marksmen in determining the direction and force of the wind.

THE AMERICAN TEAM.—The American riflemen sailed from Liverpool on the steamship City of Berlin, at four o'clock, on Thursday, the 12th inst., and they may, therefore, be expected to arrive in this city on Sunday or Monday next. The arrangements for their reception are very complete, and will be extremely warm, both to the "team" and the various individuals comprising it. Captain Kline will fire a salute at the Battery on the arrival of the team, and the steamer N. K. Hopkins has received a permit to take a reception party down the bay to meet them. The procession will probably be composed of the Ninth Regiment, Third Brigade, and the Twelfth and Sixty-ninth Regiments, First Brigade; the officers of the Twenty-seventh Regiment; the Off-hand Rifle club, and the New York Schutzen Corps. Gen. Ward, commanding the First Brigade, will be invited to take command of the procession. Colonel Ward having offered the services of the Twelfth Regiment as an escort, has received a telegram from Colonel Gildersleeve accepting the offer, with thanks.

Mayor Wickham will receive the team at the Governor's Room, City Hall, on Monday afternoon. Gilmore's Band will give a concert at the Hippodrome on Monday evening to which the team will be invited, and a dinner will be given at the Hoffman House, at which it is expected that 225 guests will be present. The price of tickets has been fixed at \$15. A proper testimonial is also being prepared to present the guests. The trophies of the team at Dollymount are on exhibition at the St. Denis Hotel.

General Dakin's Brooklyn friends will tender him a banquet, to be presided over by Mayor Hunter.

Major General Husted has issued a circular calling the attention of the field and staff to the fact that Messrs. Bodine and Coleman, members of the American rifle team, are officers of the division, and in order to give them a proper and suitable welcome upon their return, unity of action is eminently desirable.

THE JAMAICA, L. I., ROD AND RIFLE CLUB.—This association shot on Wednesday last for a \$50 gold badge at their 250 yards range. Mr. W. S. Elmendorf was the winner by a score of 50 out of a possible 75, L. R. Jaggard making 47, and Mr. W. S. Cosgrove 46 points. There were eleven contestants in all.

EMPIRE STATE RIFLE CLUB.—The tournament of the "Empire State Rifle Club," which was organized at Watertown last Fall, will take place at East Syracuse next September 28th, 29th and 30th, and October 1st. The following events are on the programme:

Tuesday—First day, match between J. W. Fowler, of Croton Falls, and H. V. Perry, of Jamestown, Penn., for \$50 a side, 40 rods distance, 40 shots each, no restrictions as to rests, guns, etc.

Wednesday—Shoot for the Association gold medal, worth \$500, open to all members of the club, the holder to retain it till won by some other member at any subsequent semi-annual meeting, the first of which will take place in the Spring.

Thursday—Shoot for the Challenge Cup, solid silver, worth \$100.

Friday, forenoon—President's prize will be shot for, and in the afternoon of all three days other prize shots to be arranged hereafter.

Louis J. Peck, of Lockport, is president, and John A. Nichols, of Syracuse, secretary and treasurer. Any person can become a member of the club, we understand, by the payment of the small sum of \$5, which entitles him to all its privileges.

—An interesting and exciting rifle match between a team of ten from the Plattsburgh Rifle Club, of Plattsburgh, N. Y., and the same number from the Ausable Valley Rifle Club, of Keeseville, N. Y., came off at Keeseville, Wednesday, August 4th, in which the Plattsburgh Club was victorious by a score of 396 to 377 for their opponents. We think these scores are pretty fair, considering that in both teams some of the best shots met with accidents which placed them at the foot of the list. The conditions were 200 yards, off-hand, and 400 yards any position without artificial rest; Wimbledon target; two sighting and five scoring shots at each range. The following table exhibits the score of each member at both ranges:—

PLATTSBURGH RIFLE CLUB TEAM.				
	200 Yards.	Total.	400 Yards.	Total.
Broadwell.....	5 0 4 3 5	17	0 2 5 5 5	17
Gunn.....	4 5 4 4 3	20	4 5 4 5 5	23

Total.....	177		200	377

—The Saratoga Rifle Club, at a special meeting held August 10th, accepted a challenge from the Parthian, Jr., Rifle Club, of Hudson, to a friendly contest of rifles, to take place at Saratoga, September 8th, 1875, between a representative team of six from each club; distance, 500 yards; Wimbledon targets.

—Through the instrumentality of Mr. F. R. Shattuck, of Boston, a 250 yard rifle range has been measured off across Sagg Pond to the beach bluff opposite, at Southampton, L. I., and targets have been put up for practice.

—A rifle club has been organized at Berlin, Ct., with S. Paddock for president, Fred. Hubbard, secretary, and M. Dudley, treasurer. Committees have been appointed to purchase rifles and select a practice ground.

WORCESTER SPORTSMEN'S CLUB.—The third and last of the competitive trials by the members of the Sportsmen's club, for the selection of a rifle team and substitutes, took place on the club grounds, east of Lake Quinsigamond, Saturday. The score was as follows:—

	400 Yards.	500 Yards.	Total.
I. C. Bates Smith.....	4 5 5 3 4 5 3.....29	0 2 3 5 4 2 3.....19	48
A. L. Rice.....	2 4 4 3 5 4.....26	5 2 4 5 0 0 4.....20	46
G. J. Rugg.....	4 4 5 4 5 5.....32	4 0 3 5 4 5 3.....24	56
A. P. Cutting.....	3 3 4 4 3 5 4.....26	4 0 2 5 4 5.....25	51
Stedman Clark.....	3 3 4 3 5 5.....28	2 2 5 0 2 0 5.....16	44
A. G. Mann.....	5 4 4 3 4 5 3.....28	3 3 0 3 4 2 4.....19	47
A. E. Grimes.....	5 3 2 4 5 4.....27	3 2 4 4 3 5 5.....26	53
W. J. McFarland.....	5 4 5 5 5 5.....34	5 4 5 2 3 5 4.....28	62
Nathan Washburn.....	3 3 5 2 4 4.....25	5 3 4 5 5 3 5.....30	55
Frank Wesson.....	5 4 4 4 4 3.....28	4 5 5 3 4 5 5.....31	59
C. B. Holden.....	0 3 5 3 5 5.....26	2 0 2 3 5 4 5.....21	47

Messrs. Smith, Rice, Clark, Grimes, McFarland, Wesson and Holden used the Frank Wesson rifle, Messrs. Cutting, Mann and Washburn the Alex. Henry rifle, and Mr. Rugg the Holden rifle. Messrs. McFarland, Cutting, Wesson, Mann, Ruggs and Rice constitute the club team, and Messrs. Grimes, Clark and Smith the substitutes. Mr. W. J. McFarland wins the rifle offered by Mr. Frank Wesson for the best aggregate score in the three competitions.

RIFLE MATCH—HAMILTON VS. MONTREAL.—A simultaneous rifle match between members of the Montreal Rifle club and those of the Victoria Rifle club of Hamilton, took place yesterday afternoon, the former firing at the Point St. Charles ranges and the latter at their own ranges in Hamilton. The understanding was, that twelve members should be selected to shoot from each club, but Hamilton shot with only ten men, who made 589 points at the three ranges. The individual scores have not been received. The Hamilton men selected were Messrs. George Murison, James Adam, F. Schwarz, J. J. Mason, William Mitchell, Albert John Mitchell, C. Murray, David and Thomas Mitchell. The following are the scores of the Montrealers:—

	200 Yards.	500 Yards.	600 Yards.	Total.
Ross.....	23	26	26	75
Turnbull.....	23	26	23	72
Thomas.....	27	25	19	71
Wall.....	22	26	21	69
West.....	26	18	20	64
Fraser.....	23	19	21	63
Iverson.....	21	21	20	62
Ferguson.....	22	21	19	62
Trihey.....	22	18	21	61
Esdaile.....	23	18	20	61
Stenhouse.....	20	24	15	59
Imrie.....	21	17	15	53
Total.....	272	259	240	771

From the above it will be seen that the Montrealers won the contest. Taking the average of ten men on each side, Montreal led by 54 points.—*Montreal Witness*, 6th.

POINT BLANK AND POINT BLANK RANGE.

"OLD SCOUT" IN REPLY TO "POINT BLANK."

NEW ROCHELLE, July 28th, 1875.

EDITOR FOREST AND STREAM:—

I observe the criticism offered by "Point Blank" in your columns of July 22d, to my articles on "Point Blank and Point Blank Range Explained," and found in your interesting paper of July 1st and 8th inst., the latter being in correction. It is courteous, and hence I aim in this hasty reply to be as mild as possible, but to vindicate my position towards "New Beginner," to whom I ventured, at his request, to offer some information on this most interesting subject.

"Point Blank," as will be seen in his letter, very politely charges me with committing the "error" of stating to the new beginner in rifle practice, that the path pursued by a rifle ball in shooting is a *curved line throughout*; and, assuming that I have committed an error in so stating, he begs "to correct" the same, fearing I had not "sufficiently considered the subject." This full assurance of his in my "error" calls on me for some remarks.

To correct this alleged error, he offers as a substitution, that the path of the ball is not a curve throughout, but that it is part a straight line and the rest a curved line. I here quote from his letter—first, in all fairness, and second, because his theory is based on the two following sentences:—

1. "Briefly, then, a rifle ball, *correctly* speaking, traverses a line at first straight, but soon becoming more and more curved and called the trajectory."

2. "And the extent of the coincidence of this trajectory with the straight line of the axis of the gun determines the true point blank."

Thus (2d) his true point blank lies in the straight line of the *axis of the gun*, and at the end of the straight line of the path of the ball. To the contrary, I stated that the true point blank lies in the straight line of sight, (not axis of the gun) and at the point where the path of the ball cuts the line of sight the second time. (See case 3, No. of July 1, and 8th for definition.)

The issue of fact, then, clearly stated, lies—first, between all curved, part curved, and straight lines; second, whether the true point blank lies in the axis of the gun, or in the line of sight. These are vital points, and should be understood by all sportsmen; hence they should not be left in doubt. That the path is all curved, I offer in proof all the standard works on this subject in the whole civilized world, both in the theory and practice; and should this not satisfy anyone, then he can make the experiments so often and so easily made in practice, when he cannot fail to be converted to the truth as I laid it down for the new beginner. Hence I reject the proffered "correction" on this point, with all the modest assurance with which it was offered. That the rifle "shoots straight" is the first thing we hear of it, and hence no wonder at this popular fallacy. But that the earth is not flat, and that the paths of all bodies, when projected through the air and left free to move, are continuous curves, have both alike been established, and this for centuries since. Immortal fame awaits him who shall prove to the contrary. The "theory" advanced is no *new* theory of mine, as "Point Blank" may have supposed. It dates back to periods unknown by me. I saw the earnest inquiry of a new beginner after the truth, and was sensible of his desire to obtain it. I saw the intricacy of the subject—at least to the young mind—and was fully conscious of the responsibility I assumed in treating it, as well as the criticism I would justly incur if aught were written in error. Thus, in my contribution I sought only to collect in my own way the facts I had long since gleaned from the standard works I had studied on this subject, and to combine these with the lessons of a long experience in rifle practice, and in the use of firearms generally, and to present the same as clearly as possible without the aid of a diagram, through the columns of FOREST AND STREAM. In my mode of explaining this subject, however, wherein I combine theory with practice, the one in mutual explanation of the other, I must confess to originality, as I believe no other popular article of the kind has ever appeared before in print. For this originality I trust I may be excused, if in so doing I thereby rendered the subject more clear, or if more interesting by unveiling the cold forms of theory and clothing them with the lively mantle of practice. On every hand I am thanked for my effort. A new beginner in Wisconsin writes to say: "I am glad to hear from you in your article in FOREST AND STREAM on point blank and point blank range. Very good. I understand the subject *now* perfectly." A sportsman from Texas, writes: "Your article on point blank, etc., will enlighten many a gunsmith," etc. Just so. These are encouraging words, and yet the truth rolls on. I have opened the door. Step in and improve; there is plenty of room. FOREST AND STREAM is up to her work; always ready to interest, and spread the truth. But let us circulate no false theories; these would mislead and be productive of harm.

To return a little. I would not say that "Point Blank" means to assert that his point blank is the true one sought after by "Enquirer," and mine the wrong one; but I may infer this, since he writes in correction generally, and lays down his "as the true point blank." I here bring forward my definition for it, also for the range, in order that they may appear clearly before the reader:—

1st. By point blank is meant the *second* point where the trajectory or curve of the ball in its falling flight *intersects* or *cuts* the line of sight. (Case 3.)

Note.—This mathematical point in theory and science corresponds to the *exact centre* of the target in practice.

2d. By point blank range is meant the straight line or shortest distance from the piece to the point blank (or cut, as above). (See Case 3.)

I will now examine the second point at issue, and see if "the true point blank lies in the straight line of the *axis of the gun*," as "Point Blank" claims, or if to the contrary it lies in the *line of sight*, as stated to "Enquirer." One shot, as at Creedmoor, where all will admit that the practice is conducted upon the true theory of gunnery, will serve to illustrate the two definitions, and to show which is the true one and which the false one. Let us now, with a Sharp's or Remington's best rifle, loaded with a full charge, take a shot at 1,000 yards, with a good aim at the centre of the bullseye. Are you ready? Aim. Fire! The ball strikes the bullseye. Such is true practice; and here, at the centre of the bullseye, is what?—the true point blank. Why? Because true point blank means the centre of the target; the terms are synonymous. Now, mark: This ball (or its path in its falling flight or curve) is here found, and seen to be on the *line of sight*; here is the second cut of the line of sight just according to my definition. Now, admit—but only to carry out the illustration—that the rifle carried straight for this distance, where would we find the point blank in this case? Answer—about 145 feet in the air, over the target. Why? Because the axis of the gun pointed here when it was fired; and mark, on this axis is the true point blank set up by "Point Blank" to correct mine (as I infer). If we come down in distance to 100 yards or less, the same fallacy obtains in proportion. No; the point blank is not along the axis of the gun, which points up or down just as we raise or depress the sight, and is in fact never pointed at the centre of the target when the line of sight points there (and the centre is struck), all this being according to the strictest rules of the true theory. In aiming a rifle the gun, or axis, is *not* pointed at the target, but away from it, more and more (as in the case above) as the rear sight is elevated. But the line of sight always points the same at the target, and is the regulator to the gun. All such facts are only deductions from Cases 1, 2, and 3. No rifle can ever be made to shoot straight till gravity, a law of nature, is destroyed, and this will be a long time, I hope. All the powder in the world will not destroy gravity in the ball when flying through the air. Say the force of the powder is to the gravity of the ball as 10,000,000 to 1. Here are the two forces left free to operate. Now construct the "parallelogram of forces" "Point Blank" refers to, and at the muzzle of the piece, for both forces are there and left free to act; and here, at the very start of the ball, commences

the curve, infinitely small, to be sure, but it is there, but do not start the curve anywhere else. Perpetual motion and straight line shooting will both come into existence when gravity is eliminated from nature, and not before. Every ball, in passing through the air, describes its own form of curve; yet all are hyperbolic, as "Point Blank" says, and they vary in form from different causes, unnecessary to mention, as he states; but he omits to say that whilst these curves are hyperbolic, that they have each their asymptotes, and that these lines are such mathematically, in relation to the curves, as to forever preclude the authority to separate the functions of either in part, as in calling the trajectory part straight and part curved. All this, however, is foreign matter. Indeed I could have considered Point Blank's letter all foreign, for his theory has no place in science or practice. Hence I reject it. OLD SCOUT.

GEN. CUSTER AS A RIFLEMAN.—The Messrs. Remington have kindly favored us with the following private letter from Gen. Custer, dated at Fort Lincoln, Dakota, July 29th, 1875:—

Messrs. Remington & Sons:—

DEAR SIRS: I have been unable to indulge in target practice with the long range rifle obtained from your firm until the present month. As I keep an accurate account of each shot I fire in a score book given me for that purpose by my friend Major Leech, of the Irish Rifle Team, I have thought you might be interested in glancing at some of the results. While I claim to have had no little experience in firing at game of all kinds at ordinary distances, yet I have never practiced firing at targets at long range until the present month. I give below my scores at five hundred yards, made on the fourth and fifth days respectively of my practice. The scores were made upon a target constructed upon the Creedmoor plan—the same in dimensions as those used at Creedmoor in the 500 yard matches. On the fourth day I fired nineteen shots, making the following score:—4 4 4 3 3 4 4 4 4 4 4 4 4 4 4 4 4 4 3 4—73 out of a possible 76. On the following day I fired thirteen shots, making the following score:—4 4 4 4 4 3 3 4 4 4 4 4—50 out of a possible 52. Instead of being the fourth and fifth days' practice at the distance named—five hundred yards—they should be noted as the third and fourth, as the first day's practice was at four hundred yards, on which occasion I fired fifteen shots, the last consecutive five being bullseyes. Previous to that day I had never fired what is termed a long range target rifle. I have caused a target to be prepared of the dimensions used at from 800 to 1,000 yards, and in a few days will commence firing at these and intermediate ranges. Very truly yours, G. A. CUSTER, Brevet Major General U. S. Army.

THE FOREST AND STREAM BADGE.—The sixth competition for this trophy and the supplemental badges offered by Mr. Conlin was shot at the gallery 930 Broadway on Thursday evening last. The usual conditions were in force; twenty shots each, strictly off hand, at seventy-five feet, measurement in inches from centre of bullseye to centre of shot. The following are the scores:—

FIRST BADGE.			
Name.	Inches.	Name.	Inches.
M. P. Lennon.....	13 1/4	A. March.....	14
Thomas Lloyd.....	13 13-16		
SECOND BADGE.			
W. B. Farwell.....	15	Wilson MacDonald.....	15 15-16
A. C. Hellwig.....	15	J. T. Rathen.....	14 1/4
T. C. Noone.....	15 7-16	Robert McFeele.....	19 3-16
THIRD BADGE.			
R. F. Hill.....	20 1/2	William Waters.....	27
D. L. Beckwith.....	20 3/4	Charles W. White.....	27 13-16
Fredk. Kessler.....	21 3-16	G. W. Irwin.....	28
F. Hyde.....	21 15-16	H. G. Taube.....	28 1/4
William Moser, Jr.....	21 1/2	W. J. Sherwood.....	32 13-16
Samuel Robinson.....	24 15-16	J. H. Potter Layington.....	32 15-16
Charles L. Blauvelt.....	24 1/2		

Mr. M. P. Lennon takes the FOREST AND STREAM badge. Messrs. Farwell and Hellwig having tied, shot off and Mr. Farwell won the second badge. Mr. R. F. Hill having the score nearest to and over twenty inches, took the third badge.

Game Bag and Gun.

GAME IN SEASON IN AUGUST.

Woodcock.	Snipe.
Curlew.	Bay birds.
Squirrels.	Pinnated grouse, <i>Tetra cupido</i> .

Pinnated grouse, or "prairie chicken," are in season in Missouri, Illinois, and Indiana, August 15th; Wisconsin and Iowa, August 20th; Ohio, Maine, New Hampshire, New York, and Pennsylvania, September 1st; Connecticut and Kentucky, October 1st. In Massachusetts the season is close until 1876, and in New Jersey until 1880.

GAME PROSPECTS.—We print the following reports received this month by letter:—

MAINE.—*Bucksport*.—Young grouse are now quite strong on the wing, but the broods are rather small. Deer are more plenty than usual, and bears have been caught in Washington county.

MASSACHUSETTS.—*Salem, Aug. 16*.—Sporting news from this locality is rather meagre. We get a few woodcock and some bay birds. One gentleman at Ipswich lately got about two dozen good birds, including curlew, snipe, and yellow legs. Quail are reported abundant near Topsfield. A few black ducks have been seen. Rail (*rallus virginianus*) are reported.

New Bedford, Aug. 16.—The birds are beginning to show themselves along our shores and marshes from the city to the Horseneck beach, 20 miles to the westward of here.

RODE ISLAND.—*Newport, August 12th*.—Bay snipe shooting has been a complete failure here, and grass plover have just put in an appearance.

LONG ISLAND.—*Shelter Island, Aug. 16th*.—I do not hear that the bay snipe shooting in Shinnecock Bay is good this year. More gunners than game. A few woodcock and teal have made their appearance in the ponds of this (Shelter) Island, but black duck will not be here until the middle of September, and coot, old wives &c., until early in October.

NEW JERSEY.—*Marlboro, August 14th*.—The exceedingly wet season we are having has driven the woodcock into the cornfields, and there they are safe. The tall and weighty stalks afford fine cover for the birds, and the soft, moist ground equal facilities for their breeding operations. I have seen several in these places and tried to shoot a few, but in vain, and I am glad, as I think they will stay with us until October. We are having some exceedingly fine

dove and pigeon shooting. Wild pigeons and doves feed upon neglected and scattered grain of the wheat, rye, and buckwheat fields after harvest, and sometimes large numbers congregate in these places. If the sportsman will make a "bush house," or properly secrete himself, rare sport is offered, as they fly over and around him to their feeding grounds. I think in eating quality they are almost equal to more popular game birds, as the nature of their feed imparts a fine flavor to their meat, and they are very fine and fat, and not easily brought down, as their flight is very rapid and wild. One pleasant feature about this kind of shooting in hot weather is, there is not much labor about it, and often the most exciting you can imagine. I shot the other day a pair of the finest golden or upland plover I have ever seen, which I sent to the taxidermists to have mounted. I have seen only a few of these or yellow leg snipe as yet.

KINSEY'S ASHLEY HOUSE, Aug. 16.—Bay snipe have been flying lively during the latter part of the week and several good bags have been made at the high bar. We also noted heavy shooting on the Great Sedge across the inlet; had your correspondent the time to spare from business he could have bagged from 75 to 100 birds on Friday and Saturday.

CARMAN HOUSE, FORKED RIVER, Aug. 16th.—The birds are daily arriving, and every day the shooting improves. During the last five days we have had a continuous Southerly wind, and this in a great measure has held the birds back, but a change, which must come soon, will start them and we expect good gunning next week. During the past week bags have averaged only from 15 to 30 birds. Yesterday the flight was better and several good bags were made. Willits, dowitch, martin, robin, curlew and bay birds of all kinds are now in season, and we expect to be able to report you excellent luck by your next issue. F.

PENNSYLVANIA.—*Trout River*.—There are plenty of birds here which have long bills and make a whistling noise when they fly up from the bushes. Some persons from the cities call them *woodcock*. If they are the kind you meant, there are plenty of them very near here.

PHILADELPHIA, Aug. 16.—I find the vandals are still among the rail, and a few (rail I mean, not the vandals, unfortunately) are being killed almost daily.

What is the Philadelphia Sportsmen's Club doing? One of the gentry came to grief over in Camden on Saturday, and as his hearing was to have been to-day, he is no doubt reflecting on Jersey justice by this time. SOULS.

INDIANA.—*Marmont, Marshall Co., Aug. 13*.—Pinnated grouse will afford good shooting this season. J. B. R.

SOUTH BEND, Aug. 15.—The whole State of Indiana turns out to-day (opening day on chickens) to try their hand at the game, anticipating much pleasure at the promise of an abundance. The laws are not stringent enough, as complaints are deep and bitter against the rural shots, who take the field before the opening of the season. B.

MISSOURI.—*Sedalia*.—We are going to have this season millions of chickens and quail.

MINNESOTA.—*Minneapolis, August 9th*.—Our chicken shooting season is upon us, and great are the preparations for slaughter. The game is abundant in many sections, but the agricultural interests in a large number can ill afford to have these enemies of the pestilent grasshopper destroyed, while, re-inforced by the young broods, they are doing such noble service. But man must and will have his fun, hoppers or no hoppers. H.

—Letters from Ohio, Indiana, and Illinois announce abundance of game for next season. Grouse and quail having escaped the Spring rains, are much more numerous than the hard Winter allowed us to hope.

KANSAS.—*Council Grove, Aug. 7*.—Prairie chickens at this date are "ripe," the open season beginning Aug. 1. From all quarters we hear encouraging reports and almost incredible stories of the vast numbers of birds which inhabit the prairie lands. An ordinary shot, with the assistance of a good dog, will find it an easy matter to bag from twenty-five to fifty chickens in one day's shooting. From two to twelve miles west of this point lies the rich, fertile, and extensive prairie lands belonging to the Missouri, Kansas and Texas Railway Company, well watered by the various streams, Neosho, Elk, Rock, Diamond, Big John, Four Mile, Bitter, Munkers, and Muddy. Although better adapted for farming purposes, the greater portion of it is still uncultivated, and at present abounds with prairie chicken, grouse, quail, snipe, duck and crane, in fact, nearly every description of the feathered game can be found within the limits of one day's drive. However, chickens are the only bird sought for and that is decidedly the most interesting of all sports. Teams can be procured at the reasonable price of \$5.00 per day, and after a day of exciting, as well as fatiguing sport, the weary hunter can find rest, peace and plenty at the "Old Commercial," which, being newly furnished throughout, and operated by the gentlemanly landlord, Jas. Phinney, affords accommodations unexcelled for the reasonable compensation of \$2.00 per day, or \$5.00 per week. Parties wishing to visit these lands we guarantee will not regret a week spent with the hunting fraternity of Council Grove.

MISSISSIPPI.—*Corinth*.—The prospect for a plentiful supply of Bob Whites is good, and we will have duck this Fall, as the "Mash" is abundant.

TEXAS.—*Fort Concho, August 1st*.—Quail are very abundant in Texas this year; first brood three-fourths grown and second brood just out of the shell.

ROUND MOUNTAIN.—Large coveys of young quail are seen all over the country. Young deer are quite plenty this year. I see them every day out on the range.

PENNSYLVANIA GAME LAWS.—The following we believe is a correct synopsis of the game laws of this State, showing the limits in which game can be shot:—Deer from September 1 to January 1; rabbits, October, November, December, and January 1; squirrels from July 1 to January 1; wild turkeys from October 1 to January 1; grass plover from August 1 to January 1; gray or Wilson snipe from September 1 to April 1; woodcock from August 1 to January 1; rail or reed birds from September 1 to December 1. There are severe penalties attached to killing game out of season. Trapping or snaring is equally punishable.

As to the killing of insectivorous birds at any time, the penalty is \$5 for each bird trapped, exposed for sale, or had in possession. The penalty for shooting on Sunday is from \$10 to \$20.

Fishing for speckled trout and salmon ceased on the 15th inst.—*Germantown Telegraph*.

LAW OF NEW JERSEY.—The law prohibits the killing, exposing for sale or having unlawfully in possession the following kinds of game at the time mentioned:—Grey, black or fox squirrels, during the year from January 1 to July 1; hare or rabbits, from January 1 to November 1; woodcock from January 1 to July 4; quail, January 1 to November 1; ruffed grouse, December 15 to October 1; and pinnated grouse until January 1, 1880. The penalties are respectively: five, five, ten, fifteen and fifty dollars for every offense. The law further prohibits the killing, trapping, exposing for sale or having in possession any insectivorous birds under a penalty of five dollars for each bird. The robbing or destroying of the nests or eggs of any birds is also forbidden under \$10 penalty.

LAW OF NEW HAMPSHIRE.—The late session of the Legislature made some changes in the game laws which sportsmen should make a note of.

Moose are now protected from the first of day of February until the first day of October, the penalty for killing them being \$100.

A bounty of ten dollars for each bear killed is payable by the selectmen of the town in which it is killed.

The penalty for killing song or insectivorous birds, or taking from their nests their eggs or young, was fixed at five dollars for each offense.

Partridges are protected until the first of September, instead of the first of August, as has been heretofore stated.

NARRAGANSETT GUN CLUB.—This organization comprises some fifty members, principally New York, Boston, and Philadelphia gentlemen, who are in the habit of spending the Summers at Newport, R. I. Its officers for the current year are: President, James G. Bennett; Treasurer, Frank B. Porter; Secretary, Russell Forsyth; Governing Committee, James G. Bennett, Frank B. Porter, Russell Forsyth, August Belmont, John G. Heckscher, Frank W. Anderson and Carroll Livingston. Its annual meetings are held at the club house, on Bellevue avenue, Newport, but it has private club grounds in the adjacent town of Middleton, where it has frequent exciting matches during the season. One of these occurred on the 9th instant, and our correspondent has kindly sent us the score:—

NEWPORT, R. I., August 11th, 1875.

EDITOR FOREST AND STREAM:—

Inclosed find score of handicap of Narragansett Gun Club for silver cup, \$10 entrance, August 9th, Mr. Robbins, referee, ten birds each, which resulted in a tie between H. Bloodgood and E. W. Davis. The tie was then shot off. Mr. Bloodgood missing his second bird, which fell one foot out of bounds. This was Mr. Davis' first match, and he surprised himself as well as his friends by his skill at the trap. Mr. Ira Paine, the professional pigeon shooter, was on the ground, and remarked the score as being excellent. The birds were very good and strong on the wing with a few exceptions:—

Name.	Yards.	Score.	Total.
M. Van Buren.....	29	1 1 0 1 0 1 1 1 0 dr.	6
T. Van Buren.....	30	1 1 1 1 1 1 1 1 0 1	8
J. G. Hecksher.....	28	1 1 1 0 1 1 1 1 0 0	7
C. Livingston.....	30	1 1 1 0 0 1 1 * 0 dr.	5

H. Bloodgood.....	27	1 *	E. W. Davis.....	25	1 1

*Deal out of bounds.

There will be another match next Monday between Pemberton Grund and J. G. Hecksher for \$2,500 a side, twenty-five birds, which I will report for you.

In the match referred to, which came off according to announcement, Mr. Grund was the victor; distance, thirty yards, fifty birds each, five traps. After shooting at forty birds J. P. Grund was declared the winner, he having killed thirty out of that number, and Hecksher nineteen. Referee, S. Hamilton Robbins, and Scorer, Russel Forsyth. The scores were:—

Grund—11110, 11110, 11110, 11011, 11100, 11011, 06111.
Hecksher—10110, 01111, 10010, 01001, 00101, 00001, 10001, 10101.

Below I give you the score of the first trap shooting ever done in this part of Georgia. The match was at five single and two double birds each, 21 yards rise and 80 yards boundary:—

E. Speer.....1 1 1 1 1 0 00—6 J. H. Rucker.....1 1 1 1 1 00 10—6
W. B. Thomas.....1 0 1 1 1 10 00—5 J. H. Dearing.....1 1 1 1 1 10 11—8
W. W. Thomas.....1 1 1 1 1 01 11—8

We consider this very fair shooting, when it is known that not a man present had ever shot from a trap before, and some had never seen one. Can you show a first trial to beat it?—
Trap.

Athens, Aug. 13.

MINNEAPOLIS, Minn., August 9th, 1875.

EDITOR FOREST AND STREAM:—

I send you inclosed a slip from the Minneapolis *Tribune* of 8th inst. giving an account of the contest for the badge in the Trap and Field Club, recently organized in this city. This organization embraces a membership of about fifty of the most respectable of our business men, some of whom, allow me to state, are better men than shots, as there is room to infer by the score I send you. This was our first shoot:—

L. B. Babcock.....	7	O. M. Humphrey.....	7
F. L. Morse.....	7	R. S. Pease.....	5
George A. Camp.....	9	R. B. Langdon.....	withdrew
B. Brown.....	5	H. M. Carpenter.....	3
G. W. Tusley.....	6	E. T. Smith.....	5
E. Grimshaw.....	7	George Purmort.....	6
Chas. Cyphers.....	10	Geo. Felt.....	4
G. S. Tuckerman.....	7	A. W. Riekman.....	7
L. Shepley.....	6	Geo. A. Brackett.....	3
Chas. Morrison.....	9	W. McNair.....	6
John Harvey.....	8	Robt. McMullen.....	8
Chas. Hipp.....	6	R. J. Baldwin.....	7

The badge was presented to Mr. Cyphers by Major George A. Camp, the President of the club.

—The Thompson gun recently completed at the South Boston Iron Company's works, is one of the largest ever built in the world. Its weight is 82,280 pounds, while the famous Krupp gun exhibited at Vienna only weighed 80,000 pounds.

—Notice is given of the formation of the Northwest Trading Company, (Canadian) for the purpose of trading in furs, skins, etc.

WHERE TO GO FOR GROUSE.

REDFIELD, Dallas County, Iowa, August 9th, 1875.

EDITOR FOREST AND STREAM:—

As many of your readers are intending to go West for pinnated grouse this season, a few hints from a "native" will not be out of place. In the first place decide what point to go to. If you go without any fixed point in view you may spend a week of time before you find a good place. In Iowa this game is abundant over most of the western half of the State. From Des Moines northwest stop at Grand Junction or Gowrie, north of there, or at almost any station west of Grand Junction. Going west from Des Moines, stop at Stuart and take stage line to Fontanelle, twelve miles out. Excellent shooting conveniences, and extends for twelve miles further. Twelve miles west from Stuart is Casey. Take stage from there to Fontanelle, twenty-four miles. Every foot almost abounds with chickens, and at almost any station west of Casey good sport can be had. In most cases it will be necessary to go from four to ten miles from the railroad, as the birds are kept "cleaned out" near the towns, but in most places a mail route, which carries passengers, extends to some country post office. On the route northwest from Des Moines good sport is to be had after ducks about the numerous ponds, wading in the shallow water and "jumping them up." About August 20th they begin to resort to the stubble fields morning and evening, and make good shooting there. Sand hill and white cranes are also there, but very shy. The other route abounds in high, rolling ground, affording splendid views, and is absolutely free from malaria, and in almost every hollow clear pure water is found. No game there but "hens" and rattlesnakes. There are hundreds of other places just as good as those mentioned above, but I have only mentioned those of which I had personal knowledge. The best shooting is from August 15th to September 15th. As to dogs, it is uncertain about getting them here. If you have a good one, bring him. A dog that has only hunted quail and cock will frequently flush chickens, as they do not lie very well. A good ruffed grouse dog is just the thing if he will only range far enough. Breech loaders should bring full supplies of everything except powder and shot, say 1,000 rounds for a three weeks' shoot.

Now, supposing you are snugly quartered at some farm house. After an early breakfast you take thirty or forty cartridges and start for a wheat stubble that is bordered by the open prairie. Walk about thirty yards from the edge and keep your gun ready for instant action. If the dog is not used to "chickens" "steady" him as soon as he scents the game. The probability is that a number of the birds have been running in all directions through the stubble, and if the dog is a novice he gets confused, and will put them up. A good chicken dog always stops at the first scent and waits for the gunner to come up. If the birds are somewhat scattered they will frequently get up gradually, and by the rapid use of a breech loader most of the pack, from six to twenty, may be bagged. If they get up all at once, try to mark them down on the open prairie, and when you see them down be sure you mark the spot by some bunch of weeds or other object; for if you do not the grass is all so near alike that you can never find the spot after once taking your eyes off it. If there be a slough with grass in it running through the stubble you may be almost sure of a find along its sides, particularly in the evening. The birds always seem to prefer the low ground in a field. By ten o'clock the birds have mostly filled their crops and gone to the grass and cornfields, where they remain till three P. M. During the middle of the day they are hard to find, as they do not move about much. At this time of day hunt in the grass along the edge of the stubble, not more than eighty rods from the edge, and along the hill sides, and on windy days always on the leeward slope. Many may be shot in the cornfields by keeping the dog well in and taking a snap shot as the bird tops the tall corn. When a large number go down in the grass they run off in every direction, and make fine trailing for the dog. They always try to alight on some spot out of sight from where they rise. They generally fly over one rise of the prairie, and stop two-thirds of the way up the next, or fly round one point and stop on the next. After a little experience one can generally tell from the lay of the land about where they stopped.

In conclusion, I will say that those who come for sport, and are willing to work for it, will not be disappointed. Very few farmers object to shooting on their grounds, and if they did our laws make no special protection for them, but, of course, no gentleman will invade the farmer's or any one's rights merely because he can do so with impunity, and in return for this generous privilege given by the farmer the sportsman should not forget to divide his game with them sometimes, and thus cement the friendly feeling that now exists. Any one wishing further information may address the writer.

O. H. HAMPTON.

Rational Pastimes.

—Captain Webb, the English swimmer, has now made twenty miles at sea, from Dover to Ramsgate, in eight hours and forty-five minutes.

THE PROFESSIONAL ARENA.

The contestants in the professional arena will have to make hay while the sun shines if they desire to gather in a full harvest of victories prior to the closing of the season on November 1. Up to August 16, they had played less than a hundred and ninety games, during a period of three months, and in the two months and two weeks yet to come they have 262 games to play, as will be seen by the appended table:—

	Played.	Won.	Lost.	Yet to Play.	Quotas Yet to Play.
Boston.....	42	38	4	48	4
Athletic.....	41	30	11	49	4
Hartford.....	47	30	17	43	3
St. Louis.....	38	23	15	52	4
Mutual.....	44	20	24	46	4
Chicago.....	38	19	19	52	3
Philadelphia.....	43	19	24	47	3
New Haven.....	33	4	29	57	2
Atlantic.....	32	2	30	58	2
Red Stocking.....	14	1	13	76	0

Up to August 17, the full record of games won and lost in the arena, stand as follows:—

CLUB.	Boston.	Athletic.	Hartford.	St. Louis.	Mutual.	Chicago.	Philadelphia.	New Haven.	Atlantic.	Red Stocking.	Games Won.
Boston.....	1	5	5	6	4	4	4	1	38		38
Athletic.....	1	2	4	4	1	6	7	6	0		31
Hartford.....	0	2	1	5	3	3	7	8	3		31
St. Louis.....	1	1	2	1	6	4	2	2	23		23
Mutual.....	0	1	3	0	3	4	4	3	20		20
Chicago.....	1	1	2	3	2	1	2	2	4		19
Philadelphia.....	0	1	2	2	1	4	3	5	1		19
New Haven.....	0	0	1	1	0	1	0	0	0		4
Atlantic.....	0	0	0	0	0	0	2	1	0		2
Red Stocking.....	0	0	0	0	0	0	1	0	0		1
Games Lost.....	4	11	17	16	24	19	24	30	30	13	188

—The games played since our last, are as follows:—

Aug. 9—Philadelphia vs. St. Louis, at Philadelphia.....	16 to 0
Aug. 9—Mutual vs. New Haven, at New Haven.....	4 to 2
Aug. 10—Hartford vs. Mutual, at Hartford.....	7 to 0
Aug. 12—Athletic vs. St. Louis, at St. Louis.....	8 to 1
Aug. 12—Hartford vs. Mutual, at Hartford (8 innings).....	1 to 0
Aug. 13—Mutual vs. New Haven, at New Haven.....	4 to 0
Aug. 14—Athletic vs. St. Louis, at St. Louis.....	6 to 2
Aug. 14—Hartford vs. New Haven, at Hartford.....	17 to 3
Aug. 16—Hartford vs. New Haven, at New Haven.....	5 to 2
Aug. 16—Athletic vs. St. Louis, at St. Louis.....	3 to 1

The Chicago club averages up to the close of their Eastern tour, are as follows:—

NAMES.	Games.	First base hits.	AV. base hits to a game.	Put out.	Assisted.	Errors.	Per cent. of fielding.
Devlin.....	41	50	1.44	375	19	32	.92
Hines.....	40	51	1.27	88	30	18	.87
Higham.....	40	46	1.15	125	49	50	.77
Bielaski.....	23	25	1.13	19	7	10	.72
Hastings.....	38	39	1.06	97	28	57	.70
Peters.....	41	43	1.05	36	125	26	.86
Glenn.....	41	38	.92	96	3	13	.88
Warren.....	41	38	.92	61	77	35	.80
Golden.....	10	7	.70	7	17	15	.50
Miller.....	16	9	.56	26	33	18	.76
Zetlein*.....	32	28	.87	44	40	16	.81
Keerl*.....	5	2	.40	7	12	5	.78
Total.....	4	385	9.39	983	412	295	.78

*Resigned.

The games with the Westerns are included in the above, but one game with the St. Louis Reds is left out, owing to the loss of the score. In the fielding part there are some six games missing, but they do not affect the standing of, and would cause very little difference in the above figures.

THE AMATEUR ARENA.

Among the best contests played in the amateur arena thus far, may be numbered the following: We give them in the order of the smallest scores:—

Aug. 5—Amateur vs. Blue Stockings, at Cincinnati (11 in.).....	2 to 1
Aug. 4—Resolute vs. Grafton, at Portland, Me.....	2 to 1
Aug. 10—Sunnyside vs. Argyle, at Sing Sing.....	3 to 0
Aug. 11—Taunton vs. Fall River, at Fall River.....	3 to 2
Aug. 2—Star vs. Buckeye, at Covington.....	3 to 2
Aug. 5—Boston vs. Rhode Island, at Providence.....	4 to 0
Aug. 12—Cincinnati vs. Olympic, at Louisville.....	4 to 1
Aug. 7—Star vs. Ludlow, at Cincinnati.....	4 to 2
Aug. 14—Frontier vs. Eckford, at Brooklyn.....	4 to 2
Aug. 7—Fall River vs. Resolute, at Fall River.....	4 to 2
Aug. 5—Keystone vs. Athletic, at Brooklyn.....	4 to 3
Aug. 6—Confidence vs. Athletic, at New Rochelle.....	4 to 3
Aug. 6—Milford vs. Buckeye, at Milford, Ohio.....	5 to 3
Aug. 7—Nameless vs. Fly Away, at Hoboken.....	5 to 5
Aug. 10—Enterprise vs. Suffolk, at Huntington.....	6 to 0
Aug. 4—Henry Corr vs. P. J. Hughes, at Brooklyn.....	6 to 2
Aug. 7—Starr vs. Trenton, at Irvington.....	6 to 2
Aug. 13—Fall River vs. Rhode Island, at Providence.....	6 to 3
Aug. 8—Nameless vs. Greenport, at Greenport.....	6 to 4
Aug. 11—Athletic vs. Neshamock, at Mansfield, Ohio.....	6 to 4
Aug. 13—Hughes vs. Corr, at Brooklyn.....	6 to 5
Aug. 6—Lowell vs. Grafton, at Lowell (10 innings).....	6 to 6
Aug. 3—Buckeye vs. Amateur, at Columbus.....	7 to 3
Aug. 4—Chess vs. Checkers, at Hartford.....	7 to 4
Aug. 12—Union vs. Neshamock, at Urbana, Ohio.....	7 to 4
Aug. 4—Union vs. Athletic, at Urbana, Ohio.....	7 to 6
Aug. 11—Starr vs. Lone Starr, at Hickman, N. Y., (10 ins.).....	7 to 6
Aug. 11—Burington vs. Trenton, at Trenton.....	7 to 6
Aug. 14—Boston vs. Star, at Cincinnati.....	8 to 1
Aug. 13—Chelsea vs. Olympic, at Brooklyn.....	8 to 1
Aug. 11—Boston vs. Keystone, at Erie, Pa.....	8 to 2
Aug. 5—Resolute vs. Trenton, at Waverly, N. J.....	8 to 6
Aug. 3—Red Stockings vs. Ludlow, at St. Louis.....	8 to 6
Aug. 2—Ludlow vs. Empire, at St. Louis.....	9 to 0
Aug. 3—Rochester vs. Livingston, at Rochester.....	9 to 7
Aug. 7—Live Oak vs. Una, at Lynn.....	9 to 6
Aug. 3—Pavonia vs. Hoboken, at Hoboken.....	9 to 7
Aug. 11—Norfolk vs. Eckford, at Boston, Mass.....	9 to 7
Aug. 7—Rose Hill vs. Olympic of N. Y., at Watertown.....	9 to 8
Aug. 5—Ionian vs. Western Rock, at Oberlin; O., (11 ins.).....	9 to 8

—A new club has been organized at Greenpoint, L. I., and the new men have already played noteworthy games. At the last meeting of the Greenpoint club the following officers were elected by ballot: President, John T. Gallup; Vice-President, J. Madison Wells; Secretary, Edwin S. Havens; Treasurer, H. A. Reeves. It was voted that the Board of Directors consist of five members, and the following were thereupon elected by ballot: Geo. H. Cleaves, Theo. P. Clark, Caleb Dawson, Dr. B. D. Skinner, H. A. Reeves. Their best game thus far was that played Aug. 14, with the crack Nameless club, of Brooklyn, the latter finding it difficult to win by 6 to 4.

—The best amateur game of this month was the following, played Aug. 11, at Fort Hamilton, L. I.:—

Frontier.....	0	0	0	0	0	0	0	0	0	2-2
Star.....	0	0	0	0	0	0	0	0	0	0-0

PHILADELPHIA, August 16.—News is slightly scarce. The cricketers are as active as they can be, with a goodly proportion, if not a large majority, out of town. They have selected nine members of the team, and they will play a practice game to select the rest. They play a practice game at Germantown on Saturday next.

SCULLS.

—A foot-race took place on Saturday on the New York Athletic club grounds between Richard McBride and Stephen Drummond. They ran one mile for \$200 a side. The race was well contested and was won by Drummond. Time, 5 minutes 5½ seconds.

SWIMMING MATCHES.—On Saturday last John Fitzgerald and Richard Manning swam a race at Glen Cove for a stake of \$200, the distance being one mile, straightaway. Manning was the favorite 5 to 4. Fitzgerald, however, proved the better man and won the race by fifty yards; time, 19 minutes 25½ seconds.

—In the match between S. H. Brown and Chas. A. Miller on the Harlem river last week, for a stake of \$200 a side and a gold medal, Miller was the winner, his time was 18 minutes 25 seconds; distance, one mile.

EXTRAORDINARY JUMPING.—A jumping match between James W. Freeman, of Chicago, and Robert H. Ryan, of this city, for \$200 a side, was decided at Hoboken on the 11th inst. The conditions of the match were, one single jump, six trials each, spring shoes barred. On the first trial Ryan, using fifteen-pound dumb bells, jumped 12 feet 2½. Freeman followed with 12 feet 2¼ inches. Ryan then made 12 feet 4¼ inches, which was beaten by Freeman's 12 feet 6¼. Ryan then exerted himself and scored 12 feet 8¼ inches, but Freeman saw him and went him one inch better. Ryan's next jump was 12 feet 11½ inches and Freeman's 13 feet 1¼ inch. On the fifth trial Ryan jumped 13 feet ¾ inch; Freeman slipped and his jump was not scored. Freeman now had to jump first and cleared 13 feet 2¼ inches, when Ryan jumped 13 feet 8¼ inches and won the match. The best jump on the record, at least in this country, is that of Searles, of Utica, 13 feet 5¼ inches.

—Why don't the Salisbury Club, of Connecticut, put a stop to netting trout from the Macedonia stream?

CHAMPION GUNNERS: Shooting Stars. This is the time of the year to look for them.

UNPROFITABLE PEDESTRIANISM:—Professional Tramps.

SARATOGA ROWING ASSOCIATION.

THIRD SEASON.

Grand International Regatta ON LAKE SARATOGA,

TUESDAY, WEDNESDAY AND THURSDAY,
August 24th, 25th and 26th, 1875.
OPEN TO THE MEMBERS OF ALL REGULARLY
ORGANIZED AMATEUR ROWING CLUBS
IN THE UNITED STATES AND
BRITISH PROVINCES.

RACES.

FIRST DAY, August 24th.—Single scull Shells,
(New York State Championship.) Single-Scull Shells,
(Junior.)

SECOND DAY, August 25th.—Single Scull, (Se-
nior.) Pair-oared Shells.

THIRD DAY, August 26th.—Double Shells, (Se-
nior.) Four-oared Shells.

All the races will be free, but an entrance fee of \$20
for each boat will be required at the time of entering,
to be paid to the Treasurer as an evidence of good
faith, to be returned if the boat entered rows in the
race.

Entries must positively be made on or before the
20th day of August, addressed

SARATOGA ROWING ASSOCIATION,
Saratoga Springs, N. Y.

The distance in the Scull Races will be two miles,
one mile to a stakeboat and return. In the pair and
four-oared races the distance will be three miles, one
and a half miles to a stakeboat and return.

PRIZES.

State Championship Single Sculls—"Empire" Dia-
mond Scull, (challenge) and Presentation Cup.
Double Scull—Two Gold Medals.

Pair Oars—"Interlaken Cup," (challenge,) gift of
Frank Leslie, Esq., and two Presentation Cups.
Single Sculls, (Senior)—"President's Cup," (chal-
lenge,) and Presentation Medal.

Junior Sculls—Gold Medal.
Four Oars—"Saratoga Cup," (challenge,) and four
Presentation Cups.

TOTAL VALUE OF PRIZES, \$5,000.

The New York State Championship Race is open
only to members of Amateur Rowing Clubs located
in the State of New York.

The Association will provide transportation for
boats and crews, from Saratoga Railroad Station to
the Lake and return, free.

Good board at the Lake, for contestants, will be ar-
ranged for in advance of their arrival, at the price of
\$10 to \$15 per week, according to bill of fare and ac-
commodations.

REQUIREMENTS.

Individuals or crews entering must forward a cer-
tificate, properly authenticated, containing their name
or names, name and location of club to which they
belong, class of boat and dimensions, club rowing
colors, and copy of their club by-laws, if printed.

No member of a club will be allowed to compete
unless his membership dates in such club previous to
July 15th, 1875.

Amateurs only will be allowed to row.

The Association defines an amateur oarsman to be
a person who is a member of a regularly organized
amateur rowing club, and one who has not rowed for
money; been willing to be matched to row for money;
entered or rowed in a regatta open to all comers since
May 1st, 1874; been engaged to instruct or train any
person in physical exercises or rowing for any com-
pensation whatsoever; been engaged professionally in
connection with boats or in the use of the oar upon
the water.

The Junior Scull Race is open to those only who
never won a Senior Scull Race.

The rules of the regatta shall be those laid down in
Englehardt's American Rowing Almanac, governing
American regattas.

Protests and charges against any entry must be
verified by sworn affidavit and presented to the Qual-
ification Committee before the 23d of August.

The winner or winners in every race are expected
to present to the Association their photographs, of a
suitable size for framing.

OFFICERS.

Geo. L. Ames, President; J. C. Shepherd, Vice
President; P. McDonald, Secretary; C. H. Tefft, Jr.,
Treasurer; L. H. Cramer, Ensign; W. A. Hamilton,
Captain; Wm. H. Bockes, Corresponding Secretary.

COMMITTEES.

Finance—B. E. Judson, J. G. Cooke, R. P. Gardner.

DITTMAR POWDER CO.,

Office 55 Kilby street,
BOSTON.

CHAS. L. ANDREWS,
President.
CHAS. J. WHITMORE,
Treasurer.

HAVE FOR SALE
Dittmar's Gunpowder
For Shot Guns and Rifles.
Secured by Letters Patent.

FIXED AMMUNITION FOR ALL VARIETIES OF
RIFLES AND SHOT GUNS FUR-
NISHED AT SHORT NOTICE.

The new patent Sporting Powder does not soil the
gun; cleans it, when you use one charge of it, after
many with black powder; no smoke—little recoil—no
loud report—high velocity. The best ever made in
this line; not to be confounded with Schultz' or En-
glish Wood Powder, or Sawdust Powder, as it is su-
perior to each.

Miscellaneous.

THE HAZARD POWDER CO., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of
strength and cleanliness. Packed in square canis-
ters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb.
kegs. A fine grain, quick and clean, for upland and
prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters
and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very
clean, shooting remarkably close, and with great
penetration. For field, forest and water shooting
it ranks any other brand, and it is equally servicea-
ble for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25
12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also
packed in 1 and 1/2 lb. canisters. Burns strong and
moist. The FFG and FFG are favorite brands
for ordinary sporting, and the "Sea Shooting" FG
is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.
GOVERNMENT CANNON AND MUSKET POW-
DER; ALSO SPECIAL GRADES FOR EXPORT,
OF ANY REQUIRED GRAIN OR PROOF MAN-
UFACTURED TO ORDER.

The above can be had of dealers, or of the Compa-
ny's agents in every prominent city, or wholesale at
our office.

88 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1
to 7, packed only in sealed 1 lb. canisters. The coarser
sizes especially are recommended to owners of fine
breech-loading guns, giving great penetration with
very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to
5. Packed in metal kegs of 6 1/2 lbs. each, and in canis-
ters of 1 and 5 lbs.

AUDUBON POWDER,

Very quick. For woodcock and quail Nos. 1 to 4.
Packed in metal kegs of 12 1/2 lbs. and 6 1/2 lbs., and in
pound canisters.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes.
Sizes F.g, FF.g, FFG, the last being the finest and
most used. Packed in wood and metal kegs of 25
lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and
1/2 pound.

All of the above give high velocities and less resis-
tance than any other brands made.

LAFLIN & RAND POWDER Co.,

21 Park Row, N. Y.

(OPPOSITE ASTOR HOUSE.)

BREWER'S

PATENT

Chute and Fishway.

The Fish-way is constructed in the bottom of a
chute of any desired width, by means of timbers
forming triangles, making a zig-zag course, breaking
the force of the water in its descent, enabling any
kind of fish to ascend it. It may be constructed on a
rise or grade of one foot in ten. Its upper end ex-
tends into the pool of a dam. The water "flows with a
uniform swiftness over a smooth bottom." It does
not form any "pools or eddies."

This Fish-way can be seen in a dam in the Mohawk
River near Schenectady, N. Y., and for its successful
working see the Report of the New York Commission
ers of Fisheries for 1874.

may 6-ly JAS. BREWER, Muncy, Pa.

SCOVILL'S Blood and Liver Syrup

All cutaneous eruptions on the face or body indicate
An Impure Condition of the Blood,
and this may or may not be SCROFULA; but in
either case is nothing more than an insidious poison, that

BURNS LIKE A TERRIBLE FIRE
as it courses through the veins, sowing seeds of death
with every pulsation.
In this condition of things something is needed AT
ONCE TO CLEANSE THE BLOOD; and

Scovill's Blood and Liver Syrup

will positively effect this desideratum, expelling
every trace of disease from the blood and system and
leaving the skin

SOFT, FAIR AND BEAUTIFUL.
Hundreds of certificates attest its value. Price \$1 a
bottle.

FOR SALE BY ALL DRUGGISTS.

Dr. Rogers's VEGETABLE WORM SYRUP

A brave man may suffer pain, when inflicted upon
himself, heroically; but he

Cannot see his Child Suffer.

There is no other malady incident to childhood that
is accompanied with more indescribable wretched-
ness to the little sufferers than that

Produced by Worms;
and when the parent fully comprehends the situation
he will not delay a moment in securing the most
prompt and efficient remedies to insure the expulsion
of the intruders. The remedy may be found in

Dr. Roger's Vegetable Worm Syrup.

Please bear in mind that
ROGERS' WORM SYRUP is the reliable prepara-
tion.

ROGERS' WORM SYRUP is a palatable prepara-
tion.

ROGERS' WORM SYRUP is liked by children.

ROGERS' WORM SYRUP positively destroys
worms.

ROGERS' WORM SYRUP leaves no bad effects.

ROGERS' WORM SYRUP is highly recommended
by physicians, and is unquestionably the best WORM
MEDICINE IN THE WORLD.

Price 25 cents. For sale by all druggists.

HENRY'S Carbolic Salve.

FOR SALE BY ALL DRUGGISTS.

The wonderful celerity with which this
combination of Carbolic Acid with other
soothing and Curative Emollients acts,
is something akin to the marvelous.

It is with pride that the proprietors call
attention to the gratifying fact that

**Physicians give it the high-
est meed of praise,**

and use it and prescribe it in their practice.

NEW YORK, Dec. 22, 1869.

JOHN F. HENRY, Esq.:

Your CARBOLIC SALVE proves an excellent article,
and I thank you for it. This is another evidence of the
great value of the discovery of Carbolic Acid. Yours
truly,

GEO. B. LINCOLN,
Pres't Board of Health.

Price 25 cents per box.

REV. R. B. LOCKWOOD'S Catarrh Cure!

The Best Remedy Known, and Endorsed by all the
Principal Physicians of the Country.

Rev. R. B. Lockwood's Nasal Douche will be
found valuable in obstinate chronic cases.

Rev. R. B. Lockwood's Liver and Stomach Pills
dyspepsia, receive the endorsement of thousands.

Price 50 cents each.

JOHN F. HENRY, CURRAN & CO., Proprietors,
8 and 9 College Place, New York.

HENRY'S SEWING MACHINE OIL

A PURE OIL that does not gum up and has the
endorsement of the principal Sewing Machine Com-
panies.

Price 25 Cents per Bottle.

MOTT'S LIVER PILLS

It is easy enough to make a pill, but to make a
good pill, and that's the difficulty. There are cheap,
harsh, drastic pills, that are of even less benefit than
a dose of salts. But a good medicine, like Dr. Mott's
Liver Pills, which penetrates to the seat of disease, is
a desideratum indeed. Will positively cure all dis-
eases of the Liver. Sold everywhere. Price 25 cents
per box.

Green's Oxygenated Bitters.

At certain periods of life a tonic is a necessity; but
there is danger in using stimulants that injure the or-
gans of digestion while giving temporary relief. To
obviate this and present to the public a tonic free
from Alcoholic Poison, Dr. Green prepared the Oxy-
genated Bitters, a sure cure for dyspepsia and all kin-
dred complaints. Sold everywhere. Price \$1 per
bottle.

Packer's All-Healing Tar Soap.

It cures all kinds of Skin Diseases with a most won-
derful certainty; it promotes cleanliness, personal
purity and general health; it is a preventive of many
kinds of disease, and it is an absolute necessity in
the nursery. Price 25 cents.

Miscellaneous.

Breech Loaders. W. & C. SCOTT & SONS.

**Winners of the "Turf, Field
and Farm" Gun Trials.**

(See issue October 3d, 1873.)

In which competition the committees have awarded
our guns, First and Second for POINTS OF MERIT
OF ACTION, MATERIALS, PROPORTION, AND
SHOOTING QUALITIES combined, in all the four
classes.

THE PREMIER GUN.

W. & C. SCOTT & SON call attention to their
very FINEST weapon, combining all their recent im-
provements, marked on the rib between their name
and London address the brand—"THE PREMIER
QUALITY."

Medium and fine guns bear full name and address,
and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped
with name and trade mark.

W. & C. SCOTT & SON, sole makers of the
Patent Top Lever, solid, Double Locking Bolt Breech
Loader, bearing the full name of the firm. W. & C.
SCOTT & SON caution sportsmen against imitations
of their patent and name. Guns bearing the name
abbreviated, or with different initials, are not genuine.

**TRIAL OF SCOTT & GREENER'S NEW SYSTEM
OF BORING, BY THE EDITOR OF
"THE FIELD," LONDON.**

(See *The Field*, January 30th, 1875.)

"From a comparison of the two tables it will be
seen that with Walker's shot, Messrs. Scott's guns
showed a marked superiority over Mr. Greener's,
both in average and in the highest score made. In-
deed, with the left barrel, in his third shot, Mr. Scott
got a selected group pattern of 239 and a penetration
of 37, equalling the highest pattern made by Mr.
Greener, and exceeding the penetration of that par-
ticular shot by eight sheets."

WHOLESALE.

April-6m

THE GREAT London Gun Trial, 1875.

W. W. GREENER begs to inform his numerous
clients in the United States that he has been very suc-
cessful in the above trial, having secured the first
prize, a silver cup, value 40 guineas—class 2 for 12
bores; also winner in class 1 for 8 and 10 bores, and
class 4 for 20 bores. He has won in all the classes for
improved boring, which is upon a different plan to any
other maker, and is far superior in the three most es-
sential points, viz., PATTERN, PENETRATION,
and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Cortlandt St.,
New York, is now importing my DOUBLE-CLOSE-
SHOOTING GUNS to order, an invoice of which
will be shipped to him on the 1st July, and can be ex-
amined about the 15th. All special orders given to
Mr. Squires will be carefully filled. A full report of
the GREAT TRIAL, showing the marked superiority
of my guns over guns made by Dougal, Pape, Westley
Richards, Tolley, Scott, and others, will shortly be
published, and can be had on application at No. 1
Cortlandt St.

W. W. GREENER,
Champion Gun Maker,
St. Mary's Works, Birmingham, England.

Miscellaneous.

J. D. DOUGALL'S EXPRESS SHOT GUNS.

(Title registered.)
SHOWN by trials at Wimbledon by Editor
of the *Field* to possess the GREATEST PENE-
TRATION and therefore LONGEST RANGE—thus:
Circle, 30 inches; 300 pellets; average, 191; penetra-
tion, 37. The Editor's trial of Greener guns with 340
pellets of same shot and same charge of powder, gave
180, and penetration 30, although there were 40 more pel-
lets in each charge. Should any controversy arise as
to the durability of these new systems, we herewith
warn all, beforehand that our system is our own inven-
tion (though founded on the American idea) and is DU-
RABLE, a fact remarked on by the *Field*, that the
guns tried had been in use during last season, and re-
ferences permitted to the owners. Send for Illustrated
Circulars to
59 St. James's Street London.

Volume 5, Number 3.
17 Chatham St. (City Hall Sqr.)

For Forest and Stream.
Swinging Round the Circle;
OR,
FRESH FROM THE WOODS.

I HAVE been a fishing and exploring, having accomplished a complete circuit of the Northern wilderness, via Utica and Black River and Ogdensburgh Railroads, Lakes Champlain and George, and Central Railroad, home. In former correspondence I have drawn chiefly on my recollections of past years; and although the "Saranac Route" is, I apprehend, to be continued, I cheerfully interrupt the narrative, to give such of your readers as may favor me with their attention, direct tidings from the woods.

On the 5th of July I declared myself free and independent, as sometimes becomes necessary, you know, in the course of human events, and struck for my favorite North Woods, to which apply the familiar lines of Dyer in his Grougar Hill,

"Ever charming, ever new,
When will the landscape tire the view?"

The uproar and confusion of the day, filled with the letter and spirit of the Fourth of July, crowded cars and noisy celebrations, prepared me all the better to appreciate the quiet and seclusion which followed. The evening of the 5th found me at Moira station, Franklin Co., en route for Spring Cove Cottage, which is introduced to the sporting fraternity in the Syracuse book, p. 297. On reading the account there given, which addressed itself very agreeably to my fancy, I determined to visit it, and having done so, I have not been disappointed. It is the home of deep, perfect isolation from the world. Never have I lived so completely in the embrace of the forest, yet surrounded with every reasonable comfort. It is about 20 miles south of Moira, approached by good roads, but for miles densely through the woods. D. S. Smith and wife, of valetudinarian history, are not there now, having retired to Dickinson Centre; and the house is kept in their place by Mr. and Mrs. Prentice. I will add in this connection, for the benefit of those whom it may concern, that there is no Aldrick's Hotel at Moira, as when the book was issued, but the only one in loco is kept by a Mr. Murray, conveniently near the depot, standing alone, and half a mile from the village.

The name of Spring Cove Cottage imports a triple charm. Spring? I never drank of a purer, clearer, colder one, nor ever desire to. It does not require the addition of a "little something" to make it better than it is. The Spring house is the ice house of the establishment, where table luxuries are well preserved. Cove? I never knew a snuggler harbor or recess from the waves. And as for Cottage, let Tom Moore interpret me:

"I knew by the smoke that so gracefully curl'd
Above the green elms that a cottage was near;
And I said 'If there's peace to be found in the world,
A heart that is humble might hope for it here.'"

Oh, how welcome, on returning at night from my river expeditions, was the far shining light of its hospitable windows, indicative of the cordial reception, bountiful supper, and secure rest which always awaited me. The house is a double one; or rather there are two distinct houses, separate yet conjoined. The front building is for reception. It contains sitting or office rooms, parlor and bedrooms. The rear tenement contains dining-hall, kitchen and other rooms. These houses are built of logs, but have regular windows, and plenty of them. The front roof projects, though unsupported beneath, sufficiently to secure protection from rain for those who may be seated on a platform under it. Close around is the interminable forest; but from the water of the cove the cottage appears, at the distance of a quarter of a mile, or more. It is claimed that there is as much game in that vicinity, of all varieties, as in any portion of the State. I saw nothing of it, but neither did I go in its pursuit. A party who came there for a night, from a settlement nine miles away, after deer, got one; but another party were not so fortunate. The one came, saw, and conquered; the other came, didn't see, and returned with very light loads, however heavy their hearts were by disappointment. The extensive things re-

lated in the book, p. 299, about captive bears, rabbits, partridges, deer, and a catamount all at once, I suspect pertained to that time only. However, I cannot see why there should not be plenty of wild game there, if anywhere in the State. The middle branch of the St. Regis river flows at the distance of about half a mile from the House. It is very narrow, circuitous in its course, and bordered on both sides with alder bushes. It has good gravel or sandy bottom, and is easily affected by the rains, in the rise and fall of its waters. The boats are small, as better adapted to the windings of the river, and its narrow current. In July, the trout are caught only, or chiefly, where inlets and rivulets enter. I caught while there, as appeared in summing up, an hundred, minus two, all with the fly, and on one occasion, three at a time. I had been casting in vain for a while, when, by a lucky throw there was a triple rush, each fly had its trout, and each trout a fly, and I brought them all in together. The only flies I have used on this excursion were, red ibis for stretcher, and orange and blue professor for the drops. They were all good, and I found no occasion for changing them. Returning to Moira, I took the cars to Chateaugay, where I lost no time, but proceeding as directly as possible to the lakes, I arrived, after a pleasant drive of an hour or two with spanned horses and over excellent roads, at evening, at the Lower Chateaugay. There I took the little steamer, Nelly Tupper, and under the auspices of a bright sunset, followed by the light of a full round moon before me all the way, navigated to my quarters on the upper lake, a distance of eleven miles. These two lakes, of which the upper is by far the larger, and more favored every way, are connected by four miles of water called the "Narrows." There are many houses here open to visitors. My lot was cast at the Adirondack House, kept by Capt. W. R. Tupper, the largest certainly, and I suspect the most comfortable, on the grounds. At any rate, if I were to return it would be to the same place. The rooms are roomy, windows well netted to keep out the flies, the table neat and plentifully provided, the situation delightful, the charges moderate. The day after my arrival proved a stormy one. There was a rapid succession of heavy showers, attended with frequent discharges of lightning and thunder. These rains "lifted the lake right up," though, as we shall see presently, it stood in no need of such rising, so far as the interests of fishing were involved. But as my introduction to it was by the fair light of the full orb'd moon, today, in contrast I beheld the magnificent spectacle of its thunder showers which were of the order sublime. The flashes were vivid and incessant; the reverberations sharp and rattling. As they echoed among the mountains they recalled those telling sentences of Irving in his sketch book, where, describing a storm on the Hudson, he wrote: "The thunder burst in tremendous explosions; the peals echoed from mountain to mountain. They crashed upon Dunderberg, and rolled along the deep defile of the highlands, each headland making a new echo, until old Bull Hill seemed to bellow back the storm." I have said that this lake does not need to be raised. It is already well up, and high, and kept so by unnatural means. Iron ore is abundant in its neighborhood, the transportation of which requires higher water than is naturally supplied. I understand that the company interested, feeling that they had grounds sufficient for the application, have applied to, and obtained consent of the Legislature to raise the waters for three years, by artificial means, for the purpose named. Alas for the trials and tribulations of the angler! Tanneries destroy his peace; saw mills, gill nets and set lines; and now even iron ore is arrayed against him, the iron entering into his soul. But, after all, this suspended fishing may be for the best. For several years the trout here will have opportunity to grow, increase and multiply, till the Chateaugay fishing becomes splendid. Might it not be well in the end, if something similar could happen to many other of our lakes? An amusing incident will illustrate the fact of high water here. I had followed up with my guide a main inlet to the place where a new bridge crossed it, built in the interest of the iron works, and was purposing to go up higher. The guide said it could not be done,

as the water would crowd the boat against the bridge. We disembarked, however, and while on the bridge, from which I had just caught a trout, I observed three men in a boat coming down. They surely intended to pass under, and so it was. As they neared the bridge, the man at the prow began to pack himself away as best he could, lying down at full length. The middle man followed his wise example, so that four legs were parallel; then the stern man bundled himself under the protecting sides and ribs of the boat, till at last, from only a foot or two above, on the sideless bridge, I saw the good natured individual's face disappearing in the sharp angle of the boat, grinning ludicrously skyward, and I suspect he saw another just over him laughing in a similar manner.

The Upper Chateaugay is admirably framed with mountains. It contains one small island, and there is another far down near the Narrows. Rocky island is just large enough to hold the one small house that is built on it. I visited it one morning and preambulated, taking a survey of its limited dimensions, and enjoying the fine view which it commands. A deer was caught in the water, and killed, of course, on the evening before my departure, six boats joining in the pursuit. It was during the shades of evening, and miles away, so that little could be seen or heard; but at the hotel we were aware of the strife, and in the morning heard all about it. I retain in vivid recollection, the sight of gorgeous rainbows here, described over against fresh watered mountains, radiant with all primary colors, complete in their arcs of promise, and even doubled in the rich luxuriance of their grandeur and beauty.

Off for Chazy—about to realize what I have imagined for 21 years, and longed to see, ever since I read Hammond's "Hills, Lakes and Forest Streams." I approached this lake by a new route, one which, I was surprised to learn, had not been traveled by a sportsman before—the plank road, to whose bridge I have just alluded, traversed only by ore and coal teams. Crossing a section of the Chateaugay, to a point where man, horse and wagon awaited me, I was soon on the bridge again, and over it. The way was an exceedingly wild one, and "Homo" pointed out the place in a deep wooded ravine, where his dog had started a deer a few days before, adding that deer were plenty there. By the way, this dog, en route, was seized in unmannerly style by a far larger one, and bitten; and in the melee both wheels passed over his neck; yet I was pleased to see that as soon as released he trotted out again as if nothing had happened. We passed coal kilns, and the little settlement where iron ore is separated by a complicated process from dross and clay, being baked, hammered, broken and cleaned by water. One man's load drawn by four horses, weighed, he said, over three tons, but far heavier loads than this are borne away. We passed the trail leading to Bradley's pond, difficult of access, but where trout abound, and after a pleasant drive of several hours, brought up at the Meader House, beautifully situated on Chazy Lake. This is another charmer, four miles long, by one and a half wide, presided over by Lion Mountain, being the seventy-fourth link in the pearly chain of New York lakes which I have visited. Here too I caught more trout, but they were neither numerous or large. July is not a good month for the purpose, particularly here; and I have seldom if ever occupied it in this way. It is as available, and not as favorite that I have so used it now. Besides, encountered violent winds, and furious showers. The scenes of Chateaugay were reproduced, and I sat patiently in my boat at times to be rained on. Behold me, reader, in the skiff, my rod laid down, my head bowed submissively to the pitiless storm, silent, thoughtful, dripping; yet anon making for the shore to relieve the boat of water, and then going a-fishing again, fresher than before, under the smiles of genial rainbows. O, it is fun! I have lifted from the waters this year, first and last, nearly 200 trout, and have every reason to be satisfied. There is a tent spread on this lake made of canvas which was used in the last presidential campaign. On it is an equestrian painting of Gen. Grant, and I read the words, which seemed strange in the solitude.

UNION NOMINATIONS: GRANT AND WILSON

After five days I took my departure from Chazy for Plattsburgh *via* Dannemora. The roads in this direction are excellent, having been made by the State. Those who aim to visit Chazy only, should by all means take this route, coming from the East. There remained to me of my contemplated tour, the best and most valued portion, viz.: a new excursion over lakes Champlain and George. At Plattsburgh I viewed with chief interest the bay which is forever memorable as the scene of Macdonough's splendid victory, where he humbled the pride of England, and forever settled the supremacy of the lake. The thunders of that hurricane of fire have been hushed for sixty years; but their echoes will go sounding through the ages of time. I never so appreciated as I now do, the magnificence of this Lake Champlain. The Great Lakes, as they are called, are altogether too great to be comprehended or enjoyed; but this, of 130 miles extent, of variable, yet appreciable width; great enough one would suppose for all practical purposes, seems yet a happy compromise. Great enough to be grand, and the boundary of States, it is yet small enough to be wholly practicable to the view; and its double range of Green and Adirondack Mountains, set it off to the best possible advantage. Where in Europe, Asia or Africa, is there a lake of even such a scale of expansiveness? If there is one, America is not to be surpassed in lakes, for she has a Superior. And then the raptures of Lake George! I cannot conceive, taking all things into consideration, how any can surpass it. There may be higher mountains on lesser lakes. There are doubtless more cultivated islands of equal dimensions. But where shall we find on earth clustered together through 34 miles, such transparent water, such hundreds of islands in their native dress, such uninterrupted cradling of majestic hills, resting on such rocky foundations? It would seem that this lake at least, was intended for man to let alone. He cannot meddle with without marring it; and, God be praised, he cannot well meddle with it at all. Let it ever remain a holy Horicon. I never can forget the white, waving handkerchiefs which everywhere cheered the Minnehaha as she passed along, indicative of happy cheerfulness, and good sociality, nor the ready, whole-souled responses which were made. My excursion for '75, which commenced in the quiet and restricted limits of Spring Cove Cottage, and its environs, expanded in the lakes and mountains of Chateaugay and Chazy, culminated in Champlain and George, and terminated in enjoyment of the splendors which Fort William Henry Hotel, and its divine surroundings abundantly supplied. AMATEUR.

Utica, August 4, 1875.

For Forest and Stream.

"DRUMMERS."

THE snipe is a musical bird. If the weather be favorable the capers he indulges in are manifold, but not generally at all satisfactory to the sportsman. It had turned warm once more. The frogs were holding grand concerts, and every other bird and animal that could sing at all was bound to do his level best. The ideal Spring was at last with us.

I kidnapped James again, and with the pointer Sam we once more occupied the covered buggy; we put the top down. The morning was bright and warm; during the day somewhat hazy, threatening a storm in a day or two; the roads were sticky and ungetoverable. Our first objective point a spring brook running through a marshy meadow. We drove up to the fence, stopped and listened. There was a "drummer" sure enough. We looked long up in the air, every few moments hearing the clatter of his wings as he made his rush. He was so high that it was several minutes before we could make him out. A "drummer" will generally follow around the same circle, however large it may be, thirty rods or half a mile in diameter. The centre of this circle is generally the point whence he started, and where he will alight if he ever makes up his mind to do so, and there also will most likely be found others. We tried it with this fellow, spent half an hour watching him, and looking for his friends in vain; gave it up; turned down to the right twenty rods or more; up went one bird wild, "Kek! kek! kek!" two more started nearer to us, which we dropped; two others kept on, rose into the air, and commenced his circumvolutions. When he made his rush it sounded very much like a flock of ducks. We kept on, hearing another "Kek! kek! kek!" at our left upon some high ground. We found there a marshy pond ten rods across. As we neared it up went three birds upon the farther side, and up into the air, they went to circling, the three together; occasionally they would come down as low as the tops of the forest trees. Told James we might as well wait for them; so we sat down. We could hear the first bird in the distance, the second also, nearer, and the three came around every few minutes. So it went on for half an hour; the three had turned toward us, and were lowering rapidly. "Kek! kek! kek!" They came over us not twenty feet high, their wings at intervals touching the tips above their backs. I picked my bird; James fired before me, dropping his almost upon my head. The other two stopped their capers, and went off like a couple of streaks of lightning with forty feet zigzags. I fired, but when the gun went off the bird was not covered within twenty feet. They went down within thirty rods, lay to the dog, and we got them both. No. 2 was lowering his flight, and shortly after pitched down into a clump of bushes, where I flushed and killed him very quickly, and with great satisfaction. No. 1 was still in mid-heavens, and there we left him. Drove on a mile further to the cheese factory marsh. There was a drummer having a good time all by himself, and we could hear another afar off. We started six near the road, and got them all; hunted through the marsh toward the railroad, flushing one bird, who flew across the railroad and straight into some open woods; following after we flushed him and three more among the trees. James got one, one scattered, and where he went no one could tell. James followed the two on our side; they were very wild; he got one shot, but did not bring back the bird. As we crossed the marsh on our return the drummer No. 1 finished his maneuverings and pitched down. I went for him; he flushed like a Christian, and I bagged him easily. Explored the cheese factory; had a good drink of cold water, which was very refreshing, and ate a large quantity of the fresh curd, which was very nice, but did not strike me as a very digestible article of diet. We now had a hard drive of about four miles, which brought us upon the other road, three miles from home. Here was some good ground, the first lying high with marshy spots, and half a mile further on a muddy brook, with several acres of marsh. Upon the high

ground we did not find a bird. Just as we were finishing looking it over a snipe came across from somewhere and alighted some distance ahead of us. He started again wild, and flying low, we could not mark him at all. James got into the buggy and drove down to the creek, while I crossed the road to examine a wet place among some trees. Sam drew uncertainly, and three snipe rose at fifteen rods, going off in different directions, but none near me. As I came out into the open meadow could hear three drummers down toward the marsh. Whether these were the birds I had started I could not say. Kept down into the marsh, where I found James with an acquaintance of ours from the village—a young fellow crazy over the bird-stuffing question, a great hand for large numbers of a kind. The fall before he shot thirteen quail out of one bevy, and he stuffed every one of them. Rail were now his specialty; believe he would stuff an old setting hen if he hadn't anything else on hand. Some of his birds were put up beautifully, but most of them in "artistic attitudes," which would frighten Mother Nature out of her wits if she ever chanced to see them. He was after rail, of which he had one, and snipe, of which he had just killed one, but neither he nor his dog could find it. We knew he would hunt until he found it if it took all Summer, so we assisted. Sam soon came to a point, and there was the dead bird forty feet beyond where H. had marked him. Two flushed as we went forward; I dropped one, the other went to drumming. We hunted over the marsh, and before long the musicians scattered; three came down, one taking a direct line for James, who, as he set his wings to pitch, helped him along, and down he came dead; the other two went down twenty rods apart. I went for one, James for the other. I killed one as I floundered through the mud, the report starting my bird; he went up, and the one James was after with him, and they went straightway to cutting up all sorts of elaborate capers. James, like a sensible man, sat down upon an old log to await their pleasure. I crossed the creek, where the other was circling about very high. Occasionally he would make a dive down to within three hundred feet. James' birds came down right for him one after the other, as usual, and he killed them both handsomely. My bird kept at his capers until I was desperate. As he was at his lowest I fired at him with No. 6; he was far out of range, but he immediately took a turn and pitched down thirty rods off. I went after him; got him up and missed; he did not fly over ten rods, and there I killed him. We took our stuffing friend H. into the buggy and drove toward home. Coming to a brook, upon the right hand side of the road, Sam came to a point through the fence. H. and I got out; we got over the fence; up rose three; H. killed one, I killed one and missed the other. I went after this one, got him and another when returning. H. left us here for a short cut across the fields. A mile further on Sam came to another point through the fence; this time upon the left. As we drove up two snipe rose, and flying about ten rods, alighted upon a high bank near some raspberry bushes. I could see them running upon the turf. I walked up within a short distance, and as they started killed them both. We had in all twenty-six. Of these about ten were "drummers." James had killed the larger portion of the musicians. I was two or three birds ahead in number, but was very willing to acknowledge myself beaten.

ALIQUIS.

For Forest and Stream.

A TRIP TO VIRGINIA.

ON the 10th of November, A. D. 1874, you might have found a solitary pilgrim, a noted Professor of New York City, on his way to "Ole Virginy" to try his luck at the partridges. When I met him here at the depot I could see by his determined look that, though a new hand at the business, he was bound "to do or die." The following morning at seven o'clock found us on the cars of the Washington City, Virginia Midland and Great Southern Railroad, (a long name for one corporation, but let me here say that this road is one of a very few that look to the comfort of, and try to make everything pleasant for sportsmen; Mr. Barbour, the popular President of the road, issued an order, which is still in force, "that hunting dogs in the care of persons who travel over the road are to be passed free of charge;" this is surely an order that shows how people may expect to be treated who travel over the road, as well as the thoughtfulness of its managers,) on our way to Fauquier county, Virginia. At eleven o'clock we arrived at Warrenton, and after some little delay, caused by our arrival being expected the previous day, we found a son of the sunny South willing to take us over the roads and up and down the young mountains a distance of ten miles. We got our dogs, guns, traps, etc., in the springless wagon, using the Professor's trunk as a seat. It being a trunk with an exceedingly round top, you can better imagine our journey over a rough road than it can here be told. After proceeding about six miles the dogs acted as if something was wrong, and sure enough something was wrong; for there was a covey of birds, and here were our guns all strapped and apart in their cases. Well, our loss was possibly their gain. About two o'clock we crossed the Rappahannock and entered Waterloo. Waterloo is not a very large place, and there is much room for buildings and improvements. All the place consisted of was a store and a dwelling house. Here we met Mort L—r, as polite a Postmaster as ever locked a mail bag, and his partner, Mr. R—y. After directing us to our habitation we started for Mrs. W—s, and our driver, after taking many wrong roads and cross cuts, finally brought us to our destination. Here we had a genuine Virginia dinner, which I assure you was enjoyed. We had about two hours of hunting, and as the country was a new one, both to ourselves and the dogs, we did not fare very well. The next day set in good, and our prospects looking better; it was a fine day's sport.

While here we met Uncle John S., who was born and "riz" about there. Uncle John can tell you more stories, I will venture to say, than any other one person, about Gen. Polk and his headquarters. He also related his remarkable exploits during the different visits of the Southern and Northern armies. One in particular I remember was his truly remarkable presence of mind and calmness when in great danger. It occurred in this way: Uncle John was on his way to Warrenton with a load of sheep-skins. While passing down the road in a narrow ravine he heard, as he expresses it, a noise as of thunder, and a moment later, on looking up the road, he espied some of the Union cavalry coming down the road at break neck speed. On they came, but something must be wrong, for behind him he heard another noise as of many hoofs, and on looking back he saw

Stuart's cavalry making for the Union forces. Before he could get by either party he found himself in an indiscriminate skirmish. The old darkey that was driving was scared nigh unto death, and exclaimed, in the greatest possible anguish, "fore God, massa John, what shall I do?" and Uncle John says he said, "Lay down thar as flat as you can," and he states, "I was beside a gate-post as calm as I am now a-lookin' in that fire."

After we had been there three or four days Uncle John wanted us to take a turkey hunt with him, and, of course, we accepted; but there was something the Professor and I could not understand, for Uncle John took us through fields that had no cover whatever, but the facts came out, as pretty soon we saw the store at Waterloo loom up before us, and at Uncle John's suggestion we took a rest while he proceeded to get a quart flask filled, not with powder, but the other kind of material that makes some persons half shot. Well, we then went after the turkeys, but got none. Another time we broke in on Uncle John before daybreak, and, after routing him up, we went to his blind to get them turkeys, but luck was against us again. On our return we found Uncle John reading the Bible to the hands on the place. After he had gotten through the Professor asked him if it was a usual thing for him to do, and he replied that he read some to them every morning, and that he told them that "now thar's the law and d—n if you don't go by it, its not my fault."

After spending a pleasant fortnight we bade our friends good-by, with a promise, which will in all probability be fulfilled, to come again next October. We started on our homeward journey refreshed in body and mind. And I cannot close this without referring to the hospitality of the Virgians. Go where you will, roam the world over, and if you can, find a welcome that is more from the heart, one that makes you think surely these are not strangers, they are some of my old friends that memory has forgotten the looks and faces of, but the hearts are still the same. And as to the eating, why its enough to make an epicure's mouth water.

JEFF.

For Forest and Stream.

FRIEND DAVIDSON AND HIS DOGS.—GOODSHOOTING.

MR. JOHN DAVIDSON resides about two miles from the city, and has been long and favorably known as an importer and breeder and trainer of dogs. He must also be classed among the best field sportsmen in all the Northwest. A few months since, on a cold morning, we paid him a visit. At this time he had under his tuition fifteen fine setters, ranging in ages from six months to two years, and of colors sufficiently varied to suit the most whimsical taste. When we were snugly seated in the warm parlor of my Scotch friend, my first inquiry was after the welfare of his interesting family; my second, for that of his famous dog Jack, which he sold a few years since to a gentleman on the North River. At once all the smiles left his face, and in tones of regret, he said, "Jack died last Autumn," at the same time pointing to a small, but beautiful engraving of the favorite. The engraving had been finely colored, exhibiting the dog in that grandest of dog attitudes, pointing a bird. After a moment's pause, he said, "I have a dog which gives promise in every particular of equaling his renowned predecessor; and as it is too cold to spend much time among the kennels, if you will excuse me for a moment, I will untether Tom and bring him to the parlor, and I can assure you he will conduct himself with propriety." Tom was soon on the carpet—noble, rollicking fellow he is—almost the counterpart of the "model dog," abating the color. A countenance indicating equal intelligence, with milder temper. There were occasions that I can well attest, rare to be sure, in which Jack could not easily be called from his particular line of beat, or if he was compelled to surrender, he did it with ill grace, and with a seemingly dogged purpose to return, as much as to say, if game is the order of the day, leave that business to me and I will find it. But in every such case, where issue was joined between master and dog, I never knew an instance in which the error was not on the human side.

To return to Tom. Mr. D., anxious that I should have some ocular demonstration of the dog's excellences, after muffling his head thoroughly as possible, ordered a quail to be brought into the room and concealed behind some books. The dog was no sooner released than he came to a point, showing himself in fine style. Soon afterwards the bird was shown to the dog and taken from the room, and the conversation between myself and friend was resumed. In the course of a very few minutes our attention was arrested by the dog on point near the centre of the parlor, apparently as breathless and immovable as marble, his nose raised toward the ceiling and his eyes fixed intently on the little engraving on the wall, backing the standing image. It was both an interesting and novel sight. To be sure that there could be no mistake, I stood between the dog and the picture, entirely concealing it from his view, but this was no sooner done than he gained another position, assuming the position of the dog backing his friend when on point. Had the picture been a large one, and hung in a more conspicuous light it would not have struck me so forcibly. As it was, it furnished a novel exhibition of canine intelligence.

At the outset I spoke of the merits of my friend J. D. in field shooting. Educated as an accountant, and expert with the pen, I was confident that he could give some interesting statistics if so disposed. After much solicitation, he gave me the amount of shooting done, commencing July 4th 1871, and terminating January 12th 1872. "I commenced shooting woodcock," he said, "in fields adjacent to my own home on the 4th of July, and went out frequently till the 15th of August, bagging from eight to thirty-six birds a day, or half day as it might be. About this time, agreeable to promise, I meet some friends near the State line, with the design of hunting pinnated grouse in Indiana. My companion was Jack, a black and white setter with tan cheeks. Being young, he had no experience in this kind of game. An early hour next morning after our arrival found us on shooting ground, where we had excellent sport till the extreme heat forced us to relinquish our labors till late in the afternoon. We remained in the locality several days with good shooting. Business matters at home required the return of several of the party; I returned also, only to meet another party going to a different part of the State. On this trip the weather had become cool, and we enjoyed grouse shooting in its perfection. The birds were now full grown and strong. From sixty to seventy birds a day for our two guns was quite

usual, and eighty not uncommon. The quail now being in season, furnished some excellent sport in fields skirting the timber. The ponds on the prairies were plentifully supplied with ducks and brant, and some geese. The thorough knowledge of the country by our teamster united to the excellent working of our dogs, with plenty of game and fine weather, rendered this trip all that could be anticipated in the way of sport. My next trip of the season was not as fortunate, having been sent for to meet a party at a given point on the Alleghany Mountains, Va., in quest of ruffed grouse. Jack was not altogether a novice in this kind of hunting, and the bird requiring a much closer ranging dog than its congener of the prairie, gave me a fine opportunity of experimenting on the merits of the dog. Having hunted in the old world as well as in the new, I am satisfied that the setter of America must be a very different dog from the setter of England. Here he must not only be a fine ranger, drop at shot, never flush a bird, but perform the office of retriever on land and water, and like the Yankee, be ready for any new emergency; while in England he is used in an open country only. Jack was alive to any situation. Whenever he came to a point on a bird, concealed in the top of a fallen tree, knowing the habits of the game, I first chose my position, then sent Jack around that he might come in on the opposite side. The intelligence he displayed in driving it out on my side, was often remarkable, and any one who has hunted ruffed grouse must have observed how often they take advantage of going out the opposite side of the thicket, or tree top, from the gunner. Our success here was not the best; seldom bagging over eight brace a day to two guns; we therefore resolved to try Ohio for quail and ruffed grouse. Among the Buckeyes we found fair sport, bagging as high as twenty brace a day to each gun. Returned home, and after hunting several days on grounds long familiar, was summoned to join a party going to Indiana and Illinois for a quail shooting. Now I had to meet one of the renowned Eastern shooters, with a setter of extraordinary reputation, and I deemed it best to take as an auxiliary to Jack, his game little sister, Flora. I reached the place appointed for our meeting two days in advance of my friends—met an old acquaintance, who had repeatedly seen my anticipated comrade and his dog in the field. I had perfect confidence in my dogs, and resolved to do as well as I could, though game was not very abundant. On the first day I bagged forty-three quail and four ruffed grouse; missing two quail only. I asked my old acquaintance how such shooting would compare with the Eastern party, and how our dogs would compare. "O'Man," he says, speaking in broad Scotch, "he has nae chance at a', nor his dog either, nor the quails for that matter." Went out the next day and bagged thirty-six over little Flora and got back to meet my Eastern friend in the afternoon. Early the next morning we started for points farther West, and had the best shooting of the season on this trip, bagging to my gun, a muzzle loader at that, five hundred and seventy-five birds in twelve day's shooting; my largest day being seventy-two birds, the mercury on that morning being 15° below zero. The law having now expired in Illinois, I returned to Indiana, and in twelve and a half days shooting, from January 1st, bagged five hundred and eighty-five quail and ruffed grouse, to my gun alone. This was my last adieu hunt with my favorite companion, Jack, as an Eastern sportsman soon after became his owner.

When reading the accounts of wonderful dogs and their exploits, I will merely say that I have often counted the number of quail in a covey when flushed, and when dropping in the long grass in low prairie, seen him find and point every one, and in one instance when the birds had alighted near each other, saw him point six different times in one covey while holding a dead bird in his mouth, each time, and all in a space of time not exceeding fifteen minutes. Another instance, after losing him among briar thickets on a prairie, and no response to my repeated call, heard one loud bark, soon found him pointing a fine covey of quail, rigid as a statue.

That season alone I killed over two thousand head of game, besides many ducks, etc.

During the fourteen years I have shot over twenty thousand."

Monroe, Michigan, August, 2, 1875.

TROUTING IN COLORADO.

EDITOR FOREST AND STREAM:—

Five weeks ago when I left New York I did not expect to see you again so soon, nor to be able to say that I have waded and soaked in the finest trout stream in America, and gained, in fact, my first real experience in catching the speckled beauties. As a tyro, my opinion may be open to criticism. I will therefore fall back upon figures. Two of my friends have caught here since the season commenced nearly two thousand pounds of trout, all with most ridiculously small fly hooks and fine tackle—in short, they are first-class amateurs, with all a sportsman's horror of ground worms and grasshoppers. For my part, as a heavy weight or a heavy fisherman after bass and bluefish, pickerel and masacalonge, sheephead and weakfish, to which denizens of the deep I feel gratefully indebted for many a well spent day and week, I must confess that I am, perhaps through ignorance, unable to appreciate the beauty of having such very light tackle as experts choose, which must inevitably, in their hands even, fail to secure but a very small proportion of the really large trout who rise to their lures. One of the objects of sport is success, and where fish run so very large the pleasure and excitement of securing one monster, thereby displaying one's skill (or luck) cannot compensate for the chagrin of losing a dozen who happen to be smart enough to flop their tails against the troutist's fragile gut. Doubtless many a smile of derision will greet this opinion, but having formed and expressed it, I shall stick to it until the light of other (future) days may perhaps make me an altered man.

After having attended to certain mining matters which took me to Colorado, and in the course of which I passed several days climbing the mountains on horseback and on foot, investigating various lodes in which I had more or less interest, I started on a three days' trip to Wagon Wheel Gaps in the San Juan Mountains. Here let me, from pure feelings of gratitude, as I have no personal interest in the matter, as you know, mention my foot dressings. I took with me from New York a pair of Frank Goode's oil-tanned moccasins, gaiter make, with soles and heels, and had hobnails put in them for mountain travel. I found them exceedingly serviceable, and while my horse and self were more than once exhausted, I never became foot sore or weary, though traveling through mud and rocks and marshes, often almost knee deep; and afterwards, though wading for several hours of two days in the waters and on the rocky bottom of the golden Rio Grande, they preserved their softness and pliability. Alas! as friends I regret them. They are departed! into the hands of greedy miners, who allowed me only the choice as to whom I should bequeath them on my departure. I will not write up our fishing trip, as it was short and without special interest to the general reader. To myself it is of course something not easy to be forgotten—at least not just yet—the catching of my first trout. He was

only a half-pounder, but there was joy in the soul of one member of our family and an unwonted fluttering of the heart and long drawn breath, as he slipped head foremost into my breeches pocket. He was followed there by several others in the course of an hour before the sun went down; but I must confess that my second fish—mine by courtesy—got away from me. He was a beauty and made a bold rise, but I didn't want him. In the vernacular of the country, "I had no use for him," so I gaped at him and didn't strike. He thought my gaping rude and left for other flies less artificial. After gaping once, I got up, got over my attack of feverish excitement, and caught enough fish to go back to camp with a proud air and a happy smile. That night, after a delicious supper, we slept in an old deserted root cellar, with a ton of old hay, the wagon covers, and some buffalo robes for our bed.

To get to this paradise of the trout fisherman, and I may say of the hunter of bear, deer, grouse, wild ducks, *ed id genus omne*, the valley and river of the Rio Grande, in Southwestern Colorado, it is only necessary to take a ticket to Denver, thence by rail to Canyon City, thence 143 miles over one of the finest of mountain roads in Concord coaches to Del Norte, which place should form the base of operations. Here saddle horses, or mule wagons, can be obtained at reasonable prices for future movements. It was with extreme regret that I have hastened back, but my partner has "struck it rich" on a gold and silver lode, and he was anxious that I should in person report progress to some Eastern friends and capitalists. I propose to astonish you in a day or two by some specimens of quartz bearing free gold. I have seen a mountain of such mineral, with gold enough almost in sight to build a first-class rapid transit road for our suffering fellow citizens, or to furnish capital to some of our millionaires for a dozen gigantic charitable schemes.

At Wagon Wheel Gaps, near where we were fishing, are also hot sulphur springs of undoubted value and efficacy in many diseases. These springs are respectively 107°, 123° and 135° in temperature. The water contains also soda and iron. Some twenty or thirty families were in camp in tents and covered wagons, having traveled from fifty to two hundred miles for the benefit of the waters. I was informed of many cases of cure of rheumatism of long standing, and from the character of the waters there is little doubt but that their action would be curative in many chronic cases of dyspepsia and female diseases. When the railroad shall have penetrated these mountain fastnesses, and it is now only a matter of time, many an invalid will delve with advantage in this mine, and give new proof of the inexhaustible greatness of Colorado's wealth.

WARREN.

Fish Culture.

THE UNITED STATES FISHERY COMMISSION AT WOOD'S HOLE.—Mr. B. F. Bowles, of the Springfield Republican, recently paid the Fishery Commission a visit at Wood's Hole, and tells us all about it in a letter to his journal. From him we learn that one of the most important conclusions reached through the examinations of the commission is, that the great decrease in codfishery on our coast is due to the obstructions placed in our streams and rivers, such as milldams, pollution of water, etc., thus preventing ascent of alewives and other small fish to spawn, these small fish being the natural food of the cod.

Of Capt. L. A. Beardslee, who has charge of the Government steamer, the Bluebird, that is used for dredging, &c., the letter says:—

"This officer now represents the navy on the commission for the examination and test of iron and steel, but he takes such a lively interest in the work of the Bluebird, that he prefers to be detailed to superintend its movements, although it is a duty far beneath his rank. In short, he spends his summer vacation, as some of the professors of science above mentioned do, in promoting the investigation of the fish commission, because it is for him a congenial and interesting occupation. Capt. Beardslee also keeps a large part of the outside world informed of the discoveries of the Bluebird in his letters, partly gossip and partly science, and altogether agreeable, to the FOREST AND STREAM, over the signature of "Piseco."

Piseco has already told us of the plaster casts of the fish that are being taken for the Smithsonian Institution. Mr. Bowles says:—

"If any novel specimen of fish is brought in, it is immediately photographed, and, as soon as possible, its colors carefully taken on paper, two skillful water color artists, Mr. J. H. Richard and Mr. Wakeman, Holberton, being employed for this purpose. This work has to be done quickly, as there is nothing in nature which fades as soon as the bright hues of a fish out of his native element. After this is done, a plaster cast is made of the fish. To-day, a big horse-mackerel, four or five feet long, was undergoing this operation. Later and more leisurely the plaster cast is mounted at the Smithsonian Institute, and colored to life according to the portrait made on paper here. This cast and painting is done with such faithful exactness that every scale and ray is shown precisely as in the living fish. A large number of these casts, embracing nearly all the varieties of fish known to exist in the United States, are already constructed at the institute, and it is the intention of Prof. Baird to have the collection complete, if possible, for exhibition at the centennial, next year."

The personnel of the commission, as at present represented here, comprising both officers and volunteers, is as follows:—

"Prof. Spencer F. Baird, United States Commissioner of Fisheries, Smithsonian Institute, Washington, D. C.; Prof. A. E. Verrill and S. I. Smith, and Tutor J. K. Thacher of Yale College, S. R. Clark, Assistant in Zoology at Yale; Prof. Theodore Gill of the Smithsonian Institute; Prof. Alpheus Hyatt of the Institute of Technology at Boston; Sanderson Smith, geologist, of New York; G. Brown Good and Tarleton H. Bean and J. H. Richards, artist, of the United States National Museum at Washington; James H. Blake, artist, in the Museum of Comparative Zoology at Cambridge; C. Hart Merriam of the Sheffield Scientific School, Mr. Simons, assistant in the Boston Society of Natural History; L. A. Beardslee, commander, United States steamer Bluebird; Passed Assistant Surgeon J. H. Kidder; Acting Master S. G. Cook; H. E. Rockwell, Secretary of Commission and Disbursing Officer; C. L. Dana, J. Paul Wilson and Herbert Gill, stenographers; J. W. Smillie, photographer; William Palmer, modeler. Among the visitors who have been here this season, are: D. C. Eaton, professor of botany at Yale, Senator Edmonds and family, Senator Morrill, of Vermont, and Rev. James Freeman Clarke. Prof. Milner, Assistant Commissioner, whose operations at South Hadley this Summer, in the hatching and distribution of shad, your readers are familiar with, is staying here for a few days, completing the details of his

work. Capt. H. C. Chester, one of the heroes of the Polar, is also here, having general charge of the government yard.

TRANSPORTATION OF FROZEN FISH EGGS.—Here is a suggestion for the transportation of fish eggs, which appears in *Land and Water*. It is worth noting. Mr. Fred Mather, now in the employ of the United States Fishery Commission, wrote an article on this subject for FOREST AND STREAM some time since. We quote:—

"It has been proved by experiment that no amount of cold will destroy the vitality of the eggs of insects, provided the principle of life has not been previously awakened; and I have a conviction that the same rule holds with the eggs of fish. I have known salmon redds exposed in Winter, by the falling away of the water, to the weather, and frozen throughout, eggs and gravel forming one mass of ice; the young fish would, nevertheless, hatch out at the appointed time. I believe that whether the suspension of animation caused by the frost endured for one day, or one month, or almost any period, the effect would be the same, if thawed in a natural and uniform manner. The frozen ova, however, must not be "broken up by a crowbar." I would propose that a portion of eggs, duly impregnated, or, which is better, taken from the redd with the gravel in which it lay (the contents of a pint pot would stock every river in New Zealand), should be placed in a cavity between two blocks of ice, which would instantly freeze into a solid mass. The simple problem would then be to convey that lump unthawed to its place of destination—not a very difficult matter, I should suppose. That done, let what remains of the block be as once submerged in an appropriate position in a bed of gravel, over which a few inches of water run; and I will wager the expense that in due time the samlets would appear and stock the waters abundantly.

FISH CULTURE IN TENNESSEE.—This State is becoming much interested in fish culture. Prominent among those who are aiding in this work, is Hon. Joseph S. Fowler, of Nashville, who has written a letter to the *Columbia Herald*, from which we make an extract. He says:—

"Since the first settlement of the country, great changes have taken place in our streams. The removal of timber and the cultivation of the land, have affected the waters and also the fish. Some of our finest food fishes, as the black bass, spawn about the time our Spring freshets bring down from the ploughed lands large quantities of earthy matter which settles on the young spawn in quantities greater than the parent fish can clear off, burying the spawn entirely. Animals of kinds which flourish in a state of nature, meet with many casualties in a state of civilization. Our intelligence and care must provide against such injurious consequences as follow changes introduced by us.

The people will also sustain a prudent, efficient and judicious system for the propagation and protection of fish.

There are but few States in the Union that enjoy greater advantages so far as fresh water is considered. The Tennessee is fed from a vast extent of surface by numerous streams furnishing a body of water that would cover many hundreds of square miles of land abounding in nourishment for our own fish. To care for this domain and have it devoted to useful purposes is at once the duty of the State. I trust then that the next Legislature will make such provisions as the experience of the times and the practice of other States warrant. The results of intelligent care for fish have proved so satisfactory in many of our States that there can be no doubt of its advantage."

TROUTDALE FISH FARM.—We lately had the pleasure of visiting this fishery, one of the oldest and best conducted in the country. It is situated in the beautiful valley of the Musconetcong, near Bloomsbury, N. J., in the midst of a fine farming country whose high rolling lands and pure cold springs are a guarantee of the perfect healthfulness of the location. The site was originally selected by Mr. Thaddeus Norris, the well known author of "The American Angler," but was afterwards sold to the late Dr. J. H. Slack, who extended the grounds devoted to the ponds, and beautified them.

The hatching house is long enough to do the work of the fish commissioners of New Jersey, as well as that of the farm, and the past season has turned out many thousand California salmon, from eggs presented by the United States Commission, as well as the salmon trout for the State, without at all interfering with the hatching of 225,000 brook trout. Since the death of its talented owner, nearly a year ago, it has been successfully managed by Mrs. Slack. The ponds are well stocked, and the fish appear healthy and well cared for. Attached to the hatching house is a boiler where food is cooked, principally the heads and lights of beef; they are then put into a chopper run by water power and brought to the requisite fineness. The cooking renders much food available that would otherwise be wasted, but as to the comparative amount of nutriment as contained in cooked and uncooked food, we are not prepared to give an opinion, never having seen it thoroughly tested side by side. It seems to be conceded that cooked food is best for cattle, but that is vegetable matter, and reasoning from analogy is not always sound.

There are nine ponds in fine condition and beautifully arranged, and it was with a feeling of regret that we learned that the failing health of Mrs. Slack would compel her to give up their care, if not to sell her elegant residence and abandon the work of fish culture altogether.—*Live Stock Journal*.

[Why doesn't New Jersey purchase it for a State Hatching House?—Ed.]

TROUT AS VEGETARIANS.

EDITOR FOREST AND STREAM:—

Mr. Hale, of this town, to whom I sold, before going abroad, my trout farm, has succeeded in solving a problem in trout culture which, it seems to me, is of the greatest importance. His trout are fed, and have been for some months, upon bread made of Indian corn. He adds to the meal a little sugar or molasses of the cheapest sort, and the trout eat the bread thus prepared with as much avidity as they do chopped liver or

RUTLAND, Vt., August 19th, 1875.

other animal food. More than this, they are in good condition; they thrive well—though they do not grow quite so rapidly as upon a flesh diet—and their flesh is firm and finely flavored. This discovery makes trout culture not only possible in localities where it would not otherwise be practicable, but in all cases more economical. Whether the vegetable diet can be rigidly or uninterruptedly practiced is a matter for further trial. Even if the result shows that a certain quantity of animal food is necessary to the most perfect health and robust development, it is still a fact of the utmost value that trout can be raised on a vegetable diet, and that upon it alone they live and grow and fatten.

Very truly yours,
M. GOLDSMITH,
One of the Fish Commissioners for Vermont.

Natural History.

EDIBLE FISH OF THE PACIFIC.

EDITOR FOREST AND STREAM:—

SAN FRANCISCO, August, 1875.

As a field for the angler this coast, including California, Oregon, Washington Territory, Columbia, and Alaska, is considered by many good judges as about the best in the world, and the Pacific Ocean probably equals the Atlantic in its variety of edible fish, and excels it in numbers, though I do not think this market comes up to that of New York, Boston, and Baltimore in the quality of the number of good fishes found in the latter cities. We have such an immense abundance of salmon of different species, (the *Salmo gairdneri* being the best,) in all our seas and many of our rivers, that most of our fine ocean fish are almost entirely overlooked, particularly in a great commercial point of view, although the halibut and cod might probably be made nearly equally good for commerce if the same attention were paid to them as to salmon. The ranges of the halibut and true cod are, however, more limited than those of the salmon. The former ranges from Oregon to the Aleutian Islands and to the Behring Sea, the specimens caught weighing from one to 400 pounds. The latter—the cod—the best for commerce, exclusive of the salmon, is found in countless numbers from the coast of Washington Territory to the highest ice floes. Of course we have these fish in plenty in our markets in this city. The majority of the fish here are edible, but some species, such as the sturgeon, etc., are of a coarse, dry, and indigestible character, although none of them can be said to be deleterious in their effects, or poisonous, unless they have become so, which is very rarely the case, from feeding on poisonous substances. Both the sea and fresh water fish are about equal as to their edibility, but the salt water fish are, I believe, considered more nourishing and palatable. Neither should be eaten when out of season, as they are considered the best a short time after spawning, and unfit to be eaten immediately after.

Most of the salt and fresh water fish are brought to our market by Italian and Spanish fishermen, and a few Chinese, who net them mostly, or take them with long lines furnished with a multitude of hooks, in our bay, or at sea outside of what are called "The Heads." They use small smacks, furnished with one large sail, which extends from stern to head, performing the office of both main and foresail. Those which go far out to sea or to the Farallone Islands, about thirty miles, are provided with "fish wells," placed in the centre of the vessels, by which the sea water can flow in and out through a latticed bottom, thus, of course, preserving the fish alive and fresh.

The number of fish are now being fast increased here, as elsewhere, by our State Fish Commissioners and our Acclimatizing Society and other persons, planting and growing many kinds of fish, especially the salmon and trout, in our estuaries, lakes, ponds, creeks, etc., for sporting as well as market purposes, as is now being done in so many parts of the world; indeed, we have now several breeding places, as on the McCloud and Merced Rivers, etc. The supply of fish varies a good deal here according to weather, tides, and ages of the moon, perhaps.

Among the numerous fish that are found on our stalls are the salmon, true codfish, and another variety, rockfish, (a species of sea bass,) smelts, tom cods, sturgeon, halibut, white perch, soles, skates, sheepshead, turbot, green fish, pompano, sardines, kingfish, jewfish, anchovies, sunfish, brook trout, salmon trout, or lake trout, mackerel, herrings, "pike," (a species of carp,) and many others of lesser note. We have at least five species of shellfish valuable for the table—one oyster, (the Eastern do not yet seem to breed here,) two mussels, one cockle, and a soft-shell clam. The oysters are small, not finely flavored, and are not very abundant. We have no lobster, (it is yet doubtful whether the Eastern kind has succeeded here,) but a crayfish or crawfish, or what some call a large prawn (*Palinurus*), very similar to the lobster in size, color, flavor, (though very inferior,) habits and general appearance except that it lacks the large claws. We have plenty of shrimps. Crabs are abundant. The abalone or aulone (*Haliotis*) is found as far north as Point Reyes, and abounds south of Point Conception. It is a large mollusk with one shell, from five to seven inches across; the shells are beautifully iridescent with rainbow colors, and it is now much used in the arts for buttons, sleeve buttons, broaches, knife handles, inlaying, and numerous other ornaments. Many vessels are engaged fishing for them. The finest salmon is from 6 to 10 cents per pound when in plenty, white sea bass are 20 cents, halibut 18 cents, soles 30 cents, kingfish 18 cents, smelts 12½ cents, and pompano, the choicest of all fish here, \$2.50 per pound.

Within these two last years we have had more tom cod, identical with the Eastern frostfish, than smelts in the bay. I often catch forty to fifty tom cod in a morning in four or five hours' time. It is a tender, sweet, and delicate fish for the table, but has no high flavor like the trout, salmon, and halibut. The smelts have come into the bay late this year, but are now being caught at Oakland Long Wharf in plenty, and of large size, averaging about ten inches in length. I sometimes take a great many. They are rather game, but they and tom cod will not content one for sport after trout and salmon fishing.

E. J. HOOPER.

DOMESTICATED WOOD DUCKS.

EDITOR FOREST AND STREAM:—

In several answers to inquiries you say the "wood or Summer duck cannot be domesticated." The following persons have had them:—Fred. Mather, Honeoye Falls, N. Y.; J. N. Bicknell, Westmoreland, N. Y.; Gen. Cus. A. Johnson, Newburyport, Mass. ***

[One of our correspondents made a misstatement of this sort, but it has been more than once corrected in these columns, and the names given of parties possessing tame wood ducks. The latter associate freely with barn-yard fowls.—Ed.]

BALD EAGLE AT CAMBRIDGE, MASS.

DAVENPORT, Mass., August 23d, 1875.

EDITOR FOREST AND STREAM:—

Friday, August 20th, a bald or gray eagle, (*Haliaeetus leucocephalus*), alighted on a chimney at the pork packing establishment of J. P. Squires & Co., in Cambridge. A ladder was placed against the chimney and an attempt made by a workman to capture it by throwing a noose over its head. This it adroitly eluded, and, after swooping down upon its assailant, soared away to alight upon the Putnam school house, where it was shot by a citizen. It was evidently a young specimen, and measured five feet from tip to tip of wings.

A. F. GRAY.

TURKEY BUZZARDS.

GRAND MANAN, N. B., August 10th, 1875.

EDITOR FOREST AND STREAM:—

In looking over your issue of the 14th of January, 1875, I saw a statement that a turkey buzzard had been taken at Calais, Maine, and marked

accidental. For those whom it may interest I beg leave to inform you that three were seen on this island last April, one of which was shot, but unfortunately before I could procure it the party who shot it had cut off its wings, which precluded the possibility of my stuffing and mounting it.

J. T. C. MOSES.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, }
New York, August 22, 1875. }

Animals received at Central Park Menagerie for the week ending August 21st, 1875:—

Two Ring Doves, *Turtur risorius*. Presented by Miss Hattie Rosenthal.

Two Night Herons, *Nyctiardea gardeni*. Presented by Mr. H. F. Barrell.

One King Snake, *Ophibolus sayi*. Hab. Gulf States. Presented by Mr. Bernhard Speckels.

One Equine Antelope, *Hippotragus equinus*. Hab. North Africa. The first of the species ever exhibited in this country.

Two Leopards, *Felis leopardus*. Bred in the Menagerie.

W. A. CONKLIN, Director.

Woodland, Farm and Garden.

PEACHES.—The city has been flooded with peaches until within the last day or two, when Delaware growers have declined to pick their fruit, the proceeds not paying expenses. During the early part of the week the fruit were selling for 25 cents per basket, and the commission merchants were not receiving back the amounts advanced for freight. Now that the supply has been somewhat reduced and the same quantities are not coming forward, prices have advanced to 75 cents per basket. The grocers and small dealers are the only ones who have made a profit out of the present glut, as consumers, unless they purchase at the markets, are charged the usual prices. Prices, however, must continue low for some time to come. Now is the time to preserve.

TREE PLANTING AGAIN.—The importance of tree planting, and the profit, direct and indirect, realized from it, are topics which cannot be pressed home too strongly or too frequently upon our agricultural communities. We have considered various phases of this subject at different times, but the most practical, and therefore the most useful articles pertaining to the matter we have lately seen are those by Gen. Jas. S. Brisbin, and we present below the substance of his statements:

"Gen. Brisbin gives the history of a ten-acre field of black ash planted for hoop-poles. Where thinned at five years from planting, the poles gathered at the first cutting were worth \$1,620. Two years later the rest of the young trees may be cut and sold for \$4,860. The total yield of the ten acres thus planted would be \$6,480, at the rate of \$725.70 a year for ten acres, or \$92.50 per acre. Land planting in walnut timber will in ten years yield more than if the land had been planted each year in grain; and moreover, a crop of corn or potatoes may be planted between the rows the first and second years with no injury to the young trees, as the walnut strikes a deep root and draws sustenance from the subsoil. Three years from planting, the trees will bear a peck of nuts each, and there are certainly few more delicious nuts than the fruit of the black walnut tree.

"An acre of sugar maples, at twenty-five years of age, will average one foot in diameter and produce 2,000 pounds of sugar annually. When the trees measure twenty inches they will give 60,000 feet of lumber, worth \$2,500, beside a great deal of fuel, and 220 trees will grow on an acre. A lot of chestnut trees planted in Mount Pleasant, Iowa, eleven years ago, is making a better return than the same number of acres in orchard. The hickory is valuable on account of its nut-bearing qualities and its wood. The shelbark is the best for planting, either for wood or fruit. The oak is the most valuable of all trees, and can be readily raised from the seed, which should be gathered in the Fall after the acorns drop. The best month to gather the seed is October, and it should be planted at once, or kept in a cool, moist condition until Spring.

"The cottonwood commends itself to all Western beginners on account of its rapid growth and easy culture. It grows anywhere, and seems to be undying. If one is cut down another springs up from the stump. Gen. Brisbin expresses the opinion that it would grow in almost any of the Eastern States, and as a shade tree for cattle is unsurpassed. The young cuttings are readily obtained from Western nurserymen and cost but a trifle. The cottonwood furnishes better shelter and fuel in a shorter time than any other tree in America. Several acres of these have been known to grow seven feet in one year from the cuttings. A thousand trees can be grown on an acre. The soft maple is improved by cultivation, and at seven years from planting will yield three ten-foot rails, while an acre of soft maple at the end of the same period will yield 3,000 rails. In some sections good land is thrown out of cultivation because there is no timber adjacent whence to get supplies of fuel and fencing."

AMERICAN FRUITS.—Professor Asa Grey said, in a recent address, of the undeveloped fruits of America:

"A few wild fruits may be mentioned which manifestly have great capabilities, that may or may not be developed in the future. The leading instances in my mind, are the persimmon and the pawpaw; not the true pawpaw, of course, which we have in Florida, but the Asia Minor, or Western pawpaw, so called. Both persimmons and pawpaws are freely offering from spontaneous seedlings, incipient choicer varieties to be selected from both fruit when only a few years old, thereby accelerating the fixation of selected varieties into races; and both give fruits of types wholly distinct from any others we possess of temperate climates. He that has not tasted a kaki has no conception of the capabilities of the diospyrus genus. The custard apples of the West Indies give some idea of what might be made of our pawpaw when ameliorated by cultivation and close selection for several generations. I have understood that one of the veteran pomologists of the country, Dr. Kirkland, of Ohio, a good while ago initiated a course

of experiments upon the pawpaw in this regard; it would be well to know with what success, and whether the breeding and selection have been continued through successive generations.

"Our American plums have for many years been in some sort of cultivation and have improved upon the wild forms; but I suppose they have not been systematically attended to. Their exterior liability to black knot and other attacks renders them, for the present, unsuccessful.

"Finally, if promology includes nuts, there is a promising field uncultivated. Our wild chestnuts are sweeter than those of the Old World; it would be well to try whether races might not be developed with the nuts as large as marrons or Spanish chestnuts, and without diminution of flavor. If we were not too easily satisfied with a mere choice between spontaneous hickory nuts, we might have much better and thinner-shelled ones. Varying, as they do, excessively in the thickness of the shell and the size and flavor of the kernel, they are inviting your attention, and promising to reward your care. The pecan is waiting to have the bitter matter between the kernel bred out; the butternuts and black walnuts to have their excess of oil turned into farinaceous and sugary matter, and their shells thinned and smoothed by continued good breeding, when they will much surpass the European walnut."

THE LAND OF HORSES.—The "blue-grass region" appears to be a paradise for horsemen according to the following statement made by the correspondent of an exchange:

"The moment you enter the 'blue-grass region' you hear nothing but horse-talk. The whole section lives upon pedigrees. The stable boys banter pedigrees in a nomenclature of their own. The men utter pedigrees with a volubility like the flowing of a never-ending stream. Even the ladies of polite society will chatter pedigrees, and talk as fluently of sire and dam as if they had received their accomplishments in the precincts of the breeding portions of the stock farm. Everywhere it is horse, mare, filly, foal, gelding. The stables are swarming with them, the streets are alive with them, the fields are dotted with them like the cattle on a thousand hills, and the visitor, even though he came merely to see, has a secretiveness and obstinacy more profound than the mysteries of a Sphinx if he does not buy before he comes away some little equine specimen for which he has no earthly use. There is a certain Free Masonry or brotherly love among the horse dealers of Kentucky. If one dealer has nothing in the horse line to answer your demands he will furnish you with a saddle horse and accompany you for miles around the neighborhood to inspect stock which he is sure will just suit your fancy. Their houses are thrown open to your entertainment. The rarest wine of corn and the freshest of mint, and the richest of Alderney cream and the tenderest of Spring chickens are offered with a princely generosity to feed the flame of your horse fever, which must not be allayed till you have left your money behind you on some of the stock farms. This is the logic of all the attentions and pedigrees and horse enthusiasm, and it is wonderful how the interest is kept up year after year, and how the surplus funds of our wealthy horse-fanciers are poured with an increasing volume, into the coffers of the 'blue-grass region.'"

—Robert Bonner, of New York, has just purchased the seven-year-old trotter, Grafton, from Richard Penniston, of Lexington, Ky. He is by Waxy, dam by Kavanagh's Gray Eagle, and is stated to have made a trial mile at Cleveland in 2:15½. The price is not known, but is said to be \$35,000.

The Kennel.

THE NEWARK BENCH SHOW.—We alluded in our paper last week to the action that has been taken in regard to the holding of a great Bench Show of Dogs in the city of Newark next Fall. Such success has attended each dog show held in this country thus far, (an institution of quite recent date here, although long in vogue in England,) and so rapidly has the interest increased in the matter of breeding and training hunting dogs, that it seemed as though a special effort, if made, might bring out a larger display of dogs and a larger attendance of spectators that has heretofore been known. New Jersey was recommended as a desirable locality for such a show, not only because it is central, but because it has a larger proportion of first-class dogs than any other State of its size. Accordingly an informal meeting was held on the 15th instant at Newark, which was even a greater success than was anticipated.

The meeting was enthusiastic throughout, and the promise for the Fall is even more radiant than Autumn colors. Mr. Jacob Pentz tendered the use of his house, and acted as Chairman of the committee acting on appointments. Many well-known representatives of sporting interests were present, and we give herewith the names of those chosen as the Advisory or Executive Committee:—N. A. Doremus, E. A. Hawes, W. Grummond, Herman Schalk, Theo. Morford, Foreman Taylor, Charles H. Raymond, S. J. Bestor, Burdett Loomis, A. P. Baldwin, William Hughes, F. S. Underhill, Eugene H. Shorb, and Jacob Pentz.

Horace Smith, of the *FOREST AND STREAM*; Fred. G. Skinner, of the *Turf, Field and Farm*; T. C. Banks, of the *Rod and Gun*, and Charles A. Foster, of the *Sportsman*, were appointed a committee to be consulted upon matters regarding premiums, programmes, and advertisements. Upon motion made by one of the committee, N. A. Demorest was unanimously selected to act as Chairman of the meeting, and presided over the parties present with great tact and discretion. Several animated discussions and arguments arose during the evening, but through the urbane but firm management of the Chairman everything progressed in the most harmonious and satisfactory manner. Col. Skinner, of the *Turf*, acted as Secretary. Five hundred dollars were subscribed to be given in special pre-

miums, and as much more subscribed toward the premiums to be given in the regular classes:—

Class First—Comprises list of special premiums to be donated.
Class Second—Setters.
Class Third—Pointers.
Class Fourth—Hounds.
Class Fifth—Spaniels.
Class Sixth—Terriers.
Class Seventh—Miscellaneous.

Upon motion of the Chairman, each one present was invited to give his opinion regarding a name under which the exhibition should be held. After discussion it was decided to hold the same as "The Grand National and International Bench Show."

Upon motion each gentleman was asked to name a friend whom he thought would act toward the advancement of the interests of the exhibition, both pecuniarily and as exhibitors. The following were proposed and elected with enthusiasm and by acclamation:—Messrs. Marcus L. Ward, Jr., W. A. Perry, Jr., William Grummond, Clarence Gould, Herman Schalk, H. Brentno, E. Whitehead, Dr. J. Robinson, E. A. Hawes, A. P. Baldwin, Fred. S. Underhill, James Peck, S. Street, Vine Hedden, E. E. Becks, A. B. Kay, A. Van Volkenburgh, William Knecht, John Poenier, E. A. Green, James Hedden, Thomas Kingston, the brothers Denman, H. Richards, Jr., and A. Parker, all of Newark; C. H. Raymond, of Morris Plains; Theo. Morford, of Newton; J. Foreman Taylor, of Monmouth; George H. Wild, of Red Bank; Thos. M. De Russey and Elmor Stout, of New Brunswick; Al. S. Phillips, of Trenton; Isaac Van Winkle, of Greenville; George M. Hard and John Walley, of Rahway; William Hughes and William Taylor, of Jersey City, all of New Jersey; Burdett Loomis and S. J. Bestor, of Hartford, and Messrs. Hills and Todd, of New Haven, in Connecticut; Messrs. R. Robinson, A. Gubner, E. Orgill, N. Saltus, W. Shipman, and F. S. Massey, all of Brooklyn, L. I.; Eugene H. Shorb, F. Palmer, S. Putnam, F. Colburn, and Joseph Elliott, all of New York City; James Tilley, of Locust Valley, L. I.; George Hayden, Jacksonville, Ill.; John E. Long, Detroit, Mich.; G. D. Saxon, Canton, Ohio; Wm. Clarkson and J. J. Spicer, of Bridgeville, Del.; J. B. Sage, Buffalo, N. Y.; Green Smith, of New York; G. E. Benson, Philadelphia, Pa.; C. Jenkins and John Swain, of Hunting Ridge, Md.; Shirley Harrison, of Brandon, Va., and Shaler Smith, of Missouri.

Upon motion made and carried the President and officers of each sportsman's club in the different States were extended a cordial invitation, and urged to co-operate in making this bench show a success, and also to consider themselves as select honorary members of the committee.

Upon motion made and carried, the meeting adjourned to meet the first day of October, at two P. M., in the Park House, Newark, where suitable rooms will be provided, and arrangements further made as to premiums to be awarded and such other business transacted as may be brought before the meeting. A cordial invitation is extended to ALL sportsmen from every section to be present at that time.

—Died at River View, near La Grange, Mo., on Friday, August 6th, Grouse and Nell, setters of E. W. Hope, Esq., aged respectively nine and twelve years. Grouse was born upon the estate of T. H. Graham, Esq., of Edmond Castle, Nell upon the estate of Jos. Hope, Esq., of Whooff House, both of the county of Cumberland, England, and both were brought to this country by their late owner. Their death will be mourned by many sportsmen in America, and also by many in the north of England, where their excellent qualities gave them a wide local reputation. Their progeny have been much sought after, and are in the hands of a few gentlemen in that neighborhood, to whom Mr. Hope had given them. Both dogs had failed rapidly for some time previous to their death, which at the last was quite sudden. These dogs accompanied the Irish Team on their Western hunt last year into the Indian Territory, and received much credit for their performances.

The death of these two valuable dogs may have given rise to a statement which we find in the latest *Chicago Field*, to the effect that Mr. Hope had lost his entire kennel by poison maliciously administered. We hope for the credit of our human kind that this is not true, for a man who would kill these dogs wouldn't hesitate at his mother-in-law. We have not been advised of any mortality in Mr. Hope's kennel other than that we have indicated above.

—We are indebted to Mr. W. Milton Farrow, of Newport, R. I., for a fine picture of his setter bitch "Spec." The picture was taken while she was on a staunch point, and shows all the characteristics of a handsome thoroughbred setter.

—We recently had an opportunity of viewing two brace of stylish young, thoroughbred setters, belonging to Mr. J. Von Lengerke, of Hoboken, and of seeing a brace of them in the field. Although Mr. Von L. is quite a young man, it is a rare thing to see an old experienced sportsman handle a brace of dogs more skillfully than he.

IMPORTATION OF VALUABLE SETTERS.—Mr. J. W. Knox, of Pittsburg, has been advised of the shipment to his address of Belton, black-white-and-tan field trial setter dog, by Laverack's Dash, out of sister to celebrated Dan, of Llewellyn's. Belton was bred by Thos. Statter, Esq., Lord Derby's agent. Mr. K. has also purchased from Mr. Llewellyn's kennel, Rifle, by Dan, out of the celebrated Ruby. She comes in help to Llewellyn's Prince, a blue Belton. These importations must make the Knox kennel equal or superior to any west of the mountains. We regret to observe that these and other valuable dogs are generally shipped to this country during the heats of Summer, thus doubling the dangers of acclimation.—*Turf, Field and Farm*.

THE VALUE OF DOGS IN ENGLAND

A CORRESPONDENT of the *Philadelphia Press*, writing from London gives an entertaining account of the grand national exhibition of sporting and other dogs held at the Crystal Palace in June, and the prices asked for some of the animals seem marvelously extravagant:—

"Among the bloodhounds the price of the dog called Rival, three years and nine months old, was £500 (\$2,500,) and that of Rolla, one year and eleven months old, 500 guineas. Among the mastiffs, the price of the Champion Turk, owned by the Rev. J. W. Mellor, seven years and three months old, the dog that has won more than thirty first prizes and cups and is of immense size, is £5,000 (\$25,000,) while that of the mastiff named Granby, owned by Mr. A. S. D. Fivas, which won the first medals for 1874 at the Crystal Palace, for the same year at Northampton, and for the year 1873-74 at Portsmouth, an animal nearly as large as a lion, £10,000 or £50,000! The price of the mastiff known as Duchess is £1,000 sterling, while in a list of 171 of the same breed there are four at £1,000, six at £500, two at £300, six at £250, nine at £100, ten at £50, and the remainder varying in price from £20 to £5. Several St. Bernards were held at £2,000 each, and one at £1,000. Of the greyhounds, St. Patrick and Warwick were each held at £5,000, and Lauderdale and two others £1,000. Ten pointers brought £1,000 each, a number £500, and others £100 and £50. Among the setters the writer counted a large number valued at £1,000 each, and one, the property of P. B. Stone, M. D., was labeled £10,000 sterling. He counted six retrievers at £1,000 each, and very many from £500 to £150. Among the Irish water spaniels Mr. N. Morton's Shamrock was held at £1,000, the others at prices ranging from £100 to £50. Six of the spaniels were labeled £1,000 each, two or three £500, and a large variety from £500 to £200. There were two hounds at £500 each. The beagles, not exceeding fifteen inches high, ranged from £100 to £20. There were nearly 200 fox terriers, held at extraordinary rates, at least half a dozen at £1,000, and about twenty at £500. The sheep dogs were also very high, a dozen commanding £1,000 each, and others £500, very few running as low as £20. A Dalmatian, belonging to Mr. R. J. L. Price, known as Crib, nine years old, was held at £10,000 sterling. Another, owned by Miss Julia Barney, called Sancho, three years and five months old, price £600. The bull dogs ranged from £250 to £25. One bull terrier, Young Puss, was held at £1,000 sterling; another, belonging to the same owner, W. Grant Rawes, at the same price. One of the drop-eared blue Skye terriers, named Sam, belonging to Mr. J. W. Berry, was held at £10,000 sterling. There was a Dandy Dinmont terrier, called Toper, price £1,000, and another called Macbeth, price £500. A Yorkshire terrier called Mozart, belonging to Miss H. Alderson, price £1,000. The Bedlington terriers commanded from £100 to £5; of one species called Dachshund, black and tan, three commanded £1,000, and the rest ran from £100 down to £5. One white Pomeranian, only six months old, was valued at £1,000; one pug, owned by Mr. A. Doveton Clark, was held at £10,000, and others at £1,000 and £500."

The annual exhibition of dogs at the Crystal Palace is one of the most attractive of the attractions of that brilliant resort, and well it might be, if only for the novelty of seeing a ten thousand pound label attached to the collar of a pug dog.

THE LAVERACK SYSTEM.

EDITOR FOREST AND STREAM:—

In your issue of July 29th, Mr. John M. Taylor has a communication on the "Laverack System of Breeding," in which letter he says "in his humble opinion, it is impossible for anyone to breed pure Laverack setters but Mr. L. himself." From this conclusion I beg to differ, and think that Mr. Llewellyn, Mr. Hemming, Mr. Wardlaw Reid, and the various other gentlemen owning Laverack stock, can and do breed just as good Laverack stock as Mr. L. himself. In Mr. L.'s book he says there are several secrets in his breeding that he withholds from the public. Now, as Mr. L. has sold, is selling, and will sell a good many dogs, is it not possible for gentlemen buying them to compare pedigrees and the results of his different inter-crosses so as to get at the system? Can there be any system, where there has been so many generations of dogs sold, that is past finding out? Are not the different traits of his individual dogs so well known that one could follow his judgment in mating? Besides, does Mr. L. produce dogs all alike? I think that there is as much difference in dogs of that breed as in any other. Some are healthier, stronger, and better constituted, and some of us dog men would like to ask Mr. Buckell, Mr. Llewellyn, and others, if "better constituted, better feeders, and harder animals do not exist?" Neither do Mr. Laverack's dogs come truer in color. In neither of the pedigrees published in his work do I find any of the Laveracks liver and white, the color of Pride of the Border. All seem to be black and white, lemon and white, one silver gray, one black gray. In Mr. L.'s work he says: "There is no better test of a pure breed of setters than a perfect uniformity of race—that is, in color, form and coat, and never throwing back to some color and form unknown to the breeder." As Mr. L., in describing the breed, says: "Color black or blue," and in the next paragraph he says, "There is another strain called lemon and white Belton, same breed and blood." It seems as if, with all his care and system, he cannot keep to the original type. There can have been no improvement in the breed for fifty years, or since Mr. L. had it, for in his work he mentions Rev. A. Harrison's Old Moll as one of the three most perfect setters he has ever seen, the other two mentioned being of different blood; so that in all his fifty years of mating and crossing he has not produced one as perfect as one of his original stock. Further than this I do not believe, nor can I find any evidence of Mr. L. being so egotistical as to say that his breed is the best, or that he has been the most successful breeder of setters. In fact he says, "There are doubtless many strains quite as good as my own."

But enough of Mr. Laverack's system. I do not believe it is "past finding out, or when found out, it will produce all setters alike." It will have its good and bad ones like all others. What we all should admire most in Mr. L. is his persistency, when he had a good breed, of sticking to it and keeping it pure for so long a time. I hope he may live long yet to see them work, and get adequate remuneration for the thought and trouble bestowed on them, even if he has not discovered the perpetual system of breeding dogs all alike, same color, equal nose, same disposition to hunt and point, and their various other good qualities.

In conclusion let me call Mr. Taylor's attention to the sale of Laverack setters in the London *Field* of July 17th, where several were sold, the highest priced one being Victress, now owned by "Dogwhip," for which forty guineas was paid. The others sold respectively—one for eleven and one-half guineas, two for ten guineas each, one for seven and a half, and one for six guineas. From the report of the sale of Mr. Hemming's dogs, with the exception of Rock, bought in at one hundred and fifty guineas, no pure Laverack brought over seventeen guineas, and that one was a bitch in pup by the one hundred and fifty guinea Rock. Then, there was to be sold, the 31st or July, the well known kennel of Wardlaw Reid, Esq., including several of the finest Laveracks. So, as

I said in my letter, one could buy plenty of Laveracks of known pedigree outside of Mr. L.'s kennel, and at a much less price than many would suppose. I think that the one who wished to purchase the American Laverack pup for \$300, gold, could do much better at home for much less money, as one can never tell how a pup will turn out.

Hoping that Mr. Taylor may find his Laverack in due season, and that he may turn out a top-sawyer, is the earnest wish of DRY LAND.

GREEN IODIDE OF MERCURY.

WEST TROY, August 16th, 1875.

EDITOR FOREST AND STREAM:—

I would like to call the attention of your readers to the necessity of muzzling dogs when using green iodide of mercury for mange. I fear I am a sufferer to the extent of a most valuable pup by Pride of the Border out of Kirby. He had the mange very bad, and I tried for six months to break it up by the use of whale oil, sulphur and turpentine, together with Fowler's solution, without effect. I saw in your paper, also in *Turf, Field and Farm*, a prescription of green iodide of mercury 1 part to 16 of lard. I tried it, and at the same time gave Fowler's solution, and it cured the mange in a week; but the pup, in licking the mercury, became salivated, which caused muscular paralysis. He has not been able to stand for more than a week, and part of the time unable to lift his head from the floor. I have hand-fed him with beef tea and chopped meat, together with stimulants, and I think he is a little better, with but little hope of his recovery, however. He appears to be in no pain, but his ambition will not let him rest. He tries to get up, and after wearying himself out, will lie still and sleep. I pay a boy to watch and take care of him as if he were a human being. The boy's orders are, to sit by him with a duster and keep the flies away, and shift his position occasionally to rest him. I have been giving him in his water say two drops of sulphuric acid to one quart of water. I am well aware of the effects of mercury upon man or beast, but did not suppose, or rather thought, if there was danger in the proportions above, the person giving the prescription would so state, and advise the muzzling of the dog. Sportsmen and others giving these recipes should be more careful, and state the nature of stuff used. Hoping this may be the cause of saving the life of some poor canine, also the grief occasioned by the loss of a valuable dog to some sportsman, who alone can appreciate their valuable qualities, I am, most respectfully yours,

J. H. FITCHET.

[We have no recollection of having recommended green iodide of mercury for mange, as we consider it rather dangerous. Can our correspondent refer us to the date of its publication.—Ed.]

KENNEL PRODUCE—*Maysville, Ky., August 14th, Arnold Burges, Owner.*—Fifteen pups to the Irish bitch, Friend, by Rufus. Four of these were stillborn, but the remainder are lively and doing well; a fine lot—eight bitches and three dogs.

Boston, Aug. 19th, Luther Adams, Owner.—Ten pups to Dora by Pride of the Border, all of which have died, save three dogs and one bitch. They do not appear to be very vigorous.

Brookline, Mass., Aug. 16, F. W. Lawrence, Owner.—Ten pups, six dogs and four bitches, out of the fine blue Belton bitch "Kate," from the kennel of our Field Editor, by the prize setter Flip, winner of the silver pitcher presented by the FOREST AND STREAM to the Springfield Bench Show in April last.

—Fanny, an extra fine American thoroughbred setter bitch, owned by our Field Editor, has recently been served by Mr. C. H. Raymond's famous Laverack setter Pride of the Border. Fanny was sired by Mr. Jas. Morgan's, of Brooklyn, imported setter Brag, and is out of a fine imported bitch, and as she is full sized, stylish, and well-formed, has a superior nose and been well broken, we are anticipating from her and Pride of the Border something altogether extra in the way of fine stock.

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

Trout, *Salmo fontinalis*.
Salmon, *Salmo salar*.
Maskenonge, *Esox nubilus*.
Weakfish.
Striped Bass.
Kingfish.

Salmon Trout, *Salmo confinis*.
Land-locked Salmon, *Salmo Gloveri*.
Black Bass, *Micropterus nigricans*.
Pike, *Esox lucius*.
Pickereel.
Bluefish.
Sheepshead.

[Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—The fish market shows but little change since our last week's report, and prices remain about the same as last quoted. Frozen Canada salmon are worth 50 cents per pound; Spanish mackerel from the Long Island shore bring 40 cents; fresh mackerel, from Boston, 25 cents each; halibut, 18 to 20 cents per pound; bluefish, from Matha's Vineyard, averaging 8 pounds in weight are worth 8 to 12 cents per pound; striped bass, from Baltimore, 25 cents per pound; blackfish, 15 cents; sea bass, 20 cents; sheepshead, from New Jersey, 30 cents; large weakfish, 12 cents; codfish, 8 cents; soft crabs, \$1.25 to \$1.50 per dozen; green turtle, 15 cents per pound. A few pompano are caught in Gravesend Bay and sell for \$1 per pound.

THE FISHERIES.—The number of fishing arrivals for the week ending August 19th was 56—33 from Georges, 9 from the Banks, and 14 from mackereling. Amount of Georges cod brought in, 300,000 pounds; halibut, 40,000 pounds. Bank cod, 550,000 pounds; halibut, 140,000 pounds. Mackerel still continue very scarce, the receipts the past week being only about 800 barrels. Several of the shore fleet, having become tired of their poor luck, have sailed for the bay, where the prospect is said to be more encouraging. It looks now as if the season's catch would be the smallest for many years.

During the season ending August 1st, 1875, 113,990 barrels or 31,000,000 menhaden fish, were taken on the Connecticut shore, from which 3,100 tons of guano and 93,000 of oil were made. The guano brings from \$10 to \$12 per ton, and the oil from 34 to 38 cents a gallon. The Connecticut shore furnishes about one-fifth of the supply from the New England and Long Island district.

A lobster was recently shipped from Eastport which weighed nineteen pounds, and measured three feet five inches in length, the claws being eighteen inches long and eight inches across.

Capt. Samuel P. Cook, of Tiverton, an old fisherman, estimates that one thousand tons of tautog perished last Winter between Gay Head and Block Island, and ascribes the present scarcity of this fish to the intense cold at that time.—*Cape Ann Advertiser, Aug. 21st.*

DELAWARE.—*Dover, Aug. 24*.—One of the best sporting places to be found along the western shore of Delaware Bay is Kitts Hammock, kept by John K. Norris, who dispenses daily fish; oysters, crabs, terrapins, &c., at a weekly charge of \$8. To reach the place take the Delaware Railway from Philadelphia to Dover, not forgetting to call upon our friend William C. Fountain, of the Capitol Hotel, who is a fine caterer and obliging landlord. Weakfish (called trout here), take crab bait eagerly now, and as many as fifty to one hundred are taken on a tide to a single line, to say nothing of an occasional bluefish, or dog fish. J. E. D.

HORNBEAM FOR RODS.

EDITOR FOREST AND STREAM:—

Some weeks ago "Woodup" wrote in praise of hornbeam for rods, and I heartily agree with him, having used it for many years. I think, however, that he errs when he describes the desirable species as the tupelo. This tree, the American hornbeam, and the hop hornbeam, are often spoken of, general as the hornbeam, and all have local names, as iron wood, betel wood, etc. (See Emerson on the Trees of Massachusetts.) I have tried all these woods, and have found the hop hornbeam all that is described by your correspondent; but the American hornbeam, as well as the tupelo, seemed to me wanting in the requisite qualities for rods. Though they don't "set" permanently, they want tenacity to prevent their getting out of shape every time they are called upon. I am more inclined to think that "Woodup" meant to refer to the hop hornbeam and not to the tupelo, from his stating that the late Chester Harding used the latter wood. I have fished many days, in times gone by, with Mr. H., and together with him have made rods in the intervals of rainy days, and know that the wood he used and so much admired was the hop hornbeam. I still have a fly rod which he and I made twenty years ago, and it is now as straight as on the day it was made. With rods of this wood I have removed from their native element almost everything, from salmon to bull heads and snapping turtles, and don't remember ever breaking a joint. I send you by express two pieces, the last of a lot which I got from Chateaugay Lake in 1857, through the late Luther Ellis, who was an excellent fisherman, as well as an enthusiastic admirer of this wood. They will make tips which bear abuse without flinching, and I beg you to note its fibre and elasticity. Some eight or ten years ago I gave Mr. Seth Green, who was not familiar with the wood, a fly rod made of it after his own pattern. He wrote a letter to the *Spirit of the Times* praising highly the wood and rod, and either in that letter or in a private letter to me, I forget which, pronounced it the best wooden rod he had ever used. He was addicted then, and perhaps is now, to split bamboo. RUFUS.

[We appreciate most highly the valued gift of our correspondent, and shall place the pieces in the hands of the best artificer we know of to manufacture into tips. Wood so well seasoned as eighteen years have made this, must give a good account of itself; but we fear the test will have to be deferred until next Spring. One of these tips we shall fit to an eight ounce split bamboo joint, that we may compare its efficacy with the bamboo tip; the other to an Orvis wooden rod, the gift also of the maker.—Ed.]

SALMON FISHING EAST AND WEST—HOW THEY TAKE THEM IN CALIFORNIA.

SAN FRANCISCO, Cal., August 6th, 1875.

EDITOR FOREST AND STREAM:—

A constant reader of your valuable paper, I have been much interested in the reports published of salmon fishing in the British Provinces. From the accounts given, the sports there must be attended with unpleasant circumstances, if not actual hardships, such as great heat, attacks of insect life, remoteness from the conveniences and comforts of civilized life, etc. Doubtless many persons who like the sport are unable or dislike to encounter these difficulties. For the benefit of such, and of your readers generally, I herewith give some information of salmon fishing to be had in California at various seasons of the year.

The first run of salmon is found in the mouths of the numerous small rivers and creeks that flow into the Pacific Ocean from the coast range of mountains from Carmel River, near Monterey, north to the boundaries of Oregon. The grilse make their appearance about the middle of October, followed in November by the adult fish. These remain at tide water, waiting for the rise caused by the heavy rains of December, which enables them to reach their spawning beds at the heads of the streams. While in tide water the fish will bite freely at bait, spoon, and frequently flies. The coast salmon are said to be a distinct variety from those spawning in the Sacramento River and its tributaries, and return to the ocean in March and April. With these salmon comes a large species of trout, known here as salmon trout, which have similar habits, and return to the sea about the same time. This last fish is long, round, and comparatively slender, with a small head, and ranging as high as seventeen pounds in weight. One of these weighing only eight pounds, caught in good condition last Spring, measured 32½ inches in length. Any salmon of the same length would weigh from twenty to thirty pounds. I am thus particular, as some parties here claim the fish as a variety of salmon instead of a trout.

The first run of Sacramento salmon arrive in San Francisco about the first of January. They remain within the influences of tide water until April and May, when the waters of the river having cleared, from the ending of the rains, they proceed to the Upper Sacramento and its tributaries to spawn. A second run of salmon comes in from sea in May, and goes up the Sacramento without remaining in the bay. These fish ascending the river are found in July and August in the vicinity of Mount Shasta in pools, awaiting their time to spawn, and can then be caught with hook and line. During the months of January, February, March, and a portion of April last, salmon were caught in the bay and rivers in unusual numbers, the cause of which I will explain further on. In these months at least ten thousand were caught by hook and line from the railroad pier at Oakland, three miles from this city. An unknown number, but probably half as many more, were taken at other points around the bay. These fish ranged from one to fifteen pounds each. The sport being a new one, and prosecuted mostly by novices with insufficient tackle and from a pier fifteen feet above the water, the largest fish were almost always lost after being hooked. When you consider that the hooks were on single and generally inferior gut, on lines attached to stiff bamboo rods without reels, scores of fishes, almost elbowing each other, with open piling beneath them coated with mussels, you will readily understand that only the smaller fish were likely to be taken.

As before stated, the number of salmon in the bay was unusually large during the present year. This came from the close season in 1873 (the first we ever had) from August 1st to November 1st, and the putting into the McCloud River the same year of 400,000 young salmon, artificially hatched out by U. S. Fish Commissioner Livingston Stone, under an arrangement made with our Fish Commissioners, Messrs. Redding, Throckmorton and Farwell. The Spring run of adult salmon in the Sacramento also was the largest known for many years to professional fishermen, fish weighing from fifteen to twenty-five pounds, at times in the city market selling from a quarter to half a dollar each.

The coming season for salmon in our bay promises to be much more favorable than the last, owing to a second close season in 1874, and to one million fish having been hatched out and placed in the McCloud River by Commissioner Stone. Visitors from the Atlantic States will, therefore, find good fishing in San Francisco Bay during the coming Winter. The climate has no greater severity than white frosts at night,

with generally sunny days. There are no flies to annoy, and the fishing can be done at a distance of about three miles from Hotels in San Francisco, or Oakland, without any of the discomforts which are common in the British Provinces. In the coast ranges in Autumn, and on the Sacramento River in Summer, fishing can be had with all the comforts of the older agricultural States. HORACE D. DUNN.

ANGLING IN KENTUCKY.

FRANKFORT, Ky., August 3d, 1875.

EDITOR FOREST AND STREAM:—

Black's Pond, four miles from Frankfort, covers a space of eleven acres, and rises almost to the dignity of a lake. Its principal product is a hybrid perch weighing less than a half pound, of dark gray color, rather squarely built and very strong, but not wary. Immense numbers of silver perch of small size are also taken at certain seasons. A few weighing as much as three pounds have been hooked, but these are rare, as are also large bass. Last year a bass weighing four and a half pounds was landed by a gentleman from this city. Small minnows are used for silver perch and bass, and the soft or "peeler" crayfish for the lake perch. I have seen as many as a thousand silver perch taken from this pond in one afternoon. It has been a favorite resort for many years, but I have never heard of any effort to stock it with fine fish, though it is fed by strong and tireless springs.

At Versailles, the county seat of Woodford, about twelve miles from Frankfort, a successful attempt has been made at propagating trout, though the stock has been killed several times by malicious persons, who have thrown unslaked lime in the pools. I have seen brook trout more than twelve inches long grown in these pools. A popular fallacy is that they cannot exist in limestone streams, but this experiment ought to remove such an idea. I do not know what effect the forty days of rain will have on our Fall fishing, but I believe it will work to great disadvantage. The advance and recession of the waters will destroy large numbers of the small fish by leaving them in the shallows, where they seek refuge from the currents, and by carrying them out to the uncharitable Ohio and Mississippi.

We have here a minnow which I have never seen in any other part of the world, and my experience is that it is more inviting to the small game fish, salmon, bass and silver perch than any other. We call it a "steel back," because of its resemblance to the popular minnow of that name, but it is not of that genus; on the contrary, it resembles the brook trout much more. It is generally found in the most secluded creeks, in shady pools, and under masses of flags, lilies and rhododendron. It has on its side a crimson stripe like the spots of the trout, a dark blue streak on its back, and a grayish white underneath. It has microscopic scales, like those of the brook trout, and is full of life and activity. To my mind a fish who would refuse him deserves to be netted or trapped, if that species of barbarous retribution is ever justifiable in any country.

Immense quantities of blue and yellow catfish—a common market article—are taken here by regular fishermen, some of them weighing as much as 100 pounds. They are cut into steaks and sold as other coarse fish in the East. I will give you my experience with the pike in Red River if you care for an article of that kind, and maybe I can furnish you some deer and bear statistics from last Winter's experience in the mountains, but I am more of a rod than a ramrod. TROUT.

[We should be pleased to hear frequently from our correspondent.—Ed.]

TROUTING IN MICHIGAN.

GRAND RAPIDS, August 1st, 1875.

EDITOR FOREST AND STREAM:—

The morning of July 21st found your correspondent in company with three friends seated in the comfortable cars of the Grand Rapids and Indiana Railroad en route for the trout streams of Northern Michigan. A ride through the pine forests and lively villages for a distance of one hundred and thirty miles found us shaking hands with our old friend mine host Dawdy, of the Dawdy House, at Mayfield, Traverse county, who knows just how to keep a hotel. Next morning after a good night's rest and breakfast on trout we started for our camping ground on the Boardman River, a distance of about ten miles, by team. We took this route, as we preferred camping out, still it is not necessary, as good fishing can be had one mile from Mayfield, on East Creek. Pitching our tent we struck water for trout, and on emptying our baskets in the evening, found that three of us could muster one hundred as handsome fish as are rarely seen together. Our total catch in five days was four hundred and eighty-eight, not to mention one grayling. Northern Michigan being now well supplied with hotel and railroad conveniences must for some time be the favorite resort for sportsmen, as good fishing for trout and bass can always be had, and for the gunner deer and partridges are quite abundant. The Boardman River was stocked by the State Fish Commissioners in the Spring of 1874 with 10,000 land-locked salmon, and this season several have been taken with a fly from six to seven inches in length. They will in a short time make fine sport for the experts with the rod and fly. VALLEY CITY.

THIS HOOK OR THAT.

NEW YORK, August 6th, 1875.

EDITOR FOREST AND STREAM:—

A recent article in your paper touches upon "This Fly or That." I tie my own salmon flies, and have experienced the necessity of harmoniously selected colors as well as the predominating subdued or more gaudy tints that the nature of the water of the different rivers require; but of greater importance is "This Hook or That." It is one part of the play to "get fast" on a salmon, but quite another to successfully lead the fish to the gaff. With some years' experience I decide in favor of the "Limerick bend" as most effective, being a fair hooker, and generally brings its game home. Next stands the "O'Shaughnessy" with its one objection—the point stands inward toward the shank slightly too much, consequently not so certain a hooker, but when fast the *Salmo salar* may prepare to leave its pool. Lastly comes the "sprout or sprout" round bend. This hook would rank with me as first, and the acme of perfection for flies. We be to the salmon that rises in even a playful mood with no intent; if not in the mouth it is very liable to fasten on him "foul," but the objections overbalance its good qualities. They can be easily remedied if the manufacturer will listen to practical experience. They are made too stout of metal, and, although perfectly tempered, yet in cutting the barb the material is in many cases so weakened in the small size hooks that a twenty or twenty-five pound salmon bids you good by after a short struggle. I have lost many heavy fish with this hook, and it is rather tantalizing after thirty or fifty minutes' experienced exertion, the fish nearly exhausted, making its death throes in shallow water, almost within reach of the gaff, to draw home your fly minus the barb and your silvery prize that you had every reason to expect slowly, (and with every symptom of a victory over,) wending its way to its usual haunts. No more sproats for me until the fault be remedied, after which I use no other. NOVICE.

WARREN, Penn., August 18th, 1875.

EDITOR FOREST AND STREAM:—

I am directed to inform you that a number of gentlemen, residents of the borough of Warren, Penn., and vicinity, met last week to form a club, to be called the Warren Sportsmen's Club. Its leading purposes are the preservation of game and certain varieties of fish, the advocacy of proper game laws, the enforcement of such laws when passed, and the promotion of healthy public sentiment in relation thereto. A constitution was adopted, and the following officers were elected for the ensuing year: President, Myron Waters; Vice President, F. H. Rockwell; Secretary, E. Cowan; Treasurer, Robert Dennison; Counsel, H. E. Brown; Executive Committee, E. B. Eldred, C. A. Bradman, A. J. Rockwell.

By publishing this you will greatly oblige the readers of the *FOREST AND STREAM* in this section. Truly yours, E. C.

Rational Pastimes.

SCOTTISH GAMES AT PHILADELPHIA.—The Quaker City was all astir on the 16th over the seventeenth annual celebration of Scotch games by the Caledonian Club of that city. The members of the club and a considerable number of visitors met at the club room at an early hour in the morning. Many of them were in full Highland costume. After a short march through some of the principal streets the cars were taken at the depot on Ninth and Green streets, and the entire body of Caledonians, along with several thousand spectators, proceeded to Schuetzen Park, near East Falls. The parade appeared to create a considerable amount of interest, and in the early part of the afternoon not less than eight thousand people were present on the ground. The names of the successful competitors and the feats they accomplished are detailed in the following prize list:—

Putting the Light Stone—First, W. Robertson, 41 ft. 2 in.; second, John Anderson, 40 ft. 6½ in.; third, Hugh McKinnon, 40 ft.

Standing High Jump—First, Alex. McKay, 9 ft. 11 in.; second, John Greenan, 9 ft. 8½ in.; third, J. S. Crossley, 9 ft. 4½ in.

Throwing Heavy Hammer—First, Hugh McKinnon, 101 ft. 6½ in.; second, H. McKay, 100 ft. 11 in.; third, John Anderson, 94 ft.

Running Jump—First, J. S. Crossley, 19 ft. 11 in.; second, A. C. Reid, 19 ft. 6 in.; third, John Maloney, 19 feet.

Putting the Heavy Stone—First, John Anderson, 34 ft. 2 in.; second, Hugh McKinnon, 33 ft.; third, W. Robertson, 35 ft. 10 in.

Short Race (150 yards)—First, John Maloney; second, J. S. Crossley; third, Wm. Barnes.

Short Race (boys under 14 years)—First, John Spotty; second, John Bunn; third, Thomas Somerville.

Throwing the Light Hammer—First, H. McKinnon, 115 ft. 2 in.; second, A. McKay, 113 ft. 7 in.; third, John Anderson, 105 ft. 6 in.

Broadsword Dance—First, James Kennedy; second, John West; third, L. D. Robertson.

Running High Leap—First, John West, 5 ft. 10 in.; second, W. Robertson, 5 ft. 9 in.; third, Crossley and Elder, 5 ft. 8 in. (tie.)

Hi ch and Kick—First, A. C. Reid, 8 ft. 5 in.; second, Wm. Elder, 8 ft. 3 in.; third, John Maloney, 8 ft. 3 in. (tie.)

Running Hop, Step and Jump—First, John Maloney, 40 ft.; second, C. Rae, 39 ft. 5 in.; third, A. McKay, 37 ft. 3 in.

Tossing the Caber—First, H. McKinnon, 36 ft. 2 in.; second, A. McKay, 35 ft. 3 in.; third, W. Robertson, 34 ft. 3 in.

Highland Fling—First, James Kennedy; second, James McLaren; third, L. D. Robertson.

Long Race (one mile)—First, Ed. Wilson; second, James Freeman; third, Wm. Coates.

Vaulting with the Pole—First, J. S. Crossley and Wm. Robertson, 10 ft. 6½ in. (tie); third, Wm. Elder, 9 ft. 10 in.

Sack Race (over hurdles 18 in. high)—First, W. Robertson; second, J. S. Crossley; third, Colin Rae.

Standing High Leap—First, Wm. Elder, 4 ft. 10 in.; second, John Greenan, 4 ft. 9 in.; third, John Maloney, 4 ft. 8 in.

Hurdle Race (boys under 14)—First, Harvey Lynch; second, James Bunn; third, John Spotty.

Hurdle Race (300 yards)—First, John Maloney; second, J. S. Crossley; third, A. C. Reid.

Quoits—First, Fred. Emerick; second, John Elliott; third, Robt. Millar.

Best Dressed Highlander—William B. Smith.

GAMES IN BROOKLYN.—The ninth annual meeting of the Brooklyn Caledonian club took place at Myrtle Avenue Park on the 18th and 19th August, occupying the unusual time of two days. The weather was decidedly unfavorable, and detracted considerably from the success that might otherwise have attached to the exhibition, although we question the policy of again trying to keep up the interest in the sports for such length of time. In order to occupy fully the two days the intervals between the games were necessarily made very lengthy and wearisome. The first day's sport was sadly marred by the rain, but Thursday was delightful, and the spectators numbered about five thousand. The athletes present included most of the men who are considered adepts in this branch of athletics. Their names and the record of distances are detailed in the prize list, as follows:—

Most Appropriately Dressed Athlete—1st, John West; 2d, G. K. Gilluly.

Putting the Heavy Stone (21 pounds)—1st, John Anderson, 35 ft. 3½ in.; 2d, W. Robertson, 33 ft. 3½ in.; 3d, H. McKinnon, 32 ft. 5 in.

Standing Jump—1st, J. T. Crossley, 9 ft. 6½ in.; 2d, Andrew Rennie, 9 ft. 6 in.; 3d, W. Robertson, 9 ft. 6 in.

Short Race—1st, J. T. Crossley; 2d, A. C. Reid; 3d, W. Robertson.

Boys' Highland Fling—Only competitor, James S. Knox.

Running Hop, Step and Jump—1st, G. T. Addison, 38 ft. 4½ in.; 2d, John T. Crossley, 38 ft. 3 in.; 3d, Wm. Robertson, 36 ft. 7 in.

Boys' Short Race—1st, Robt. J. Forfar; 2d, Charles Pollock; 3d, E. P. Edgar.

Hitch and Kick—1st, A. C. Reid, 9 ft.; 2d, John West, 8 ft. 9 in.; 3d, G. T. Addison, 8 ft. 3 in.

Throwing Heavy Hammer—1st, Hugh McKinnon, 88 ft. 8½ in.; 2d, John Anderson, 84 ft.; 3d, W. Robertson, 75 ft. 9½ in.

Walking Match (one mile)—1st, John Henderson; 2d, W. J. Hume.

Old Men's Race (over 50 years of age)—1st, James Faulkner; 2d, S. N. McAdam; 3d, Colin Campbell.

Broadsword Dance—1st, J. W. Adams; 2d, James Kennedy; 3d, Wm. Summers.

Running High Leap—1st, Wm. Robertson, 5 ft. 2 in.; 2d, J. T. Crossley, 5 ft. 1 in.; 3d, John West, 5 ft.

Wheelbarrow Race—1st, Robert Forfar; 2d, A. McIntosh Talmie; 3d, Jas. Archibson.

Hurdle Race—1st, J. S. Crossley; 2d, A. C. Reid; 3d, Wm. Robertson.

SECOND DAY.

Putting Light Stone—1st, J. Anderson, 43 ft. 4 in.; 2d, W. Robertson, 39 ft. 7 in.; Hugh McKinnon, 39 ft. 5 in.

Running Jump—J. T. Crossley, 19 ft. 9 in.; Andrew Lennie, 18 ft. 8 in.; A. C. Reid, 18 ft. 6 in.

Long Race—1st, J. T. Crossley; 2d, Andrew Rennie.

Reel Dancing—1st, James McLaren; 2d, Wm. Robertson.

Three-Legged Race—1st, Wm. Robertson and Andrew Rennie; 2d, J. T. Crossley and James McLaren; 3d, A. C. Reid and Wm. Dunmore.

Tossing the Caber—1st, Hugh McKinnon, 38 ft. 7 in.; 2d, A. McKay, 36 ft. 6 in.; 3d, Wm. Robertson.

Egg Race—1st, J. T. Crossley; 2d, W. J. Hume; 3d, Andrew Rennie.

Throwing the 56 lb. weight—1st, H. McKinnon, 22 ft. 4 in.; 2d, A. McKay, 21 ft.; 3d, Wm. Laird, 19 ft. 8 in.

One Mile Race—1st, W. J. Hume; 2d, Maxwell E. More; 3d, H. Faulkner.

Hurdle Race (Boys)—1st, R. J. Forfar; 2d, C. Pollock; 3d, E. P. Edgar.

Vaulting with Pole—1st, J. T. Crossley 9 ft. 9 in.; 2d, W. Robertson, 9 ft. 6 in.; 3d, F. Duke, 9 ft.

Throwing the Light Hammer—1st, H. Kinnon, 106 ft. 2 in.; 2d, A. McKay, 103 ft. 4 in.; 3d, John Anderson, 100 ft. 1 in.

Highland Fling—1st, James McLaren; 2d, James Aitchison; 3d, John West.

Standing High Leap—1st, J. T. Crossley, 4 ft. 3 in.; 2d, J. McMillan, 4 ft. 2 in.; 3d, John West, 4 ft. 1 in.

Sack Race over hurdles—1st, W. Robertson; 2d, J. T. Crossley; 3d, P. Ried.

GAMES AT WASHINGTON.—The clubs of Waverly and Baltimore have been sufferers by the rain, and to these may be added that of the Washington, D. C., club. Nothing but a fine day was wanting to make the third annual gathering a grand success. Many other cities sent representatives, including Fall River, New York, Philadelphia, Baltimore and Richmond. The clansmen turned out in large numbers, and the pipers were playing their best. The ground—Seventh street Park—had been prepared and decorated, and a very general interest was manifested in the gathering. When the first part of the games had been carried through and the athletes were enjoying an intermission the rain came on, and with the exception of those detailed below, the games on the programme were abandoned.

PRIZE LIST.

Putting the Heavy stone—1st, A. McKay, 32 ft 6 in.; 2nd, Robert Cameron, 28 ft 7 in.

Putting the Light Stone—1st, A. McKay, 37 ft 8 in.; 2nd, R. Cameron, 32 ft 9 in.

Running Long Jump—1st, John Maloney, 16 ft 10 in.; 2nd, Henry Elder, 16 ft 5 in.

Running Hop, Step and Jump—1st, J. T. Maloney, 38 ft 3 in.; 2nd, A. McKay, 36 ft 6 in.

Standing Jump—1st, A. McKay, 9 ft 7 in.; 2nd, William Elder, 9 ft 1 in.

Short Race—(150 yards)—1st, J. T. Maloney; 2nd, H. Elder.

Tossing the Caber—1st, A. McKay, 41 ft 5 in.; 2d, R. Cameron, 39 ft 9 in.

Throwing Heavy Hammer—1st, A. McKay, 90 ft 3 in.; 2d, R. Cameron, 78 ft 2 in.

Throwing Light Hammer—1st, A. McKay, 117 ft; 2d, R. Cameron, 97 ft 7 in.

Three-legged Race—1st, Maloney and Elder; 2d, Cameron and McKay.

Highland Fling—1st, J. D. Robertson; 2d, John McGregor.

Sword Dance—1st, L. D. Robertson; 2d, John McGregor.

Quits—1st, George Anderson; 2d, James Kelley.

The dances were performed in the pavilion. A feature of the afternoon was a feat performance by Mr. John T. Maloney, of Fall River, Mass., who jumped into and out of 150 barrels consecutively. He was greatly applauded for the exhibition in a style so peculiar of his strength and skill. In spite of the rain, this and other feats which could be performed under cover, amused the spectators, who were very generally satisfied with the day's sport.

NEW YORK ATHLETIC CLUB.—The Fall meeting of this association will be held on the 4th of October, and competitors are expected from all parts of this country and Canada. The grounds at Mott Haven are being enlarged, the running track having been extended to one-fifth of a mile in length and twenty feet in width. A grand stand, capable of holding 1,000 persons, and a capacious two-story club house, are being erected. Information regarding entries, etc., can be obtained by addressing the secretary, P. O. Box 387.

CRICKET.

PATERSON VS. PROSPECT PARK.—The return game between these clubs was played at Paterson Aug. 17th before quite a crowd of spectators, including quite a number of ladies. The Brooklyn party found a picked eleven made up against them, all of course, members of the Paterson club, including Lemon, the professional of the St. George club of last season; Brewster, the professional of the Staten Island club, together with McDougal, Greig, and Gilbert, of the Manhattan. This was too strong a combination for the Park team and they succumbed as will be seen by the appended score.—Prospect Park, 1st innings, 44; second, 33; total, 77. Paterson, 1st innings, 38; second, 40; total, 78.

SYRACUSE, August 19th.—A cricket match was played here to-day between Central Canada and Central New York. Central New Yorks never having played together before were no match for the experienced Kanucks. But one inning was played by each on account of the weather, though the New Yorkers commenced their second inning. Score, Canada, one inning, 137; Central New York, first inning, 33; second, 42.

—The Boston Red Stocking eleven, base ball champions, played an eleven of the St. James Cricket Club on Aug. 20th, in St. Louis, the Boston team winning in one inning, with 34 runs to spare.

THE AMATEUR ARENA.

SYRACUSE, Aug. 17.—The Crickets, of Binghamton, and the Stars, of this city, played a match game on the grounds of the latter club to-day. Owing to the Stars' inability to get together their regular nine, they were badly defeated. The following is the score:—

Innings.

Crickets.....0 0 7 2 0 0 6 0 2—11
Stars.....0 3 0 7 0 0 0 0 0—10

Passed balls—Crickets, 4; Stars, 4. First base on errors—Crickets, 8; Stars, 7. Left on base—Crickets, 6; Stars, 7.

Umpire—Henry Wheeler, of Binghamton. Time of game—2 hours 25 minutes.

—In the Lynn tournament the Graftons won the first prize, defeating the Live Oaks by 4 to 2. The Live Oaks have beaten the T. B.'s and Beacons and have been beaten by

the Lowells and Graftons, and therefore stand tie with the Lowells, two won and two lost. The T. B.'s have been defeated by the Lowells, Graftons and Live Oaks, and gain one from the Beacons by the failure of the latter to appear Saturday.

The following are the scores of some of the best amateur games played since our last issue:—

August 16—Grafton vs. Lowell, at Lynn, Mass.....6 to 3	
August 16—Astor vs. Red Hook of Brooklyn, at Jersey City, 6 to 5	
August 17—Lowell vs. T. B. of Bridgeport, at Lynn, Mass. 3 to 1	
August 17—Resolute vs. Star, of Newark, at Waverly.....5 to 1	
August 17—Alaska vs. Arlington, at Melrose.....5 to 3	
August 17—Philadelphia vs. Burlington, at Burlington.....7 to 4	
August 18—Olympic of Paterson vs. Burlington, at Burlington.....7 to 5	
August 18—Staten Island vs. Athletic of New York.....9 to 4	
August 19—Live Oak vs. Beacon, at Lynn, Mass.....8 to 1	
August 19—Quickstep vs. Mystic, at Manhattanville, 11 in. 8 to 7	
August 19—Grafton vs. T. B. of Bridgeport, at Lynn.....9 to 3	
August 19—Frontier vs. Americus, at Prospect Park.....9 to 3	
August 21—Active vs. Hamond, at Bracklen, Mass.....7 to 4	
August 21—King Phillip vs. Rollston, at Fitchburg.....5 to 4	
August 21—Staten Island vs. Concord, at S. I., 11 in.....8 to 7	
August 21—Resolute vs. Tuttle & Bailey, at Waverly.....6 to 3	
August 21—Grafton vs. Live Oak, at Lynn.....4 to 2	
August 21—Expert vs. National of Washington, at Harrisburg, 10 innings.....8 to 7	
August 21—Astor vs. Battery, at Jersey City.....9 to 0	

—A pretty game was played in Rochester on the 18th between the crack nine of that city and Crickets, of Binghamton, the former winning by 6 to 2.

—The game is rapidly spreading in Canada. The New Havens go over the border next week, and other noted clubs will give the Dominions a call this September.

—One of the best amateur games played in Philadelphia this season was the match of Aug. 14th between the amateur Experts and the Philadelphia professionals, the score of which is appended:—

EXPERT.					PHILADELPHIA.				
R.	LB.	P.O.	A.		R.	LB.	P.O.	A.	
Jackson, s.....1	1	2	0	0	Murnan, 2d b.....0	0	4	1	2
Quinton, c.....0	0	6	0	0	McMullin, p.....0	2	1	0	2
Blackburn, 2d b.....1	2	4	5	0	Ady, r.....0	1	0	0	0
Myers, 1st b.....0	3	8	0	0	Meyette, 3d b.....2	1	2	0	0
Dixon, 3d b.....0	1	3	0	0	Fulmer, s.....1	1	1	3	0
F. Hunter, l f.....1	1	1	1	0	Malone 1st b.....0	2	7	0	0
Harbridge, c f.....1	0	1	0	0	Snyder, c.....1	4	9	2	0
Householder, r f.....1	2	2	1	0	Schaefer, c f.....0	1	3	0	0
Carigan, p.....0	1	1	3	0	Treacy, l f.....0	2	0	1	0
Totals.....5	11	27	13		Totals.....4	13	27	9	

Innings.

Expert.....0 1 0 0 4 0 0 3 0—5
Philadelphia.....0 0 0 2 0 1 0 1 0—4

—On Aug. 20, the Hartford Amateurs and the Tuxis club, of Unionville, had a good game together, ending with the appended score:—

Amateur.....0	1	0	1	0	0	0	0	0—2
Tuxis.....0	0	0	0	0	4	0	0	0—4

Umpire, Mr. Brown of Unionville; earned runs, none.

THE PROFESSIONAL ARENA.

The games played in the arena since our last issue have not been as numerous as they should have been, but some few games have been played, as the record below shows:—

Aug. 16—Hartford vs. New Haven, at New Haven.....5 to 2	
Aug. 16—Athletic vs. St. Louis, at St. Louis.....3 to 1	
Aug. 17—Athletic vs. Chicago, at Chicago.....8 to 4	
Aug. 18—Athletic vs. Chicago, at Chicago.....14 to 6	
Aug. 18—Philadelphia vs. New Haven, at Philadelphia.....3 to 2	
Aug. 19—Philadelphia vs. Hartford, at Philadelphia.....5 to 1	
Aug. 19—Boston vs. St. Louis, at St. Louis.....2 to 1	
Aug. 20—Hartford vs. Atlantic, at Brooklyn.....2 to 0	
Aug. 21—St. Louis vs. Boston, at St. Louis.....5 to 3	
Aug. 21—Hartford vs. Mutual, at Brooklyn.....7 to 3	
Aug. 23—Chicago vs. Boston, at Chicago.....13 to 11	
Aug. 23—Athletic vs. St. Louis, at St. Louis.....3 to 2	

It will be seen that while the Athletics have won every game they have played out West—four up to Aug. 23—the Reds have lost two out of three. In the defeats sustained by the Reds they were minus the services of Spaulding, their pitcher. While also being out of his position. The full record up to Aug. 23, is as follows:—

CLUB.	Boston.	Athletic.	Hartford.	St. Louis.	Philadelphia.	Mutual.	New Haven.	Atlantic.	Red Stocking.	James W.
Boston.....	1	5	5	6	4	5	6	4	1	39
Athletic.....	1	1	2	5	6	3	4	2	6	34
Hartford.....	0	2	1	3	2	5	7	9	3	33
St. Louis.....	2	1	2	1	4	3	5	2	2	24
Philadelphia.....	0	1	3	2	1	4	5	1	1	21
Chicago.....	2	1	2	3	2	2	2	4	4	20
Mutual.....	0	1	3	0	4	3	1	3	2	20
New Haven.....	1	0	1	1	0	1	0	0	0	4
Atlantic.....	0	0	0	0	0	0	0	2	0	2
Red Stockings.....	0	0	0	0	1	0	0	0	0	1
Games Lost.....	6	11	18	19	24	21	25	31	13	198

—Tournaments are all the rage at present in base-ball circles, the committee men of fairs finding that it pays well to add a base-ball tourney to their attractions. The tourney at Lynn has paid well, being marked by some very close contests. The latest announcement is of a tourney to be held early in September at Lowell, Mass., at which purses amounting to \$1,000 cash are to be contested for.

New Publications.

BOOKS RECEIVED.

IRISH RIFLEMEN IN AMERICA. By Major Arthur Blennerhassett Leech. Van Nostrand, 23 Murray street, New York. Price \$2.

Coincident with the arrival home of the American Rifle Team comes opportunely Major Leech's book descriptive of his visit to America last year, which we shall be pleased to review at length soon.

WILD SCENES AND WILD HUNTERS. By C. W. Webber. Claxton, Remsen & Haffelfinger, Philadelphia.

Mr. Webber is already favorably known to the lover of wild Western sports and scenes as the author of "The Hunter Naturalist" and "Old Hicks the Guide." His present work contains sketches and portraits of Audubon, Wilson, and Boone, as well as stories of wild border life and stirring adventures by flood and field, and in hunting all the larger game of our continent. Nor are the hunting descriptions confined to America; going to the old world the writer describes the killing of elephants, lions, giraffes, and the game of South Africa generally. The book will be found entertaining in the long Winter evenings when rod and gun are consigned to rack and closet.

A SUMMER IN NORWAY. By John Dean Caton, LL. D., Chief Justice of the State of Illinois. Jansen, McClurg & Co., Chicago, and D. Appleton & Co., New York.

It is but recently that we published more than a column of extracts from the advance sheets of Judge Caton's book, so that little now remains for us to do but to announce its issue from the press, and to inform our readers that the bulk of the work amply verifies the samples we have already laid before them. The information concerning Nor-

way, its fauna, and the manners and customs of the people is all fresh, seen with the eyes of a keen observer, and described by a practiced pen in a plain and readable manner. We can heartily recommend the book as one of the most interesting works of travel with which we have met.

The *Aquatic Monthly* for August contains a record of the yachting and boating events of the season, and the extent and reliability of its reports render it a valuable repository of information relating to aquatic pastimes. August Bretano, 39 Union Square.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

J. A. H., Boston, Mass.—For information relative to Allagash route, address E. J. Thompson, 17 Market street, Lynn, Mass.

G. W. M., Augusta, Me.—What is the best work on taxidermy, where can it be obtained, and for what price? Ans. "Field Ornithology," published in Boston; price \$2.75. We can send it.

H. T. T., Tecumseh, Neb.—Please tell me whose make of a revolver you consider the best. I want to get one and want the best. I think about 32-100 is large enough? Ans. Smith & Wesson, .32.

R. T. M., New Haven.—Where can I get decoy ducks, and at what price per dozen? Ans. At H. C. Squires, 1 Courtlandt street, city; price \$10 to \$16.

COMING.—The best greenheart rods that we know of in this country are manufactured by J. B. Crook, 50 Fulton street, New York, and Dinee Scribner, St. John, New Brunswick.

F. DINGELDER, New York.—Please inform me if there is good duck shooting in season at South Oyster Bay, and at Canarsie Bay, L. I., and to whom must I apply? Ans. Duck shooting is only fair at these places. You will find a plenty of good baymen at each place.

A READER, Brattleboro, Vt.—Where can a pair of light shoes suitable for wading, and something that will not soften on the bottoms by standing in water several hours, be obtained? Ans. Frank Good, Manchester, N. H., has the wading shoes you need.

D. H. B., Syracuse, N. Y.—Are Colt's navy revolvers of the old style alterable so that fixed ammunition or cartridges can be used, and if so, by whom, and where? Ans. Yes; send to George Hayden, gunsmith, 143 Fulton street, New York.

E. L. V., New York.—Please inform me if there is good trout fishing in Pennsylvania; where, and how late fly-fishing is allowed by law? Ans? Our paper informed you last week that trout fishing in Pennsylvania ended 15th August.

G. B., Alton, Ill., F. B. F., Paris, Ont., L. W., Farmington, Ill., and many others.—We have discovered another lot of the combined sun dial and compass, which we can furnish you, or any of our friends who may desire them, upon receipt of price, \$1 each.

T. M. C., Lockhaven, Pa.—Please inform me whether the Ward-Burton gun will be ready for the market this season, and what has caused the delay? Mr. Burton informs us that he can fix no date at which his guns will be put upon the market, but probably in the Fall.

PAWPAW.—Our correspondent can get the book he wants ("The Settler's Guide") by writing to Hon. Dennis Egan, Tallahassee, Fla., enclosing twelve cents postage, and if he will send his name to Geo. J. Alden, New Smyrna, Fla., he will send him his pamphlet, which is now in press.

G. S. B., Washington, D. C.—Do you know anything about the guns made by Field, of London, Eng., are they good, and what do they sell for? Also any other particulars in regard to these guns. Ans. We can not learn of any gun maker in London by the name of Field. Dealers in guns frequently have their names engraved on guns which they sell.

H. A. F., Delevan, Ill.—Can you inform me as to the reputation of breech loading shot guns made by Chas. Green, of Rochester, N. Y.? Is't his reputation good in New York State? Can you tell me where I can procure all the rules for trap shooting, both English and American? Ans. We have never seen any of the guns you allude to, and know nothing of their reputation in the State. From E. S. Harris, No. 177 Broadway, you can get a pamphlet containing rules for trap and pigeon shooting.

JACOB.—Please inform me what a trawl is, technically speaking. I see it often used in FOREST AND STREAM? Ans. A trawl is a line 200 yards long or more, stretched across the mouth of a bay, between two buoys. At about every six feet there will be a wooden float, from which is suspended a short line, at the end of which is a hook kept down by a sinker and baited with a small live fish. In this manner hardly a fish can enter the bay to feed without being caught, and the slaughter becomes wholesale. Besides a great many are mutilated and killed that are not caught.

GUNNER, W. Farmington, Me.—Will you please inform a few of us who are beginners, but not yet able to sport a costly Remington or Sharp rifle, in regard to proper distance, size of target, etc., to be used in practice with a Stevens or Wesson skeleton stock rifle, 15 inch barrels, calibre, 22 and 32. Of course with these weapons we do not expect any long range work; but are they serviceable for practice, and what ought they to do? Ans. Send to J. S. Conlin, No. 930 Broadway, for some of his Creedmoor targets reduced to scale for 25 yards. Also his ready measurement targets; price \$1.50 per 100.

OSCAR, Hants Falls.—Where, in Maryland or Virginia, can our party of two or three find first-class duck shooting this Fall, with good private board and attendance? We prefer some place not visited by the general crowd of shooters. Please give me the address of some party who can accommodate us and who you can recommend. Ans. Address Capt. James Scott, Ocean House, Green Run Beach, Worcester county, Md., or Littleton Dennis, Snow Hill, Md. They can inform you. There is always good duck shooting on the Havre de Grace flats and Gunpowder River, Md., and at Chincoteague Island, Va. Take steamer from Newtown.

S. S. W., Washington.—I have a setter about eight months old. He has some kind of disease similar to the mange. He breaks out in boils. From the first appearance they seem to be hard and then turn to sores, especially on his knees, which seem to have some five or six on each. I have tried several remedies, and lastly coal oil, but they don't seem to do any good. Will you please inform me what is best to do for him? I often wash him with soap and water. Would it be advisable to break him in with a tame bird? When about three months old he would point it, but now he will trail it up and watch it, instead of pointing. Ans. Give your young setter a few doses of flour of sulphur and plenty of exercise. Feed with boiled rice, corn, or oatmeal. It very often proves injurious to a young setter or pointer to practice him much on a tame bird, as it accustoms him to use his eyes instead of his nose.

ANOMY, New York.—Will you please explain why in pigeon matches the best shots frequently get no prize? For instance: A and B each shoot ten birds, E and D each kill nine birds, and E gets eight pigeons. A and B shoot off their tie and A takes first prize. Then, instead of, as one would naturally suppose, B taking second prize, his two inferiors—C and D—proceed to shoot for second prize, while the third prize goes to E without further palaver. Under this system it might happen that a duffer, who shot no birds at all, would carry off a second or third prize from half a dozen good shots, who had killed all their birds. Why is this thing thus? Ans. We cannot imagine upon what principle of equity such rules as you allude to in trap shooting for prizes can be made. It is easy to see that very indifferent shooting may be rewarded, while crack shooting gets nothing. In our opinion such a rule is entirely wrong. In fact we can see how a shooter may win a second or third prize surely by making a bad shot. For instance: Suppose six shooters are shooting for two prizes, \$200 for best shot, \$100 for second best, at say ten birds each. The first five shooting kill ten birds each. Then, all the sixth man shooting has to do in order to win the \$100, is to make bad shooting. Should such things be?

A WEEKLY JOURNAL.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, August 26th.—Racing at Monmouth Park, N. J. Trotting at Springfield and Lawrence, Mass., Portland, Me., Wilkesbarre, Penn. Simcoe, Canada. International Amateur Regatta, Saratoga. Base ball—Philadelphia vs. Doer, at Philadelphia; Athletic vs. Chicago, at Chicago; Keystone vs. Active, at Reading, Penn.

FRIDAY, August 27th.—Trotting at Springfield and Lawrence, Mass., Cynthiana, Ky., Big Rapids, Mich. Base ball—Athletic vs. Chicago, at Chicago.

SATURDAY, August 28th.—Racing at Monmouth Park, N. J. Trotting at Osage, Iowa, Cynthiana, Ky. Base ball—Athletic vs. Chicago, at Chicago, J. B. Doer vs. Media, at Media, Penn., Riverton vs. North Philadelphia, at Philadelphia. Creedmoor—Contest for Remington Diamond Badge.

MONDAY, August 30th.—Base ball—Keystone vs. Archer, at Philadelphia.

TUESDAY, August 31st.—Trotting at Hartford, Conn., Dover, N. H., St. Albans, Vt., Jamestown, Penn., Aurora, Ill. National Amateur regatta, Troy, N. Y. Ontario Rifle Association meeting, Ontario, Canada. Base ball—Resolute vs. Burlington, at Waverly, N. J.

WEDNESDAY, September 1st.—Trotting at Hartford, Conn., Dover, N. H., St. Albans, Vt., Kenosha, Wis., Battle Creek, Mich., Florence, Ky. National Amateur regatta, Troy, N. Y.

WHAT OTHERS SAY OF US.—Our entry upon the fifth volume of FOREST AND STREAM has evoked many valued complimentary notices from our newspaper contemporaries which it would please us to acknowledge separately if it were possible. Their opinion seems unanimous that it is "one of the very best of weekly papers," and for this expression we thank them all. From the editor of the St. Augustine Press, who is also editor of the New York Pathfinder, we have received a private letter, which our vanity prompts us to publish. It is all about ourself, and runs in this wise:—

LONG BRANCH, August, 1875.

EDITOR FOREST AND STREAM:—

In glancing over the index of your last volume some idea of the completeness and worth of your valuable paper is plainly discovered. Not only one individual or one State has been benefited by the publication of the FOREST AND STREAM, but thousands personally and the States universally. Its a requisite in every household, and a fit companion for either the user of the gun or rod. Its manifest interest in our national games and sports is a noteworthy feature of every issue. We have watched with interest the progress of this journal, and, considering the times when its managers chose to inaugurate it, and the dullness of business generally, we say they have worked a young miracle, and established in a short space of time the best sporting journal in this country. Its managers never lacked capital or exertions to place it favorably before the public; and to-day it is widely circulated and known throughout this country and Europe. We cannot correctly predict its ultimate attainings, but feel justified and assured when we foretell a wonderful and glorious success for the young institution.

FOREST AND STREAM AT THE CENTENNIAL.

"We would respectfully suggest to the management [of the Centennial Exhibition at Philadelphia] that the sportsmen of the United States, a numerous and influential class, would be highly gratified if some provision were made for the exhibition in close juxtaposition—in order that comparisons may be more easily made—of the guns, weapons, fixed ammunition, and, indeed, all the paraphernalia used in the sports of the field, whether by land or water, of each of the peoples represented at the Centennial. We can see no good reason why one of the numerous halls in the main building should not be devoted exclusively to this purpose, and be converted into a museum for the display of weapons and implements used in the pursuit of 'fur, fin and feather;' and if it is done, we will venture the prediction that it will prove one of the most popular features of the exhibition."—*Turf, Field and Farm*, Aug. 20th.

"Sport, like every other human occupation, has its place in the Centennial, and we hope that some means will be devised for worthily presenting our National Sportsmen to the great gathering of the nations."—*Rod and Gun*, Aug. 14th.

Our contemporaries will doubtless be gratified to know that the proprietors of FOREST AND STREAM took this matter in hand at the very inception of the Centennial Exhibition, and as long ago as last February had engaged space in the building to cover 1,200 square feet. There anything that comes within our province will be welcome to a place, whether old relics or new inventions, things useful or ornamental, boats, guns, rods, dog collars, camp utensils, life preservers, bear traps, snow shoes, lariats, wigwams, buckskin suits, wampum belts, portable stoves, Indian scalps, pelts and horns, jack lamps, moccasins, tents, rubber goods, stable furniture, rare birds and animals, fruits and plants, trolling tackle, bats and balls, billiard tables, aquariums, and cartridge belts. Last month we arranged also for space outside of the building, adjoining our interior allotment, where we hope to have a genuine camp in the forest with a running stream—shelter tents, a veritable Indian birch wigwam, canoes, etc., etc. Every department will be complete, and genuine Indians and trappers have already been engaged to superintend each one. A great many friends to whom we privately communicated our plans have promised contributions, and when all are perfected we will lay them before our readers, whose co-operation, as well as our contemporaries, we shall cordially invite.

PORTABLE BOATS.

A DOZEN years ago the Indian birch canoe was practically the only portable boat known in this country or elsewhere. Its use was limited to the Indians and a few whites who lived as they lived, by fishing and hunting. The uncertainties of the chase made their life nomadic, and their canoes were so constructed as to meet their requirements fully. Weighing but thirty to fifty pounds they could be easily carried upon the back for long distances from water to water, while the materials for their repair were always at hand as nature provided—a few splits of white cedar, a few sheets of birch bark, cedar roots to sew them together, and the gum of the spruce to make them water-tight. What could be more perfect in construction or adaptation? Other canoes, called dug-outs, made of logs, were much in vogue at the South, and used elsewhere, but they were ponderous affairs, the lightest of them, and by no means portable in the true acceptance of the word. It was not until the influx of sportsmen into the Adirondacks, which succeeded the establishment of Pol Smith's and Martin's hostleries there, that strictly portable boats came into requisition. In that vast wilderness the thoroughfares are chiefly water-courses connecting together, or merely separated by narrow strips of land requiring portages. The sportsmen who went there in pursuit of game and fish often traveled long distances; hence the demand arose for a craft that could be carried easily, as well as carry. Necessity is the mother of invention, and the invention that grew out of the necessity of the circumstances was the very perfect and beautiful Adirondack boat which we have all admired and so much enjoyed. The lightest of them are intended for two persons only with their camp stuff; but heavier ones will carry three, and they are not so heavy (eighty pounds,) but that a stout guide will carry them three miles without frequent rests. Nevertheless, swift, light, staunch, and graceful as they are, they do not seem to have entirely filled the bill. What we require is a craft that will not encumber, one that will carry a heavy load, that will have speed, that will not leak with the first abrasion, or founder with the first thump on her bottom. She must be of light draught to traverse shallow streams, and stiff, to stand the flaws and seas of the deep open lakes. If we admit that the Adirondack boat combines all these, still, she is not compact enough. She cannot be folded into a small package and toted about like a valise. This seems to be the great desideratum sought for now in a strictly portable boat.

Some few years ago, two types of canoes were invented which combine all the essentials of a strictly "traveling boat," one known as the Rob Roy canoe, invented by Mr. McGregor, and the other as the Nautilus, by W. Baden Powell. These have been fully described in a series of papers published in Vol. II. of this journal. They do not, however, fully meet our requirements. One at least, (the Rob Roy,) will carry but a single person, while both are better adapted to a continuous line of water courses than to a broken country where they must be carried over many portages of miles in length. Something different is still required at least for general forest service in this country. With the rapidly increasing interest in fishing and the chase which has especially marked the past two years, and is still growing apace, the demand for a suitable boat becomes constantly more imperative; and to meet this

requisition a dozen builders are taxing their ingenuity. Whether any one will ever succeed in attaining the great desideratum may well be questioned, because the service required of these boats must vary in accordance with the fluvial geography of the localities where they are to be used. To make ourselves clearly understood, it will be well to indicate briefly the general features of the several styles of boats that we have personally examined, to show wherein they meet the various conditions of service to be required of them.

The Adirondack Boat.—This is a round bottom, lap streak cedar boat, fourteen to eighteen feet in length, (we speak of portable sizes,) accommodating two or three persons with their camp outfit. They are stiff and safe and possibly the best suited of any to that particular region. We can suggest no change. For ourselves, we should prefer a bass wood, or cedar canoe, as being of lighter draught and easier to navigate through grass or winding, overgrown streams; but in the Adirondacks a large proportion of the visitors are ladies, and very few of either sex are accustomed to canoes, which are easily upset. A sectional boat would, on the whole, be of no advantage here. Price \$60 and upwards.

Bond's Sectional Boat.—This is made with iron sides and wooden bottom, with an air chamber amidships. It is constructed in two sections of eight feet each, which can be unjointed, and one-half of the boat set in the other. It is evident that wherever a wagon can go, this boat can be hauled with facility. It is not easy to carry on the back, as it does not balance well. In a country much broken by lakes and streams, where only short portages have to be made, we see no advantage that the sectional boat has over an entire boat. Its advantages, however, are obvious where long transshipments are to be made by rail or otherwise. It is flat-bottomed and can run in shoal water, and being of iron is less vulnerable to snags and rocks than other boats. Built at Cleveland, Ohio, by Thos. E. Bond; price \$60.

Waters' Paper Canoe.—This is an improved Nautilus canoe, made by Waters & Son, of Troy; price \$100 to \$125. The body is made of tough linen paper about one-sixth of an inch thick; length fourteen to sixteen feet, depth amidships eight and one-half inches. It has a canvas deck which buttons at the sides. Weight fifty to sixty pounds. It has ample accommodations for camp stuff, but carries only one person. Objection has been made that the material (paper) would soon become soft and destructible, but the long voyages of months and miles made in this craft wholly controvert this. They will stand any kind of a sea.

The Rushton Boat is made at Canton, N. Y. This is a round bottom lap streak cedar or oak boat, with much more sheer and bearings than the Adirondack boat, and much lighter, as they are made to weigh as little as thirty pounds, and therefore very desirable for a single person in an inland lake country. Lightness being indispensable to a portable boat, this boat certainly meets this requirement more than any other. It is best adapted for a single person, but will accommodate two. Length, eleven to thirteen feet; weight, thirty to fifty-five pounds.

The English Canoe.—This is a bass wood canoe made by Wm. English, of Peterboro, Canada, and like the Gordon canoe, more nearly approaches the Indian birch canoe in shape and character than any other craft afloat, but is much stronger, stiffer and faster. It is made of thin boards laid upon ribs two inches apart so neatly that the seams cannot be detected on the outside. Length fourteen to eighteen feet, weight about sixty pounds, and will carry three persons and their baggage with ease. It is in all respects equal to the Adirondack boat, and is much more easily managed and handled by one who understands them, and is of lighter draught and easier to carry over a portage. They are not easily fractured, as bass wood is very tough. They can be fitted with a small sprit sail. Price \$25.

The Gordon Canoe is like the English canoe in all respects except its shape. It is, if anything, perhaps a little more cranky, but is preferred by many experts. It is made by Thomas Gordon, at Lakefield, Peterborough, Canada.

The Herald Canoe is made at Gore's Landing, Rice Lake, Canada, by Hutchinson & Co. Its material is white cedar. It has no ribs, and is so constructed that it resembles a dug-out canoe, both inside and out. Instead of ribs it has transverse strips of cedar jointed neatly, constituting the frame of the canoe, and upon which similar boards are laid lengthwise. Price, weight, and dimensions similar to the above.

Hegeman's Folding Boat.—All of the above named are entire boats, excepting Bond's, and portable only as to weight. Ingenious men have lately been contriving some kind of a craft that would serve all the purposes of a practicable boat, and still be portable as to weight and compact as to dimensions. To invent a machine that one can carry like a valise, or stow in his trunk, which, arriving at his destination, shall be speedily convertible into a freighting or sporting boat, seems to be the problem of the hour. Of course the lightest material must be employed, and this seems to be canvas. To make a light, jointed frame of sufficient strength to keep the canvas shell in proper shape, and sustain the weight of its load, is what is wanted. Hegeman's boat does all this. Its frame is a marvel of braces and joints that shut up like a carpenter's rule folding with it the canvas into a complete parallelogram whose weight is not more than forty pounds. This boat is not sinkable; it will sustain a dozen men easily. It is a good boat for many purposes, and can be bought at prices ranging from \$80 to \$100.

Colvin's Ampersand Boat.—Notwithstanding the compactness, lightness, and portability of Hegeman's boat, there are places so inaccessible, either by their great distance or their rugged character when reached, that it will not pay to carry thither a boat that weighs even so little as forty pounds. In wilderness fastnesses of this kind, which explorers alone might be induced to penetrate, all that is required is some temporary makeshift, such, for instance, as the craft of which the Indians of our western plains sometimes use to cross swollen rivers that are not fordable. This is merely a bull's hide stretched upon a framework of cottonwood. It will not be expected that boats of this character make first-class race boats. Nevertheless, we find that Colvin's canvas boat, which is made on similar principles, has considerable speed, as well as staunchness and capacity, and possesses that invaluable quality of lightness. *It weighs only ten pounds.* Its frame is cut in the forest on demand, and fitted to the waterproof canvas. The gunwale is made fast by leathern thongs or points. It is only the shell that is carried. Made by R. A. Scott, Albany.

Berthon's Self Folding Boat.—This is now on exhibition at Paris. It is the invention of Rev. E. L. Berthon, of Romsey, Hampshire, England, and differs from all others. It claims to combine the necessary elements of the life-boat with the advantage of being folded up to one-tenth of its size and again opened and set up in half a minute. The ribs are longitudinal, joined at the bow and stern by strong linkage. When the boat is closed up the ribs close in parallel lines, and when open they are raised into position by the use of braces, and the proper form of the boat is maintained by these braces, the flooring, seats, &c. The sides are of very strong canvas and India rubber compartments, inclosing a continuous air chamber. The exhibitor offers these boats for yachting as well as for higher uses, and from the price of 75 francs to that of 1,250, as marked on the largest shown, which is fully equipped with mast and sail. Captain Nares took several on shore with his late British Arctic expedition, for the contingencies of which they must be found useful.

From an examination of the subject it does not seem difficult to make a portable boat. The trouble is to select just what is nearest adapted to immediate or prospective requirements. What will do for one set of circumstances and situations, will not do for another. One's judgment must be used in the selection.

FISH PICTURES.—Wakeman Holberton, the artist, is at Wood's Hole with the United States Fish Commission making studies of fish, Prof. Baird having very kindly offered him the use of his tanks and the hospitalities of the place, so that he has every facility for prosecuting his favorite vocation. Mr. Holberton deserves great credit for his painstaking. No fish looks like itself after it has been even a few minutes out of the water, and fish portraits, to be accurate, must be taken on the spot. What, for instance, can surpass the iridescent beauty of the weakfish when first taken from the water, glowing with sparkle of a sunshower and the glory of the rainbow! and yet how quickly its beauty vanishes, even before it dies. None but an angler can appreciate the difference between a fish painted in life and in death. One is animate and the other inanimate. Mr. Holberton is both an angler and an artist.

COLORADO GOLD SPECIMENS.—Our correspondent from Western Colorado, whose letter will be found in another column, however heterodox his opinion may be on scientific trout-fishing, seems, judging from the specimens of the ore we have seen, to be sound in his judgment and estimate of the rich mining district he has visited. The formation of these mines is somewhat peculiar. It is neither granite nor limestone, but a kind of honey-comb and partially decomposed quartz. The quartz carries free gold, much of it visible to the naked eye, easily mined and treated. When sufficient capital and enterprise enter the district marvellous results are anticipated. Very little silver is found in the district, but gold bearing quartz crops out in all directions, and in places it stands up in vast pillars fifty feet high.

LONG ISLAND POULTRY ASSOCIATION.—This society, recently organized, bids fair to make its mark as one of the most successful associations of its kind in the country. Great preparations are being made for the grandest display of fancy and hunting dogs ever held in America. The society will offer an extensive premium list for the best display of poultry, pigeons, birds, flowers, deer, and in fact every kind of pet and fancy stock that will add to the attractiveness of the display. The committee have secured one of the largest buildings in Brooklyn, the skating rink, and will exhibit the first week in December. Address Thomas Smith, Secretary, Stoney Brook, L. I.

—The remains of Grimwood, the companion of Donaldson in the ill-fated balloon, have been fully recognized by relatives and friends, and have been taken to Bristol, near Chicago, for interment. Grimwood's body was picked up on the shore of Lake Michigan.

—The New York *Journal of Commerce* says that Postmaster James, of this city, is on the whole, the best official who has filled that position in the last decade. Several instances of official effort requiring much care and shrewdness have come within our knowledge within two years past that enable us to fully endorse the above expression of approval, so far as our personal experience goes.

The Rifle.

RECEPTION TO THE AMERICAN RIFLEMEN.—Late on Saturday afternoon, the steamer City of Berlin, having on board the victorious rifle team who have so distinguished themselves at Dollymount and Wimbledon, was signalled as being outside of Sandy Hook. The steamer Nelson J. Hopkins having on board General Shaler, Gen. McMahon, Gen. Knox, Col. Geo. W. Wingate, Hon. D. W. Judd, Messrs. A. Alford and J. T. B. Collins, of the joint committee of reception appointed by the National Rifle Association and Amateur Rifle Club, together with a large party of distinguished guests, had previously started down the bay to meet the incoming steamer. Meeting the City of Berlin the Hopkins steamed alongside amid the greatest enthusiasm, and with continued cheers and firing of guns accompanied the larger steamer to the anchorage at the Quarantine grounds. Here the members of the team and their friends were taken on board the Hopkins and brought to the city. It being dark the steamer was decorated with Chinese lanterns, and fireworks were let off in profusion. On the trip up the bay the party were assembled on the after deck, and addressed by General Shaler in a speech of welcome, in which he recapitulated the performances of the team abroad and stated the programme which had been arranged for their reception. Colonel Gildersleeve, who was received with cheers, responded and thanked the committee for the warmth of their reception and concluded by saying:—

"It is with the greatest pride and pleasure that I am able to state to you that during the whole time of our absence, which has occupied nearly a period of three months, this body of riflemen have assembled at different times, have associated together from day to day, and at night also, constantly, under every condition and under all circumstances. We have been in this acquaintance individual contestants for matches, and shooters in the team, and during all this period not one unkind word, I think, has been exchanged among any of us, and the best of feeling has existed at all times. Every man has been, at all times and under all circumstances, willing to make personal sacrifice for the general good. All have been equally entitled to regard, and we separate with great regret. We have advised together on all occasions, we have had this good feeling on all occasions, and each one of the team is justly awarded an equal proportion in the honor which we have achieved. We are very much obliged to you, ladies and gentlemen, and at a future time we shall thank you in better terms.

A speech was also made by Alderman Purroy, after which a collation was served. Arrived at the Battery, the members of the team were placed in carriages and driven to their respective homes.

On Monday the team was formally received in the Governor's Room of the City Hall, by Mayor Wickham. They rendezvoused at the Hoffman House in the morning and proceeded from there to the Hotel Brunswick, and thence to City Hall. An immense crowd had assembled to welcome them, and after being individually introduced to the Mayor in his office, the whole party proceeded to the Governor's Room, where his Honor formally welcomed them in the following speech:—

COL. GILDERSLEEVE AND GENTLEMEN OF THE TEAM:—In behalf of the City of New York, I give you a cordial greeting and welcome home. Every Summer now finds in Europe a great number of Americans, distinguished for personal qualities and in every walk and avocation of life. But upon none of them has this year been bestowed half the attention accorded to you, and I am sure none have better deserved it. Originally selected after competition between those among us who have specially cultivated the use of the rifle at long ranges, and because only of the excellence of each of you in that single art, you have so acquitted yourselves as to have come home victors indeed, in many trials of skill with the riflemen heretofore the most renowned in the world. And that is a matter of national interest. Excellence in this art of yours largely contributes to the security of the country against a public enemy. * * * By warm-hearted Ireland, and by more deliberate England, you have been regarded as what we are very proud and happy to consider you—as representative Americans—displaying not merely the American's skill in every art which he zealously pursues, but amid the excitement and allurements which surrounded you, displaying also the very best American self-control, nerve, courtesy—in two words, American manhood; again gentlemen, I give you a most cordial welcome home.

Col. Gildersleeve replied as follows:—

MR. MAYOR AND GENTLEMEN:—I should do great injustice to the members of the American Rifle Team, for whom I have the honor to speak, did I fail to acknowledge that we feel much flattered by the compliment you have paid us this day. To you, Sir, especially do we feel grateful for your attendance here in person to welcome us; you, Sir, the distinguished representative of this great Metropolis. For the very kind terms in which you have been pleased to address us I beg you, Sir, to accept our most sincere thanks. We also acknowledge our obligations to the Common Council for tendering us this magnificent room in which to receive our many friends. They are apparently legion. We left with some friends; we have returned apparently with many. Here, in this room containing the pictures of so many distinguished men, I should not be at a loss in speaking to you; I should be inspired with words equal to the occasion. While we admire the room, while we admire the paintings, while we admire the history and the records of these distinguished men, I am very sorry that I don't feel such inspiration as I would like to. The great enterprise of the newspapers of the present day has left us very little to say for ourselves, or of the many excellent people we met while abroad, of the many kindnesses we there received, of the great hospitality we enjoyed, or of the unbounded welcome which the Irish gave us. [Applause.] From one end of Ireland to the other our reception was a complete triumph, and you have already heard it all. We can only assure you to-day, Mr. Mayor

and gentlemen, that whatever has been written cannot convey to you any adequate idea of the warm and earnest welcome which Ireland gave us. * * * Of our visit abroad I can only say that the fact that what we said and what we did and the manner in which we were able to conduct ourselves was satisfactory to you is most gratifying to us. That no act of ours reflected any discredit upon the United States Government was a source of great congratulation to us as we journeyed home. We endeavored from first to last to make everything abroad or at home secondary to the good name of our native land. [Applause.] That we succeeded in doing this is a source of great gratification, and that you, one and all, are so ready to acknowledge it, increases the pride we feel in our success. I can only say in conclusion, Mr. Mayor, what I said at the beginning, that you have our warmest thanks. We are glad to be among our friends, and we are glad that you enjoy the victories and the pleasures we participated in as well as we enjoyed them ourselves. [Applause.]

Short speeches were also made by each member of the team and Alderman Cole. During the reception, the procession was forming in the park, and after taking leave of the Mayor and Aldermen the team entered their carriages, and with the Twelfth Regiment formed around them as an escort proceeded up Broadway in the following order:—

Col. John Ward, Twelfth Regiment National Guard, commanding brigade.
Aids. Col. Clifford, A. H. Bartlett, of the Governor's Staff, Lieut. Col. Montgomery, of the Ninth Regiment, and Major Taylor, of the Twelfth Regiment.
Ninth Regiment.
Sixty-ninth Regiment.
Officers of the Twenty-seventh Regiment, and officers of the National Guard.
Twelfth Regiment.
National Rifle Association and Amateur Rifle Club.
American Off-hand Rifle Club.
New York City Schutzen Corps.

Along the line of march the utmost enthusiasm prevailed. At the Army and Navy Club Colonel Gildersleeve was called upon for another speech, to which he responded amid hearty cheers.

In the evening a reception was held at Gilmore's Concert Garden (late Barnum's Hippodrome,) where more speeches were made, and the same enthusiastic reception awarded the returned victors. On the whole, the reception awarded the riflemen was a well earned tribute to their skill and self-restraint in upholding the reputation of their country abroad, and was as warm as they could have looked for.

The Brooklyn *Union* says that Gen. Dakin attributes the victory at Dollymount, in great measure to the splendid organization of the team. They helped each other throughout, while the Irish shot almost independent of one another. As to the reception in Ireland, it was an ovation from the moment they put their foot on the soil, till they left it. The railroads, steamers, hotels, theatres, and every other place of amusement were open to them without cost. He never saw so many American flags in his life as were thrown out in Dublin in honor of the team. The compliment paid by Trinity College would always be remembered by the team. "It was sumptuous, grand."

The reception of the team at Wimbledon, although not so demonstrative as at Dublin and Belfast, was warm and hearty. There were many jolly fellows there, and numerous crack shots too, many of whom were introduced to the team. As to the team not being allowed to shoot for the "Elcho Shield," they knew from the first they would not, and the impression which had got abroad in America that the team were snubbed in this matter was quite erroneous. The Canadians had never been allowed to shoot for it, or in a match side by side with the three teams, therefore the Americans did not expect to be admitted. Nothing but the most warm and cordial friendship existed between the Americans and English during the meeting at Wimbledon. From what General Dakin could learn at the camp the Americans were much admired and the British were evidently on their mettle. It is proposed to send a picked team of twelve men to America next year to compete in the grand international contest.

THE NATIONAL RIFLE ASSOCIATION.—The Executive Committee of the above association have adopted the following new rules:—

Any rifle club or association, organized and having its headquarters within twenty-five miles of the Creedmoor range, may become a member of the National Rifle Association upon the payment of \$50 per annum to the association.

Such application shall constitute all members of such association or club members of the National Rifle Association, and entitle them to all the privileges of the association, or any member thereof and each club shall be entitled to the publication, free of cost, in each annual report of the National Rifle Association of the roll of its officers and members for that year, and the scores made in the matches at its principal annual meeting; and shall be entitled to receive copies of all reports, programmes and circulars issued by the National Rifle Association during such year; and shall be entitled to refer to the Board of Directors of the latter any questions in relation to rifle practice which the society or managing committee of such affiliating association or club may deem it expedient to so refer for final decision.

Every association or club so affiliating shall be required in its rules concerning rifle practice, size and shape of targets, value of shots and limitations as to arms, sights, and pull of trigger to conform to the rules of the National Rifle Association.

Application for affiliation must be accompanied with a check for the annual affiliation, a copy of the constitution and by-laws of the affiliating society and a roll call of its officers and members.

The American Rifle Association has changed its third class targets to conform to those of the National Rifle Association. This is a wise measure, and one that should be followed by all new rifle organizations throughout the country. Uniformity is essential to success, and the only way in which the proper results can be obtained is by a strict adherence to the rules of the National Association.

Under the system of application adopted by the National Rifle Association their reports will contain the roll of officers and members and the scores made in the matches of all affiliating societies, and will therefore constitute a full report of rifle practice throughout the United States. In this way the new associations will be able to calculate their strength, and decide when they have obtained sufficient skill to send a team to Creedmoor to contend for the championship in the Inter-State or long range match. This

however, can only be accomplished by the adoption of a universal system of targets, scoring, marking etc.

The regulations to govern military rifle shooting at Creedmoor have recently been revised, the principal alterations being as follows:—

THE TARGETS.

Score-keepers shall, as each shot is signaled, call in a loud voice the name of the competitor and the value of the shot, and at the conclusion of the score of each competitor announce in like manner his name and total score.

All competitors shall be allowed to examine the records of the score-keeper during the progress of the match.

The targets are divided into three classes, and shall be of the following sizes:—

Third class, to be used at all distances up to and including 300 yards. Target 4x6 feet.

Bullseye, circular, 8 inches in diameter; centre, circular, 26 inches in diameter; inner, circular, 16 inches in diameter; outer, square, 4 feet by 6 feet.

Second class, to be used at all distances over 300 to and including 600 yards. Target 6x6 feet.

Bullseye, circular, 22 inches in diameter; centre, circular, 38 inches in diameter; inner, circular, 54 inches in diameter; outer, circular, 70 inches in diameter.

First class, to be used at all distances over 600 yards. Targets 6x12 feet.

Bullseye, circular, 36 inches in diameter; centre, circular, 54 inches in diameter; inner, square, 6 by 6 feet; outer, square, 6 by 12 feet.

MARKING AND SCORING.

Bullseye counts 5; signal, white circular disc; centre counts 4; signal, red disc; inner counts 3; signal, white and black disc; outer counts 2; signal, black disc; ricochet counts 1; signal, red flag waved twice right and left in front of the target. Ricochet hits will be marked out after the flag signal.

When a shot strikes the angle iron upon which the target stands the marker will open the trap and raise and lower the flag three times in front of the target.

When a shot strikes any part of a second class target outside of the boundary of the "outer," he will open the trap so as to display the trap danger signal (red square disc) and close it again without marking the hit.

Whenever the danger flag is displayed, competitors about to fire will be required to open the breech block of their rifle (if breech loaders.) If they leave the firing point they must draw the cartridge.

No two competitors shall be allowed to shoot with the same rifle in the same match.

Any competitor delaying his squad may be passed by. In no case will the firing be delayed to enable a competitor to procure a rifle.

The positions remain the same, except in National Guard matches, where the head must now be to the target in the "any position" contests, and kneeling is prescribed for 400 yards.

SCORES.

When the firing takes place at more than one distance, by the score made at the longest distance and if still a tie, and there be three distances in the competition, by the score at the second distance.

By the fewest misses.

By the fewest outers.

By the fewest inners.

By the fewest centres.

If still a tie, by inverse orders of shots, counting singly from the last to the first.

By firing single shots at the longest range.

By the aggregate scores made at the longest distance.

By the fewest misses.

By the fewest outers.

By the fewest inners.

By the fewest centres.

By the competitor on each side who has made the highest score firing five rounds at the longest distance.

The names of the competitors who have to shoot off ties will be posted on the bulletin board as soon after each match as practicable.

When the ties are shot off one sighting shot shall be allowed without charge.

Competitors not present at the firing points at the hour named for shooting off ties lose their right to shoot.

Any competitor firing on a wrong target in any match will be fined \$3, or he will be debarred from further competition in such match, or both, in the discretion of the executive officer.

These are excellent changes in the rules, and they should be rigidly enforced by the executive officer in command.

—The programme of the third annual prize meeting to be held at Creedmoor on Tuesday, September 28th and following days has been issued, and comprises the following events:—

Competition I—JUDD MATCH.—Conditions, any military rifle; distance, 200 yards; position, standing; rounds, seven; entrance fee, \$1. Twenty prizes.

Competition II—CAVALRY MATCH.—Conditions, distance, 200 yards; position, standing; rounds, seven; weapon, Remington breech loading carbine, State model, using carbine ammunition, trigger pull not less than six pounds; entrance fee, \$1 each man. Ten prizes.

Competition III—SHORT RANGE MATCH.—Conditions, open to all comers; any rifle; seven rounds at 200 yards, standing, entrance fee, \$1. Twenty prizes.

Competition IV—1ST DIVISION N. G. MATCH.—Conditions, five shots each at 200 and 500 yards with Remington rifle. State model; position, standing at 200 yards, any; at 500; entrance fee, \$1. Twenty-five prizes.

Competition V—2D DIVISION N. G. MATCH.—Conditions, same as above. Twenty prizes.

Competition VI—N. Y. STATE N. G. MATCH.—Conditions, same as above. Thirty prizes.

Competition VII—INTER-STATE MILITARY MATCH.—Conditions, open to one team of twelve men from each State and Territory of the United States, from any one or more of the regularly organized regiments, battalions, or companies of uniformed militia; distances, 200, 400 and 600 yards; position at 200 yards, standing, at 400 yards kneeling, and at 600 yards, any; weapon, the authorized military rifle in use by the National Guard of the State or Territory represented by the team; entrance fee, \$2 each man. Fifteen prizes.

Competition VIII—ARMY AND NAVY JOURNAL MATCH.—Conditions, any military rifle; distance, 500 yards; any position; seven rounds; entrance fee \$1. Twenty prizes.

Competition IX—GATLING MATCH.—Conditions, weapon, Remington State military rifle; distance, 500 yards; rounds, seven; position, any; entrance fee, \$1 each competitor. Twenty prizes.

Competition X—PRESS MATCH.—Conditions, open only to bona fide representative employees of any newspaper or periodical; weapon, any military rifle; distance, 500 yards; position, any; rounds, seven; no entrance fee. Ten prizes.

Competition XI—MID-RANGE MATCH.—Conditions, open to all comers; weapon, any rifle; distances, 500 and 600 yards; seven shots at each distance; position, any; entrance fee, \$1.50; competitors using rifles other than military to allow those using military rifle of 50 calibre, nine points, and all military rifles of less calibre four points; those using military rifles of less than 50 calibre to allow those using rifles of 50 calibre six points. Twenty prizes.

Competition XII—CONSOLATION MATCH.—Conditions, open to members of the National Rifle Association and competitors in the foregoing matches, but excluding all winners therein; distance, 500 yards; weapon, any military rifle; position, any; rounds, seven; entrance fee, \$1; competitors using military rifles of less than 50 calibre to allow those using rifles of that calibre three points.

Competition XIII—LONG RANGE MATCH.—Conditions, open to all comers; weapon, any rifle; distances, 800 and 1,000 yards; rounds, ten at each distance; position, any; entrance fee, \$1.50. Fifteen prizes.

Competition XIV—CHAMPION MATCH.—Conditions, open to all comers; weapon, any rifle or rifles; distances, 200, 400 and 1,000 yards; rounds, ten at each distance; position, standing at 200 yards, any at 400 and 1,000 yards; entrance fee, \$2. First prize, grand medal of the National Rifle Association in gold; second prize, grand medal of the National Rifle Association in silver; third prize, grand medal of the National Rifle Association in bronze. Ten other prizes.

In the above competitions No 2 is open to teams of five men each; Nos. 4, 5, 6, 7, 8 and 9 to teams of twelve men.

—The third contest between members of the Amateur Rifle Club for the Luther Badge was decided on Saturday. The conditions of the match were, two sighting and five scoring shots at 800, 900 and 1,000 yards. Eight contestants appeared, the badge being won by Mr. L. L. Hepburn. The new danger and wind flag-staffs recently introduced by

the National Association were brought into use for the first time and found to work admirably. The following are the scores made:—

Name.	Yards.	Score.	Total.
L. L. Hepburn.....	800...5 5 5 4 5...24 900...5 5 5 5 3...23 1000...3 5 5 3 4...20	67	
H. S. Jewell.....	800...5 5 5 4 5...24 900...3 4 5 5 4...21 1000...4 3 5 4 5...21		66
A. J. Roux.....	800...3 5 5 5 4...22 900...5 5 5 5 5...25 1000...4 0 5 4 2...15		
L. Geiger.....	800...4 4 3 4 5...20 900...4 4 3 4 4...19 1000...2 3 4 5 5...19	58	
T. Hyde.....	800...4 5 4 5 4...22 900...0 5 3 4 5...17 1000...4 3 5 4 0...16		55
A. Anderson.....	800...4 3 4 4 0...15 900...0 5 3 4 5...17 1000...3 3 3 3 3...17		
W. B. Farwell.....	800...5 5 5 5 0...18 900...0 2 3 3 5...13 1000...2 5 4 0 0...11	42

A. V. Davis.....	800...4 5 0 3 0...12 Withdrew.		

—On the same day members of the Seventh Regiment Rifle Club competed for the "shells," under the superintendence of Lieut. J. C. Abrams, captain of the regimental team. The match was at 500 yards with two sighting and five scoring shots. The badge was won by F. S. Gardner, with a total of 21 points out of a possible 25, Samuel Schwartz following with a score of 18. Capt. Robbins, Regimental Inspector, J. Linton, J. W. Gardner and others competed.

Members of the Seventh are now in constant practice at the ranges, as from the best scores made this month will be selected the team to represent the regiment in the Fall matches.

—On Saturday next the Remington Diamond Badge, now in possession of Mr. H. S. Jewell, will be competed for by members of the Amateur Rifle Club. The event receives additional interest from the fact that several members of the victorious International team will probably participate.

HUDSON RIVER RIFLE RANGE.—This range, located at Poughkeepsie was opened on the 19th inst. with an all-comers match at 200 yards, and a long range match at 500 yards. The highest score made at the 200 yards was 24 out of a possible 35, Richard Pittcher winning the first prize, a gold badge. The long-range match was not concluded.

Game Bag and Gun.

GAME IN SEASON IN AUGUST.

Woodcock.
Curlew.
Squirrels.

Snipe.
Bay birds.
Pinnated grouse, *Tetra cupido*.

GAME IN MARKET is still confined to woodcock and a few varieties of bay birds. The former, coming from the West, bring \$1.25 per pair. A few grass plover are offered on the stalls at 75 cents per pair. Bay birds, comprising yellow legs, robin snipe and willets bring from 75 cents to \$3 per dozen. Although the season for pinnated grouse (prairie chickens) has opened in some of the Western States, the law in this State is close until the 1st proximo, and therefore none are offered for sale.

Mr. McCready, the President of the Old Dominion line of steamers, who is a thorough sportsman, by the way, is building a new line of railroad which will open up a grand wild fowl country—Chincoteague, Northampton, Accomac, and adjacent islands to the north, in Worcester county, Maryland, which are now difficult of access, and where a breech loader is seldom seen. Our sportsmen will be under great obligations, for Currituck is full; every point worth anything is taken at a large figure.

—Next month some of the best duck shooting to be had, will be found among the Thousand Islands of the St. Lawrence, on the first southward flight of the wild fowl. Grenadier Island and Corn Island, near Alexandria Bay have long been recognized as favorite points; and if any of our friends who stop at the Crossmon House will enquire for Fitz Hunt or his brother, we may safely guarantee them a boat load of game. The Crossmon House will keep open as long as guests continue to patronize it in paying numbers. Indeed, it may be said to be open the whole year round, for the wayfarer is sure of good entertainment there at any time, Winter or Summer.

—We have on exhibition in our office one of the Goss Revolving Cartridge Holders, manufactured by N. S. Goss, of Neosho Falls, Kansas. For lightness and simplicity we prefer it to anything in the shape of a belt we have yet seen.

—The Richmond *Whig* says that deer are numerous in Virginia, and have greatly multiplied since the war, especially in the lowland region. On the peninsula they are very numerous, and over in Chesterfield and Amelia and other Southside counties there are scores now where there was one before the war.

—The annual deer hunting excursion of the Blooming Grove Park Association will take place September 10. Members and invited guests will assemble at the club house on Thursday, and the hunt will commence on Friday, 10th inst. Grouse shooting commences September 1. There will be rifle matches for prizes. Distances, 200 and 400 yards, for military and Creedmoor rifles, at Wimbledon targets.

MASSACHUSETTS.—Salem, Aug. 23.—A few coots have been seen in the bay; peeps and ringnecks numerous. There was a flight of yellow legs at Greenwich last Friday.

TEAL.

NEW JERSEY.—Seaville, Aug. 23.—Messrs. Wm. Reckless and W. H. Shuster, of the *FOREST AND STREAM*

shooting Club, Philadelphia, have just returned from a two days' shoot at Seaville, N. J. They report woodcock very plenty, but the mosquitoes so thick they drive you out of the woods. Bay birds were very plenty; they succeeded in bagging some sixty, principally willets in splendid order. Mr. Theo. Schulz, who had them in charge, is one of the best sportsmen on the coast, and a good shot; also one of the best whistlers I ever heard; it is "good-by willet" when he commences to call, as it surprises them to hear one out-whistling themselves.

SETTER.

—Beach Haven, August 23.—Willets, marlin, peeps, yellow legs, robin snipe and plover are quite plenty. Last week "Mohawk" and "Homo" made big bags. E.

MARYLAND.—Snow Hill, Worcester, Co., Aug. 21.—Birds are plentiful on the beaches, and are being slaughtered in immense quantities.

DELAWARE.—Kitts Hammock, Kent Co., Aug. 24.—Young ducks and all the different varieties of beach birds are here in plenty now. Take cars from Philadelphia to Dover, via Delaware Railroad. J. E. D.

ILLINOIS.—Walnut, August 17th.—Prairie chickens are in good condition and in fair quantities for good shooting here now, and should the sloughs keep full of water there will be no lack of ducks, brant, and geese later.

TUSCARORA.

MINNESOTA.—Brainerd, August 19th.—Have just returned from a short foray among the grouse. Birds are plenty, and larger than usual at this time. We expect quite a number of gentlemen from the East between now and 1st September.

HAVILAND.

WISCONSIN.—Montello, Aug. 20.—The season for pinnated grouse shooting opened finely Aug. 15, and the various reports are extremely flattering, as the birds are more abundant than for several years previously. This is wholly unexpected, as the severe Winter and late, cold Spring, had a tendency to annihilate, not only the young broods, but the old birds also. Much of this bountiful supply is, doubtless, from the strict watch kept by sportsmen to prevent illegal shooting, and hence this season but few broken and scattering covies are found to suggest the marauding visits of the pot-hunter.

FRED.

CAPT. BOGARDUS IN ENGLAND.—The London *Illustrated Sporting News* gives its opinion of Capt. Bogardus in the following quaint style:

"The Chicago *Field* says that 'Bogardus is teaching the English how to shoot.' This is scarcely exact. Captain Bogardus is showing us how he shoots, and we are invited to do likewise—if we can. Before he landed in this benighted island he had met and beaten all the crack shots of America. He is a phenomenon, and we shall not be overwhelmingly surprised if he teach 'the English how to shoot,' as he has already taught the Americans."

The same paper says:

"Captain Bogardus, after being in England a fortnight, and challenging the best men in the south, made two matches, [for £400] one with Mr. Rimel, at 30 yards rise, and one with Mr. A. Stevens (giving the latter four yards), in which the American vanquished both; then, traveling further north, he made a match with S. Shaw, of Oldham, near Manchester (considered to be the best shot in the north of England), on the following terms:—viz.: to shoot at one hundred pigeons each, 1 oz. of shot, 21 yards rise, one barrel, the gun to be held below the elbow, to find birds and trap, and pull against each other, the match taking place on Monday last, before a very large company. The American was favorite at starting, and justified the confidence of his supporters by killing eighty out of ninety-two. Shaw killed sixty-five out of eighty-nine."

Bill's Life says:

"This score was never before equalled in England; in fact, the losing man's score is the largest ever previously made. When we take into consideration the swiftness of the birds, they being the best blue rocks that could be obtained for the time of year, and the fact of the Captain being made to load every cartridge himself with shot singly, before he placed it in his gun, and also trapping the whole of his birds, that is to say, those for Shaw to shoot at, the performance must be deemed a surprising one. He shoots exceedingly fair, with the gun clean below the elbow, and kills his birds in a most astonishing manner. Each appears to receive the stipulated quantity of shot in its body, being instantaneously doubled up. Shaw shot well enough to beat 99 sportsmen out of a 100, and yet he never was in the hunt on this occasion. S. Hammond, of Kent street, Borough, supplied the birds against Shaw, and Offer, of Hammersmith, against Bogardus. We have handed over the stakes (£400) to Captain Bogardus, who sails for America on August 12. We had almost forgotten to state that Captain Bogardus' gun, a choke bore, was made by W. and C. Scott & Son, of Birmingham. It is a strong, plain weapon, without ornament, and an 'extraordinary killer.' He used five drachms of orange lightning powder, and one ounce of No. 9, T. Otis Le Roy, of America, wind shot. Mr. E. Smith, of *Bill's Life* was referee."

Capt. A. H. Bogardus... 11011 11111 Mr. S. Shaw... 01110 11011 11011 10111 11111 11110 11111 11110 11111 11011 11011 01010 00110 11111 11111 10010 11111 11110 11111 11110 01101 11111 11111 01011 10111 11111 10110 10111 11—total 89 11111 00110 0111—total, 65 out of 89. out of 92.

That Captain Bogardus has proved himself an extraordinary marksman no man can deny.

—On the 2d of August, at the Preston Gardens, England, the beautiful 100-guinea champion cup was shot for at nine birds each—three at 24 yards, three at 27, and a like number at 30. Mr. Howard S. Jaffray, of New York, alone killed nine birds, and was thus awarded the trophy. Mr. Burrows received the second prize, and Capt. H. B. Patton the third.

THE LATE HECKSCHER GRUNDE MATCH.—A correspondent, whose report reached us too late for insertion in our last issue, in describing the second match at Newport, between Messrs. Heckscher and Grunde, states that the latter gentleman, who was the winner, used wood powder in his right barrel, and as the day was misty with little or no wind, the absence of smoke gave him an immense advantage over his opponent, who frequently failed to make use of his second barrel owing to the smoke of the first obscuring the bird. If the statement is correct it shows that the wood powder can be made of practical service in trap shooting.

SYRACUSE, Aug. 10.—A pigeon shoot took place to-day on the grounds of the Central City Sportsmen's Club at East Syracuse. A very strong wind was blowing, and the

birds were exceedingly lively, which accounts for the poor shooting. The first shoot was for the Onondaga County Club Medal, between Ed. Lodder, holder, and Wm. Page, challenger, shooting at fifteen single birds, with the following result:—

William Page.....1 0 1 1 1 0 0 0 1 1 0-9
Ed Lodder.....1 0 0 1 1 1 0 0 1 0 0-8

After the medal shoot followed a general sweepstakes, shooting at ten single birds, twenty-one yards rise. The following is the score:—

Name.	Total.	Name.	Total.
C. Parker.....	9	Ed Lodder.....	6
E. Budlong.....	9	R. B. Strong.....	6
E. Earle.....	9	W. R. Barnum.....	6
Thomas Jackson.....	8	S. Taylor.....	6
R. B. Harmon.....	8	John A. Nichols.....	6
James Manning.....	7	J. Steves.....	6
C. McKinly.....	7	Frank Daner.....	6
Ed Mann.....	7	T. Kimber, Jr.....	4
W. Stalbaum.....	7	L. Hubbard.....	4
C. J. Steves.....	7	T. Duplessie.....	3
Ed Crouch.....	6	C. H. Finch.....	2

Ties of nine, five birds.

E. Budlong.....4-C. Parker.....3
Mr. E. Budlong won first prize, \$51.50. Ties of eight, five birds, won by Mr. E. Earle, of Skaneateles, second prize, \$30.90. Mr. Stalbaum won third prize of \$20.60 after shooting off ties of seven four times. W. F. Daner took fourth prize, \$7. Rox.

—The Trap and Field Club of Minneapolis, Minn., is in a flourishing condition. At a recent election the following officers were appointed to serve for the ensuing year:—President, Major Geo. A. Camp; Vice President, W. W. McNair; Secretary, Roger S. Pease; Treasurer, Robert McMullen. Subsequent to the voting a contest took place at the club grounds for a badge presented by Mr. Hathaway, a member, the shooting being at seven birds each, 21 yards rise, 80 yards boundary, from plunge traps. The following was the result:—

George A. Brackett.....	2	George W. Felt.....	6
R. B. Langdon.....	2	L. B. Babcock.....	5
Frank Morse.....	6	B. Brown.....	5
John Harvey.....	7	C. Morrison.....	3
Charles Cyphers.....	4	A. W. Riekman.....	5
George W. Tinsley.....	7	Roger S. Pease.....	3
E. Grimshaw.....	5	D. F. Smith.....	6
Mike Hoy.....	5	G. H. Parmort.....	5
Charles Roberts.....	5	Robert McMullen.....	5
L. C. Shepley.....	3	Otis M. Humphrey.....	6

Messrs. Harvey and Tinsley having each killed all their birds and tied, then shot with the result of another tie on four each. The birds having given out, Mr. Tinsley temporarily waved his claim to the badge, which will be worn by Mr. Harvey until birds enough can be procured for a renewal of the struggle.

MANSFIELD, Alleghany Co., Pa., August 20th, 1875.

EDITOR FOREST AND STREAM:—

We had a small shoot here yesterday; ground trap, 21 yards rise, 80 yards boundary.

THOSE SUMMER WOODCOCK.

PORT RICHMOND, August 13th, 1875.

EDITOR FOREST AND STREAM:—

I thought I should keep quiet on the woodcock question, for the present at least, but after reading your article copied from the Hartford Times, I feel as if every sportsman that knows anything whatever about the habits of this bird ought to have a word to say. Now, as regards the Connecticut law relating to woodcock shooting, as I understand it, it allows woodcock to be shot from the 1st to the 21st of July, and from October 1st to January 1st. There is no one who is more fond of gunning than your humble servant, or can stand a longer tramp on a warm day; but I think there is little sport in following a dog through a swamp, with the thermometer at 90°, and the air full of mosquitoes. I have seen the time when I've had to run out of the woods to escape the sting of these pests. What shooting I have done this season has been between the hours of 4:30 and 11 A. M., and in nine mornings I have bagged myself, over one dog, forty-eight birds. There have been 102 birds shot over him this season. I can just about get these birds home and down the well before they spoil, and as regards the superior flavor of a young bird, I disagree with the Hartford Times. I would not give, for my eating, one Fall bird, with his handsome dark plumage and large, plump breast, for three of the Summer ones. I like to kill birds at a season of the year when I can hang them up and go and look at them now and then. I have seen young birds in July that could hardly fly, and because a person can kill several of these birds I don't think it is anything to his credit. Shoot at birds that get up like a pigeon, which require something more than two or three pellets of No. 10 shot to stop. When you can knock down six or eight of these birds in "percussion," you are doing some shooting. No farmer wants his corn trampled down, and I know that your correspondent would not care to have two or three gunners and the same number of dogs running through his cornfields. The month of August is generally the season for molting, and I seldom, if ever, shot a woodcock in the cornfields that did not have pin feathers. Last Monday, to oblige a friend, I took a stroll for them and shot one in a small piece of timber and three in a field of corn. I blew the feathers back, and there were the pin feathers. I showed them to him and we started for home. On our way my dog started two more, but neither of us shot at them. Probably he may relish pin feathers, but I do not.

In conclusion I would say that, had we a law in the several States to prohibit the shooting of Summer cock, we would have sport enough for a king in the Fall, and would be doubly repaid for allowing these birds to attain their full size.

MORTIMER.

FORT WAYNE RIFLE CLUB.

FORT WAYNE, Ind., August 17th, 1875.

EDITOR FOREST AND STREAM:—

Quite a large number of our leading citizens held a meeting a few evenings ago, and organized a company to be known as the Amateur Rifle Association of Fort Wayne, and elected the following named members as its officers: President, Capt. James Harper; Secretary, James C. Beeks; First Vice President, Dr. J. S. Gregg; Second Vice President, Christian Grafmiller; Third Vice President, T. P. Cordrey; Treasurer, Silas Tam; First Captain, Gen. A. F. Devereaux; Second Captain, Gen. J. E. Mayer; Trustees, John Lechner, Hiram Iddings, Will. L. Beeks, and William Schiefer. It was agreed that the Remington rifle should be the one used by the association. W. R. Russell, Esq., of 29 East Main street, has negotiated for the rifle arms, which he is now receiving. They are really fine articles and probably the best manufactured. Already we carry the names of thirty-one of the best sporting men in town on our list, and the interest in the thing is so earnest that the secretary expects to have a hundred names inside of two months. We have made application to the N. R. Association for recognition, and mean business.

W. R. R.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

NEW YORK YACHT CLUB.—The cruise of the squadron was virtually ended on Wednesday, the 18th inst., with the race for the cups presented by James Gordon Bennett, Esq. The course was the triangular one from Newport, starting from a line between the light ship and the spar buoy on Brenton's reef, to the light ship off Cuttyhunk, thence around the buoy off Block Island and return to Newport, the total distance being about eighty miles. The entries comprised the schooners Alarm, Mohawk, Rambler, Dreadnaught, Restless and Idler, and sloops Vindex, Vision and Addie V. The day was stormy, and the rain poured down in torrents. The Dreadnaught was the first to cross the line at 9:48:30, followed by the sloop Addie V., and the others in quick succession. The yachts were close hauled on the run to Cuttyhunk, the Dreadnaught being the first to round the light ship, followed by the Mohawk a minute later. The latter vessel, however, in rounding carried away her fore-topmast. The Vision, of the sloops was the first to pass the point. To the Block Island buoy was a free run before the wind, but the Mohawk and Dreadnaught had obtained such a lead of the other schooners that the interest in the race had centered in them. At Block Island the latter had gained another minute, owing to the sheet of the Mohawk's balloon main staysail parting; and on the run home Mr. Garner's yacht also carried away a bobstay, but she so gained on the Dreadnaught that at the finish she had reduced the starting time of the latter as to win by two minutes. The Vision won the prize for sloops, the Addie V. carrying away her topmast and giving up the race. The following table shows the result:—

Yacht.	Start.	Finish.	Actual time.
Dreadnaught.....	H. M. S. 9 48 30	H. M. S. 4 58 30	7 10 0
Addie.....	9 49 20	Not taken.	
Rambler.....	9 51 0	5 13 35	7 22 35
Mohawk.....	9 51 50	4 59 50	7 8 0
Idler.....	9 53 10	5 41 30	7 48 20
Vision.....	9 54 20	6 22 35	8 28 15

On Thursday the Commodore issued an order disbanding the squadron. The Dreadnaught sailed for Shelter Island, and the Vindex for the Eastward. The Alarm and Mohawk go to New London, and the Clio sailed for Fire Island, where, however, she had not appeared up to Saturday.

THE LONG ISLAND YACHT CLUB.—The third annual regatta of this club was sailed on Thursday last from the rendezvous in Gowanus Bay under circumstances which, if not exactly favorable, were at least such as to bring out the good qualities of the yachts and the seamanship of their owners. The courses were for first and second classes—From the stakeboat to and around Robin's Reef Buoy, thence to Fort Lafayette, twice around, and return. Third class—From the stakeboat to and around Oyster Island Buoy three times. The following yachts started: First class—Siren, Thomas Davis; Reville, Frank Bates, and Sophia, Richard Bosch. Second class—J. Saunders, James McMahon; Henry Holmes, A. L. Kreymeyer, and Au Revoir, Arthur Murphy. Third class—Ella, W. H. Johnson; Teresa, J. A. Quinn; Four Brothers, Edward Sparron, and Only Daughter, Commodore Farley. The owners of the Annie, Chapman and Chemung had intended to take part in the contest, but the storm prevented them from getting their boats ready. In turning the buoy at Oyster Island the Ella capsized and the Only Daughter met with a similar mishap on rounding the home stakeboat for the second time. The Holmes also upset in turning Fort Lafayette and the Siren breaking her topmast stay was obliged to withdraw. The following table shows the result:—

Yacht.	Start.	Finish.	Time of Race.	Time by Allowance.
Reville.....	3 13 0	7 16 31	4 03 31	4 03 31
Sophia.....	3 13 0	7 15 55	4 01 55	4 09 02
Siren.....	3 12 0	Withdrawn.

Ella.....	3 08 20	Capsized.		

The Reville takes the prize in the first class, the Saunders in the second and the Four Brothers in the third. The judges were Messrs. James Lenox, James Edwards, W. H. Johnson, and Commodore Farley. Mr. Frank Bates acted as referee.

SEA CLIFF ROWING REGATTA.—The Sea Cliff Amateur Boating Club held its opening regatta on Saturday last in Hempstead Bay. Five matches were rowed, and the proceedings wound up with a tub race. The first race was for whale boats, open to all comers, with a prize of \$20 to the winning boat, for which there were two entries, as follows:—*Iris*.—Crew—R. J. Mott, bow; 2. G. Anderson; 3. J. Turner; 4. T. Mott; D. Van Pelt, stroke; R. R. Mott, coxswain. *Sea Ranger*.—Crew—W. H. Cocks, bow; 2. William Cocks; 3. Henry Stillwell; 4. Isaac Cocks; Stephen Cocks, stroke; James Cocks, coxswain. The *Sea Ranger* won by five lengths; no time. The second race was for four-oared Whitehall boats, open to all comers, outriggers barred, for which three prizes were offered—\$50 to first, \$20 to second, and \$10 to third. Four boats were entered, as follows:—

Kittie.....	W. Stansbury.....	R. J. Mott, stroke.
Glenwood.....	J. Turner.....	G. Anderson, stroke.
Gracie.....	M. White.....	Harry Howard, stroke.
Rough and Ready.....	Isaac Cocks.....	William Cocks, stroke.

The Rough and Ready won, making the three miles in twenty-nine minutes, the Kittie second, and the others dis-

tanced. The third race was for the same class of boats, but open to members of the club only; the prize a silver challenge cup; distance one mile and return. The following boats started:—

Lorelie.....	A. Hibbs.....	N. D. Webb, stroke.
Kate.....	L. R. Benjamin.....	J. Koop, stroke.
Batchelor.....	C. C. Stringham.....	J. Keator, stroke.
Gracie.....	M. White.....	Harry Howard, stroke.
Kittie.....	S. S. Biddle.....	W. R. DePuy, stroke.
Rough and Ready.....	Henry Stillwell.....	W. H. Cocks, stroke.

The Rough and Ready was again victorious, the Kittie second, and Lorelie third; time of the winner, 18 minutes. The fourth race was for single-scutt flat-bottomed boats, no outriggers, open to all comers, and the prize \$10 to the winning boat. For this there were five entries, as follows: Mamie, William Cocks; Fawn, T. McCauley; Lancashire Lass, H. Howard; Goldsmith Maid, G. Allen; Cricket, M. Winsler. Allen won; time, 21 minutes. The fifth race was for the Ladies' Challenge Flag, valued at \$40, presented by the ladies of Sea Cliff. This race was for members of the club only, the winner of the cup being debarred from entering for this prize. Six boats started:—

Kate.....	L. R. Benjamin.....	John Koop, stroke.
Lorelie.....	N. D. Webb.....	A. T. Webb, stroke.
Gracie.....	M. White.....	H. Howard, stroke.
Batchelor.....	C. C. Stringham.....	James Keaton, stroke.
Rough and Ready.....	W. H. Cocks.....	H. Stillwell, stroke.
Kittie.....	S. S. Biddle.....	W. R. DePuy, stroke.

The Kittie took the lead at the start, and not being headed, won by three lengths from the Lorelie; time, 18 minutes.

QUINCY YACHT CLUB REGATTA.—The second regatta for the championship of this club took place on Saturday last. The wind was light and variable, and the time consequently not remarkable. The time made by the various yachts was as follows:—First Class—Nettie, Capt. S. F. Whitmarsh, 4:41:31; Lena, Capt. H. M. Federhen, 4:52:36; India, Capt. F. W. French, 4:52:37. The India claims a foul with the Lena, which will be decided by the Regatta Committee. Second Class—Mabel, Capt. J. W. Roberts, 3:40:11; Flora, Capt. W. F. Mayberry, 3:55:26; Wildfire, Capt. H. A. Keith, 4:19:25; Maisie, Capt. J. H. Slade, 4:19:47; Aurora, Capt. J. C. Sharp, Jr., 4:25:24. The time of the Vesta C., Capt. Cushing, was not taken, and the Secret, Capt. J. Binny, was ruled out for shifting sails, contrary to rules. Third Class—Edith, Capt. Richards, Newcomb, 3:22:59; Jennie, Capt. P. B. Tower, Blover, 3:33:38; Louisa, Capt. L. Parrott, 3:44:02; Red Lion, Capt. G. W. Morton, 3:45:26. Fourth Class—Annie, Capt. C. F. Pierce, 1:38:17; Lightfoot, Capt. Albert A. Packard, 1:24:51. The Mabel of the second class and the Annie of the fourth class having been winners in the previous regatta were declared the champions in their respective classes.

In the first day's racing of the third International Amateur Regatta at Saratoga on Tuesday, the State champion race for single-sculls was won by C. E. Courtney in 13 minutes 39½ seconds; distance, two miles. The Junior single-scull race was won by Jas. Riley in 14 minutes 0½ seconds.

THE NASSAU BOAT CLUB.—On Saturday last this club held their semi-monthly races, the contests being between a six-oared gig and a six-oared barge, and between four-oared shells. In the first race, distance one mile, the crews were as follows:—Barge—James D. Foote, bow; William Lenthil, E. W. Coles, Carl Von Langen, George W. Scott; George C. Power, stroke; William K. Foster, coxswain. Gig—M. D. Parker, bow; Robert L. Reade, Walter Wilson, Channcey Floyd Jones, George S. Floyd Jones; Christopher G. Peterson, stroke; William Robinson, coxswain. The barge crew fouled the gig and obtained a lead of five lengths by the accident, finally winning by twenty lengths in 6m. 11½s. In the four-oared race, distance two miles, two crews entered, Walker's crew winning in 13m. 3½s. The Nassaus have a race on hand for next month with a picked crew of the Anolatan Boat Club, of Washington, D. C., to be rowed on the Harlem River. When they last met the Anolatan were victorious, but in the coming event the Nassaus hope to recover their laurels.

BREAK-UP OF THE PARIS CREW.—Boating men will regret to hear of the disorganization of the Paris—the world's four oared—crew. They had engaged in no contest since their victory over the McLarons, Indiantown, and Portland, Me., crews, at the Kennebecasis regatta, September 18, 1873; but they were preparing themselves to win fresh laurels at the Philadelphia regatta next year, their practice being taken on the harbor every morning and evening. The crew gained their first great victories on July 7 and 8, 1767, when they defeated, at Paris, the celebrated German, French and English crews, in the races in irrigated and outriggered boats. It was in consequence of these victories that they were named the Paris crew. On their return from the Seine they were rowed against, and closely pressed by an Indiantown crew; but in the following year they gained a great victory over the Indiantown four. In October, 1868, at Springfield, Mass., they gave the Ward Brothers, the champions of the United States, a bad beating, reaching the winning post fully one minute in advance. The following year they were victorious at regattas on the St. Lawrence, at Toronto and Niagara. On September 15, 1870, the Paris crew sustained their first and only defeat from the time of receiving their title. They were matched against James Taylor, Thomas Winslip, John Martin, and James Renforth, England's champion crew. The race came off at Lachine. The water had not been as smooth as desired by our boys, and St. John citizens, who witnessed the contest, offered to put up \$4,000 to have another match made at once. Nothing was done until the following year, when Renforth, Jas. Percy, Robert Chambers, and Harry Kelly, as the champions of England, met our men in a match on the Kennebecasis. The St. John oarsmen were the victors, but the sudden death of Renforth made them as downcast-looking as the vanquished.—*St. John's (N. B.) News*.

Fulton's card published in the St. John News says that the break-up is not the result of any division in the crew as to the ownership of the boat, as has been intimated, "the real fact being that, as we have no practice boat, we are compelled to stop rowing for the present."

—A single scull race for \$400 a side has been arranged between Alex. Brayley, of St. John, and John Brown, of Halifax, to come off on the 23d of September, on Bedford Basin, Brayley being allowed \$100 for expenses.

—A steam yacht called the Charles Roche was launched at North Sydney, Nova Scotia, last week. The hull and engine were built by John Barrington, a lad about sixteen years of age.

Tennessee State Sportsmen's Association.

SECOND ANNUAL MEETING

AT
MEMPHIS, Oct. 25, 1875.

TRAP SHOOTING. Premiums \$3,500 cash.
BENCH SHOW OF FIELD DOGS. Premiums, \$500 in cups.

FIELD TRIAL. Premiums, \$1,300 in cash, and \$300 in cups, donated by FOREST AND STREAM and Rod and Gun.

SMOKE VANITY FAIR.

It is shaved from the best Natural Leaf, for Meershaum and Cigarettes. Does not make the tongue sore. Liberal sample on receipt of money. Highest award, Vienna, 1873. Send for circular. WM. S. KIMBALL & CO.,
PEERLESS TOBACCO WORKS, Rochester, N. Y.

From J. E. CORNELL, Fall River, Mass.
Your Vanity Fair smoking tobacco is the best I ever used.

It has a decidedly beneficial effect upon the intellectual power. Companion in our solitude, amuser in our idleness, and soother in our troubles.

From F. B. TAYLOR, U. S. A., in camp, Ellijav, Ga.
I consider your Vanity Fair of superior quality, its flavor approximating so closely to Havana rolled leaf that I can scarcely tell the difference in Cigarettes. Being a great lover and consumer, and conscious of how much happiness you are conferring upon my brethren of the weed, in your efforts to furnish them a good article, I desire to express my appreciation and thanks.

From E. A. GREENE, Richmond, Vt.
Found your Vanity Fair at Montpelier, and think it the best smoking tobacco out.

Miscellaneous.

THE

HAZARD POWDER CO.,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 5 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER. GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

88 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER.

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER.

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

AUDUBON POWDER.

Very quick. For woodcock and quail Nos. 1 to 4. Packed in metal kegs of 12 1/2 lbs. and 6 1/2 lbs., and in pound canisters.

ORANGE RIFLE POWDER.

The best for rifles and for all ordinary purposes. Sizes F.g, FF.g, FFF.g, the last being the finest and most used. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 pound.

All of the above give high velocities and less residuum than any other brands made.

LAFLIN & RAND POWDER Co.,

21 Park Row, N. Y.

(OPPOSITE ASTOR HOUSE.)

BREWER'S

PATENT

Chute and Fishway.

The Fish-way is constructed in the bottom of a chute of any desired width, by means of timbers forming triangles, making a zig-zag course, breaking the force of the water in its descent, enabling any kind of fish to ascend it. It may be constructed on a rise or grade of one foot in ten. Its upper end extends into the pool of a dam. The water "flows with a uniform swiftness over a smooth bottom." It does not form any "pools or eddies."

This Fish-way can be seen in a dam in the Mohawk River near Schenectady, N. Y., and for its successful working see the Report of the New York Commissioners of Fisheries for 1874.

may 6-ly JAS. BREWER, Muncy, Pa.

Sportsmen!

KEEP YOUR GUNS CLEAN, FREE from rust and lead with one-half the usual time and labor, by the use of my chemically prepared Circular Gun Swabs, suitable for cleaning any size bore, and warranted not to injure the finest barrels. SCOVILL'S

Blood and Liver Syrup

All cutaneous eruptions on the face or body indicate

An Impure Condition of the Blood, and this may or may not be SCROFULA; but in either case is nothing more than an insidious poison, that

BURNS LIKE A TERRIBLE FIRE

as it courses through the veins, sowing seeds of death with every pulsation.

In this condition of things something is needed AT ONCE TO CLEANSE THE BLOOD; and

Scovill's Blood and Liver Syrup

will positively effect this desideratum, expelling every trace of disease from the blood and system and leaving the skin

SOFT, FAIR AND BEAUTIFUL.

Hundreds of certificates attest its value. Price \$1 a bottle.

FOR SALE BY ALL DRUGGISTS.

Dr. Rogers's
VEGETABLE WORM SYRUP

A brave man may suffer pain, when inflicted upon himself, heroically; but he

Cannot see his Child Suffer.

There is no other malady incident to childhood that is accompanied with more indescribable wretchedness to the little sufferers than that

Produced by Worms;

and when the parent fully comprehends the situation he will not delay a moment in securing the most prompt and efficient remedies to insure the expulsion of the intruders. The remedy may be found in

Dr. Roger's Vegetable Worm Syrup.

Please bear in mind that ROGERS' WORM SYRUP is the reliable preparation.

ROGERS' WORM SYRUP is a palatable preparation.

ROGERS' WORM SYRUP is liked by children. ROGERS' WORM SYRUP positively destroys worms.

ROGERS' WORM SYRUP leaves no bad effects. ROGERS' WORM SYRUP is highly recommended by physicians, and is unquestionably the best WORM MEDICINE IN THE WORLD.

Price 25 cents. For sale by all druggists.

HENRY'S
Carbolic Salve.

FOR SALE BY ALL DRUGGISTS.

The wonderful celerity with which this combination of Carbolic Acid with other soothing and Curative Emollients acts, is something akin to the marvelous.

It is with pride that the proprietors call attention to the gratifying fact that

Physicians give it the highest meed of praise,

and use it and prescribe it in their practice.

New York, Dec. 22, 1869.

JOHN F. HENRY, Esq.:

Your CARBOLIC SALVE proves an excellent article, and I thank you for it. This is another evidence of the great value of the discovery of Carbolic Acid. Yours truly,

GEO. B. LINCOLN,
Pres't Board of Health.

Price 25 cents per box.

REV. R. B. LOCKWOOD'S

Catarrh Cure!

The Best Remedy Known, and Endorsed by all the Principal Physicians of the Country.

Rev. R. B. Lockwood's Nasal Douche will be found valuable in obstinate chronic cases.

Rev. R. B. Lockwood's Liver and Stomach Pills rid dyspepsia, receive the endorsement of thousands. Price 50 cents each.

JOHN F. HENRY, CURRAN & CO., Proprietors,
8 and 9 College Place, New York.

HENRY'S
SEWING MACHINE OIL

A PURE OIL that does not gum up and has the endorsement of the principal Sewing Machine Companies.

Price 25 Cents per Bottle.

MOTT'S LIVER PILLS

It is easy enough to make a pill, but to make a good pill, ah! that's the difficulty. There are cheap, harsh, drastic pills, that are of even less benefit than a dose of salts. But a good medicine, like Dr. Mott's Liver Pills, which penetrates to the seat of disease, is a desideratum indeed. Will positively cure all diseases of the Liver. Sold everywhere. Price 25 cents per box.

Green's Oxygenated Bitters.

At certain periods of life a tonic is a necessity; but there is danger in using stimulants that injure the organs of digestion while giving temporary relief. To obviate this and present to the public a tonic free from Alcoholic Poison, Dr. Green prepared the Oxygenated Bitters, a sure cure for dyspepsia and all kindred complaints. Sold everywhere. Price \$1 per bottle.

Packer's All-Healing Tar Soap.

It cures all kinds of Skin Diseases with a most wonderful certainty; it promotes cleanliness, personal purity and general health; it is a preventive of many kinds of disease, and it is an absolute necessity in the nursery. Price 25 cents.

W. & C. SCOTT & SON call attention to their very FINEST weapon, combining all their recent improvements, marked on the rib between their name and London, address the brand—"THE PREMIER QUALITY."

Medium and fine guns bear full name and address, and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped with name and trade mark.

W. & C. SCOTT & SON, sole makers of the Patent Top Lever, solid, Double Locking Bolt Breech Loader, bearing the full name of the firm. W. & C. SCOTT & SON caution sportsmen against imitations of their patent and name. Guns bearing the name abbreviated, or with different initials, are not genuine.

TRIAL OF SCOTT & GREENER'S NEW SYSTEM
OF BORING, BY THE EDITOR OF
"THE FIELD," LONDON.

(See The Field, January 30th, 1875.)

"From a comparison of the two tables it will be seen that with Walker's shot, Messrs. Scott's guns showed a marked superiority over Mr. Greener's, both in average and in the highest score made. Indeed, with the left barrel, in his third shot, Mr. Scott got a selected group pattern of 239 and a penetration of 37, equalling the highest pattern made by Mr. Greener, and exceeding the penetration of that particular shot by eight sheets."

THE GREAT
London Gun Trial,
1875.

W. W. GREENER begs to inform his numerous clients in the United States that he has been very successful in the above trial, having secured the first prize, a silver cup, value 40 guineas—class 2 for 12 bores; also winner in class 1 for 8 and 10 bores, and class 4 for 20 bores. He has won in all the classes for improved boring, which is upon a different plan to any other maker, and is far superior in the three most essential points, viz., PATTERN, PENETRATION, and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Cortlandt St., New York, is now importing my DOUBLE CLOSE-SHOOTING GUNS to order, an invoice of which will be shipped to him on the 1st July, and can be examined about the 15th. All special orders given to Mr. Squires will be carefully filled. A full report of the GREAT TRIAL, showing the marked superiority of my guns over guns made by Dougal, Pape, Westley Richards, Tolley, Scott, and others, will shortly be published, and can be had on application at No. 1 Cortlandt St.

Miscellaneous.

WILLIAMS & POWELL,
Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE OF THE BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET,
LIVERPOOL.
Established 1780.

aug26-tf

J. D. DOUGALL'S
EXPRESS SHOT GUNS.

(Title registered.)

SHOWN by trials at Wimbledon by Editor of the Field to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thus: Circle, 30 inches; 300 pellets; average, 191; penetration, 37. The Editor's trial of Greener guns with 340 pellets of same shot and same charge of powder, gave 180, and penetration 30, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is our own invention (though founded on the American idea) and is DURABLE, a fact remarked on by the Field, that the guns tried had been in use during last season, and references permitted to the owners. Send for Illustrated Circulars to

59 St. James's Street London.

BEWARE OF WORTHLESS IMITATIONS
AND COUNTERFEITS!BROWN'S
ESSENCE OF
JAMAICA GINGER

PREPARED ONLY

—BY—

FREDERICK BROWN,
PHILADELPHIA, PA

THIS RELIABLE PREPARATION, one of the oldest of American Pharmaceutical Products, still maintains its enviable reputation, and finds a steadily increasing sale without advertising, and in spite of piracy.

Its high reputation has tempted the cupidity of parties, whose only excuse for their unfair simulations, exists in the great popularity of the original, and accidental similarity of their names.

BROWN'S ESSENCE OF JAMAICA GINGER is protected by the private Proprietary Stamp of the manufacturer, which is incorporated with the steel plate label.

The attention of Druggists and the Trade generally, is called to the Price List of

ENGLISH & FRENCH
MEDICINES & PHARMACEUTICAL
PREPARATIONS,

Which will be mailed on application.

Attractive Route

To the Trout and Grayling Fisheries of
Northern Michigan,
VIA GRAND RAPIDS AND INDIANA RAIL-
ROAD, MACKINAW GRAND RAPIDS
AND CINCINNATI SHORT LINE.

The attention of SPORTSMEN and TOURISTS
is invited to the many attractions offered by this line,
now completed from Richmond, Ind., to Traverse
City, on Grand Traverse Bay, and to Petoskey, on
Little Traverse Bay. The waters of the Grand Traver-
se region and the North Woods of Michigan are
unsurpassed, if equalled, in the abundance and great
variety of the finny tribe. BROOK TROUT abound
in the streams, and the famous AMERICAN GRAY-
LING, now attracting the attention of Sportsmen
everywhere, is found only in these waters. BLACK
BASS, PIKE, PICKEREL, and MASALONGE are
also found in great numbers in the many lakes and
lakelets of this territory.

LUXURIOUS SLEEPING AND CHAIR-CARS
run through from Cincinnati to Traverse City; also
PULLMAN PALACE SLEEPERS from Detroit over
Michigan Central and Grand Rapids and Indiana road,
via Grand Rapids, to Petoskey, with SPLENDID
STEAMER making DAILY CONNECTION at latter
point for the Island of Mackinaw.

For Tourists' Guide, containing complete and accu-
rate maps, with full information as to Fishing Grounds,
transportation facilities, and in short all that could be
desired by Sportsmen or Tourists, send to Forest and
Stream office, or to the undersigned. Low Round
Trip EXCURSION TICKETS good until SEPTEMBER
30th. J. H. PAGE,
Gen'l Passenger and Ticket Agent,
Grand Rapids, Mich.

July 1

Tourists' and Sportsmen's Route.

THE ERIE RAILWAY.

THE ROUTE OF THE ERIE RAILWAY
is peculiarly rich in the variety and extent of its
scenery, and while the tourist has alternating glimpses
of the beauty of rivers, gaps and mountains, the
sportsman has within easy reach many localities that
afford him every facility for the enjoyment of the
sports of the field and stream. We enumerate a few
of the pleasure resorts which crowd the line of the
road.

Rutherford Park.—9½ miles from New York. Fine
hotels and boating pastimes on the Passaic.

Clifton.—13½ miles from the city, overlooking the
picturesque Lake Dundee.

Lake Mohonk.—A beautiful body of water 1,200 feet
above the Hudson—splendid hotel accommodations.

Orange Lake.—Six miles West of Newburgh, and
noted for its fishing attractions.

Milford, Pa.—About eight miles from Port Jervis.
Is noted for its trout fishing, woodcock shooting and
superior hotels.

Avon Springs.—Celebrated for 20 years as a resort for
invalids, the waters possessing many valuable heal-
ing qualities.

Watkins Glen.—This beautiful gorge is distant 294
miles from New York, via Erie Road to Elmira. Its
wild and picturesque attractions are second only in
reputation to those of Niagara.

Chautauqua Lake.—18 miles long, 3 miles wide; said
to be the highest navigable water on the American
continent, being 730 feet above Lake Erie and 1,290
feet higher than the Atlantic Ocean.

Niagara Falls.—This great cataract is reached by the
direct line of the Erie Railway.

There are along the line of the road no less than
Ten Large Lakes, Abounding with Fish,
and affording most delightful sport for black bass and
pickerel. Their names are—Lakes Greenwood, Orange,
Mohonk, White, Otsego, Cayuga, Seneca, Keuka, Sil-
ver and Chautauqua.

The following schedule will afford a partial guide to
the numerous fishing localities reached by this road:

Trout Fishing:

At or near Southfields, 42 miles from New York.

" " Oxford, 52 " " " "

" " Middletown, 67 " " " "

" " Otisville, 76 " " " "

" " Port Jervis, 88 " " " "

" " Monticello, 112 " " " "

" " Milford, 96 " " " "

Black Bass and Pickerel.

At or near Sloatsburg, 36 miles from New York,
including Lakes Truxedo, Potogue and Cedar Pond.

At or near Monroe, 50 miles from New York,
including Round, Long, Mombasha and Cromwell's
Ponds.

At or near Florida, 64 miles from New York.
The famed Mirror Lake, is distant 1 mile.

At or near Otisville, 76 miles from New York.

" " Guymard, 80 " " " "

" " Port Jervis, 88 " " " "

" " Monticello, 112 " " " "

" " Cen. Valley, 48 " " " "

" " Seneca Lake, 291 " " " "

Tickets for sale at the General Offices of the Erie
Railway Company, 124 Washington street Boston; 241,
401, 529, or 957 Broadway, New York; and 732 Chest-
nut street, Philadelphia. Express trains leave New
York from depot foot of Chambers street at 9 A. M.,
10:45 A. M., and 7 P. M.

MARIE, MICHIPICOTON, NEPIGON, SIL-

VER ISLET, AND PRINCE AR-

THUR'S LANDING.

Fort Garry and the Northwest!

With direct connections at Thunder Bay with DAW-
SON'S ROAD TRANSPORTATION COMPANY for

Fort Garry, and with steamers for

DULUTH, FORT GARRY, and THE RED RIVER
COUNTRY.

Pleasure Travel.

This route embraces the most enjoyable and pictu-
resque Summer Tour by making the circuit of Lake
Superior, with the sheltered and beautiful waters of
the inside channels of Lake Huron and Georgian Bay,
and thence by three hours' rail, with magnificent par-
lor cars, to Toronto, connecting with the Royal Mail
Daily Line of steamers on Lake Ontario, and the
Grand Trunk Railway, for the THOUSAND ISLANDS
and the Rapids of the River St. Lawrence, for Mon-
treal, Quebec, White Mountains, Portland, Boston, and
all points East and South; and with the Great West-
ern Railway and Lake Ontario steamers daily for
Hamilton, Niagara Falls, Suspension Bridge, Buffalo,
Detroit, and all points West and Southwest.

Cheap Excursions

Will be made during the Summer season, in the
months of June, July, August, and September, afford-
ing ample opportunity for visiting the Great Mineral
Region of Lake Superior and the FISHING GROUNDS
of Lake Nepigon.

Connections throughout punctual and certain.

State Rooms can be secured at Central Passenger
Offices, Toronto, and all information given by

CHAS. PERRY, 63 King street, East, Toronto.

D. MILLOY, 8 Front street, East, Toronto.

COOK, SON & JENKINS, Agents, 261 Broadway, Y.

ALFRED TELFER, General Agent,
Northern Railway, Brock street, Toronto.

July 7-3m

Chicago, Milwaukee and

St. Paul Railway

Traverses a finer country, affords views of grander
scenery, and passes through more business centres
and pleasure resorts than any other Northwestern
line. Its forests, prairies, lakes and streams, abound-
ing with game, present unequalled attractions to the
sportsmen of Nimrod and Walton. It is the only rail-
way route along the valley of the Upper Mississippi.
It is also the shortest as well as best route between
the great metropolitan centres of the Northwest—
Chicago, Milwaukee, St. Paul, and Minneapolis.
Track and equipment unequaled, and its trains of
palace-coaches and sleeping cars run through without
change.

New York Office, 319 Broadway.

Chicago Depot, cor. Canal & W. Madison.

City Offices, 61 and 63 Clark St. Apr 20-6m

HIGHEST AVERAGE AT DOLLYMOUNT, IRELAND.

SHARPS average, 162 points.

Remingtons average, 161 points.

SEND FOR ILLUSTRATED PRICE LIST.

Dr. Hayes' sledge expedition reached Cape Lieber, latitude 81° 35', April, 1861, and found the nests and breeding places of many birds, but no brant. If further testimony were needed that these birds breed north of and beyond any human footprints, we would give the following from the last named author: "Long lines of cackling geese were sailing far overhead winging their way to some more remote point of Northness." (p. 382). Again, July 7, he says: "I found a flock of brant geese, but could not discover their nests," (p. 411.) If they do breed along the

shores of Baffin's Bay and the Arctic Archipelago, it is very singular that none of these voyagers have spoken of finding their nests or eggs, as they do of the eiders and other birds.

Capt. Hall's first expedition reached Frobisher's Bay June 24, 1861, and a party went ashore for eider ducks eggs with the following result: "In ten minutes four of us gathered six dozen, and at another island, in twenty minutes, sixteen dozen and five." He makes no mention of brant in this vicinity. Again, July 23, he observes: "Duck were to be seen in every direction. * * * They were in such numbers that when above us they almost darkened the air." His second voyage was through Hudson's Bay, to King William's Land, but he does not speak of seeing brant. The third expedition—the unfortunate "Polaris"—reached 82° 29' north latitude, where he pens this sentence: "Seals, game, geese, ducks, musk cattle, wolves, fowls, bears, patridges and lemmings are plenty." Our quotations from the brave men who have suffered untold hardships to discover a "Northwest passage," or "open Polar Sea," are, we submit sufficient to establish the hypothesis that brant go north of 83° to breed, and that they go in large flocks. Any observer of the habits of birds knows very well that while they are in "large flocks," they are in no condition for breeding: Before nidification takes place, they "woo and wed," *i. e.*, they "pair" and retire to solitary nooks for the seclusion of the little family, and although hugely gregarious at other times, during the breeding season we believe all the *anserinae* are strictly monogamous. Nor do we suppose all the birds go to one island, or arrive or depart at the same time. It takes from four to six weeks for all of them to pass a given point at Cape Cod or Prince Edward's Island, so that the last of the flight does not reach the Arctic Archipelago till late in June. Then see how brief a period they have to build their nests, incubate and carry their young through the various stages of growth, from the tender days of infancy, to the self-sustaining period of maturity. It seems almost incredible that all this is accomplished in less than three months! It so happens that some years there are no young brant. The cause of this we presume to be the shortness of the season, *i. e.*, when the Spring is backward and Winter sets in early. When the young ice forms rapidly by the 3d of September the parent birds must abandon their progeny or perish with them. The law of self preservation is stronger than the love of offspring, and with sorrowing hearts they bid adieu to the callow brood and wing their way to more genial climes. On the following Spring the epicure will in vain call at the Parker House for the coveted morsel.

We have spoken of the Arctic Archipelago as the place of nativity of these birds. It is possible that Greenland continues to and beyond the pole. Certain it is that these birds do not go into the middle of the ocean or "open Polar Sea" to lay their eggs and rear their young. They are not divers, and must feed on shore or in shoal water. It is probable that the region north of Greenland and around the pole is dotted all over with islands. The Austrian "Tegethoff" expedition of 1872, which discovered Francis Joseph's Land, and other islands has proved this theory further east, and we think the brant themselves have, westward. The climate must be so warm as to produce marine vegetables for food, and also to exempt the egg from the possibility of destruction by frost. There is something inexplicable in the temperature of these unexplored latitudes. The sun's rays fall more obliquely as we approach the pole, and yet it must be warmer than at 70° of north latitude. It is not possible—nay, probable—that in the wisdom of the Creator, some law exists whereby the sun's rays, on reaching a certain degree of obliquity, renew their heating power, which being intensified as it approaches the pole makes a comparatively warm climate there! We know that a similar law exists in regard to water. Water diminishes in bulk as it cools down to 39·80°, at which point it expands down to the freezing point. Let us suppose the law of solar heat to be cooling as the rays incline up to an angle of 45°, (or any other) and warming beyond that degree, and we are at once relieved from our brant dilemma. Another feature of the climate disturbs us. Dr. Kane discovered ice in Smith's Sound forty feet thick, and Koldewey, on east coast of Greenland, sixty feet! The old navigator, Scoresby, in 1820, undertook to prove that this ice formed in mid-ocean, but this hypothesis is contrary to our observation. The first young ice is formed along the shore line, in shoal water, then pushes itself out into the bay or ocean. We presume in the Arctic region the ice forms around the islands, then extends to meet that formed around other islands until it encases every thing in its crystal folds. Then as Summer approaches it is disengaged from the land or broken up by heavy gales and drifts with the current down through Baffin's Bay, or between Spitzbergen and coast of Greenland, where it melts and disappears. Of course the ice first melts in Spring, where it first froze in Autumn, along the shore line, and is there first disengaged. Were it not so the brant would not be able to get on to their feeding ground so early as the end of June, and consequently would not be able to reproduce at all. Then there would seem to be scarcely time for the growth of marine plants for food. It may be fore-ordained by Divine Wisdom that the tender herb may be dispensed with. We have observed, more especially in Spring time, the decoys constantly pecking at the boards and decayed posts of their pen. They seem to hanker after decayed wood, and we have been led to suspect that this article forms no inconsiderable portion of their food in their boreal abode. Why should they eat up their pen? It is a curious way of obtaining their liberty, and yet we are well assured they devoutly desire this boon. They often try to fly or jump out of their pens, and when a flock is flying overhead in sight, they instantly and vociferously utter the call note "r-r-ronk! r-r-ronk!" There is plenty of drift wood in the Arctic region which in time must decay. Capt. John Franklin (afterwards Sir John) found, in 1821, at mouth of Banks' River, a fine log of drift wood sufficient to cook a bear. McClure, at Banks' Land, 1851, discovered wood to the depth of forty feet. McClintock and the other navigators in that quarter, speak of great quantities of drift wood along the Coast of Greenland, and Parry finds the same thing at Spitzbergen. All the rivers of Northern Asia, Europe and America, as well as the swift currents of Behring's Straits are constantly discharging their rich freight of drift wood into the Polar Sea, and if the brant do not feed upon it there they act very different from what they do in bondage. Here, then, we may, in our mind's eye, see the different families isolated and scattered all over these islands, at the end of August or first of September, gathering and reuniting into large flocks ready

for the long voyage South. Doubtless many of the young are too feeble to endure the long journey, and either do not set out, or fall by the way. Their return is by nearly the same route they went thither. They make no stop at Cape Cod, unless compelled to do so by stress of weather, and the time of their passage is the latter part of October and whole of November, but at this season they are poor and not prized, either by sportsmen or epicures. They spend the Winter months along shore from Barnegat to Florida, or possibly Gulf of Mexico, where they again recuperate and on their return North in Spring are regarded as among the finest fowl on our coast.

W. HAPGOOD.

Boston, August 14, 1875.

W. HAPGOOD.

X THE OSWEGATCHIE COUNTRY.

THE east, or main branch, of the Oswegatchie River rises in Crooked Lake—that is, if we are to call the longest branch the main branch. From Crooked lake it runs in a northeasterly direction, some six or eight miles, to where it forms the branch from Deer Pond (Colvin's Lost Lake) country. It is known above this point as the Robinson River, taking this name from a hunter named Robinson, who had a shanty and hunted near it some twenty-five years ago. In the meantime it receives the waters from Orin Lake, Grassy Gall, Cracker, West, and two or three other small ponds. The stream that it here unites with is formed by the outlets of Partlon Lake, Gull Big Deer, Little Deer, Clear and Nick Ponds, and the drainage of a big balsam swamp known as the "Inlet Swamp." Below the junction, some two miles, it tumbles over a ledge of rocks some twenty feet in height. Here, at the foot of these falls, known as the "High Falls," on the inlet are found speckled trout of three to four pounds weight, and now and then one that gets away with your tackle so easy that you are sure "he was the biggest trout you ever saw." Above the falls are plenty of trout weighing from a quarter to a half pound. Half a mile further down you come to "The Plains," a tract of country that has been cleared of timber by wind and fire, some three miles long, and varying in width from a quarter to three-quarters of a mile, and nearly surrounded by hills of from three to five hundred feet high. Near the upper part of these plains a small spring brook and very cold spring empty into the river from the east side, making a good "trout hole" when the water is not too high. In the brook are also small trout. For the next two miles the river is broken by several rifts or chains of rocks across it, and from two to ten rods in length. Over some of them it is necessary to lift your boat. All along here, and for some miles further down, the fishing is good, and for a stretch of ten miles the chances for a shot at a deer by day or jack light is very good. On the west side of the river, near the foot of the plains, and distant from one and a half to two miles, are the "Five Ponds," taking their name from their number. These, or a part of them, are good ponds for deer. About this section there is now and then a wolf and panther; just enough to frighten the timid ones, but not enough to pay the hunters who trap for them, they seldom getting more than two or three in a season. At the foot of this still water is some three miles of rapids, on which, about the first of June, is some good fishing. Below this we come to the "Drowned Land," as it is called, being a large swamp overflowed by the draining of Cranberry Lake. This lake is used as a reservoir from which to obtain extra water for running saw logs, and for mill purposes in general. The original lake was some seven miles long and three and a half to four miles wide in the widest part, while the overflow of swamp land is probably as much more. When full, the water is raised twelve feet on the lakes, which damages the sporting somewhat in the early part of the Summer, but by about the first of September the water is nearly down to the old bed, and fishing and hunting are both good. A dozen or more ponds empty into the lake on the south and southeast side, among which are Bossout, Cat Mountain, Cow Horn, Olmstead, Darnneedle, Fish Pole, or Little Grass, as it is sometimes called, Little Gull, Curtis, and other small ones. Nearly all of these are good for trout or deer, and some of them for both.

To reach this hunting ground the sportsman has a choice of two routes. First—leave the R. W. & O. R. R. at Gouveneur, going through Edwards to Fine, twenty-five miles, by stage, three times a week, or by private conveyances. At Fine you can put up at a good hotel, or go on five miles to Griffin's, where you will find as good fare and accommodations as can be had at a first-class farm house. Here, or at the hotel, you will get good guides with light boats for three dollars a day and board; also team, usually oxen and sled, to convey boats and baggage to the foot of still water on the outlet or inlet, as the river is frequently called above and below the lake. Second—you can leave railroad at Canton and go direct to the foot of Cranberry Lake by team. The distance is about forty miles and is accomplished in a day. You can purchase good light boats, weighing thirty to forty pounds at Canton, or hire rather poor ones at the hotel at the lake. You can get there with or without guides. Finally, there is plenty of work connected with a trip to this part of the woods, and the lazy ones had better stay at home. But those who are willing to rough it a little can have a good time.

HUNTER.

LAWNS.—Those who are about to make new lawns for another year should now commence the labor of trenching or plowing or subsoil plowing very deep. The lawn should be made and allowed to settle a week or two, or during two or three good rains before sowing the seed and leveling up, and the seed should be sown as early as the season of cool nights and frequent rains comes on. Some writers advise the use of grains, as rye, oats, etc., to be sown with the grass seed; but, as according to the general law, the stronger overpowers and gradually destroys the weaker, we have found the use of any coarse grain injurious rather than beneficial. In the making of lawns we have at times had the handling of some very light sandy soil, and when compelled to do the best we could, without aid from top-dressing, etc., we have used oats in the Fall, for the purpose of holding it from blowing, and have made our second sowing of seed after the oats had grown an inch or so.—[*Practical Farmer*.]

—The Hayden surveying expedition reports most satisfactory progress. They are at work in Utah, west of the Gunnison and Grand rivers.

Fish Culture.

—The Massachusetts Angler's Association held its first Fall meeting yesterday, Sept. 1st, at its rooms, 608 Washington street, Boston.

—The Society D'Acclimatation of France has awarded a gold medal of the first class to Seth Green for his labors in fish culture, and particularly for his efforts in sending to France eggs of the salmonidæ. This is the third honor of the kind which Mr. Green has received from French societies.

RETURN OF MONROE A. GREEN.—This gentleman arrived home from Europe yesterday. We have already announced the failure of his attempt to hatch shad eggs while crossing the Atlantic. His theory of the failure is, that the eggs were injured while being conveyed in the cars, and in a wagon over the rough pavement of New York to the steamship. The eggs were packed in ice. He opened them the second day out and worked them two days in succession in his apparatus. Finding them all affected, he discontinued his operations and threw them overboard. Mr. Green attributes his failure entirely to the transportation of the spawn in the cars, or from the Grand Central Depot to Hoboken. Constant jarring is fatal to shad eggs. The spawn of the trout family can be transported thirty days by cars without loss. His apparatus for fish hatching worked perfectly on the steamship. It is worked by the aid of an air pump, and is a complete success. He experimented with it at Holyoke, Mass., and found that the eggs progressed better than in running water. Prof. Baird will probably make another trial early next season before the water gets too warm. Mr. Green used Croton water, but thinks Hudson River water preferable. Water that has run through iron pipes is not beneficial either to spawn or live fish. Those on the other side interested in the placing of shad in the waters of the Rhine, are anxious to have another trial made. Prof. Baird's report on the subject will be looked for with considerable interest.—*Rochester Express*, Aug. 24th.

CARP IN THE SOUTHERN STATES.

WOODVILLE, Miss., August 18th, 1875.

EDITOR FOREST AND STREAM:—

I have here in the State of Mississippi three artificial fish ponds. One I devote to small fry, perch, etc., and in another, deep and cool, I am raising carp. From an experience of several years I am satisfied the carp or fish of that family are most deserving of attention for artificial ponds, at least in the South, as they can be bred and fed with as much facility as poultry, the carp feeding to fatness on corn-meal or grits. Now, the American carp is not perfection for the table, and I would like to obtain a variety of the same family that is better. I have seen a statement that there was to be an attempt to introduce the European carp into this country as being far superior to the natives. To do so the fish themselves will have to be brought over, as the carp eggs I have experimented with hatch in about twenty-four hours after being deposited, they always being on brush or sticks floating on the pond. If you have any information of parties that propose importing the carp from Europe will you please send me such information?

DOCTOR.

DOCTOR.

[Four years ago, five grown carp were brought from Hamburg, Germany, to Santa Rosa, Cal., by Mr. J. A. Pappe, of San Francisco, who has succeeded in propagating a large number of fish from this small stock. They are of very large size, weighing as much as ten pounds. Some hundreds of these have been introduced into waters near San Francisco and into the Sonoma Creek, some thirty miles from that city. They possess a remarkable fecundity, and are excellent table fish. No doubt most satisfactory information can be obtained respecting the introduction of this fish, by addressing a letter to our valued correspondent, E. J. Hooper, of San Francisco, to whom we have also applied for the like favor; also to Wm. A. Newell, President California Acclimating Society. It is most important that this fish should be introduced here, and we are glad to see that "Doctor" is paying attention to it.—ED.]

SEINING TO STOCK OTHER WATERS.

WATERTOWN, N. Y., August 28th, 1875.

EDITOR FOREST AND STREAM:—

The sportsmen at Cape Vincent, on the St. Lawrence, have been much exercised of late, from the fact that pound nets have been extensively used on the best fishing grounds. I was told by a gentleman yesterday that the leaders of these nets extend from Fox Island to the main shore (a long distance) and that over seven hundred black bass were taken at one haul. Upon farther inquiry I learned that the persons employed in taking these fish were in the service of Seth Green, Fish Commissioner etc., and of course it is all legitimate; but the question comes up as to whether it is fair, or even good policy, to deplete our fishing grounds in order to benefit those in another locality.

*

MUSHROOM CAVES.—The famous mushroom caves of Paris are, in reality, deserted stone quarries in the suburbs of the city. They are entered by shafts, and consist of a series of dark, low, long corridors. Their floors are covered with long lines of narrow beds, made of a rich compost of earth and horse manure. The paths between the beds are kept scrupulously clean, and the mushrooms are carefully cultivated. One of these caves at Montrogue, just outside the fortifications of Paris, contains seven miles of beds, and yields an average of 300 pounds of mushrooms daily. Near Frepillon, an hour's ride from Paris, there is another class of caves or old quarries, that have a lofty interior, with something of the aspect of a vast cathedral. In 1867 one of these caves had a run of twenty-one miles of mushroom beds. During that same year over 3,000 pounds of mushrooms were daily sent to Paris from Frepillon. The crops vary according to certain atmospheric and other conditions, and at intervals the great quarries refuse to yield a profitable crop. They are then thoroughly cleansed, the very soil being scraped out, and are left to lie fallow for a year or two.

Natural History.

SINGULAR FATE OF A MOCKING BIRD.—A mocking bird, an exquisite warbler, owned by Col. J. R. Elliott, came to its death in a singular manner Thursday afternoon last. On that day, after the Colonel had listened to its melodious notes for some time, he retired to his room for the purpose of writing. Having finished his labors he again thought of his "pet," and went out on the piazza, intending to feed it. Upon taking down the cage, he was shocked and grieved to find the unfortunate little songster lying upon its back on the bottom, its breast and neck (from which the feathers had been plucked) all torn and bleeding, and its head twisted completely from its natural position. A lady who resides in an adjoining house explained the mystery. She, while sitting upon her piazza, noticed a bird very much resembling a mocking bird flying around and occasionally alighting upon the cage, as if wishing to hold communication with the other. Suddenly as "Pet" came near the bars, the stranger dashed forward his claws, caught its little victim by the breast, seized the neck with its strong bill, and suddenly letting go its hold on the cage, revolved round with lightning rapidity, by which means the poor inmate's neck was as completely wrung as is a fat chicken's by a kitchen scullion. Both the colonel and his lady were very much attached to little "Pet," as they had named it. The other bird belonged to a species known as the "loggerhead," and it is not a very generally known fact that they invariably attack mocking birds when in their vicinity, and always in the manner described.—*Jacksonville, (Florida) Union, Aug. 14th.*

AN ALLIGATOR PUZZLE.—Last October Mr. Greenleaf had a number of small alligators, about eight inches long, in the alligator pen. On the arrival of cold weather they disappeared, and it was thought that they had crept through a small hole under the adjoining building. When Spring came they did not appear, so they were considered as dead. Last week the large alligator was taken away, and on removing the tank six alligators from two to three feet long were found under it. They were strong and active. What could they have lived on all that time is the puzzle, as no food of any kind was ever left in the place. They could not get any water either, for the large 'gator would not allow any others in the tank.—*Florida Agriculturist, Aug. 21st.*

—The *Scientific American* describes a method of putting any rooster into a state of catalepsy. Select a dark colored table with a smooth top; place it so a narrow streak of sunlight will fall across the surface. Then set the rooster on the table, and hold his head down so that his beak comes in contact with the wood. Now, with a piece of chalk and in the sunlight, draw a line straight from the bird's beak. Move the chalk very slowly, and by the time he line is a couple of feet in length the rooster will fall into a cataleptic or trance-like condition; and although the hands are removed from his body, he will remain perfectly rigid for a minute or two. It is said that a black line on a white surface will produce the same effect. Hens may be similarly treated, but it takes much longer to get them into the trance state, it being necessary to hold the head down several minutes before they come under the influence.

FED BY AN EAGLE.—The Seneca Falls *Courier* tells the following:—A party were out of town on Monday, picnicking and fishing along the shores of Cayuga Lake. In their ambles they took in the camp of the Seneca Falls boys, who are whiling away a few days near East Varick. After posting the boys about home matters, and being told by them that the fish were not in a biting mood, which somewhat disconcerted their plan of action, they concluded to push on to a shady nook a short distance up the lake, where they exercised their squatter sovereignty by squatting on the rock preparatory to further developments, when lo! and behold, an eagle was seen approaching, bearing in his talons a large fish. When nearly over their heads they all gave an unearthly yell, which so shocked the propriety of Mr. Eagle that he loosed his grasp of the fish, and it fell at their feet. It proved to be a pike weighing some three pounds, and still alive. They all returned to camp in high glee over their good luck, and fresh fish was on the next bill of fare for dinner.

INSTINCT OR REASON—WHICH?

EDITOR FOREST AND STREAM.—

In a lively stable at Waukegan, Illinois, is a horse that has been brought up in the business from colthood known to every one in the place as Gold-dust. Becoming lame recently, his owners had the shoe taken from the lame foot and the horse turned into the street. His first act upon gaining his liberty was to walk through the town until he came to the blacksmith shop where all the work of the stable is done, upon reaching which place he deliberately entered the shop and placed his lame foot upon the customary block. Being driven back to the stable, he soon found the shop a second time, and was a second time driven away. This being repeated many times, the blacksmith at last gave the persistent animal the attention he required, after which he was taken back to the stable, where he remained perfectly satisfied. This intelligent animal had doubtless, when previously lame, received relief by having his feet attended to at this establishment, and the fact remained upon his memory. But by what faculty did he revive the experience, instinct or reason?

UPH.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
New York, August 29, 1875.

Animals received at Central Park Menagerie for the week ending August 28th, 1875:—

One Raccoon, *Procyon lotor*. Presented by Dr. E. P. Miller.
Two African Elephants, *Elephas Africanus*. Smallest one three feet six inches high.
One Barn Owl, *Strix flammea*. Presented by Mr. Joseph G. Harrison.
One Booby Gannet, *Sula fiber*. Presented by Mr. James King.
One Blue Macaw, *Ara macao*.
One Zebu, *Bos indicus*. Bred in the Menagerie.

W. A. CONKLIN, Director.

—The failure of the funds required for the support of the Penikese school established by the late Professor Agassiz, together with its indebtedness, has compelled the making of an inventory of its property for the purpose of closing up the business.

The Kennel.

CHICKWEED AND ELACAMPANE.—A highly valued correspondent, who is a physician of note, sends us the following prescription for Hydrophobia, with the qualification that he does not indorse it, although it is highly thought of in Pennsylvania:

1 quart of Beer; 16 ounces Red Chickweed; 16 ounces Thrirac (molasses). Steep in a new earthen vessel until reduced to 1 pint; drink while fresh.

He adds:—

"The red chickweed can be obtained from Dr. A. J. Snively, Hanover, York county, Pa., or from Johns & Cramer, apothecaries, Race street, at Third, Philadelphia, Pa. I do not send this as an advertisement for Snively, for I do not know him, but I occasionally see people inquiring for such and such a remedy for Hydrophobia. (Give me the scalpel and nitric acid.) This (the chickweed and the elacampane remedy) are both popular in the country."

With regard to elacampane, it is a plant well known to most persons, and is to be found in many of our gardens. Immediately after being bitten, take one and a half ounces of the root of the plant—the green root is preferable, but the well dried will answer, and may be found in our drug stores—slice or bruise, put it into a pint of fresh milk, boil down to a half pint, strain, and when cold, drink it, fasting at least six hours afterward. The next morning, fasting, repeat the dose prepared as the last, and this will be sufficient.

These are the directions given by a gentleman of veracity, who had a bitten son and four children of neighbors cured by the remedy, as well as others.

—Some dastardly scoundrel lately poisoned a fine setter pup about a year old, belonging to Major Geo. E. Alden, of Savannah, Georgia, also a litter of five exceedingly handsome setter pups two months old, belonging to the same gentleman, out of his fine bitch Josie, by Mr. D. Brook's Bismark, by Capt. White's imported Irish setter Yock. Mr. E. F. Lovell also lost a fine pointer in a similar way.

BLOODHOUNDS IN PHILADELPHIA.

IT is about eighteen or twenty years ago that two bloodhounds appeared at the beer house of Engel & Wolfe, then situated on Dillwyn street, above Callowhill. They were of the German breed, a male and a female, of a brownish black in color, and of immense size. Since then, by importation and natural increase, the number has grown until scarcely any of the many beer breweries is without one or more of them, while the German butchers as a rule take a pride in seeing who can own the biggest and savagiest. There are three varieties—the Siberian, the Russian, and the German—in this city. The best specimen of the Siberian, the most ferocious of them all, can be found within the walls of the Eastern Penitentiary, where any one can interview them by becoming a prisoner, and then, breaking out of his cell, skirmish around the yard of nights. The Russian and German vary in size according to the purity of the breed, and are without exception the most ungrateful, vicious, and untamable brutes that exist among the domestic animals. It is as much as a man can do, when attacked, to escape unharmed from their fangs. Some few years since a well known down town lumber merchant possessed one of these villainous pets that he had raised from puppyhood. As it grew towards full size he was compelled to keep it chained, because not a workman in the yard dared to lay a hand upon even a lath but the dog would fly at him. He had fed the dog always himself, and therefore imagined he would never attack him. But one day, when removing the dog's pan in order to take it away and return it filled with food as usual, the dog flew at him and the chain only saved him from a bite. Then he took a stick and soundly whipped the chained bloodhound. But the next day the villain was shot; for when the lumber merchant that night unchained him he barely escaped with his life by flight to a board pile, where he was all night besieged. It was only last Summer that the writer, happening at Bridgeport, opposite Norristown, saw slowly stalk across the road and into the yard of a large factory, a most superb female of the Siberian breed. The watchman of the factory was standing by, and with the visitor conversed about the animal he had just seen. I'll show you something, he said, and opening a stable door, out jumped a pup as big as a full grown Spanish pointer. This, he said, was one of her pups, and nine months old, but I have an older one, a brother of the pup, and he introduced an immense fellow. This, he said, is nineteen months old, and weighs 190. (Think of what chances an unarmed man would have with a hound of this weight.) Did you ever chastise them? was inquired. No, he answered, I would not dare. The fact is that these bloodhounds are dangerous, even to their owners, are utterly useless to anyone, and are kept only because of a competition between a certain class of citizens as to who shall own the biggest and most ferocious.—*Philadelphia Times.*

[In FOREST AND STREAM, Vol. 3, page 310, is the description of a magnificent Siberian bloodhound that was brought to our office. So far as his manner and record goes, he was passive and gentle. But this is exceptional. We are aware of a little girl in England who was nearly killed while feeding two of these creatures which she had reared from infancy. We believe that most dogs and cats are snappish, if not vicious, at their food.—Ed.]

THE TOLLEY MEDAL.—Through the kindness of Dr. Rowe we have had an opportunity of examining the beautiful gold medal presented by Messrs. J. & W. Tolley and won by Mr. B. W. Jenkins' pointer dog Sancho at the last Watertown show. The medal is of solid gold, and handsomely ornamented.

KENNEL PRODUCE.—*Muirkirk Furnace, Prince Georges county, Md., Chas. E. Coffin, Owner.*—On July 19th, six puppies to his black pointer bitch Meg by his liver dog Pinto. Three are now living and doing well, namely, one black gig, one white and liver gig, and one liver dog with roan breast.

A KANGAROO DOG.

SAN FRANCISCO, Cal., August 13th, 1875.

EDITOR FOREST AND STREAM:—

A friend residing in Australia, conceiving the idea that I was short of dogs (I have only eighteen) sends me a dog from that far off land—a veritable kangaroo dog, and a noble fellow he is. As some of your readers may never have seen this breed of pups, I give you a description: He is a cross of the greyhound and bloodhound, stands 34 inches, and from tip of nose to stern post, 54 inches. In form he resembles the greyhound, but in muscle and power is equal to half a dozen. His limbs are symmetrical—a mass of muscles—ears small and pointed; nose long; mouth deep; eyes large, lustrous, and soft as a woman's; color, a decided brindle, with bars of black across his back and loins; weight, 85 pounds. In body and limbs he seems all muscle, lithe, wiry, and as elastic as rubber. In disposition, as affectionate as a setter, playful and good natured; allows all my little King Charles dogs to bite his legs (they can't reach his body standing on their hind legs). I let him loose in the stable yard and he seemed perfectly delighted to have his liberty, and amused himself by leaping over a buggy that a groom was washing, and finally cleared a twelve foot fence as easily as he did the buggy. I thought I had lost him, but in a moment here he came back again, sailing over the fence—several feet over it, at that. He frolicked and played until he excited the ire of my old setter, Bob, who had been lying on a pile of straw, hugely disgusted with the attention the stranger was receiving. Bob evidently thought the thing had been going on long enough, and forthwith sailed into knagaroo, who did not seem to understand the cause of Bob's enmity, and wanted to play, but Bob was jealous and seized kangaroo by the throat. The new comer could take a joke, but the matter was getting serious, for Bob's blood was up, and he kept chawing away until kangaroo concluded that it was time for that fun to stop, and freeing himself, seized Mr. Bob by the scruff of the neck, and with no apparent effort slung him clear across the yard, twenty-five feet, and then continued his frolicking. Bob gathered himself up, took a good long look at his enemy, jumped up into the buggy, and could not be induced to come out again all day; and now, when he sees knagaroo about, he gives him the widest kind of a berth. I never saw such power in a dog, and never such a perfect specimen of symmetry.

My Australian friend writes me that by next steamer he shall send over a fine slut, fully equal to the dog. He could not get her in time to send with the dog. So I shall be all right on kangaroo dogs, but at the present writing am a little short on kangaroos. My friend will have to continue his favors and send me some. He says they are fine deer dogs as well, and I am going to take my new acquaintance down into the country in a few days to have a run with an old friend, who keeps a pack of greyhounds for coursing, and if my dog don't eat up his whole pack or sling them over into the next county, we shall have some fine sport. I have had some fine dogs in my day, and have some now—Gordon and Irish setters, pointers, etc.—but I never saw such a perfect specimen of a dog as my kangaroo. They are bred with a great deal of care in Australia, and are highly prized there, a good pair being worth £120, or \$600. At the present writing my leviathan is rolling on the carpet with a little three-year old girl, who has her little fist down his throat and kangaroo is enjoying it as much as she is. I will tell you more of my dog and of his performances when I have tried him. Yours,

PODGERS.

A VISIT TO MR. LAVERACK.

LONDON, England, August 9th, 1875.

EDITOR FOREST AND STREAM:—

On Thursday last, the 5th inst., our party of two took our departure hence for Whitchurch, Shropshire, via Crewe. The railway runs through a beautiful country, and the ride from Crewe to Whitchurch, a distance of some twenty miles, is remarkably pretty. From the station we drove to the Victoria Hotel, arriving there about five o'clock P. M. Whitchurch is a very ancient town, with old buildings, narrow streets paved with cobble stones, and kept scrupulously neat, and houses standing close to the roadway. The sidewalks, where they exist at all, are very narrow.

Next morning after breakfast we ordered our turn-out—a dog-cart with a fine black cob and a "tiger"—and drove over to Mr. Laverack's, about a mile beyond the station, arriving there a little before noon. This house—Bronghall Cottage—is nicely situated in a field, though inclosed by a hedge, a brick wall, and an iron fence. The stables, kennels and other outbuildings are on the side nearest the road. The two-story cottage, which is of unpainted brick, with a fine wide hall separating the parlor and dining room, fronts the other way. We found the famed breeder of English setters at home, and were received with a courteous welcome. This prompt invitation to remain and dine with him was gladly accepted, and we sent the dog-cart back to return for us at a later hour. Mr. Laverack, one of the oldest and most thorough sportsmen in England, is a gentleman well advanced in years, but his fine physical and mental preservation prove—if proof were needed—how beneficial to constitutional health and vigor are the exercise and air found while

"Walking o'er the meadows with a dog and a gun."

Our first visit was to the kennels. Old Dash, greatly to our regret, was in Scotland, but we saw, first, Cora, orange and white, but little ticked, a few spots on her side and with orange ears, head all white. Her markings are very dark, almost red—a beautiful deep orange. She is the mother of Ruby, now in America, and is the best and handsomest bitch we ever saw. Her head is perfect, though at first glance, owing to color and wave of hair, her ears look high, but they are not. She is of good size, larger than Fairy, who won your pitcher at Watertown, and is of long body, flat thighs, very much curved quarters, long feather like floss silk, and is nine years old. Take her all in all, she is a slasher!

The next to show was Blue Prince, four years old, sired by Pride of the Border. Prince is black and white, and is marked like Mr. Reid's Sam, with whose picture many of your readers are familiar, but is more ticked than he. Blue Prince is without exception the most beautiful dog we ever saw, though slightly under size. We had never before seen such a head, and the only way to describe it is to call it perfect to a hair. His coat is very fine, long and soft; his quarters droop, droop, droop; and his thigh is as flat as a pan-cake. His motions were perfection. We had already seen most of the famous Laverack setters outside of their home kennel, both in America and in this island, and are free to say that Blue Prince in looks and action is *facile princeps*, or, as we say in Brooklyn, he just "lays over" them all. He has but one fault, or rather misfortune: a second and severe attack of distemper left him with a slight twitching of the muscles of the hind legs. Mr. L., however, assured us that this does not in any way affect or interfere with his great speed and staying powers in the field, and his value as a stud dog is well attested by the finest progeny in England.

The next seen were two puppies three months old, by Blue Prince out of Cora. They were very fine—one black and white mottled, the other a perfect blue with a few black patches; in fact, almost as blue as a blue greyhound. Next four orange and white puppies, same age, by — out of a white and black bitch by Prince, one of which is named Fairy 2d. Fairy's American bred litter by Pride were, as we remember them, finer and bigger at the same age than any of these English puppies. Next the mother of the litter last shown—a very good setter, but in low condition. The last shown was Rock, and against him our admiration met with its first shock. He is black and white, three years old, with a nearly perfect head and very intelligent eyes. His coat, too, was fine, soft and thick. But his shape did not suit our American ideas of a well-made setter, being very long in the body and very short in the legs, which in their turn were not as straight in front as we like. He was, however, of the pure blood, and is for that reason preserved by his owner.

We were most hospitably entertained by the courteous and hale proprietor of this snug nest of cottages, and greatly enjoyed his well-matured ideas upon the subject of breeding his favorite strain. As an evidence of the success that has attended his efforts his sideboard is both a

thing of beauty and a joy forever. It is resplendent with silver flagons and jugs, a large silver tea kettle, beer mugs and claret pitchers with golden tops, while on his mantle ticks a beautiful French clock, all prizes awarded at different times to his dogs, and trophies of their winning. (To these must be added also many gold whistles, "et settery, et settery," as one of our party suggested.)

Mr. Laverack expressed his admiration of the portraits of Fairy and Pride which appeared in your pages, and bidding him good-by, we brought away with us many delightful and valuable recollections of the hours spent in his genial society. Yours truly, VIATOIRES.

Game Bag and Gun.

GAME IN SEASON IN SEPTEMBER.

Moose, *Alces malchis*.
Elk or Wapiti, *Cervus Canadensis*.
Hares, brown and grey.
Wild Turkey, *Meleagris gallapavo*.
Woodcock, *Scolopax rusticola*.
Ruffed Grouse, *Tetrao umbellus*.
Esquimaux Curlew, *Numenius borealis*.
Plover, *Charadrius*.
Godwit, *Limosina*.
Rails, *Rallus Virginianus*.

Snipe and Bay Birds.
Caribou, *Tarandus rangifer*.
Red Deer, *Caracus Virginianus*.
Squirrels, red, black and grey.
Quail, *Oxya Virginia*.
Pinnated Grouse, *Tetrao cupida*.
Curlew, *Numenius argus*.
Sandpipers, *Tyngana*.
Willetts.
Reed or Rice Birds, *Dolichonyx orizivon*.
Wild Duck.

GAME IN MARKET.—Yesterday saw the opening of the season for grouse in this State and the stalls are well supplied with both varieties. Pinnated grouse are selling for \$1 to \$1 25 per pair, the young birds bringing the latter price. The supply at present principally comes from Iowa. Ruffed grouse, called indiscriminately partridge and pheasant in this and adjoining States, are not in such plentiful supply, but the receipts will probably increase; the price is \$1 25 to \$1 50 per pair. The season promises to be a prolific one for both varieties. A few woodcock are still in market, and sell for \$1 25 per pair. Reed birds have also appeared; price \$1 per dozen. The scarcity of bay birds in the market does not indicate much sport on the shores and marshes. They sell for from 50 cents per doz. for the smaller to \$1 50 for the larger varieties.

—A large number of the correspondents of FOREST AND STREAM are going this week and next to Rice Lake, Canada, for ducks. This resort, and the Thousand Islands, have long been favorite shooting grounds for sportsmen during the month of September, one of the most glorious months in the year in that latitude. We understand that the hotels will keep open throughout the month. Indeed, the golden sun that has now superseded the long, wet August, has brought a sense of relief to the discomfited and weather-bound sojourners in the country, and created a new incentive, not only for those to prolong their vacation, but for others to follow them into the fields and forests. It seems altogether probable that the Autumn will be long and golden, and that the mildness of our Indian Summer will be continued into the later months. Scientific men base such an opinion upon present meteorological conditions. A pleasant and cheap trip for a shooting party is to take the steamer from Charlotte (port of Rochester) across Lake Ontario to Port Hope and Cobourg, Canada, and thence twelve miles by wagon or rail to Rice Lake; after a few days there, take rail or steamer to Kingston, and thence steamer to the Thousand Islands, Clayton, and Alexandria Bay.

—An acquaintance on Long Island informs us that Mr. Nathan Raynor, two miles by stage from West Hampton railway station, can accommodate a party of four during the duck season. West Hampton is seventy-five miles from New York.

—The Connecticut State game club is taking active steps for the detection of parties who are killing birds out of season. Those who are anxious to preserve the game birds of the State should promptly report every infringement of the game laws to the Secretary of the State club.

—We have received one of Dudley & Co.'s recappers, a useful little instrument by which the sportsman can be aided in recapping his cartridges in the field. It is small and compact, and the price only 50 cents. Messrs. Dudley & Co.'s address is Poughkeepsie, N. Y.

GROUSE IN GREAT BRITAIN.—The grouse season, which opens on the 12th of August, appears to be more promising than the two which have preceded it. The severe Winter seems to have had the effect of killing off the weak and sickly birds, leaving only the vigorous and healthy to propagate their species. The prices asked for the birds in the London markets on the first day of the season do not indicate any very great abundance of game, 24 shillings sterling, or \$6 currency, being asked for a brace. On the following day, however, prices had been reduced to 10 shillings (\$2.50) per brace for the old birds, and a guinea a brace for the young ones. Grouse shooting, being followed over comparatively treeless moors, is somewhat akin to our prairie chicken shooting, and is the perfection of gunning, as your dogs are in full sight, there being nothing but the heather to obstruct the view. With regard to the dogs best adapted for moor shooting, we take the following from the *Field*, the same remarks applying to prairie shooting:—

"Very great difference of opinion exists as to whether pointers or setters are best suited for grouse shooting. Some men will tell you there is nothing like a pointer, while others swear by the setter. The fact is, I have seen first-rate dogs of both breeds. The setter has advantages in some ways, while the pointer has the pull over him in others. If the weather is such as we sometimes have in August—boiling hot, with a scant supply of water to be had—then the pointer is the best dog, as when in condition they do not mind the heat very much, and they do not feel the want of water nearly as much as their longer-coated brethren. The setter, however, if the weather is cool and

water to be had now and then, will stand more work than the pointer; and, as a rule, his feet bear knocking about much better, which is a great consideration for a man who only keeps a small kennel, and expects them to stand work regularly through the season. It is often a matter of wonder to me how dogs that spend most of their lives shut up in a town, and come down to the moors perhaps the very day before the shooting, get through their work at all; and I generally arrive at the conclusion that the dog's master is, like the dog himself, out of condition, and consequently not able for hard work, and so the dog gets two or three days to pick up his wind."

MAINE.—Hallowell, Aug. 23.—I am just starting out for a hunt. My bag of woodcock for the season is sixty birds. LORD.

RHODE ISLAND.—Newport, R. I., Aug. 30.—A party of sportsmen shot forty-one grass plover and green-heads yesterday afternoon on Bateman's point. A few teal, wood duck, and young black ducks have been shot in the ponds back of the bathing beaches. Our marshes, which were once famous for all kinds of bay snipe, are silent, not more than a good "baker's dozen" having been seen this season. SHOT.

NEW JERSEY.—Beach Haven, Aug. 30.—Bay bird shooting has been bad the last week, owing to the northeast which has prevailed. With a change of wind it will undoubtedly be as good as the week previous. Fishing, however, has been good. Jay Cooke and a friend made large catches of weakfish, and "Homo" was quite successful with striped bass, which have just begun to come. E.

NEW YORK.—Watertown, Aug. 28.—A friend at Cape Vincent went out for plover yesterday, but only succeeded in getting a shot at one. He was, however, fortunate enough to bag eighteen snipe without much labor. S.

Good Ground, L. I., Aug. 24.—Wm. Lane, Jr., and G. B. Eaton, of the Sportsmen's Emporium, on Monday bagged 52 bay snipe, consisting of yellow legs, willets and marlin before 9:30 A. M.

PENNSYLVANIA.—Baden, August 28.—At Conequeensing Creek, where it empties into the Beaver Creek, near Clinton, there has been a pretty good hotel started in the old Lock House. Any one going there can be sure of good accommodations. Quail and grouse are about as plenty as usual, but there is not so many now as there was two years ago. Squirrels are not so plenty, although in some places there are a good many.

Pittsburg, Aug. 25.—Quail and grouse will be abundant this season in the counties surrounding here. AUGUSTINE.

VIRGINIA.—Nottoway, Aug. 27.—We shall have plenty of quail; shooting hard, and cover very thick. T.

TEXAS.—Gainesville, Aug. 20.—No hunting news; Col. McCarty has passed back toward Denison lately because the "grasshoppers had eaten the grass up." Capt. Rowland and some others camped on Dry Elm, eight miles west of this place one night last week, and next day brought back two deer and three turkeys. P. B. Storar and four others recently returned from a two week's hunt and brought back twelve deer.

—The Franklin Fish and Game Club has its headquarters at Greenfield, Massachusetts, among the Green Mountains, and is destined to do some good there. Its officers are Samuel L. Lyons, President; Henry R. Simons, Vice President; R. A. Packard, Treasurer, and Charles Allen, Secretary.

JAMES WARD'S SKILL.—A short time ago James Ward, the champion pigeon shot of Canada, offered to bet \$100 that he would shoot 50 pigeons out of 60 under the following conditions:—30 single birds from ground traps 21 yards rise, and 15 pair of "doubles," 21 yards rise, the two traps to be placed ten yards apart. The bet was accepted, and was decided last week at Toronto. Of the 30 single birds not one escaped, and of the 30 in pairs, Ward succeeded in killing 24, making a total of 54 out of 60, thus winning his bet.

—In a pigeon match on the grounds of the Narragansett Gun Club at Newport, Aug. 28th, between Messrs. P. Grund and J. Van Buren, for \$500, 50 birds each, distance 30 yards, Grund took 32 birds and Van Buren 37.

—The Lexington (Ky.) Hunters Club have recently held a three day's pigeon shooting tournament, which brought together a large number of sportsmen. Our space will not permit of a detailed account of the result, but we summarize it as follows:—

FIRST DAY—WINNERS.—First match, T. J. South; second match, S. G. Sharp; third match, C. Woodford; fourth match, E. P. Gaines; fifth match, J. A. Headley; sixth match, C. Bradley.

SECOND DAY—WINNERS.—First match, A. Harris; second match, J. H. Kerr; third match, J. B. Beck; fourth match, J. A. Headley and Jun. Smith; Eighth match, C. H. Vorhies.

THIRD DAY—WINNERS.—First match, M. D. Richardson; second match, H. C. Elder; third match, Jas. Gilroy; fourth match, L. L. Herndon; fifth match, S. W. Bagge; sixth match, T. Woolley.

THE SHOOTING SEASON IN MINNESOTA.

BRAINERD, Minn., August 26th, 1875.

EDITOR FOREST AND STREAM:—

The season for "chicken shooting" opened on the 15th of August, and promptly on time the sportsmen left town, and in a day or so after the birds began coming in, some in huge bunches, consigned to the hotels, others in small packages, half a dozen in a bunch, sent in by some thoughtful sportsman to his friends in town. The grouse are well grown for the season, and in remarkably fine order. Letters from friends along the Northern Pacific west of this point, as well as personal observation, tend to confirm my former opinion that game of all kinds will be plenty in this section this Fall. The Summer having been very dry, chickens are mostly found around "slews" or swampy places, and in brush near the edge of prairies. In a couple of weeks they will be more in the open, and when the wheat is cut one wants to look for them where he would look for quail if "down East."

At the stations near the Leaf and Otter Tail Rivers ducks are very plenty—more so than usual. They also can be shot on the wheat stubble; they are of all kinds common to the North, and with "stacks" of chickens and clouds of ducks, what more does a sportsman want unless it is a "never-tiring dog and a never-falling gun?" A September day on a Minnesota prairie with the above mentioned style of dog and gun is something that once enjoyed will not soon be forgotten.

Ruffed grouse are not as plentiful as they were last season, still if one

is a good shot, and has his dogs under good control in brush, he can get all he wants to pack. The season for these birds commences September 1st.

Deer will be very plenty this Fall; very few Indians have been about here this Summer, consequently the does and fawns have not been molested, for when the Indians let them alone so does the white man, but it is provoking to see in August or September, (deer shooting does not commence lawfully till October 15th,) a big, lazy brute of a Chippewa come into town with his squaw bent double under the weight of a saddle of venison and know that you dare not kill a deer. "A white man is as good as an Indian," and more than one deer has "come to grief" prematurely that would have been let alone till later if the Indians were made to observe the laws as the white man does.

Quite a number of gentlemen from the East, who have evidently "gotten their bearings" from reading the FOREST AND STREAM, (and where can they get more varied or more correct information?) are expected here about the 1st of September. Mr. Marble and friends of Worcester, Mass., will be here shortly, and several others, who have found out through your paper that along the Northern Pacific is a "happy hunting ground," will be here about the 1st of September prepared to take the grouse and ducks. There is room for as many as choose to come, and grouse enough for all. T. P. C.

SHOOTING AT BARNEGAT.

ELIZABETH, N. J., August 16th, 1875.

EDITOR FOREST AND STREAM:—

On Thursday, the 12th inst., I started with my wife, child and gun, on board the 7:45 train on the Penn. Cen. R. R., for Barnegat Bay, to get a sniff of ocean air and to kill a snipe or two. Arriving at Squan, we took stage for Charlie Maxon's, where, after eating a good, hearty dinner, we were driven over to the landing to find the yacht Rover, Capt. Chadwick, in readiness to sail us down the bay to Billy Chadwick's gunning house, where we proposed stopping. After being cordially welcomed by "Uncle Billy," who is the best of hosts, we ascertained there were five gentlemen guests there, one of whom was accompanied by his family. This was good news for Mrs. W., who had feared she would be, possibly, the only lady guest there.

At 4 A. M., Friday, we were called, and those gentlemen wishing to have a chance at the birds before breakfast, we were quickly dressed, and picking up guns and ammunition were on the move for the shooting grounds, distant about 500 yards from the house. The early morning was not favorable, as but few birds were flying; but at 3 P. M., up till dark the shooting was excellent. I shot one and a quarter days, fired sixty times, and killed by count seventy-five birds. I returned home on Saturday, bringing the birds packed on ice, by express, with me. They furnished dinners for five families. There were ten varieties of snipe.

The wind has been blowing for seventeen days incessantly from the southward, causing the ocean to roll up a tide which never leaves the bar until a change to the northward takes place. The best shooting will take place then, as the birds will have feeding grounds where now they can't alight. It was my good fortune to meet there the finest body of true sportsmen that I ever met in a strange place; gentlemen in the literal signification of the term, and who, individually and collectively, heaped such courtesies and kindness upon the writer that he will never forget them nor Barnegat. One of them has annually visited the house for the past forty years, another for twenty-five, and they together own some of the finest points for duck shooting on the bay. Any praise offered Uncle Billy is superfluous; it has been sung too long and by better men than of this generation. He don't "run" his house; his guests do it for him—they order and he obeys. Any one who goes between the 25th of August and 20th of September, will find the shooting all that can be desired, and if he is not satisfied with his trip, I would say to him on his return, "Go West, young man! go West!" for that country alone can satisfy him, if any can. Fare by Penn. Cen. R. R., excursion ticket, good for one month, from New York, \$3.00; stage, dinner and boat up to Chadwick's, \$2.50; board, \$2.00 per day. Respectfully yours, E. S. WANMAKER.

CHICKEN SHOOTING AROUND CHICAGO.

CHICAGO, Ill., August 15th, 1875.

EDITOR FOREST AND STREAM:—

For the past week there has been but very little talked about among the boys besides chicken and the best places for hunting them, and there were innumerable bets made on which party would bring the most chickens home with them. The favorites were two old hunters and trappers, who have lived around Chicago for years, and know the country by heart for miles around. We younger boys took all the odds they offered, and so the excitement grew apace as the momentous day approached. My partner for the hunt was an old Irish sportsman, who had been an under gamekeeper on some estate in the old country, and who is the possessor of one of the best dogs in the city. Our party and the two old trappers both left about the same time—about 3 P. M. Friday—we going west along the Whisky Point road, and they going south by way of John Wentworth's (commonly called Long John) farm. We did not stop until we reached a small station on the C. & P. R. R., about twenty miles from Chicago and eighteen from Elgin, called Itaska. Here we put up for the night, and about 3:30 next morning we were in the buggy again. As we were driving along the road, just as day was breaking, I saw a single chicken in a stubble field. He held until I was almost on top of him, when away he started, but you bet he did not get far. First blood for me. Letting the dog loose he was not long in putting up three more, and we got two of them, the third getting up out of range; and so the sport went on for about thirty minutes, when up comes one of those fierce thunder storms, and the way it did rain for all of two hours was a caution; and we poor devils had to take it just as it came. The only shelter we had was a stack of oats. When the rain was over, two more miserable looking sportsmen you never saw. We were covered with mud and oat chaff and wet to the skin, and throughout the rest of the day there was as many as a dozen little squalls of rain, and the roads were little better than a slough. We had very good luck along towards evening; we got everything we saw worth shooting—in fact neither of us missed a shot until about 5 P. M., when we got in a covey of chickens in a potato patch. It was raining when we loaded, and perhaps the powder got damp, and my gun failed to go off, and of course away went the chickens, and when Pat saw the chickens flying away he got mad, or excited, and blazed away right and left at the same chicken I was trying to shoot; but the chicken was a long way out of range before he shot. No sooner had he emptied his gun when, from almost under my feet, flew out the rest of the flock—the old hen and about ten half grown young ones. O, wasn't I mad, and I do believe I said some prayers for their benefit about that time. As quick as possible we loaded up again and followed them over into an oat field, and I had the luck to raise two and drop them in fine style, right and left. We did not get any more chickens after that, for they ran into the cornfield and it is impossible to get them out of there. We now had fourteen chickens and seven large plover. I call them whistling plover; is that the right name? And so we started for home, where we arrived muddy, wet and tired, about 6 P. M. I guess we had been home about thirty minutes, when who should I see coming along in a worse fix than ourselves, if possible, but Jake and his pard—our rivals—with only one chicken apiece. They got nearly drowned out where they went.

They report that Mr. Wentworth has put poisoned meat around on his farm for wolves, and so it is dangerous to let the dogs work. The chickens are very scarce and hard to find, for they lay close in the corn. We are going out again in a couple of days after that covey we missed yesterday, and I hope to have as good luck as before. Yours,

J. H. READING.

KAY SHOT CARTRIDGE.

New York, August 3d, 1875.

EDITOR FOREST AND STREAM:—

A short time since I had occasion to visit Newark, N. J., on business, and having some spare time I thought I would step in and see, if possible, the mode of manufacturing the article whose name heads this communication. I had heard something of it from my friends in Newark, and was glad to have an opportunity of inspecting its manufacture. It may be well to state that the inventor, Mr. A. B. Kay, has for many years been the leading gunsmith and dealer in sporting implements in the flourishing city of Newark, and that from his conversance with guns in general, he found that the shooting of most of them was far below what it should be, hence his invention. He has shot, in the gallery attached to his establishment, many hundred guns, which have been brought there to be repaired or for the purpose of having them tried at a target. The knowledge thus acquired that shot guns were uncertain things at a target led him to invent and perfect the cartridge which bears his name, and he thinks it is certain to give satisfaction to the sportsman. In this I am inclined to concur, judging from the comparison between targets made with loose shot and those with the cartridge, many of both kinds being preserved in his store to convince the doubters. Well, to resume: I was met in the store by Mr. Kay, who introduced me to his partner, Mr. Robert Kay, and several other gentlemen, who had dropped in to talk on sporting matters. On stating my business I was cordially invited to inspect the working of the various machines for making the cartridge. On the first floor is the boiler to supply steam for working the engine up stairs. The latter is of Lilliputian proportions, but of great power, to judge by the way it made things hum. The buckram, of which the cartridge is made, is first cut into pieces of circular form by means of a large punch, and is then wet slightly to make it pliable. While in this state it is put through a set of dies, which form the disks into little cups. The dies are heated by gas jets, so that the buckram is dried during the process, and are so constructed as to lay the folds of the stuff with mathematical precision, thus securing regularity in opening when shot from the gun. After this process these cups or cases are taken to a little machine, which trims the rough edges, and they are then ready to be filled, except those used for the long range cartridges, which go through another process by which they have another case put inside of them, reversed, and with a hole cut in the top.

Now comes the machine. These cases are put one by one into little cups made to receive them, and of which there are about a dozen. The cups are on a revolving table, which stops as each cup comes under the "charger," which fills it with shot measured to a pellet. Another stop and the wad is put in, and after this it passes round until it comes under the part of the machine called the "turner," which turns in the end of the case similar to the way paper shells are crimped. The cartridge is now complete. The beauty of the last machine is its perfect time. As one cartridge is being turned in, another is receiving its wad, and still another being filled with shot. So nicely does it work that one could watch it for an hour. It was designed by a Mr. Chapman, an English gentleman, now resident in Newark, and who is at present perfecting a double machine for the same purpose with the view of taking it to England and starting the business there to supply our transatlantic cousins. If all the sportsmen of the country could be convinced of the excellence of this invention I have only to say that a very brilliant future would open to Messrs. Kay & Co. One could hardly believe that guns bored on the "double close" principle practiced by Messrs. Green, Pape and others could perform as badly as they do. Mr. Kay has a great number of targets, made with loose shot, by guns of such makers as Purdey, Richards, Greener, Scott and others, but the use of this cartridge will be found necessary to perfect the shooting of even these, and besides very inferior shooting guns may be made equal to the best by the slight expense incident to the use of these cartridges. They are made of two kinds—the "field" and the "long range" cartridges. The first are intended to be used for ordinary shooting, for convenience in loading and handling. They also increase the regularity of pattern. The second may be used like Eley's wire cartridges, but with the advantage which cannot be found with the latter—that is, uniformity. All I saw shot were as if the shot had been put in by hand, so regular was the distribution. What an advantage they would be for pigeon shooting! You could "knock a bird endways" at fifty to seventy-five yards. Mr. Kay reversed one or two cartridges to show what they would do, and they acted like solid shot, tearing a hole in the target an inch in diameter; very useful in case a bear or panther should be met.

I do not wish to be considered as giving any opinion in regard to the merits or demerits of these cartridges, preferring to leave the same to the judgment of those who try them; but they certainly seem to me to be just the thing which is wanted, and I hope many of your readers will give them a fair trial and report the same at an early day. We have had arguments on boring and the Dittmar powder; will not cartridges be an interesting subject? Yours truly,

CHOKE BORE.

PITTSBURGH, Penn., August 14th, 1875.

EDITOR FOREST AND STREAM:—

I noticed in your paper of the 12th inst. a gentleman of Cleveland asking for information concerning chicken shooting in Iowa. I have shot in Iowa for a number of years, and believe the best grounds in the State are to be found at Garner Station, Hancock county, and extending on out to Angola, the terminus of the Northwestern Railroad. By going back from the railroad a few miles, anywhere between the above named stations, you can have as fine shooting as can be found anywhere, and will always find a good class of farmers to stay with. Our party will leave Pittsburgh August 31st for Garner; we will be in camp at Twin Lakes, nine miles north of Garner, for four weeks, and will be happy to entertain of the readers of your paper who may wander out our way. Get off at Garner and mine host of the Elder House, big Bob Elder, will pilot you out to Cottonwood Grove Camp. If not too lazy when I get back, I will do what I have long been threatening—that is, send you an account of our trip. Yours,

J.

[We know of some of our subscribers who will be more than thankful for the information so kindly given.—ED.]

GAME LAW OF ONTARIO.—Moose, reindeer, or cariboo, deer and elk may be killed from the 1st day of September to the 1st day of December. Wild turkeys, grouse, pheasant or partridges from the 1st day of September to the 1st day of January; quail 1st October to 1st January; woodcock 1st July to January; snipe 15th August to 1st May; waterfowl, which are known as mallard, gray duck, black duck, wood or summer duck, and all the kind of duck known as teal, from 15th August to 1st January; hares or rabbits from 1st September to 1st March. No person shall have in his possession any of the said animals or birds, or any part or portion of said animals or birds during the period in which they are so protected; provided that they may be exposed for sale for one month and no longer after such periods, and may be had in possession for the private use of the owner and his family at any time; but in all cases the proof of the time of killing or taking shall be upon the party of possession. It is enacted that no beaver, muskrat, mink, martin, raccoon, otter or fisher shall be hunted, taken or killed, or had in possession of any person between the 1st day of May and the 1st day of November. The penalties attaching to transgression of this law are as follows: In case of deer, elk, moose, reindeer or cariboo, \$50, and not less than \$10; in case of birds or eggs, \$25, and not less than \$5; in case of fur-bearing animals, \$25, and not less than \$5.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

Land-locked Salmon, *Salmo gairdneri*. Salmon Trout, *Salmo fontinalis*. Black Bass, *micropterus salmoides*, *micropterus nigricans*. Striped Bass *Roccus lineatus*. Sea Trout, *Salmo immaculatus*. Bluefish, *temnodon solitator*. Weakfish.

Trouting is permitted in Maine until October 1, and in Canada until September 15th. Salmon fishing with fly is permitted in New Brunswick until September 15th. Land-locked salmon and salmon trout in season till September 15th.

[Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—Fishing prospects have been more brilliant during the past week than for some time past; bluefish have "struck in" in large quantities, both in this vicinity and off the capes in the Vineyard Sound; those coming from the East are large, averaging ten pounds in weight, while those taken in this vicinity rarely exceed five pounds; price 8 to 10 cents per pound. The supply of Spanish mackerel is falling off rapidly, and receipts do not verify the predictions formed early in the season of a large supply. Up to this time only about one half the usual quantity have been taken, and those now received come from the Long Island shore; they sell at 40 to 50 cents per pound. Large striped bass are arriving from Rhode Island. We saw a lot of splendid specimens at Blackford's, Fulton Market, twenty of them averaged forty pounds each, price 20 to 25 cents per pound. Halibut are worth 20 cents; blackfish, 18 cents; sea bass, 20 cents; eels, 20 cents; sheepshead, 28 cents; frozen salmon, 50 cents; fresh mackerel, 20 cents each; green turtle, 20 cents per pound; soft crabs, \$1 50 per dozen; frog legs, 50 cents per pound.

—Our harbor and bay are swarming with little bluefish, known as "snapping mackerel." They are taken off the wharves with light tackle and float, shrimp bait, in large quantities and afford excellent sport, not only to the gamins, but to complete anglers.

—Weakfish are being taken between Bedloe's Island and Gowanus. Several boats can be seen on the ground every day.

THE SHORT CATCH OF MACKEREL ACCOUNTED FOR.—An old fisherman, who has followed the business for half a century, (a pretty observing man, too) with whom we were conversing yesterday, says there will not be any great catch of mackerel until we have a storm, and after that the fleet will get a good haul. Now, he says, when it has been such a long stretch of calm weather, the mackerel are busy feeding on bottom among the rocks, and mix in with other fish, schooling but little. This accounts for there not being any schools seen recently, the few mackerel which have been brought in having been taken on the hook. A storm would stir up the water, and cause the mackerel to school again and change their feeding ground.

—The mackerel seem to have struck in along the eastern coast of Nova Scotia. Quite a large number of moderately large stops have been seen at the various coves along the western shore of Halifax harbor during the past few days.

—John W. Nicholson, Esq., of St. John, New Brunswick, who is one of the very best salmon anglers in America, returned last week from a month's fishing on the river Nepisiguit, N. B., of which he is partly owner. He had his wife and family in camp, seven persons in all. Although a poor season, Mr. Nicholson had not a blank day; his best day's score was fifteen fish. Mrs. Nicholson landed two salmon from her own canoe.

—Gen. W. H. Whipple, U. S. A., Rev. M. W. Reed, of Wisconsin, Rev. Mr. Heberton, of Columbus, Ohio, and Cap. Miner, U. S. A., are among the anglers who have fished the Nepigon this Summer, and all express their astonishment at the size of the trout found there. Mr. Vernon is the name of the Hudson's Bay agent who has taken the place of Mr. Crawford, at Red Rock.

—G. H. Taylor, and four friends, of Columbus, Ohio, Capt. Coxeter, of Charleston, S. C., and Mr. Higby with a party of six from St. Paul, have just returned from the Nepigon, Lake Superior. The average weight of 251 Nepigon speckled trout, (*Salmo fontinalis*), from a score carefully kept by Mr. Avery, of the Elgin Watch Co., Chicago, in 1873, was a trifle over three pounds apiece.

—Messrs. Kitchen & Wilmot caught a few days since in the Avon River near Windsor, one of the largest horse mackerel ever taken in Nova Scotian waters. Weight, 600 pounds; length eight feet seven and a half inches; girth six feet six inches at largest part; tail two feet across.

MENHADEN FISHING ON LONG ISLAND.—Greenport, August 24.—Last week, ending 21st, moss bunkers were in the greatest abundance in Gardiner's Bay, and around Plum and Gull Islands and in Plumgut. Indeed the Sound was full of them as far as Fisher's Island. The fleet of fishing vessels have seldom in former years had such success in taking them. There were some thirty gangs out and their catch averaged 200,000 each. One vessel got 80,000 fish at haul. One vessel lately got at one haul over 200,000. Last week the Anna Homan got 300,000 in the week's fishing, and the Agnes numbered 260,000, and some other vessels probably exceeded even that number. These fish are at once disposed of to the fish factories, receiving about \$1.50 per thousand. Each vessel carries a crew of eight men, and is attended by a smaller craft called a "Car-away," in which the fish are placed as fast as taken by the seines, and then carried to the several factories, the chief

of which is in Napeague Bay. The oil is there pressed out and the remains of the fish packed in barrels or bags for fertilizing purposes; and it makes a very strong manure. Hundreds of men are here (Greenport) dependent upon this business, and when such luck comes as that of last week, they are highly exultant, and the proceeds of the work fills their pockets, for use in the coming Winter. One of these boats, last week, took a shark sixteen feet in length.

J. McL.

THE FISHERIES.—The number of fishing arrivals at this port for the week ending August 25, was 79—46 from Georges, 16 from the Banks and 17 from mackereling. Amount of Georges cod brought in is 775,000 pounds, halibut, 40,000 pounds. Bank cod, 1,450,000 pounds, halibut, 107,000 pounds. Mackerel scarce as ever, only about 600 barrels having been landed the past week.

Schooner Andrew Leighton, Capt. Olsen, arrived from the Grand Banks on Saturday with 107,387 pounds fresh halibut, and 10,000 pounds codfish. Her stock amounting to \$3,250. Time absent, four weeks.

Schooner Col. Ellsworth, Capt. Howard, which has been absent the past month on a voyage to the Bay of Islands, Newfoundland, for salt herring, arrived home on Friday last, with no fish, it being early in the season. She reports the Labrador fleet as doing very poorly. Twenty sail of vessels belonging to Nova Scotia were returning home without fish.

Same good mackerel fares are now our greatest need. The August cast has proved a failure, but September may show a better result, at least we hope so.—Cape Ann Advertiser, August 26.

—The Gloucester schooner Wyoming, on her last trip to Georges Bank had a narrow escape from sinking, through the attack of a swordfish. The sword was run through the planking of the vessel some two feet, and in the struggles of the fish broken off and remained in the aperture, otherwise a leak would have remained sufficient to sink the vessel.

—The largest lobster which has been brought into the Boston market for fifteen years was caught at Eastport, Me., last week. It measured three feet five inches in length and weighed nineteen pounds.

NEW YORK.—Syracuse, Aug. 28.—Yesterday afternoon, in about three hours, in Oneida River, near Bremerton, and four miles below Oneida Lake, I took seventeen black bass, and a lot of cheap stuff, on a trout fly rod, using my trout leader and cast of small flies. That was an experiment, but eminently satisfactory. I found I could "set" the hook every time and the fish couldn't get away. Four times I took a pair of black bass, and once I took two black bass and two rock bass—12 fish at five hauls—and got them all in. I had on four flies, and took all there was room for for once.

A. J. N.

Thousand Islands, Aug. 28.—The hotels at Alexandria Bay are full, and the fishing reported much better than last month. Black bass do not take the fly at all, this is accounted for by the fact that the surface of the river is literally covered with eel flies, consequently the fish are gorged with them; however, many are taken still fishing with minnows. Many muscalonge are being taken now upon the St. Lawrence, ranging from two to forty-five pounds.

S.

NEW JERSEY.—Kinsey's Ashley House, Barnegat Inlet, August 28.—Bluefish scarce. Weakfish ditto. Striped bass are getting more plentiful, blackfish and sea bass very thick and running very good size, from 1 to 4 pounds, are taken daily from the stone pile in front of the house.

We quote the following catches, all taken on the slack tides each day.

August 24.—L. A. Oakley, of Elizabeth, 57 blackfish and sea bass; A. W. B. Crane and D. Benedict, of Newark, 40 blackfish and sea bass.

August 25.—H. Swansboro, H. M. Vreeland and Judge Derby, of Cranford, N. J., 20 sea bass; Gen. L. A. Oakley, 35 blackfish and sea bass; Crane and Benedict, 72 blackfish and sea bass; J. N. Kane, 20 striped bass, weighing 42 lbs.; Nelson Soper, 32 lbs. bass (striped.)

August 26.—Vreeland and company, 30 sea bass; Crane and Benedict, 82 sea bass and blackfish.

August 27.—Crane and Benedict, 56 sea bass and blackfish.

August 28.—Crane and Benedict, 25 blackfish; J. W. Starns and E. D. Beach, of Troy, 8 blackfish.

Messrs. Crane and Benedict attribute their success to having employed the well-known fisherman, Dad Parker.

K.

PENNSYLVANIA.—Bucks County, August 25.—The black bass have been very lively on the Upper Schuylkill. Send any one to Paulin's Bridge, Perkiomen Station, Montgomery County, Pennsylvania, Reading Railroad, for black bass, 25 miles from Philadelphia. Two and three pounders are common, and you never fail to make a basket.

W. C. H.

CALIFORNIA SALMON.—When to Take them with a Fly.—Three or four years ago our Eastern anglers would have given considerable for the information so kindly furnished us in the following letter. The prevalent opinion among them then was, that the Pacific salmon would not rise to the artificial fly, and asseverations to this effect were made repeatedly by anglers who had thoroughly tested the rivers (they said,) without reward. They had gone there, it seems, in the Summer months, at the season corresponding to the salmon season of Canada. Hallock's "Fishing Tourist," published in the Spring of 1873, informed these gentlemen that they had experimented at the wrong time of year; that the seasons there were different from the seasons here; in fact, that (we quote,) "the Pacific salmon can be caught with the fly at any time after the Fall rains commence." This accompanying letter, it will be seen, corroborates that statement, and makes the way easy for any of our anglers who desire hereafter to fish for the California salmon with fly. This journal, in the course of its publication, has given a great deal of information on this subject which, if culled, would be of great service; but here our readers have the whole story in a nutshell:—

SAN FRANCISCO, August 16th, 1875.

EDITOR FOREST AND STREAM:—

An enthusiastic friend of mine, who, somewhat like myself, does a great deal more talking on the fishing question than fishing—he because he is lazy, with lots of time on hand, and I because I have no time—said to me, "Why don't you let us Eastern fellows know all about your salmon fishing in time; tell us when to come, etc., so that we could get out you

way at the proper season." That he may have no excuse, and for the information of others, who, perhaps, may feel like taking a trip as far as California the coming Fall, I write to say that our salmon come in the rivers along the coast in October, and for about six weeks we have the finest salmon fishing in the world. The fish run into all the rivers after the first rain, generally about the 15th of October, and remain until later and heavier rains raise the waters, when they run up the streams as far as they can go. For about six weeks the rivers are full of them, and they then take the fly, bait, and spoon. Some seasons they bite well at the fly, then again they will not raise to it, but they can always be taken trolling with the feather spoon. In the Navara, Noyo, and Big rivers they are abundant. These rivers are about ninety miles up the coast, accessible by railroad and stage. The accommodations are fair; board \$2 per day. Boats and men to row can be had at reasonable prices, and fine sport it is to haul in twenty-five-pounders every ten minutes. I have caught forty and fifty in a morning and evening in, say four hours' fishing. Tackle should be of the strongest description, for they are awful fellows to tear and twist. The best tackle is the regular striped bass rig, heavy rod, large reel, and plenty of line. Spoon baits should have two or three hooks, wire snells, twisted at that. Bluefish tackle is none too strong, and is, in fact, just the thing. If any of your Eastern fishermen are disposed to come out give them my address, and I will take great pleasure in putting them on the right track and posting them fully.

PODGERS.

—We copy from the San Francisco *Ledger* herewith some salmon scores from the McCloud River, the cold and dashing stream upon which the United States Fishery is located.

SODA SPRINGS, Siskiyou County, August 13th.

DEAR SIR: I returned yesterday with Mr. and Mrs. Goodman from a week's fishing on the McLeod, and will very gladly give you an account of our sport.

To commence with the fishing in the Sacramento, I give you the result of my last six days, as under. Mr. Goodman only fished one day for salmon, on which he caught twelve, weighing altogether 166 pounds, but brought in the largest baskets of trout that are ever seen here, culminating in a catch of 200 in one day without any undue labor, or ever having rendered his pleasure a toil. I confined myself entirely to catching salmon, and scored as follows:

July 23, four salmon—12, 12½, 7½, and 8½ pounds each.
July 24, seven salmon—23, 9, 7, 17, 15½, and 17 pounds each.
July 26, seven salmon—13, 15, 6½, 23½, 11, 21, and 10 pounds each.
July 27, fifteen salmon—3, 8, 14, 10, 4, 15½, 7, 9½, 17½, 18½, 12, 2½, 6½, 16, and 16 pounds each.

July 29, twenty-seven salmon—7, 19½, 9, 15, 14, 13, 13, 9½, 15, 10, 11, 15, 14½, 21, 15, 2, 6½, 15, 13, 9½, 15, 2½, 12½, 7½, 13, and 13 pounds each.

August 2, six salmon—13, 13, 17, 13, 20, and 15 pounds each.

The McLeod River was swarming with salmon. We killed a good many "Dolly Vardens," (the local name for a large species of trout,) the average run of which were about 4½ pounds, and found that they took both spoon and minnow greedily. The salmon, notwithstanding their want of condition, averaged at the very least seven pounds more than those of the Sacramento, and became a perfect nuisance from the persistent manner with which they seized spoon, phantom bait, or anything they could get hold of.

I have fished in most of the best rivers of Scotland and Ireland, as well as in Nova Scotia and Norway, and consider the rivers here as equal to any, and superior to most of them. As in Scotland, Ireland and Norway a man has to pay from \$500 to \$1,000 for a single season's fishing, the Californians are to be congratulated on having such sport for nothing, though possibly for that reason they do not value it as highly as they ought. The ordinary trout fishing in the McLeod is superb.

ROSE PRICE.

—The San Francisco *Commercial Herald* of August 19 quotes the market well supplied with Oregon salmon that sell as low as \$6.00 for whole barrels. These very low prices are explained by the astonishing abundance of these fish which now fill the Oregon rivers. To illustrate, we quote from the *Pacific Tribune* of August 6, printed at Seattle, Washington Territory:

"Probably as heavy a haul of fish as was ever made on the Pacific Coast was that of the Puget Sound Salmon Company, at Muckilteo, yesterday morning. By actual count 2,900 salmon were taken at one haul of the seine, the fish averaging seven pounds each, making an aggregate of over 20,000 pounds. A previous haul, on Monday last, brought in 1,000 salmon, of about the same average size. Few or no other fish were taken in the same seine. So heavy was the haul of yesterday that the men could not drag it ashore, but were obliged to leave it in shallow water till the tide left it bare. The first fish of the present season were taken about ten days since, the run increasing rapidly from that time to this. The salmon are not canned at this establishment, but barreled. So far four men only have been employed in the work, but the force will be doubled at once. The season will last until the 1st of November.

THE ADIRONDACKS.

CAMP GEO. E. HART, ROLLINS POND, August 19th, 1875.

EDITOR FOREST AND STREAM:

It is raining to-day, aye pouring in torrents. We are loafing. As yet no noble buck hangs from yonder limb, but we hope one will. No trout as yet has been deceived by incomparable flies, which we were assured were taking and never failed. The woods have a goodly number camping out, but many more remaining like butterflies around the different houses discussing the latest fashion and what we shall wear the coming winter. As I came in at Martin's I found registered Mr. Manierre and party, Mr. Pell, the Rich party from Nova Scotia, Rev. Dr. Garrison, H. C. Lea and party from Philadelphia. At Bartlett's, Dr. Ely and wife, Rochester; Mr. Stewart, Fall River, Mass.; Mr. Pitkin and wife, New York; Dr. Romeyn and son, Keeseville, N. Y.; Mr. Fulton and family, Philadelphia, and very many others at above well-known and well-kept houses. Paul Smith is full; yes, crowded, but of the Saratoga "cut" to the greatest extent. Paul keeps an excellent house, and knows how to "cater" for the true sportsman, and those who would be if they had the taste. I regret to find the majority of "old stagers," save in a few instances, not here this season. The majority of names registered are new comers, who out for the day return to their rooms at night. Trout and venison are scarce. No attention is paid to the game laws at any season, and the result will be the entire extermination of game in this beautiful and attractive region. Where are our Fish Commissioners? I write from Camp Geo. E. Hart, out of respect to a brother sportsman, who has furnished the fraternity with the best bass and trout reel I have ever seen or used, and whose acquaintance I hope to make to thank him, again personally for his interest in our behalf. Cordially, S. S. N.

FISHING IN MONTANA.

FORT BENTON, M. T., July 21st, 1875.

EDITOR FOREST AND STREAM:

Much is being said and done to cultivate in the American people a desire to become disciples of Izaak Walton, and many works are in circulation giving instructions how to wield the rod with dexterity. In the last only one thing stands in the way of many good people becoming amateur fishermen, and that is the expense attending the instruction necessary to become experts, expensive outfits of highly polished rods, finely working reels, flies, baskets, etc., not to mention the outlay attending a trip to the place where the festive trout sports himself. A few fish are caught, and the fact is heralded in all the sporting journals that Mr. So-and-So, during a recent trip to the North Woods, caught ten or twelve trout weighing, say ten or twelve pounds. This is all very nice, but out here in Montana no such preparation is necessary. All that is required for a fishing trip is a lodge, a few blankets, and a piece of bacon; for fishing tackle, a cottonwood pole, a few bent pins, and a mo-

dicum of grasshoppers, which a providing Providence is pleased to send in large quantities. A party of five persons left Fort Benton a few days since for a fishing trip to the Highwood Mountains, twenty miles from the Fort. After reaching the stream one of the party went out and caught seventeen trout before the lodge was set up, or a fire built. The result of one day's fishing by the party was 150 trout, many of them weighing over two pounds. Two gentlemen went out from Helena a few weeks ago and returned, after fishing one day, with three hundred trout. I am indebted to A. A. Surgeon Will E. Turner, U. S. A., for the following list of fish caught in the Missouri at this point: Pike-perch, catfish, sturgeon, perch and suckers, and in the tributaries of the Missouri in his vicinity, are trout, grayling and salmon trout. To a frontiersman it is no trick to catch trout; only put a line in, and success attends the effort. The experienced angler can find full scope for practice in any of the streams in this locality, and trouble from Indians is not to be apprehended. For real sport I would commend the mountain streams of Montana.

A. B. KEELER.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

SANDS POINT REGATTA.—Sands Point is a pleasant Summer resort on Long Island Sound opposite New Rochelle. On Friday last a pleasant regatta was sailed in the adjacent waters, the race being open for working as well as pleasure boats. The latter were divided into two classes and prizes valued at \$40 and \$20 given for the first and second boats in each class. The course was from the dock at Sands Point to and around the buoy at Throggs neck, to be sailed over twice, making a distance of twenty miles. The working boats sailed over partially the same course, but first rounded Mattinicoek buoy, making an equal distance in one round. The following yachts entered:—

Name.	Owner.	Port.	Length.
Susie S.	Ira Smith.	Brooklyn.	26 00
Gracie, (cat).	Revere Peck.	Sands' Point.	30 00
A. J. Brush.	Keegan & Brush.	Williamsburg.	28 02

SECOND-CLASS YACHTS.

F. Pidgeon.	S. & A. Hill.	Williamsburg.	20 03
Fidget.	H. L. Van Wyck.	Port Washington.	10 10
Mary Emma.	Iseline Bros.	New Rochelle.	23 14
Sophia Emma.	J. Varian.	Harlem.	21 10
G. J. Orr.	Wm. Davis.	Williamsburg.	14 10

The Brush carried away her port shroud when half way up the home stretch, but repaired damages and continued the race. The Susie upset on the second round and the Gracie came home alone, making the course in 3h. 19m. Of the second class the Sophia Emma also upset, and the Mary Emma took first prize in her class and the Midget second. Twelve working boats started, but only the following four were timed:—

	H. M. S.		H. M. S.
Clara.	4 37 20	Sarah Lucinda.	4 38 09
Lena.	4 37 24	Matie Jencks.	4 38 29

FAIRCHILD'S CANOE VOYAGE.—Mr. D. H. Fairchild, of Kansas, who is now en route to Florida in an open canoe *a la Bishop*, expects to resume his journey about September 6th, starting from Ithaca, New York, where he has been having a canoe built by Jarvis & Co. Mr. Fairchild has intimated to us his desire to have a companion canoe-man accompany him on the voyage, and addressed a letter to that effect to the officers of the Canoe Club of New York. Mr. Fairchild tells us in a private note:—"I am not undertaking this trip for glory or notoriety, but solely for pleasure, and I shall not hesitate to resort to steamer or rail whenever I can avoid danger or serious inconvenience by so doing."

—On Wednesday of last week an interesting regatta, under the auspices of the Long Island Yacht club, occurred from off Frank Bates' on Gowanus Bay. The entries comprised but three competing yachts, viz., Mr. J. Varian's Sophia Emma, Mr. J. Sweeney's Emily P., and Mr. McManus' Joe Saunders. The cruise was from the float at the starting point to and around the buoy on Robbin's Reef and return, a distance of six miles, the course to be sailed over three times. The Joe Saunders led on each round, and finally came in winner, beating the Emily P. 6 min. 14 sec. on corrected time. The following table shows the result:—

Name.	Start.	Finish.	Elapsed time.	Corrected time.
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Joe Saunders.	3 11 20	5 48 24	3 37 04	3 37 04
Emily P.	2 10 45	5 54 33	3 43 48	3 43 18
Sophia Emma.	2 11 45	6 02 32	3 50 47	3 50 37

ROYAL HALIFAX YACHT CLUB, N. S.—On Saturday the yachts of the Royal Halifax Yacht club competed for the Dufferin Silver Medal, the Dufferin Bronze Medal and a third class prize presented by the flag officers. The entries were:

Yacht.	Tons.	Entered by
Squirrel.	20.	R. F. Armstrong.
Petrel.	16.	Vice Commodore Black.

SECOND CLASS.

Spray.	8.	H. St. G. Twining.
Xiphias.	6.	R. Macdonald.
Cloud.	9.	Commodore Scott.
Cygnets.	9.	S. Norris.
Mystery.	10.	F. C. Sumichrast.
Kate.	9.	Rear Commodore Hutchins.
Falcon.	7.	F. W. Bullock.

THIRD CLASS.

Siren.	4.	Major Dundas, 60th.
Minnie.	1.	Dr. Douglas.

The Squirrel won in the first class by two minutes. In the second class the Spray did not start. Commodore Scott's Cloud returned first, followed by Mr. McDonald's Xiphias, to which a time allowance has to be made, and the race is not yet decided.

THE ROYAL CANADIAN YACHT CLUB.—This club will hold their annual regatta on the 6th and 7th of September. On the first day there will be three races—the first for the champion flag and \$275, open to all yachts in the Dominion or United States of ten tons and upwards; the second for \$85, open to all yachts and open boats under ten tons,

and the third for \$40, for all open and half-decked skiffs under 18-foot keel. The race on the second day, open to all yachts owned by members of the Royal Canadian Yacht club, will be for the challenge cup, the gift of the Prince of Wales, and two cups recently presented by Dr. Hodder, the Commodore.

CANADIAN YACHTING ITEMS.—September promises to be a lively month for Canadian yachtsmen. The regatta of the New Burlington Yacht Club, of Hamilton, will commence on the 4th, to be followed on the 6th and 7th by that of the Royal Canadian Yacht Club at Toronto. The prizes in both instances are very tempting. The object sought for by the officers of the Royal Canadian Club has been to secure a series of races along Lake Ontario which would combine a cruise in company, or as a fleet, to the various points. Toronto Bay never looked lovelier than at present, and its waters during the yachting season present a most animated sight.

—The little sloop yacht Julia, of Newbern, N. C., with a party consisting of I. E. West, the owner, John S. Palmer, Esq., Dr. W. A. Lodge, of Raleigh, N. C., and W. G. West, Esq., Secretary and Treasurer of the Atlantic & North Carolina R. R., Capt. Joseph W. Davis, sailing master, and Lorenzo, the steward, recently arrived at Philadelphia, having made the run outside from Norfolk up the coast. The trip was considered by some to be foolhardy, as the yacht is only forty feet over all; but it is only by such attempts that amateurs in yachting may ever hope to become thorough sailors. The run from Chincoteague Inlet to the Delaware Breakwater was made in little over half of a day, and part of the time under two reefed mainsail.

SARATOGA REGATTA.—The result of the first day's racing at the International Amateur Regatta at Saratoga was given in our last issue. On the second day (Wednesday) there were twelve entries for the single scull race: Courtney, of the Union Springs club; Riley, of the Neptune; Randall, of the Potomac; McCormick, of the Beaverwyck; Yates, of the Pilot; Roche, of the Waverly; Bainbridge, of the Argonauta; Maxwell, of the Seawanhaka; Gehin and Lathrop, of the Beaverwyck; Ackerman, of the Atlantic, and Orr, of the Seawanhaka. The water was in fine condition. Courtney, who was a strong favorite, took a commanding lead at the start, and won easily in 13 min. 59 sec.; distance, one mile and return. The second race was for pair-oar shells, a mile and a half and return. Three crews started—the Argonauts, Beaverwycks and Mutuals. The Argonauts won in 21 min. 36½ sec., the Beaverwyck crew second; the Mutuals withdrew.

The regatta closed on Thursday with a double scull race and a four-oared race. For the first event, one mile and return, four crews started, as follows: Neptune—Robert Lefman, bow; James Riley, stroke; Union Springs—R. H. Robinson, bow; C. E. Courtney, stroke; Beaverwyck—G. W. Lathrop, bow; James T. McCormick, stroke—Seawanhaka, R. H. Orr, bow; J. W. Maxwell, stroke. Courtney and Robinson were strong favorites, and after rounding the turn opened a gap of ten lengths between their boat and the Neptune, and landed winners by this distance in the excellent time of 12 min. 42½ sec., the Neptunes doing the distance in 13 min. 5½ sec., and the Beaverwycks in 13 min 14½ sec. The Seawanhakas were not timed.

The great event of the regatta was the four-oared race, for which six crews started, viz., the Beaverwyck, of Albany; the Atalanta, of New York; the Mutual, of Albany; the Duquesne, of Pittsburgh, Penn.; the Buffalo, of Buffalo; and Argonauta, of Bergen Point, N. J. The Beaverwycks were the winners of the challenge cup of the association last year, and the Duquesnes had just returned victorious from the Toledo regatta. The Atalanta crew was comprised entirely of college men, Rodgers and Dows, of this year's Wesleyan crew, Eustes, stroke of last year's crew, and Gunster, Williams' last year's stroke. Here was a crew that would not be denied, and when the race was half finished they had obtained a lead of half a length, the Duquesnes rounding second. On the run home the Buffaloes drew into second place, but the Atalantas won by a length and a half, doing the three miles in 18 min. 32½ sec.

REGATTA ON THE HUDSON.—On Saturday last the members of the Gramercy Boat club held their regular monthly contest for a gold medal and the single scull championship of the club. The contestants were Henry Mills, Frank Winnie, E. J. Atkinson, and R. E. Weisner. The course was two miles in length, being from the Railroad Bridge, 130th street, to Pollock's Dock at High Bridge. Upon the signal being given, Mills took the lead, and keeping on the Westchester shore, had the advantage of the tide, passing McComb's Dam Bridge eight lengths ahead of Winnie, and winning easily. It being dark at the conclusion of the race no time was taken. Mills having won the champion trophy three successive times now retains it.

SENECA LAKE REGATTA.—The Watkins and Seneca Lake Rowing and Regatta Association announce their second annual amateur and professional regatta to be held at Watkins, at the head of Seneca Lake, on September 7th, 8th and 9th. Premiums aggregating \$2,000 will be given, as follows:—To amateurs, for six-oared shells, \$500; four-oared shells, \$400; pair-oared shells, \$250; senior single sculls, \$250; junior single sculls, \$150. For professionals, pair-oared shells, \$300; single sculls, \$150. Oarsmen and their boats will be transported free on the lake and on the New York Central and Hudson River, Erie, and Northern Central Railways. In addition to the attractions of the regatta visitors will have the opportunity of visiting the celebrated Watkins and Eldridge Glens. The rules of the regatta will be those laid down in Engelhardt's "American Rowing Almanac," governing regattas. The association's definition of an amateur is essentially the same as that governing entries at Saratoga and Troy. The officers of the Watkins Association are Capt. D. P. Dey, President; Henry C. Silsbee, Vice President; Geo. A. Wickes, Treasurer; A. S. Stothoff, Commodore; C. H. Blaisdell, Vice Commodore; L. M. Gano, Secretary; M. Ellis, Assistant Secretary.

—A single scull race was rowed on the Charles River, Boston, on the 25th inst. between Fred. J. Plaisted and M. F. Davis, an amateur, of Portland, Maine. The men crossed the line bow and bow, but the judges awarded the race to Davis on account of a foul by Plaisted. The time for the three miles was 23m. 13s., being the fastest ever made by single sculls over the Charles River course.

—Brayley, of St. John, defeated Landers, of Salem, in a single scull race at St. John, N. B., on the 23d inst.

National Pastimes.

THE INTERNATIONAL CRICKET MATCHES.

PHILADELPHIA, Pa., August 30th, 1875.

EDITOR FOREST AND STREAM:—

Arrangements for the Cricket Tournament are being rapidly completed. The first game will be on Sept. 13th, between the Philadelphia and Canadian teams. On the 15th and 16th September the British Officers' team will contest. The British Officers and the Philadelphia Eleven play on Friday and Saturday, 17th and 19th. The game between the Philadelphia team and an All-comer's eleven will close the tournament on the 20th and 21st. The British Officers team is as follows: Captain N. W. Wallace, field captain; Lieuts. Hon. Keith Turmount, H. L. Farmer, J. D. Howden, R. C. Davies, all of the Sixtieth Royal Rifles; Capt. W. W. Taylor, Lieuts. F. Carpenter and M. Singleton, of the Eighty-seventh Royal Irish Fusiliers; Lieut. W. Saville, Royal Navy; Lieuts. G. E. Brown and P. F. Tallents, of the Twentieth Regiment, and Lieut. H. Cummings, of the Ninety-seventh Regiment; extras, Capt. C. Tennant, Eighty-seventh Regiment Royal Irish Fusiliers; and Lieut. W. H. Sykes, Royal Engineers; scorer, Lieut. W. H. Holbeck, Sixtieth Royal Rifles.

The Canadian Eleven will be—Rev. Thomas D. Phillips, field captain; and C. Brodie, of Ottawa; R. McLean and L. Brison, of Montreal; A. Greenfield, of Toronto; C. Hope, of Hamilton; J. Whelan, of London; W. Wells of Chatham; G. Hall, of Port Hope; Maj. Morris, of Fredericton, N. B.; E. Kearney, of Halifax, N. S.; and F. Armstrong, of Orilla; extra, Dr. Sprague, of Toronto; scorer, A. W. Powell, of Ottawa; umpire, G. Brunell, of Ottawa.

The visitors are expected on the 11th inst., and will be the guests of the Philadelphia cricket clubs. Their quarters will be at the Continental. The tournament will be held at the grounds of the Germantown Cricket Club, near Nicetown. On Saturday last there was a practice game between two elevens selected by G. Newhall and D. Newhall. On Saturday next there will be a game between the Young American Cricket Club and a picked Philadelphia twelve, after which the remaining vacancies on the team will be filled. SCULLS.

A correspondent of the *Toronto Globe* says of this eleven: "I venture to affirm that the team is not only the strongest ever got together in Canada, but also the very best available. It is, moreover, thoroughly representative. I propose that as many of the above as possible shall meet in Toronto on Saturday, September 11th, and there play the best twelve that can be brought against them, leaving for the States that evening. The team will on Monday, being then completed by the arrival of the Eastern contingent, play the St. George's club of New York a one day's match, leaving the same evening or next morning for Philadelphia, a run of only two hours by rail, resting Friday, thus witnessing the finish of the first match of the tournament, America vs. England. The Canada twelve will commence their four days' play on Wednesday, September 15th, their match being against America, and their second against England, *i. e.*, vs. the English military twelve. On Monday, the 20th, twelve of Philadelphia will play a twelve selected from the Canadians and Englishmen."

BASE-BALL—THE PROFESSIONAL ARENA.

The closeness of the contest for the pennant between the Boston and Athletic nines, which is now marking the battles in the championship arena is giving an interest to the closing months of the season not previously anticipated. Up to August 30, inclusive, the record showed the "Reds" and "Blues" to be within three games of each other, as will be seen by the appended table:—

CLUB.	Boston.	Athletic.	Hartford.	St. Louis.	Philadelphia.	Mutual.	Chicago.	New Haven.	Atlantic.	Games Won.
Boston.....	5	5	6	4	8	6	3	4	41	
Athletic.....	1	5	6	6	4	6	7	6	38	
Hartford.....	0	2	1	4	2	2	7	9	32	
St. Louis.....	2	1	2	4	6	3	2	2	22	
Philadelphia.....	0	1	3	2	1	4	4	7	23	
Mutual.....	0	1	3	0	4	3	4	3	18	
Chicago.....	2	1	3	2	2	2	3	2	16	
New Haven.....	1	0	1	1	0	0	1	0	4	
Atlantic.....	0	0	0	0	0	0	0	2	2	
Games Lost.....	6	11	18	19	24	25	31	33	195	

—The games of the Redstockings have been thrown out as there is not now time for them to play their quota of six games with each club, still less to play their full series of ten games.

—The best games in the arena since our last issue, were the following:—

Aug. 24—Hartford vs. Mutual, at Hartford.....	3 to 2
Aug. 26—Athletic vs. Chicago, at Chicago.....	2 to 1
Aug. 26—Hartford vs. Mutual, at Hartford.....	8 to 2
Aug. 27—Athletic vs. Chicago, at Chicago.....	5 to 0
Aug. 30—Boston vs. Mutual, at Boston.....	9 to 1

—The other games during the week, were as follows:—

Aug. 24—Boston vs. Chicago, at Chicago.....	13 to 9
Aug. 25—Athletic vs. St. Louis, at St. Louis (forfeit).....	9 to 0
Aug. 25—Philadelphia vs. Atlantic, at Philadelphia.....	14 to 2
Aug. 26—Philadelphia vs. Atlantic, at Philadelphia.....	10 to 5
Aug. 27—Athletic vs. Chicago, at Chicago.....	14 to 8
Aug. 30—Hartford vs. Philadelphia, at Philadelphia.....	11 to 3

—This week the Boston club plays in Brooklyn and Philadelphia, and before they return home they will add five victories to their record out of the seven they will play, or we shall be much mistaken.

THE AMATEUR ARENA.

Among the amateur games of the past week worthy of note, may be named the following:—

Aug. 26—Live Oak vs. Taunton, at Lynn.....	3 to 0
Aug. 30—Flyaway vs. Stars of Syracuse, at Syracuse.....	3 to 1
Aug. 28—Philadelphia vs. Burlington.....	4 to 0
Aug. 28—Blue Stocking vs. Star, at Cincinnati.....	4 to 2
Aug. 25—Star vs. Eagle, at Covington.....	4 to 3
Aug. 21—California vs. Alert, at San Francisco.....	4 to 2
Aug. 25—Champion vs. Virginia, at Abingdon.....	5 to 4
Aug. 20—Champion vs. Cave City, at Abingdon, Va.....	6 to 0

Aug. 27—Beacon vs. Live Oak, at Boston.....	7 to 6
Aug. 27—Star vs. Tuttle & Bailey, at Irvington.....	8 to 2
Aug. 28—West Philadelphia vs. Riverton, at Philadelphia.....	8 to 3
Aug. 24—Otoe vs. Baltimore, at Nebraska City.....	8 to 4
Aug. 24—Randolph vs. Hoboken, at Dover.....	8 to 4
Aug. 27—Chelsea vs. Reliance, at Brooklyn.....	8 to 6

—On Saturday James Moffat, of Norwich, Conn., and W. Kimball, of Huntington, Long Island, ran a foot race at Hempstead, L. I., for a stake of \$300 a side; distance, 125 yards. Kimball took the start at the lead and kept it for 100 yards, when Moffat closed the gap and going to the front won the race by three feet in 12½ seconds. The judges were Messrs. Finch and Crowley, and Thomas Chalmers, referee.

New Publications.

Scribner's still holds its own as the most varied and entertaining of our magazines, although we would mildly suggest that a few more such articles as that entitled "Mr. Beecher" in the current number would scarcely balance the excellence of its other pages. The warmest partisanship could scarcely warrant the tone and language of that article, and the editor has very much mistaken the sentiment of the general public if he imagines it to be in accord with him. With regret we notice the conclusion of Mr. C. E. Waring, Jr.'s, sketches under the title of "A Farmer's Vacation." No more interesting descriptions of travel have ever appeared in an American magazine. We are again treated to a homeopathic dose of Jules Verne in a chapter of "The Mysterious Island," and to a very entertaining and well illustrated article on "Chicago."

St. Nicholas for September contains the continuation of Miss Alcott's story, "Eight Cousins," and Mr. Trowbridge's capital story of "The Young Surveyor." The table of contents is unusually long and varied, and comprises matter suited for children of every age, from the little toddler, who can only enjoy the picture, to the more mature master and miss.

The Galaxy for September, full, as usual, of good things, is on our table. "Dear Lady Disdain," Justin McCarthy's story, is continued; John Codman takes the reader through the peculiar phases of Utah life; A Review of Sherman's Memoir is commenced, wherein the writer evinces a warm appreciation of the Memoirs and the military achievements of which they are a record. "Leah, A Woman of Fashion," by Mrs. Annie Edwards; "A Sketch of Madame Ratazzi," by Junius Henri Browne; "A Slight Misunderstanding," a sketch of New York life; A Paper on French Plays, by Albert Rhodes; Lucy C. White's "Summer Days in London;" A Paper on Tennyson's Queen Mary, by H. James, Jr., and Richard Kirk White, on "The Spelling of the Future," complete the leading articles, which are supplemented by the usual variety of "Drift Wood," Scientific Miscellany, Literary Notes, etc. Sheldon & Co., publishers, 677 Broadway.

The Popular Science Monthly, (with cut leaves,) for September contains a valuable paper on "House Ventilation," which we would commend to the attention of house builders and architects. The cliffs and canons of the Colorado Valley are described in an illustrated paper by Major Powell, and Professor Morse contributes one of his instructive articles entitled "Fresh Water Mollusks." The information contained within the pages of this magazine is varied as well as valuable, and we regard it as one of the most valuable of our periodicals.

The Illustrated Household Magazine—This monthly publication, although unpretentious in typography, contains a large assortment of excellent matter, and for the price, only \$1 per annum, its pages are remarkably well filled. The current issue comprises a number of interesting sketches of travel and stories by well known writers. Mr. A. Benrimo is now editor of the *Household*, and the publication office is at No. 41 Park row.

Savannah News.—We direct attention to the card of this journal in another column. It is one of the best newspapers in the South, and contains much intelligence of special interest to those who wish to visit that section. Its chief editor is Col. Wm. T. Thompson, a veteran of the Florida war as well as of Southern journalism, and widely known as Major Jones, author of "Major Jones' Courtship," and other humorous papers. He is familiarly acquainted with every portion of Florida, and his paper contains copious notes of current events in that State. We commend the *News* to those who would like to read a reliable Southern journal, or wish to bring their business before the people of Florida and the South Atlantic States.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

J. M. R., Boston.—Will you please publish the address of the party engaged in breeding minks, somewhere in your State? Ans. H. Res-sique, Verona, Oneida county, N. Y.

J. T. H., Hudson, N. Y.—The combined compass and sun-dial is the same handy little pocket companion to which we alluded last Spring. We can forward you one on receipt of price, \$1.

F. G., New York.—Will you please give me the address of some one who could supply me with young black walnut trees, in Ohio. Ans. Address R. G. Hanford, Columbus Nursery, Columbus, Ohio.

F. H. M., Newtonville, Mass.—Please send me the names of some books on dogs and the price of the same. Ans. "Dinks, Mayhew and Hutchinson." We can supply you with a copy; the price is \$3.

J. B. B., Rockford, Ill.—Please inform me what is the best book on taxidermy for a beginner, and what is the price of the same? Ans. This question was answered in our last paper, and twenty times before.

BOB AND OTHERS.—Perth Amboy is one of the best weakfishing grounds near New York. Take Staten Island boat to Third Landing, cars to Tottenville, ferry to Perth Amboy; fare whole distance, 25 cents.

H. N. C., Waterville.—Cannot partridge (ruffed grouse) be shot after the 1st of September? It was in the local paper that the close season was until October. Ans. Open season in New York State September 1st.

A. J. T., Castile.—Can I use Ely's wire cartridge in a breech loader choke bored gun? Ans. Ely's wire cartridges may be used in a choke bored gun, but choke boring is intended to obviate the necessity for their use.

H. L. S., New York.—In your answer to W. S. B. August 5th you say that "the drachm is a powder measure." Please inform me what the table is. Ans. The powder drachm is an arbitrary measure, not in accordance with any organized table.

G. W. H., Philadelphia.—Can the Rushton boat mentioned in last number of *FOREST AND STREAM* be used with a pair of oars like any pleasure boat, or is it necessary to use paddle? Ans. It is a row boat. You can use a paddle, of course.

H. M. G., Morristown, N. J.—Please decide a bet by answering the following question: How far will a Colt's navy revolver carry a ball point blank, (so as to hit a bullseye,) the pistol to be screwed in a vice and aimed point blank at the bullseye? Ans. About forty yards.

AUGUSTINE, Pittsburg, Pa.—My setter pup, three months old, is very much troubled with worms, and, like your Philadelphia correspondent, I cannot find any area nut here. Ans. Have sent you some powdered area nut, with directions for its use, and have written you.

G. H. W., Jackson, Michigan.—I have observed that at the last Wimbledon meeting canvas targets were used instead of iron. Can you give us any information about them, how they are made, and how the shot holes are stopped after each hit? Ans. For full description of canvas targets, see our Editorial pages this week.

JACKSON.—We are just forming a long range rifle club, and need some information concerning targets, markers, butts, score books, etc. Any information you can give us will be thankfully received. Ans. Send to the Rifle Association Rooms, 93 Nassau street, New York, for Annual Report of N. R. A. for 1875; price 25 cents.

PLANKERS, Hudson, N. Y.—What can I do to keep moths out of deer skins. I have a pair of buck horns with a small piece of skull, and the skin on that, although very dry, is full of moth. Ans. Dissolve a small piece of corrosive sublimate in alcohol and brush on; or the best arsenic dissolved in the same manner will answer.

W. L., Bridgeport.—Having heard many inquiries and some disputes in regard to the height and weight of Capt. A. H. Bogardus, the champion wing shot of the world, I would ask you to give the desired information, and much oblige many of your readers. Ans. Capt. Bogardus stands six feet in height, and

J. R. E.—Where can I obtain good shooting in October for deer and grouse—an accessible locality? Give me route and name of guide acquainted with the region. Ans. Take Erie road to Lackawaxen; thence thirteen miles by wagon to the house of Moses Westbrook, Blooming Grove township, Pike county, Pa.

J. H. D., Philadelphia.—Please let me know the cause of a gun recoiling in your next issue. It is a new gun, and I have tried as light charges as possible, and I have tried coarse and fine powder. I shot eleven birds, and had to stop shooting, my shoulder being too sore to shoot any more. Ans. Use less weight of shot, coarse powder, and hold the gun firmly and squarely against the shoulder.

CONSTANT READER, New Haven.—A party here told me that he saw an eel taken from fresh water which weighed thirty-nine pounds, and another from salt water which weighed ninety-eight pounds. Please inform me if it is a "fish story," or if you ever heard of such eels being taken? Ans. The above no doubt were *sea serpents*, or else in the latter instance congers, which sometimes grow to immense size.

C. C. R., Acton, Ont.—Please inform me if Captain A. H. Bogardus ever shot a match with Ward, of Toronto, Ont.; if so, where did the shooting take place, and who won? Ans. Several matches have been shot, the last at Buffalo, when Bogardus killed 95 birds to Ward's 88. In one match shot in Canada Ward won by one bird, but the match was not a "square" one. In every square match Bogardus has won.

L. J., Greenpoint, L. I.—What is the best way to load paper shells? What kind of wads are considered the best? Do you advise a larger wad than the shell; if so, why? Is not Hazard's duck No. 4 powder considered as good as any for all kinds of shooting for breech loaders? Ans. Use one card wad and two Ely's pink edge, or one card wad and one Ely's thick felt on powder, and one Baldwin wad on shot. All wads should be the size of the gun, although many persons use a size larger. Hazard's No. 4 powder is as good as any.

G. L., Cincinnati.—You will do me a great favor by stating your opinion of the Remington breech loading shot gun as a sporting arm? I intended to purchase an English breech loader, but the price is too high for a good one, so I concluded a gun of home make might be just as good as a high-priced English gun, and have not had occasion to try the Remington gun myself, which caused me to apply to you for information. Ans. Our friends who are using the Remington gun speak well of it. It is an excellent gun for the price.

W. H. B., New York.—Having read the report by "the Dittmar Powder Company" of the trial of their new powder, I will trouble you with a few questions in regard to it: 1st. How does it compare in point of strength with, say Hazard's Electric? 2d. As to its cleanliness? 3d. As to any qualities, good or bad, it possesses different from those of black powders by any of the established manufacturers? Ans. Its proprietors claim equal strength with other powders, and greater cleanliness. As to its qualities, read the numerous letters in our columns, and experiment for yourself.

W. J. W., New York.—Will you be kind enough to inform a reader of your paper of the best method of cleaning brass cartridge shells (rifle)? I clean mine by boiling in water and then wiping out each shell with a swab of cotton; this process is quite laborious, and I would be greatly obliged if you can tell me of an easier and simpler way. Ans. Rub the shells with a mixture of two parts sulphuric acid, two parts water, and one part pulverized bi-chromate potash, and then wash them in hot water. See page 107, No. 7 vol. IV.

PLUYIER, Boston.—Please inform me through your valuable paper what the best books are on the following subjects, viz.: Marsh and shore shooting, and black duck, teal and coot shooting. I want a book giving general information on each, not stories. Ans. "American Wild Fowl Shooting," by J. W. Long; price \$2. We can send it. Do you consider the Dittmar sporting powder perfectly safe to use in a shot gun? Ans. Yes; if used with care and according to Mr. Dittmar's directions. We would suggest, however, that you read the correspondence on this subject which has appeared in our columns and judge for yourself.

S. E. P., Cleveland, Ohio.—What size buckshot would you use for antelope and large game in a 12 bore gun? How many drachms of powder? Are ball cartridges better than buckshot, and where can I get them? Is it best to put enough buckshot in to have them fit snugly regardless of number? What size shot is best for grouse? Ans. Use 1 oz. No. 2 buckshot, 4 drachms powder, two heavy wads between the powder and shot. Buckshot is more effective than ball, except for large game at close quarters. You can get ball cartridges at any gun store in this city. Load them yourself. It is better that your buckshot should chamber evenly. Early in the season we use No. 8; later in the season No. 6 shot for grouse.

J. W. P., Mineola.—I have a fine young setter bitch that I would like to have spayed if it can be done without injury to her hunting qualities, and will prevent the periodical annoyance from neighboring canines. Does it work satisfactorily; if so, will you please state who I can get to do it, and the cost? Ans. You can have your bitch effectually spayed by Capt. Anderson, of Trenton, N. J., but we do not advise any one to have the operation performed after the animal is over two or three months old, as when done after that age they are apt to become lazy and incline to get too fat. The proper time is when the pup is from four to eight weeks old. When spayed at the proper age they make a very desirable kind of dog. The usual charge is \$2.

YOUNG AMERICA, New York.—1st. Are these Field Trial dogs of England perfectly broken? 2d. Does Mr. H. Thompson, of New Jersey, own the champion dog of America, and is his old bitch Bella thoroughly broken or not? What color are they? 3d. Was there ever a gun manufactured in England with "stubb twist barrels" and gold let in at the breech? 4th. What kind of a gun was the Manton? Ans. 1st. There is a strain of setters in England called Field Trial dogs, and like all other strains, some are broken and some are not. 2d. Mr. H. Thompson does not own the champion dog of America. We do not know how well his dogs are broken. He has a brace of fine-looking red setters. 3d. Yes. 4th. Manton was a very celebrated maker of muzzle loading guns of his day. He died long ago.

C. A. P., Boston.—Will you be so kind as to inform me the process of removing the hair from and tanning deer skins? And also the process of tanning muskrat skins and other fur-bearing animals with the fur on? Ans. Indians remove the hair from deer skins by putting them in water, where they remain until the hair leaves them freely. They are then cleaned and covered with a coat of the brains of a deer, which are boiled before using. The skins are then gradually dried and worked soft by rubbing them with a sharp-edged stone. They are then smoked by laying them over a frame-work of sticks in the shape of a bell tent or Indian tepee, with a small smouldering fire or smudge underneath. The whites use lime for removing the hair from pelts. To tan skins with the fur on, put them into a pickle of alum and saltpetre until they become leather; then dress the flesh sides, dry them slowly, and rub them with a little butter, and dry them by rubbing or treading them out in vaneer sawdust.

G. F. G., Brooklyn.—Will you inform me how large is the largest setter dog you know of in this country? I have the largest setter I ever saw; those who have measured him say he stands 31½ inches, and built in proportion. Colburn's Dash is claimed to be the largest setter in the country; he stands 30½ inches. If you know one that is larger please let me know, or I shall claim through your valuable paper the ownership of the largest setter in this country. He is crossed from an English setter dog out of an Irish setter bitch, both imported. I see in your paper of other pigeon shooting clubs but the Long Island Shooting Club is reported. I belong to the latter club, and will send you the reports if you will insert them in your valuable paper. Ans. Mr. Colburn's Dash is the tallest setter we have seen, and we think you have the largest thoroughbred setter in this country. If any of our readers have a larger one we will be glad to make a note of it. Shall be glad to have reports of Long Island Shooting Club.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH-CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCUCLATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.]
127 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, SEPTEMBER 2, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, September 2d.—Trotting at Hartford, Conn.; Dover, N. H.; St. Albans, Vt.; Florence, Ky.; Jamestown, Pa. Nineteenth Anniversary of N. Y. Caledonian clubs at Lion Park, N. Y. Base ball—Philadelphia vs. Boston, at Philadelphia; Confidence vs. Nassau, at New Rochelle; Randolph vs. Olympic, at Dover, N. J.; Eagle vs. Magnolia, at Brooklyn; Irvington vs. Eagle, at Hoboken.

FRIDAY, September 3d.—Trotting at Hartford, Conn.; Aurora, Ill.; Florence, Ky.; Battle Creek, Mich. Base ball—Athletic vs. Boston, at Philadelphia; Pavonia vs. Randolph, at Dover, N. J.

SATURDAY, September 4th.—Racing at Newport, R. I. Trotting at Battle Creek, Mich. Regatta of Burlington Yacht Club, Hamilton, Canada. Base ball—Athletic vs. Boston, at Philadelphia; N. J. A. Association vs. Hoboken, at Hoboken; Active vs. Alert, at Harlem; Keystone vs. Quickstep, at Wilmington, Del.

MONDAY, September 6th.—Racing at Newport, R. I. Trotting at Dubuque, Ia. Regatta of Royal Canadian Yacht Club, Toronto. Banquet to the American Team, Academy of Music, N. Y. Base ball—Philadelphia vs. Boston, at Philadelphia.

TUESDAY, September 7th.—Racing at Lexington, Ky.; Prospect Park, L. I. Trotting at Dubuque, Ia.; Syracuse, N. Y.; Gardiner, Me.; Syracuse, Ill.; Mankato, Minn.; Knoxville, and Macomb, Ill. Dominion Rifle Association Tournament, Ottawa, Canada. Bench Show of Dogs at Manchester, N. H. Regatta at Watkins, Seneca Lake; Royal Canadian Yacht Club, Toronto, Canada; Race between Union and Herald Boat Clubs, Harlem River. Base ball—Alaska vs. Hoboken, at Hoboken.

WEDNESDAY, September 8th.—Racing at Lexington, Ky.; Prospect Park, L. I. Trotting at Syracuse, N. Y., and as above. Rifle match of Saratoga and Parthian Clubs, Saratoga, N. Y. Bench Show of Dogs, Manchester, N. H. Regatta at Watkins, on Seneca Lake.

BOUNDARIES IN PIGEON MATCHES.—We observe that Captain Bogardus, in an interview with a contemporary, strongly deprecates the practice of having boundaries in pigeon matches, justly urging the fact that the element of luck is thus introduced, and suggesting that a time allowance for gathering birds be substituted. We have long advocated this plan, and at a recent match at Philadelphia, where we were referee, the new mode was adopted with excellent results. We would call attention of sportsmen's associations throughout the country to this suggestion, and trust to see it acted upon.

LONG BRANCH.—A private letter written at Long Branch, August 20th, says:—

"Long Branch is gay with visitors. The weather has been rainy for some time past, but it did not materially affect the travel, as all the hotels are doing fairly. Owing to the popularity of the Metropolitan this season the house is full. Mr. W. W. Palmer, its proprietor, also of the Magnolia Hotel at St. Augustine, Fla., has retrieved its reputation. The visitation, it is thought, will be prolonged far into September. At this, the headquarters of the Florida visitors, the winter resort is discussed, and the indications are that the State will be well represented in Florida this winter. Money this fall will not be so stringent, the numbers of pleasure-seekers greater, and hence an increase of travel to the Italy of America."

HONOR TO WHOM HONOR IS DUE.

"After all, what real good is to accrue to the human race from putting a rifle ball through a bullseye a thousand yards away?"—*Syracuse Courier*.

Leaving to the Peace Commission the settlement of the question as far as the human race is concerned, the benefits to be derived by our own country from the increased interest taken in rifle shooting are too palpable to be ignored, and it is a matter of some surprise that those high in Federal authority have as yet not made some move toward recognizing and encouraging it. We believe it is received as an axiom that those nations best prepared for war and whose skill both in the manufacture and use of military and naval appliances is beyond a doubt, are the least likely to be drawn into a conflict, and although the comparatively isolated position of this country lessens the probability of such an event as far as we are concerned, it must be borne in mind that at the present day both time and space have been almost annihilated as compared with a half century since. Nor are we prepared, as are other nations, with a large standing army to repel an invasion or hasten an attack. In the occurrence of either deplorable event, the working man, the artisan and the merchant must compose the rank and file, and be called upon to defend his country, and however "regulars" may sneer at target practice among civilians, by which are meant also the volunteer militia, as being valueless when the men are brought face to face with an enemy, the veteran must be the work of time and experience, and previous familiarity with and skill in the use of his weapon will make the best soldier when the necessary coolness has been acquired.

Our State governments have been wise in their generations in recognizing the importance of rifle practice in the National Guard, and present indications show that the epidemic which originated in this State with the opening of Creedmoor but little more than two years since, is rapidly spreading until it has embraced California and Nevada on the West and Maine and Florida, North and South. The improvement in shooting made at Creedmoor since the opening of the range is almost incredible. A reference to the files of this paper amply verifies the statement. In the issue of FOREST AND STREAM of December 11th, 1873, will be found a complete report of the official scores of Creedmoor matches, (the same being the first ever produced by which comparisons might be made as to the shooting). This statement shows that on the opening day, June 21st, 1873, in the first match, out of 220 shots fired only six were bullseyes, and these at a distance of only 200 yards. A comparison of this score with those made in the International contests, shows what wonderful proficiency has been attained in two years. In the second match only eight bullseyes were made, but from then the progress was steady until the proportion of bullseyes in some of the recent matches has reached to the enormous figures of 93 per cent.

In a recent capital article on this subject in the *Arm and Navy Journal*, facts in history are pointed out which go to prove the value of target practice as a purely military exercise, demonstrating the value to be very much greater than is generally credited to it by military men. We quote:—

"We have in history four campaigns in which troops trained only in target practice were opposed to troops not so trained. Three of these campaigns belong to the age of archery, one to the age of modern breech loading fire arms. They are the campaigns of Cressy, Poitiers, Agincourt, and Sedan. In the first three, as will occur to every reader, the victory was due wholly to the precision of English archery, and the result decisive. The English archers acquired their skill in shooting at the butts, for the game laws of England were then frightful in severity, and free shooting unknown, save in the myths of Robin Hood. We have purposely left out the triumphs of American riflemen in the Revolution, because largely due to a different sort of marksmanship, that of the hunter, and not so complete. In the Sedan campaign of 1870 the Germans, likewise used only to target shooting, against the French. The latter had special corps of marksmen, just as at Cressy they had the Genoese cross-bowmen, but the mass of rank and file was unused to target practice. The Germans were greenhorns, the host that served at Sodowa having been replaced by new levies of only three years service, but they had all been used to target practice, and were fair average shots. The result was marked in every battle when it came to close range shooting, and in nothing more than in saving of ammunition as compared with the lavish expenditure by the French. While the special French marksmen shot well at long range, at short range all the Germans and very few French shot respectably, and the losses soon became out of proportion to the numbers on each side."

We think, however, that our contemporary should have ascribed a certain proportion of the German success to the great superiority of the Prussian needle gun over the French Chassepot, which was much commented upon at the time.

But setting aside the military view of the case, the increased interest taken in rifle shooting is of value in other respects. An impetus will be given to the efforts of inventors, and although our rifles of the present day seem almost perfect and have been so recognized abroad, ingenuity at the present time knows no limit, and it is impossible to predict what may or may not be accomplished in the future. In this connection we observe a disposition on the part of many newspapers to fall into error regarding the present military weapons of Europe, citing the recent International match as a battle between the muzzle loader and breech loader, and inferring therefrom that the former is still in use, whereas in point of fact both for sporting and military purposes the breech loader is the universal arm throughout

Europe and the muzzle loader is only used for long range target practice.

There is another aspect also to the recent International victories which entitles them to greater consideration than under other circumstances they might deserve. It is the first occasion on which we have beaten our trans-atlantic cousins, decisively and unmistakably, and on their own soil, in any of those games requiring skill and nerve. The defeat of the Harvard crew and the almost total annihilation of the crew which subsequently went from this city, is now wiped out, and the eagle may scream himself hoarse without risking a pin-feather. To be sure the America taught them a lesson in yacht building, but that event rather belongs to a different category of victories than the achievements of the American team and Captain Bogardus.

Although a reticence on the subject is noticeable on the part of the English press, the recent rifle matches have excited the greatest amount of comment and some consternation across the water. We learn that it is highly probable that an Irish team, *per se*, so far as international matches are concerned, will henceforth be unknown, and that the team to visit this country next Summer will be strictly a national one, selected from among the best shots of England, Ireland, Scotland and Wales. Sir Henry Halford, probably the best shot in England and a leading spirit at Wimbledon, has entered heart and soul into the matter, and the probability is that '76 will see a team in this country whose skill will try to the utmost that of our own riflemen. So also, the rapidly spreading interest throughout the United States, that has already stimulated the organization of rifle clubs here, there, and everywhere, will evoke a spirit of honorable sectional emulation, and thereby probably call out a team that will be more strictly representative, and not confined to the State of New York alone.

The moral effect of the International match, is to unify national sentiment, sympathies, and ambitions, on both sides, and to nationalize future competitions. It will bring the Irishman and the Englishman shoulder to shoulder congenially, on the one side, and our countrymen of the North, South and West on the other. So far as this effect reaches, it is of appreciable value. Whether the success of the American team in making bullseyes at 1,000 yards is worth all the ado which has been manifested over the victors, may be a question in the minds of persons inclined to be captious, but one thing is certain, success and consummate skill have compelled the respect of nations for us, and any instrument, however humble, that adds one grain of weight to our American honor deserves to be extolled. The FOREST AND STREAM is gratified to join, in its humble way, in doing honor to those who have honored us.

CANVAS TARGETS AT WIMBLEDON.

SEVERAL of our readers have asked for a description of the targets used at Wimbledon, which we are pleased to give herewith. It is the first we remember to have seen printed:—

The targets at Wimbledon are of canvas, stretched on wooden frames, which are so fitted in iron frames that they can be easily and quickly removed, and are arranged to raise or lower on upright sliding posts. When the target is pierced by a bullet a large red disk, operated by a lever hung on a pivot, with a weight at the extremity, is swung up so as to conceal the bullseye, indicating that the target is struck. Immediately the target disappears downwards, and a dummy target, which is covered by a fine wire network, upon which is hung a disk indicating where the real target is struck, rises upon a similar sliding frame directly in front of the other. The dummy target rises and the real target falls simultaneously, by the marker simply turning a crank, the two targets being balanced by a proper weight attached to a chain running over pulleys. When the target is lowered, the marker takes a small, diamond shaped disk, about three inches long, one side of which is painted white to use on the bullseye, and the other side red to use on the rest of the target. On each side of this disk is a small wire hook, one of which the marker inserts in the last shot hole, with the proper color out, according to where the shot is. He then covers the previous hole with a small piece of paper, leaving the disk in the last shot hole to indicate its exact position until the next shot is fired; then, by turning the crank, the target is raised and the dummy is lowered at the same time. The large red disk remains in front of the bullseye until the target is raised, when it is swung out of sight, showing that the target is all clear. By means of a field glass the small disk in the last shot hole can be seen plainly, indicating exactly where the last shot struck. The sliding frames extend downwards in a trench about ten feet deep and eight feet wide; a roof covering the marker extends over about four feet, leaving the rest of the trench open; but as there is no splash from the canvas targets, the marker is perfectly safe. The marking is according to the new rules of the N. R. A. of the United States, as adopted this year, excepting as to the 3d class target, which has been altered by the N. R. A. so as to include the remainder of the target outside of the 40-inch ring, to form the outer, 6 feet by 4 feet.

—Summer is ended—September has come—and the clerk of the weather is now fanning the "embers" of the year for a protracted heated term.

—President Grant is an expert cod-fisher. He tried his hand at the sport off Block Island lately.

COMPARATIVE TABLE OF CLOSE SEASONS

[PREPARED FOR FOREST AND STREAM.]

IN ALL STATES OF THE UNION WHERE GAME LAWS EXIST—COMPILED FOR THE YEAR 1875.

*Reed birds and Rail—close time from May 1 to Sept. 1. †Reed birds and Rail—close time from Dec. 1 to Sept. 1. ‡Relates to Does only. §Law varies in certain counties. ¶Applies only to counties of Henry, Dyer, Giles, Maury, Davidson, Madison, Hamilton, Bedford, Wilson, and Reel birds—All the rules for killing birds, fish, or game in this State are inapplicable and inefficient. In Kent, or Sussex, or Newcastle no partridges or pheasants to be killed between Feb. 1 and Oct. 15, nor any woodcock between Feb. 1 and July 1. In California bill exempts the counties of Los Angeles and San Bernardino, where the close time is from April 1 to Aug. 1. In Maine certain localities are exempt from the provisions of the law as relating to migratory fishes. In Connecticut there is also a close time for woodcock between the 1st of July and 1st of October.

INDIA—"PIG STICKERS."—A correspondent, who happens to be an officer in our Regular Army, recently inquired how the hog spears used in India are made. The information sought for has been kindly furnished us by Capt. C. E. McMurdo, late of the British Army, who writes:—

"My recollection of the spears used in India for 'pig sticking' is that they are about seven feet long, of male bamboo, weighted with lead at the butt end; the heads vary in shape, but the best are two-edged, the blade about four inches long by one inch broad, with a strong socket five inches long, and so constructed that it can easily be withdrawn from the pig. Tough wood that will not splinter is necessary. I have the head of a hog spear, and shall be happy to send it to you if you would like it, but it is not, I think, a very good pattern, as it has three edges."

Our Georgia readers who remember the famous pikes with which Gov. Brown proposed to arm the Confederate troops, will observe a striking resemblance between those curious war implements and the India pig-sticker above described. The pike staff was of hickory, instead of bamboo, and the base of the spear had a crescent-shaped blade or shield, designed to give lateral blows and ward off the thrusts of the enemy's sabre. It was eminently a sanguinary blade, better suited, doubtless, for pig-hunting than for military service. As some thousands of them were rusting in the Georgia Armory at last accounts, who knows but some sharp carpet-bagger down there might make an honest penny by shipping them to our Western plains for hunting wolves, or to India. No doubt the Government would sell at a low figure. The venture would promise better than Lord Timothy Dexter's shipment of warming pans to the West Indies.

TOO MANY BEAVERS.—In the present day, when furs are scarce, and trappers are obliged to go far beyond the confines of civilization in quest of a livelihood, it seems strange to hear that in Nottoway county, Va., the beavers have so multiplied as to become a nuisance and a distress to the farmers. So troublesome are they, indeed, that we have been requested by a planter there to invite the trapping fraternity to come down with their traps, and board will be furnished free, with the use of traps, if necessary. Here is a good chance for several of our correspondents, who have made inquiries for accessible and remunerative trapping grounds, and if they will only wait a short time until the setting of the fur makes the pelts merchantable, they will derive quick and abundant profits.

This is no ruse to induce emigration to Virginia. Take cars from City Point, on James River, to any station in Nottoway; fare \$1.50. Fare from New York to City Point by steamer, \$10.

DEER KILLING IN CLOSE TIME.—A gentleman of high social and official position, who has not asked us to withhold his name, sends us the following lines:—

"The Rev. Dr. Wm. H. Murray, has been at Cranberry Lake, (St. Lawrence county,) hounding deer since the middle of July. He has with him a large party, and it is to be regretted that he is permitted to annually enter this State for the purpose of breaking the laws. It is said, even, that he has never killed a deer in season, and his course certainly deserves reproof at the least."

This reverend gentleman is an old and unscrupulous offender who snaps his fingers at laws and the opinion of men. We have exposed his derelictions and delinquencies before, in common with several of our contemporaries, but he seems to grow great on the censure and happy under the reproach.

—Fitzgerald Cochran, Esq., the very efficient secretary of the Game and Inland Fishery Protection Society of Nova Scotia, has been appointed to the office of Chief Game Commissioner of the Province, provided by act of the Provincial Legislature last Winter. It is his duty to supervise and instruct the District Commissioners and the Wardens, in the discharge of their duties, to assist as far as practicable in the prosecution of offenders, and generally to see that the provisions of the law for the preservation of useful birds and animals be carried out. This is a most important office, and ere long we shall find that one similar will be created in every State in this Union. Under such a functionary, who will act as a sort of drill-master to our Armies of Game Protection, and chief prosecutor, as it were, to the Government, we shall soon wipe out offenders and put a stop to offences. The example of our Canadian neighbor is worth following; indeed, we have been obliged from the outset to recognize her leadership in these restrictive measures, so coveted and needed here. In due time we may hope for suitable laws, and capable officials to compel their observance, and one gentleman who will be found foremost in bringing about such a consummation is Fitz Cochran, Esq., who is also one of the Vice-Presidents and a member of the Executive Committee of the International Association for the Protection of Game.

TABLE OF CLOSE SEASONS.—We reprint this week our comparative table of close seasons, after carefully correcting it by all the recent Legislative acts to which we have had access. If any error should appear it must be attributed to the incorrectness of the data furnished us, as no pains have been spared on our part to make a table which shall be at once valuable and reliable. Secretaries of sportsmen's associations throughout the Union will confer a favor by forwarding us copies of any new laws regarding fish or game which may pass their respective Legislatures.

—There will be an eclipse of the sun on the 29th September instant, visible to a certain degree in all parts of the United States east of the Mississippi Valley.

POINT BLANK.

WE print herewith two letters on this subject, and have also another communication from "Old Scout," which want of space compels us to omit. We are inclined to think with our friend, Mr. Mather, that an excess of scientific terms is apt to confuse the beginner at rifle shooting, and that the simpler the definition the easier will it be understood, and the principle involved become familiar. However science may define it, we all understand "point blank" to be the range of the piece with the simple fixed sights, which may vary more or less with the charge of powder used. For instance: Mr. Greener, in his work on modern breech loaders, in speaking of the ball shooting properties of his shot guns, says that their point blank range is up to fifty yards, beyond which distance a rifle is required for accurate shooting, as in the ball gun the bullet drops rapidly beyond that distance; also that a tight-fitting bullet gives a flat trajectory and a long *point blank range*. In speaking of the Express rifle, he says: "The actual point blank range of this kind of rifle with four drachms of powder is 130 to 140 yards. *One sight only* is necessary for sporting distances, and over 200 yards a full fore sight must be taken, as the bullet *begins to drop* at over 150 yards." In a series of experiments made at Wimbledon in 1870, to ascertain the fall of projectiles with military rifles, it was found that with an Enfield rifle, both weapon and point aimed at being five feet above the level of the ground, with the sight fixed at 100 yards, the mean of ten shots struck the ground at 321½ yards. It must be noted, however, that the fall of a bullet when fired from the shoulder is less than when fired from a fixed rest, the reason being that there is a slight tendency of the muzzle to rise when the piece is fired from the shoulder. With regard to the curve of a projectile, we believe with our correspondent "Trax," that most rifles have a flat trajectory for a certain distance, and that the ball describes a curve only when the muzzle is elevated. The definitions of point blank in Webster are probably the simplest that can be given. "The point at which the line of sight intersects the trajectory" (the trajectory being the course of the bullet) and "the extent of the apparent right line of a ball discharged."

EDITOR FOREST AND STREAM:—

I have read the discussions on this subject in your paper, and think "Old Scout," "Point Blank," "Plain Talk," and others are getting the thing highly mixed, and that some of them might be a trifle more courteous toward those whom they criticize, especially as they may possibly have a small particle of "beam" in their own eyes, which could profitably be extracted before plucking the mote that is in their brothers. When I was in the service I learned that "point blank" was the point where the trajectory cut the line of sight the second time *without the use of a rear sight*. That is in artillery, the dispart giving sufficient elevation. In heavy garrison guns we used a spirit level with vertical slide to determine the highest point on the base ring and the swell of the muzzle. This is known as the "line of metal." In ordinary practice there is but one case where the object is struck by sighting upon the line of metal—this is then known as point blank range. A knowledge of this range for each gun can only be obtained by experiment, as it varies with the length and calibre of the piece as well as the dispart and charge. The "line of metal" is also known as the "natural line of sight," and for all distances beyond point blank a gunner's quadrant or breech sight, (tangent scale,) is used.

The old 42 and 32-pounder sea-coast guns had no natural line of sight, as the swell of the muzzle was not visible when the eye was on a level with the base ring on account of the extension of the first re-enforce; therefore these guns had no point blank. As the rifle has a fixed sight as well as a raised one, I should consider the former as the dispart, and the point blank of my gun as the distance at which I could strike the object aimed at by sighting with this fixed sight, and all distances beyond this requiring an elevation of the hind sight as beyond point blank range of that gun.

FRED. MATHER.

EDITOR FOREST AND STREAM:—

"Let us circulate no false theories; these would mislead and be productive of harm." Now, "Old Scout," this is just what you are doing. I have no doubt that you have received many letters of commendation, but they only show the ignorance of the masses about anything connected with the rifle and its projectile. "Point Blank's" article showed your errors very plainly, and now, in order to maintain your position, you reply with an unintelligible jumble of words and scientific terms. Either you have misunderstood the subject or the work from which, you have obtained your information was incorrect. I do not think you will enlighten many gunsmiths or any one else.

In the first place, in your former letter you assumed that the bullet fired from every rifle describes a curve, whose highest point from the line of sight is four inches at one hundred yards distance. This may be so with the guns you have been accustomed to shoot, but take the good small bore rifles and you will find they have to all intents and purposes a flat trajectory for from 120 to 140 yards, and in some guns even more, and no perceptible curve for a still greater distance, and to the distance which a gun will carry without perceptible fall of the bullet is the point blank range, which varies according to the gun and the charge used. Point blank, by which you mean artificial point blank, you describe properly. As regards your theory of the curve of the ball you are wrong, and any practical gunmaker will tell you so. The ball does not describe a curve from the moment it leaves the gun; the fall of the bullet is gradual, and as it increases it describes a hyperbolic curve, owing to its loss of momentum consequent on the resistance of the air and the attraction of gravitation. Now, if "Old Scout" is correct in his theory of a constant curve, how will he account for the increased trajectory that can be given a rifle by using a light ball and a heavy charge of powder, as in the English express rifles and our own Kentucky rifles? Let him go into the backwoods of Pennsylvania or Virginia to a turkey shoot and he will see a turkey set up eighty rods away and the natives with their open V and bead sights that they cannot raise loading with two or three of their ordinary charges of powder, and taking a full sight of the head, unmindful of the increased recoil, shoot, and occasionally win a turkey merely by increasing the trajectory of their gun by a large charge of powder. Over that distance the ball undoubtedly falls very quick with a curve that would delight "Old Scout."

"Point Blank" hopes to see the times when the same sight can be used up to 1,000 yards. That he will never see, but he can see the same sight used up to eighty rods, or about 400 yards, which practically proves his theory and that of all practical gunmakers. In the immortal words of the learned Professor of Chemistry, "Gentlemen, the experiment has failed, but the theory remains the same." So "Old Scout" will probably stick to his, but neither he nor any other man can calculate the parabola of a rifle ball on the principle he advocates. The practice at Creedmoor is conducted on the true theory of raising their sights till they hit the target.

TRAX.

[FROM OUR SPECIAL CORRESPONDENT.]
MISSOURI CLUBS AND OTHER MATTERS.

SOUTHERN HOTEL, ST. LOUIS, August 25, 1875.

EDITOR FOREST AND STREAM:—

The St. Louis and King's Lake Fish Breeding Association hold their grounds seventy miles up the river, and four miles back of Sterling's Landing. This lake is 25 miles long by an average of a half a mile wide. It is fed by springs and river, and abounds with croppies and black bass. Adjoining are extensive prairie hunting or shooting grounds. This is said to afford the best fishing waters within one hundred miles of the city. The club has an extensive boat club house, with all the appliances for fishing and good cheer. It numbers about eighty members. The veteran fisherman and gun dealer, Mr. R. Beauvais is President; E. M. Leeds, Vice-President; J. B. Beauvais, Secretary and Treasurer. On the Illinois side, twenty-six miles below here, is located the fishing grounds of the St. Louis and Murdock Fishing Club. This is smaller in extent than King's Lake and like the same is four miles from the river, under the bluff, where probably the main channel of the stream remotely took its course. The club has been to considerable expense to put the lake in good order and beautifying the scenery, and eradicating the "baser fry," and stocking it with croppies and black bass. This lake is only nine miles long by an average width of one-fourth of a mile. It is under the same management, yet distinct in its organization, and unincorporated, unlike the former in this respect. The sportsmen of St. Louis, if not as enthusiastic at trap shooting as those of Chicago, certainly are not a whit behind in the field where the true test of skill should be exemplified, judging by what I have been assured, read and observed. They are now having a lively time with the chickens, for this kind of game never was more plenty. The grangers are a little troublesome to strangers, by attesting their vested rights over their domain; nevertheless, our country friends are readily approached, through acquaintances, and cheerfully take a hand or point the way to fields of abundance. I am happy to know that Col. Williams, of Quincy, has formed a company in this city, consisting of a few of the leading financial men, with a capital of \$50,000, for the purpose of manufacturing his patent cartridges, to which I think I called your attention in one of my communications last Winter. The machinery is expected to be completed in ninety days. The officers in the management of the company are Chas. L. Hunt, President; N. S. Chouteau, Vice-President; Wm. A. Albright, Secretary and Thos. Hunt, Treasurer, and will be known as the St. Louis Patent Shell Manufacturing Company. The patent consists simply of a concentrated inner base of the shell, giving thereby greater efficiency and preventing recoil, all of which, it is claimed, can be made 75 per cent. less than any other. Anything that will lessen the expense and at the same time increase its efficiency, will be welcomed by the brotherhood, and the agency liberally encouraged and rewarded. A gentleman, not interested in any way in these shells, other than general good, made a comparative test. Perhaps I could do no better than to give the trial in his own language:

"After taking from my library several pamphlets, of the light literature of the day, to test the penetration of my shot, I proceeded to the trial with the following result: My object was to make the investigation as thorough and complete as possible, so that no regrets in the future would arise in my own mind as to the thoroughness of my work. First firing was at Victor Hugo. I blazed away at the creator of Monte Christo with a plain paper shell; distance, 56 yards, 4 drachms of powder, 1½ ounce of No. 6 shot. The old man must have dodged, for not a solitary shot took effect. I then tried a patent shell, 3 drachms of powder, 1 ounce of shot; same distance. Seven shots took effect, giving a penetration of 42 leaves.

I next used plain metallic shells, No. 6 shot; same distance as before.

5½ drs. powder, 1½ oz. shot, penetrated 37 leaves.

Pat. shell, 3½ drs. powder, 1 oz. shot, penet'd 32 leaves.

" 3 " 1 " " 50 "

" 4 " 1½ " " 37 "

Pat. shell, paper, 3½ drs. powder, 1 oz. shot, penetrated 50 leaves.

Plain shell, paper, 4 drs. powder, 1 oz. shot, penetrated 42 leaves.

Pat. shell, No. 6 shot, 3 drs. powder; distance, 38 yards, penetrated 100 leaves, with many shot buried deep in the bark of the tree. This I consider the best shot out of all my tests, as the gun was loaded the same as a muzzle loader, with one wad on top of powder. The distribution was perfect, the shooting hard and the penetration extraordinary. The "Countess of Thule" and "Rob Roy," the bold moss trooper, came in for a share of my attention, with about the same results. I don't hesitate to say that a complete revolution in this branch will take place as soon as these patent shells are placed upon the market."

Personally, I have carried one of these shells in my pocket and exhibited it to many sportsmen throughout my travels, all of whom accepted the theory of its construction favorably, and will hail their introduction into the market with pleasure.

I find two clubs, one the St. Louis Gun Club, organized for perfection in trap and field shooting. The other is for the protection of fish and game, called the Sportsmen's Club. These are distinct in their organization and management, but composed of almost the same members. A great many leading sportsmen are out on the wing. A few by the sea shore, on the lakes and streams in the higher latitudes. By-the-by, I must not forget to mention the popularity of the Dane gun throughout the valley of the Mississippi and its tributaries. Dr. McKellops, the leading

dentist of this city, takes pride in showing up this gun and its superior action, and he does not hesitate to pronounce it the *par excellence* in the gun line. He is equally skilled with the "shooting iron" as with the forceps, and is ranked with the leading sportsmen of the city, and it is fair to presume that when he praises anything in the line of field sports, he knows what he is talking about; besides, I find this confirmed by many others of no less pretensions. B.

The Rifle.

THE TEAM IN BROOKLYN.—Gen. Dakin and his companions of the victorious rifle team were entertained on Wednesday evening last at a banquet held at the Brooklyn Academy of Music. After the viands had been disposed of Mayor Hunter welcomed the General and his friends in a congratulatory speech, in which he alluded to the fact that the team having their work to do, had done it well, and that the confidence placed in them as fit representatives of their country had not been misplaced, concluding by proposing Gen. Dakin's health, and wishing that he might always hit the mark at which he aims. After the applause had subsided Gen. Dakin arose and replied to the call made upon him. After alluding to the departure of the team and the pleasure experienced by himself and associates in receiving so warm a welcome both abroad and at home, he expressed his indebtedness to the press of both countries for their liberality in devoting so much of their space to the doings of the team, and to the almost marvellous correctness and exactness of their reports, as well as for the many pleasant words they have published complimentary to the team and also to himself. Less than one year ago we assembled here as now, only then it was to bestow honor upon a few of Ireland's noblest sons—[applause]—whom it was our good fortune and pleasure to meet. [Applause.] We have since seen them in the land which gave them birth, and in return for the treatment they received here they have shown us that the hospitality of the Irish people cannot be excelled—[applause]—nor can the magnificence and splendor of their banquets be eclipsed by any nation."

Col. Gildersleeve responded to the toast of "The American Rifle Team" and Col. Mitchell to "The Irish Rifle Team." Other toasts were proposed and responded to by various gentlemen. Judge A. H. Dailey in responding to "The city of Brooklyn," presented to the team an old time musket which had been used by Patrick Henry in Virginia during the revolutionary war. The gun came into the possession of Mr. Dailey's family, and on his last visit to his old home he secured it. He proposed that it should be shot for every year. Major Fulton accepted the gun, which was handed to him in its old buckskin case, and he said that the team would shoot for it in preference to the most magnificent trophy.

Here is what our artist intended should be a fac simile of this old arm, from a drawing attempted upon the spot, but the banquet was too much for him.

The festivities were not concluded until a very late hour.

—The various prizes won by the American rifle team at Dollymount and Candeboye, together with the massive challenge cup presented by the National Rifle Association, of Great Britain, to the National Rifle Association of America, for competition at annual meetings of the latter, are on exhibition at the establishment of Messrs. Tiffany & Co., in Union square.

—On the evening of August 30th a banquet was tendered to Major Henry Fulton, of the American rifle team, by the Freemasons of Williamsburg, at the banquet hall of DeWitt Clinton Commandery in Broadway. Dr. Charles A. Doane, Master of Progressive Lodge, presided, the guests being limited to seventy-five, representing the various lodges.

—The American rifle team will be tendered a grand complimentary banquet at Delmonicos, on Monday, Sept. 6th. About 200 guests will be present.

—A reception will be tendered at Poughkeepsie, on Monday, Sept. 13th, to Col. John Bodine and Capt. R. C. Coleman of the American rifle team. The other gentlemen of the team will be present also. A splendid badge will be offered for competition among the American rifle team at 500 yards, on the grounds of the Hudson River Rifle Association, during the afternoon. On Tuesday the team will proceed to Utica.

—The Ninth Annual Reunion of the Army of the Cumberland will take place at Utica, N. Y., September 15 and 16, 1875. President Grant, Gen. Sherman and Sheridan are expected to be present. The American rifle team have received invitations and signified their intention of being present, Col. Gildersleeve having been an active member of the Army of the Cumberland during the war.

MILNER'S MUZZLE.—We do not refer to Milner's dogs, of which he has several very fine specimens, but to the muzzle of his rifle, which was the cause of his poor score in the International match. Since the return of the American rifle team we have been informed that after the match his rifle was examined, and upon the breech of the barrel being removed, it was found that the rifling was entirely effaced up to within three or four inches of the muzzle, proving conclusively that the rifle was defective, if not absolutely worthless, for fine shooting.

CREEDMOOR.

THE REMINGTON DIAMOND BADGE.—The tenth and last competition for this badge was shot on Saturday last, resulting, after some excellent and close shooting, in a victory for Mr. L. L. Hepburn, who, having won the badge on the fifth and eighth competitions, now becomes the fortunate possessor of a very handsome trophy. The contest for this badge has always attracted great interest, but on this occasion it was much enhanced by the presence of several members of the American team, four of whom took part in the match. The wind was light and the weather everything that could be desired for good scoring. The conditions of the match were as follows:

"Open to members National Rifle Association. Weapon, any breech-loading rifle within rules. Distances, 500, 800 and 1,000 yards. Position, any without artificial rest. Rounds, seven, with two sighting shots at each distance. To be won three times, not necessarily consecutively, to become the winner's personal property. Entrance fee, \$1."

There were eighteen contestants. The shooting at the 500 yards range was very close, Messrs. Fulton, Jewel and Canfield leading with scores of 34 each out of a possible 35. At 800 yards Mr. Hepburn came up, making seven consecutive bullseyes, 1,000 yards, as did also Major Fulton. At the 1,000 yards Fulton seemed to have some difficulty in finding the bullseye, but Hepburn succeeded in getting on after the first attempt. At the close of the shooting it was found that Messrs. Hepburn and Fulton had tied, but, as under the rule framed for such occurrences, the prize goes to the one making the largest score at the longest distance, it was awarded to Mr. Hepburn and duly presented to him by Major Fulton as Secretary of the National Rifle Association. Mr. Hepburn made a short reply, concluding by saying that Messrs. E. Remington & Sons would replace the diamond badge by another badge or trophy. The following are the scores:—

Name.	Rifle.	Yards.	Score.	Total.
L. L. Hepburn, Remington.....	500.....4 4 5 5 4 5 4.....31	800.....5 5 5 5 5 5 5.....35	1000.....4 5 5 5 5 5 5.....32	98

A. Alford, Remington.....	500.....4 3 2 3 3 4 4.....21	800.....0 0 2 2 4 2 4.....14	1000.....0 0 0 0 0 0.....0	35

The first competition was shot on the 15th of November, 1873. Seven competitions were shot at the old style targets, the bullseye counting four, the highest aggregate score per man being 84 points. The other three were shot on the new targets—bullseye 5—making the highest aggregate score 105. The scores of the winners in the ten matches were as follows:—

Robert Omand.....	70	H. Fulton.....	77
John Bodine.....	69	H. Fulton.....	73
J. P. M. Richards.....	71	L. L. Hepburn.....	98
A. V. Canfield, Jr.....	73	H. S. Jewell.....	96
L. L. Hepburn.....	78	L. L. Hepburn.....	98

The Whitworth rifle, presented by Mr. T. C. Clark for second prize in this match, having never been won but once by any one person still remains in abeyance.

A cut of the Remington badge will be found on page 233, vol. 1, No. 15 of this journal.

CORRECTION.—The new rule of the National Rifle Association regarding affiliating societies which we printed last week, was by an error made to read that "any rifle club or association, organized and having its headquarters within twenty-five miles of the Creedmoor range, may become a member of the National Rifle Association upon payment of fifty dollars per annum to the association." It should have read "any rifle club or association having its headquarters NOT within twenty-five miles of Creedmoor, etc."

—The *Pull Mall Gazette* is our authority for the following bit of gossip regarding Mrs. Scott Siddons, the well known actress and elocutionist. "The Biddeford and Torrington Rifle Corps have just obtained a new long range, which was formally opened by Mrs. Scott Siddons lately. In the presence of Sir Edward Green, the local gentry and the officers and men of the respective corps, Mr. Siddons took a Martini-Henry rifle and fired at the target, making a bullseye the first time and a centre with her second shot. She

was loudly cheered, and the Devon volunteers boast that they have now in their county the best marksman and the best markswoman in England."

—We publish herewith an engraving of the elegant Gold and Silver Badges, manufactured by the Gorham Manufacturing Company for presentation to the victors of the International match at Dollymount. They were delivered by Col. Gildersleeve to the Irish committee in charge of the match. On the evening of July 3d, at the Exhibition Palace in Dublin, the Lord Mayor presiding, among the numerous awards distributed, the Lady Mayoress presented to the American Rifle Team these beautiful badges, which were universally admired by every one.

This engraving originally appeared in *Harper's Weekly*, and has been kindly furnished to FOREST AND STREAM for its present use.

THE FOREST AND STREAM BADGE.—The seventh competition for the badge and the accompanying medals presented by Mr. Conlin occurred at the gallery No. 930 Broadway on the 25th ult. The number of contestants was large, and the winner proved to be Mr. J. P. M. Richards, with a score of 13½ inches in 20 shots at 75 feet. Messrs. Thos. Lloyd and A. B. Dodge were the winners of the second and third badges, scoring respectively 16½ and 20 13-16 inches, being the score nearest to and over 15 and 20 inches. The following are the complete scores:—

Inches.	Inches.
J. P. M. Richards.....13½	Chas. Johnson.....19½
M. P. Lennon.....15½	A. B. Dodge.....20 13-16
Thos. Lloyd.....16½	Geo. W. Yale.....21½
Wm. Hayes.....17½	H. Wing.....22 2-8
T. C. Noone.....17 11-16	D. L. Beckwith.....22½
Wm. Mosier.....17 7-16	Thos. Fenton.....23 5-16
C. A. Cheever.....17 13-16	Joseph Woodward.....23 6-8
C. F. Robbins.....17 15-16	Fred. Bullick.....23½
L. V. Sone.....17½	J. L. Price.....24 1-16
Fred Kessler.....18	J. B. Gun.....24½
G. W. Hamilton.....18½	C. Jones.....29½
A. B. Freeze.....18 7-16	W. T. Thorp.....30
Geo. W. Jones.....19 1-16	W. B. Joline.....32½
Ed. Brown.....19 5-16	

The winners of the FOREST AND STREAM badges are as follows:—

First Badge.	Second Badge.	Third Badge.
G. W. Yale.		
John Trageser.		
Wm. Hayes.	L. Bird.	A. Marsh.
Wm. Hayes.	Wilson MacDonald.	W. A. Sherman.
G. W. Hamilton.	A. G. Hellwig.	J. J. O'Kelley.
M. P. Lennon.	W. B. Farwell.	R. F. Hill.
J. P. M. Richards.	Thos. Lloyd.	A. B. Dodge.

The next match will be shot on Thursday, September 9, at No. 930 Broadway.

CHICAGO RIFLE CLUB.—We learn from the last issue of the *Chicago Field* that the efforts made to establish an interest in rifle shooting at that place, and which by the way were set on foot originally by our Chicago agent, Ira G. True, have culminated in the organization of a regular rifle club, with a constitution similar to that of the Amateur Rifle Club of this city. In forming this association, the projectors have in view a systematic course of instruction for its members, and propose to encourage shooting under such conditions and rules as those now in force at Creedmoor, abjuring all artificial rests and selecting a range, not in some sheltered spot where the influence of the wind is escaped, but rather one where the marksman will be forced to train himself to allow for wind and be prepared to meet other vicissitudes of weather. No selection of a range has yet been made, but a tract at Galewood and another on the Lake Shore Division of the South Park are talked of. The officers appointed by the club are: President, Judge Bradwell; Vice President, Dr. Arthur Edwards; Treasurer, O. C. Blackmer; Secretary, Col. R. S. Thompson; Executive Committee, W. R. Rooney, James P. Root, J. A. Shaffer, Scudder, S. S. Greeley. Mr. Blackmer has been appointed as a committee of one to visit the clubs and ranges in this section and report upon the same. Creedmoor will receive particular attention, and Mr. Blackmer will make himself familiar with all the details of practice and construction. Some good shooting may be expected from the members of this club, many of whom are men accustomed from boyhood to the use of the rifle, and who want only practice to develop them into first class long range shots. We hope to see a visiting team at Creedmoor ere long, and in the distance looms up a vision of inter-State matches without number. Chicago is in time to furnish a team or portion of an American team to participate in the great International matches, which will be one of the marked features of next year's Centennial.

THE RIFLE IN GEORGIA.—One of the attractions of the Georgia State Fair to be held at Macon in October next, is a series of rifle matches, open to all-comers. The first match, to be shot on Tuesday, October 19th, is open to teams of eight from all parts of the United States, five shots each at 200 and 300 yards, off-hand; prize, \$300. The second is an all-comers match at 100 yards, five shots, standing, prize, \$100. The third is a similar match at 200 yards, with the same premium. Entries are to be made to the Secretary of the Georgia State Agricultural Society before October 18th. The shooting will be conducted according to the regulations of the National Rifle Association.

SAVANNAH, Ga., August 24th, 1875.

EDITOR FOREST AND STREAM:—

In reply to a call through our dailies of the 12th inst. by the Board of Directors of the Georgia Game Association, to such members of that organization as were desirous of forming themselves into a rifle team under its auspices, quite a number met at the rooms of the association that evening, and organized a team to be called the Georgia Game Association Rifle Team, and elected the following officers: Captain, Malcolm McLean; Lieutenant, J. P. White; Secretary, William N. Nichols. At an adjourned meeting held on the evening of the 19th inst. rules and regulations similar to those existing at Creedmoor were read and adopted, after which the names of several new members were added to the list. It was decided that the members should be formed into teams of eight, each team to be commanded by an officer to be elected or appointed, as might be decided upon hereafter. Two teams were formed from those present, under the command of the Captain and Lieutenant, as follows: Captain McLean's team—Robert Wayne, W. H. Connerat, T. Halligan, Jos. Hirschbach, J. Kaufman, W. J. Fohard, J. W. McAlpin, B. C. Wright. Lieut. White's team—W. F. Chaplin, E. F. Lovell, Wm. N. Nichols, J. G. Butler, Geo. E. Alden, J. R. Hamlet, F. W. Dasher, W. F. Scherff.

Captain McLean's team at once challenged that of Lieut. White to shoot for a prize to be agreed upon, and as the two teams are very evenly matched, some close shooting will be looked for. It will be seen that Messrs. White and Hirschbach will be opposed to each other, and to a certain extent it will be decided as to which is the best rifle shot. Quite an effort was made some time ago to bring about a match between these two fine shots, but failed. My having stated in a letter some time ago that Capt. White was the recognized champion rifle shot hereaway, gave considerable offense to several parties, hence the effort to make a match between them. If he is not—and he is too modest to claim that distinction—how is it no one who has contended against him in the matches gotten up by the members of the old Savannah Rifle Club—now defunct—or at the festivals of the Schutzen Gesellschaft of this city, has ever beaten him?

Great interest is manifested in the rifle contest which is to come off at Isle of Hope on next Thursday, when a fine Remington rifle and breech loading shot gun will be given as prizes to the successful winners. The guns to be used will be the Springfield breech loading rifle, regulation pattern. The distance will be one hundred yards and each contestant will have three shots, off-hand. Many of the Springfield rifles among our military men, it is thought, have had the triggers tampered with, acting almost as a hair trigger, and for this reason, I am told, the judges will examine each gun carefully, to see that nothing of that kind has been done to it. It is expected that many fine shots from Macon and Augusta will be present to participate in the contest. Some very fine shooting has been done lately by the Macon military, but, so far, Savannah is ahead. Mr. George Allen has the credit of making the finest single shot, his ball driving the tack in the centre of the target.

GEORGIA.

[It would be well to procure one or more 6 lb. trigger testers, and have every rifle tried before shooting. See regulations of N. R. A.—Ed.]

RIFLE CLUB AT MONROE, MICHIGAN.—A rifle club has just been organized at Monroe, Michigan, numbering twenty members, with the following officers: President, F. H. Hubbard; Secretary, Vincent Kindler; Treasurer, H. A. Conant. The rules governing the National Rifle Association have been adopted so far as they may apply to the club, and the rules of practice observed at Creedmoor have also been added. The club will commence at once. B.

MICHIGAN STATE RIFLE ASSOCIATION.

JACKSON, Mich., August 24th, 1875.

EDITOR FOREST AND STREAM:—

We have formed a rifle club here called the Jackson Rifle Club, and have secured a range of 1,200 yards near the city. Only two or three of our members have the long range rifles yet, but these have been engaged in practice at the longer ranges, and have made fair scores. We hope at no distant day to send a team to Creedmoor. A number of clubs have been organized in other parts of the State, and we hope during the coming Winter to form a State association of the amateur riflemen of Michigan. G. H. WOLCOTT, President Jackson Rifle Club.

—The second contest of the New Jersey Rifle and Gun Club for the club medal took place at Ridgewood on Aug. 19th. Distance, 200 yards, off-hand, Creedmoor third class target. The following is the score:—

Name.	Score.	Total.
Gaylor.....	3 4 4 4 5 3 4 5 4	40
L. Lane.....	4 4 4 3 4 4 4 4 4	39
A. Lane.....	2 3 3 4 4 3 3 3 3	31
Perry.....	2 4 4 4 3 3 0 2 0	25
Reading.....	0 0 3 5 2 3 0 3 2	21
Sheffield.....	3 2 0 0 3 0 0 2 0	12

C. MARTIN, Secretary.

HOLYOKE, Mass., August 28th, 1875.

EDITOR FOREST AND STREAM:—

Our club now numbers thirty-two members. We use the Creedmoor targets, rules, etc., and are about equally divided in the use of the Remington, Sharps and Maynard rifles. This week's score is at 400 yards, seven shots, position any without rest:—

H. White.....	27	E. C. Smith (taking the badge).....	32
A. Knight.....	29	J. Snover.....	28
F. Norton.....	12	J. Mercier.....	23
D. H. Smith.....	28	D. Kelton.....	27
S. Chapman.....	27	C. Farrington.....	23
W. Heywood.....	27	R. McDonald.....	17
A. Munger.....	33		26

Week before last, August 14th, W. J. Bishop and J. Snover made a tie on 34 at the same range, 400 yards, and on shooting off Bishop made 15 out of a possible 15, taking the badge. On August 21st E. C. Smith took the badge, 300 yards, score 27. A valuable silver cup is to be shot for in a few weeks. Yours respectfully, S.

—At the third and last trial of the Parthian Jr. Rifle Club of Hudson, New York, to select a team to shoot against the Saratoga Rifle Club at Saratoga, September 8, the following are the names and score; distance 500 yards; highest possible score 100:—J. A. Smith, 93; L. Geiger, 92; Thos. Dennegar, 91; E. S. Elmer, 85; A. Bush, 81; S. B. Newcomb, 88. Reserve, G. H. Macy and Fred. Geiger.

PLANKERS.

—At the Provincial Rifle competition at Fredericks, N. B., on the 24th August, the national silver medal was won by Lieut. Congle, with a score of 39 points at 500 and 600 yards.

Tennessee State Sportsmen's Association.

SECOND ANNUAL MEETING

AT
MEMPHIS, Oct. 25, 1875.

TRAP SHOOTING. Premiums \$3,500 cash.
BENCH SHOW OF FIELD DOGS. Premiums, \$500 in cups.

FIELD TRIAL. Premiums, \$1,300 in cash, and \$300 in cups, donated by FOREST AND STREAM and Rod and Gun.

FIRST DAY.—MONDAY, Oct. 25th.—Trap Shooting, Purse No. 1. \$1,000; \$200 entrance; 50 to fill or prorate. 10 single rises, class shooting; \$350, \$250, \$175, \$125, \$100.

SAME DAY.—Purse No. 2. \$500—\$15 entrance, 33 to fill or prorate. 10 single rises, class shooting; \$150, \$125, \$100, \$75, \$50.

TUESDAY, Oct. 26th.—Trap Shooting, Purse No. 3. \$1,000; same conditions as Purse No. 1.

SAME DAY.—Purse No. 4. \$500; same conditions as Purse No. 2. Also, BENCH SHOW OF FIELD DOGS. Cups valued at \$35 will be given the prize dogs, bitches, and pups in each of the following classes: Irish, Gordon and English (or of any breed) Setters and Pointers. Cups valued at \$10 will be given Hounds, each to dog, bitch and pup.

WEDNESDAY, Oct. 27th.—Trap Shooting—Purse No. 5. Gold Medal; for members of the Association only.

SAME DAY.—Purse No. 6. \$500; same conditions as Purse No. 2. Also continuation of Bench Show and awarding of the premiums in the same. Wednesday at 9:30 P. M. the proprietors of the Peabody Hotel have tendered the Association a grand champagne supper and banquet. All visiting sportsmen are cordially invited, free of charge. The Peabody Hotel will entertain sportsmen at reduced rates.

Miscellaneous.

THE HAZARD POWDER CO., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER. GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

88 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER.

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER.

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

AUDUBON POWDER.

Very quick. For woodcock and quail Nos. 1 to 4. Packed in metal kegs of 12 1/2 lbs. and 6 1/2 lbs., and in pound canisters.

ORANGE RIFLE POWDER.

The best for rifles and for all ordinary purposes. Sizes F.g., FFG, and FFG, the last being the finest and most used. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 pound.

All of the above give high velocities and less residuum than any other brands made.

LAFLIN & RAND POWDER Co.,

21 Park Row, N. Y.
(OPPOSITE ASTOR HOUSE.)

BREWER'S

PATENT

Chute and Fishway.

The Fish-way is constructed in the bottom of a chute of any desired width, by means of timbers forming triangles, making a zig zag course, breaking the force of the water in its descent, enabling any kind of fish to ascend it. It may be constructed on a rise or grade of one foot in ten. Its upper end extends into the pool of a dam. The water "flows" with a uniform swiftness over a smooth bottom. It does not form any "pools or eddies."

This Fish-way can be seen in a dam in the Mohawk River near Schenectady, N. Y., and for its successful working see the Report of the New York Commissioners of Fisheries for 1874.

may 6-ly JAS. BREWER, Muncy, Pa.

Sportsmen!

KEEP YOUR GUNS CLEAN, FREE from rust and lead with one-half the usual time and labor, by the use of my chemically prepared Circular Gun Swabs, suitable for cleaning any size bore, and warranted not to injure the finest barrels. Put up in packages containing 100 Swabs and sent postpaid to any address on the receipt of 50 cents. Please state whether they are wanted for shot gun or rifle. Try a package and you will use no other. Address R. L. GRAVES, Sunderland, Vt. an19tf

SCOVILL'S Blood and Liver Syrup

All cutaneous eruptions on the face or body indicate
An Impure Condition of the Blood,
and this may or may not be SCROFULA; but in
either case is nothing more than an insidious poison,
that

BURNS LIKE A TERRIBLE FIRE
as it courses through the veins, sowing seeds of death
with every pulsation.

In this condition of things something is needed **AT**
ONCE TO CLEANSE THE BLOOD; and

Scovill's Blood and Liver Syrup

will positively effect this desideratum, expelling
every trace of disease from the blood and system and
leaving the skin

SOFT, FAIR AND BEAUTIFUL.

Hundreds of certificates attest its value. Price \$1 a
bottle.

FOR SALE BY ALL DRUGGISTS.

Dr. Rogers's VEGETABLE WORM SYRUP

A brave man may suffer pain, when inflicted upon
himself, heroically; but he

Cannot see his Child Suffer.

There is no other malady incident to childhood that
is accompanied with more indescribable wretched-
ness to the little sufferers than that

Produced by Worms;
and when the parent fully comprehends the situation
he will not delay a moment in securing the most
prompt and efficient remedies to insure the expulsion
of the intruders. The remedy may be found in

Dr. Rogers's Vegetable Worm Syrup.

Please bear in mind that
ROGERS' WORM SYRUP is the reliable prepara-
tion.

ROGERS' WORM SYRUP is a palatable prepara-
tion.

ROGERS' WORM SYRUP is liked by children.
ROGERS' WORM SYRUP positively destroys
worms.

ROGERS' WORM SYRUP leaves no bad effects.
ROGERS' WORM SYRUP is highly recommended
by physicians, and is unquestionably the best WORM
MEDICINE IN THE WORLD.

Price 25 cents. For sale by all druggists.

HENRY'S Carbolic Salve.

FOR SALE BY ALL DRUGGISTS.

The wonderful celerity with which this
combination of Carbolic Acid with other
soothing and Curative Emollients acts,
is something akin to the marvelous.

It is with pride that the proprietors call
attention to the gratifying fact that

**Physicians give it the high-
est meed of praise,**

and use it and prescribe it in their practice.

NEW YORK, Dec. 22, 1869.

JOHN F. HENRY, Esq.:

Your CARBOLIC SALVE proves an excellent article,
and I thank you for it. This is another evidence of
the great value of the discovery of Carbolic Acid. Yours
truly,

GEO. B. LINCOLN,
Pres't Board of Health.

Price 25 cents per box.

REV. R. B. LOCKWOOD'S Catarrh Cure!

The Best Remedy Known, and Endorsed by all the
Principal Physicians of the Country.

Rev. R. B. Lockwood's Nasal Douche will be
found valuable in obstinate chronic cases.

Rev. R. B. Lockwood's Liver and Stomach Pills
dyspepsia, relieve the enderment of thousands.
Price 50 cents each.

JOHN F. HENRY, CURRAN & CO., Proprietors,
8 and 9 College Place, New York.

HENRY'S SEWING MACHINE OIL

A PURE OIL that does not gum up and has the
endorsement of the principal Sewing Machine Com-
panies.

Price 25 Cents per Bottle.

MOTT'S LIVER PILLS

It is easy enough to make a pill, but to make a
good pill, ah! that's the difficulty. There are cheap,
harsh, drastic pills, that are of even less benefit than
a dose of salts. But a good medicine, like Dr. Mott's
Liver Pills, which penetrates to the seat of disease, is
a desideratum indeed. Will positively cure all dis-
eases of the Liver. Sold everywhere. Price 25 cents
per box.

Green's Oxygenated Bitters.

At certain periods of life a tonic is a necessity; but
there is danger in using stimulants that injure the or-
gans of digestion while giving temporary relief. To
obviate this and present to the public a tonic free
from Alcoholic Poison, Dr. Green prepared the Oxy-
genated Bitters, a sure cure for dyspepsia and all kin-
dred complaints. Sold everywhere. Price \$1 per
bottle.

Packer's All-Healing Tar Soap.

It cures all kinds of Skin Diseases with a most won-
derful certainty; it promotes cleanliness, personal
purity and general health; it is a preventive of many
kinds of disease, and it is an absolute necessity in
the nursery. Price 25 cents.

Miscellaneous.

Breech Loaders. W. & C. SCOTT & SONS.

Winners of the "Turf, Field
and Farm" Gun Trials.

(See issue October 3d, 1873.)

In which competition the committees have awarded
our guns, First and Second for POINTS OF MERIT
OF ACTION, MATERIALS, PROPORTION, AND
SHOOTING QUALITIES combined, in all the four
classes.

THE PREMIER GUN.

W. & C. SCOTT & SON call attention to their
very FINEST weapon, combining all their recent im-
provements, marked on the rib between their name
and London address the brand—"THE PREMIER
QUALITY."

Medium and fine guns bear full name and address,
and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped
with name and trade mark.

W. & C. SCOTT & SON, Sole makers of the
Patent Top Lever, solid, Double Locking Bolt Breech
Loader, bearing the full name of the firm. W. & C.
SCOTT & SON caution sportsmen against imitations
of their patent and name. Guns bearing the name
abbreviated, or with different initials, are not genuine.

TRIAL OF SCOTT & GREENER'S NEW SYSTEM
OF BORING, BY THE EDITOR OF
"THE FIELD," LONDON.

(See The Field, January 30th, 1875.)

"From a comparison of the two tables it will be
seen that with Walker's shot, Messrs. Scott's guns
showed a marked superiority over Mr. Greener's,
both in average and in the highest score made. In-
deed, with the left barrel, in his third shot, Mr. Scott
got a selected group pattern of 239 and a penetration
of 37, equalling the highest pattern made by Mr.
Greener, and exceeding the penetration of that par-
ticular shot by eight sheets."

WHOLESALE.

April-6m

THE GREAT London Gun Trial, 1875.

W. W. GREENER begs to inform his numerous
clients in the United States that he has been very suc-
cessful in the above trial, having secured the first
prize, a silver cup, value 40 guineas—class 2 for 12
bores; also winner in class 1 for 8 and 10 bores, and
class 4 for 20 bores. He has won in all the classes for
improved boring, which is upon a different plan to any
other maker, and is far superior in the three most es-
sential points, viz., PATTERN, PENETRATION,
and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Cortlandt St.,
New York, is now importing my DOUBLE CLOSE-
SHOOTING GUNS to order, an invoice of which
will be shipped to him on the 1st July, and can be ex-
amined about the 15th. All special orders given to
Mr. Squires will be carefully filled. A full report of
the GREAT TRIAL, showing the marked superiority
of my guns over guns made by Dougal, Pape, Westley
Richards, Tolley, Scott, and others, will shortly be
published, and can be had on application at No. 1
Cortlandt St.

Miscellaneous.

WILLIAMS & POWELL, Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the
extreme SIMPLICITY, STRENGTH and DURABIL-
ITY of their New Patent "SIMPLEX" Breech loader
and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,)
its mechanical soundness so thorough, and the
strength and simplicity of the action so great, that
W. & P. feel sure it will supercede all the complicated
and manifold grips now in use, its one powerful grip
being far stronger than any double, treble or quadruple
grip now used. In this new action LEVER and GRIP
ARE ONE SOLID PIECE OF STEEL and the AN-
GLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on ap-
plication, and orders may be forwarded through any
of the best houses in the States for execution in the
Spring.

Guns guaranteed to make patterns of from 160 to
230 with No. 6 SHOT AT 40 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET,

LIVERPOOL.

Established 1780.

J. D. DOUGALL'S EXPRESS SHOT GUNS.

(Title registered.)

SHOWN by trials at Wimbledon by Editor
of the Field to possess the GREATEST PENE-
TRATION and therefore LONGEST RANGE—thus:
Circle, 30 inches; 300 pellets; average, 191; penetra-
tion, 37. The Editor's trial of Greener guns with 340
pellets of same shot and same charge of powder, gave
180, and penetration 30, although there were 40 more pel-
lets in each charge. Should any controversy arise as
to the durability of these new systems, we herewith
warn all beforehand that our system is our own inven-
tion (though founded on the American idea) and is DU-
RABLE, a fact remarked on by the Field, that the
guns tried had been in use during last season, and re-
ferences permitted to the owners. Send for illustrated
Circulars to

59 St. James's Street London.

Attractive Route

To the Trout and Grayling Fisheries of Northern Michigan, VIA GRAND RAPIDS AND INDIANA RAILROAD, MACKINAW GRAND RAPIDS AND CINCINNATI SHORT LINE.

The attention of SPORTSMEN and TOURISTS is invited to the many attractions offered by this line, now completed from Richmond, Ind., to Traverse City, on Grand Traverse Bay, and to Petoskey, on Little Traverse Bay. The waters of the Grand Traverse region and the North Woods of Michigan are unsurpassed, if equalled, in the abundance and great variety of the finny tribe. BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING, now attracting the attention of Sportsmen everywhere, is found only in these waters. BLACK BASS, PIKE, PICKEREL, and MASCALONGE are also found in great numbers in the many lakes and lakelets of this territory.

LUXURIOUS SLEEPING AND CHAIR CARS run through from Cincinnati to Traverse City; also PULLMAN PALACE SLEEPERS from Detroit over Michigan Central and Grand Rapids and Indiana road, via Grand Rapids, to Petoskey, with SLENDID STEAMER making DAILY CONNECTION at latter point for the Island of Mackinaw.

For Tourists' Guide, containing complete and accurate maps, with full information as to Fishing Grounds, transportation facilities, and in short all that could be desired by Sportsmen or Tourists, send to Forest and Stream office, or to the undersigned. Low Round Trip EXCURSION TICKETS good until SEPTEMBER 30th. J. H. PAGE, Gen'l Passenger and Ticket Agent, Grand Rapids, Mich.

Tourists' and Sportsmen's Route.

THE ERIE RAILWAY.

THE ROUTE OF THE ERIE RAILWAY is peculiarly rich in the variety and extent of its scenery, and while the tourist has alternating glimpses of the beauty of rivers, gaps and mountains, the sportsman has within easy reach many localities that afford him every facility for the enjoyment of the sports of the field and stream. We enumerate a few of the pleasure resorts which crowd the line of the road.

Rutherford Park.—9½ miles from New York. Fine hotels and boating pastimes on the Passaic. **Clifton.**—13½ miles from the city, overlooking the picturesque Lake Dundee.

Lake Mohonk.—A beautiful body of water 1,200 feet above the Hudson—splendid hotel accommodations. **Orange Lake.**—Six miles West of Newburgh, and noted for its fishing attractions.

Milford, Pa.—About eight miles from Port Jervis. Is noted for its trout fishing, woodcock shooting and superior hotels.

Avon Springs.—Celebrated for 20 years as a resort for invalids, the waters possessing many valuable healing qualities.

Watkins Glen.—This beautiful gorge is distant 294 miles from New York, via Erie Road to Elmira. Its wild and picturesque attractions are second only in reputation to those of Niagara.

Chautauqua Lake.—18 miles long, 3 miles wide; said to be the highest navigable water on the American continent, being 730 feet above Lake Erie and 1,290 feet higher than the Atlantic Ocean.

Niagara Falls.—This great natural reach is reached by the direct line of the Erie Railway.

There are along the line of the road no less than Ten Large Lakes, abounding with fish, and affording most delightful sport for black bass and pickerel. Their names are—Lakes Greenwood, Orange, Mohonk, White, Otsego, Cayuga, Seneca, Keuka, Silver and Chautauqua.

The following schedule will afford a partial guide to the numerous fishing localities reached by this road:

Trout Fishing:

At or near Southfields,	32 miles from New York.
" " Oxford,	52 " " " " "
" " Middletown,	67 " " " " "
" " Otisville,	76 " " " " "
" " Port Jervis,	88 " " " " "
" " Monticello,	112 " " " " "
" " Milford,	96 " " " " "

Black Bass and Pickerel.

At or near Sloatsburg, 36 miles from New York, including Lakes Truxedo, Potague and Cedar Pond. At or near Monroe, 50 miles from New York, including Round, Long, Mombasha and Cromwell's Ponds.

At or near Florida, 64 miles from New York. The famed Mirror Lake, is distant 1 mile.

At or near Otisville,	76 miles from New York.
" " Gnyard,	80 " " " " "
" " Port Jervis,	88 " " " " "
" " Monticello,	112 " " " " "
" " Cen. Valley,	48 " " " " "
" " Seneca Lake,	291 " " " " "

Tickets for sale at the General Offices of the Erie Railway Company, 124 Washington street-Boston; 241, 401, 529, or 957 Broadway, New York; and 732 Chestnut street, Philadelphia. Express trains leave New York from depot foot of Chambers street at 9 A. M., 10:45 A. M., and 7 P. M.

July 7-3m

Chicago, Milwaukee and St. Paul Railway

Traverses a finer country, affords views of grander scenery, and passes through more business centres and pleasure resorts than any other Northwestern line. Its forests, prairies, lakes and streams, abounding with game, present unequalled attractions to the votaries of Nimrod and Walton. It is the only railway route along the valley of the Upper Mississippi. It is also the shortest as well as best route between the great metropolitan centres of the Northwest—Chicago, Milwaukee, St. Paul, and Minneapolis. Track and equipment unequalled, and its trains of palace-coaches and sleeping cars run through without change.

New York Office, 319 Broadway. Chicago Depot, cor. Canal & W. Madison. City Offices, 61 and 63 Clark St. Apr 29-6m

Magic Lantern and 100 Slides for \$100.

E. & H. ANTHONY & CO., 591 Broadway, N. Y., opposite Metropolitan Hotel, Chromos and Frames, Stereoscopes and Views, Graphoscopes, Megaloscopes, Albums and Photographs of celebrities. Photo-Lantern Slides a specialty. Manufacturers of Photographic materials. Awarded First Premium at Vienna Exposition. Aug 5-1y

Georgia and Florida.

Parties wanting information about Georgia or Florida should subscribe for the MORNING NEWS, published at Savannah, Ga. Daily, \$10; Weekly, \$2 per annum. Advertisers desiring customers in these States should use its columns. It is the best paper in the Southeast. Specimen copies sent on receipt of 5 cents. Address J. H. ESTILL, Savannah, Ga. Aug 12-4t

The Goss Revolving Cartridge Holder

CARRIES PAPER OR METALLIC SHELLS, either end up, revolves on centre slides, weighs but 1½ pounds, and is only 1½ inches wide. Holders flare at top so as to quickly receive the shells, and, being elastic, securely clasp the same. For ease of action and rapid shooting it excels anything of the kind invented.

PRICE, C. O. D., \$6.50.

In ordering, give the size of shells and a loose measurement outside of vest.

July 22-1y N. S. GOSS, Neosho Falls, Kan.

SMOKE VANITY FAIR.

It is shaved from the best Natural Leaf, for Meersmann and Cigarettes. Does not make the tongue sore. Liberal sample on receipt of money. Highest award, Vienna, 1873.

Send for circular. WM. S. KIMBALL & CO., PEEBLES TOBACCO WORKS, Rochester, N. Y.

From JAS. H. STAATS, 27th street, Phila.

Please inform me where in this city I can procure your world-renowned "Vanity Fair." Can't keep house without it.

From HENRY WAGNER, Capt. 1st U. S. Cav., Camp McDermitt, Nev.

We like Vanity Fair now as well as we did a few months since, and only hope that it may be sold in its unadulterated quality for a hundred years to come.

It is clean and sweet, and a most, pleasing soother of disturbed feelings, and a capital companion, and a comforter.

From HORITZ BIELSCHOWSKY, Coneyos, Col.

As I opened the box of Vanity Fair, a good many friends present tried it, and all considered it the best tobacco we ever smoked.

It is a kind of oil and balm for whatever was stormy and harmful; it gives a permanence to the smile of existence.

From H. C. HASBROUCK, Capt. 4th Artillery, Presidio, San Francisco, Cal.

Please send me 10 pounds Vanity Fair. I recommend your tobacco to my friends and dealers in town.

NEW YORK AND LONG BRANCH RAILROAD.

Central Railroad of N. Jersey.

ALL RAIL LINE BETWEEN

NEW YORK AND LONG BRANCH.

Commencing WEDNESDAY, August 25, 1875. FIVE TRAINS EACH WAY DAILY, Sunday excepted, passing through Woodbridge, Perth Amboy, South Amboy, Matawan, Middletown and Red Bank. Leave New York, foot of Liberty street, North River, for Long Branch, at 7:30, 9:15, 11:45 A. M., 3:45, 5:00 P. M. For South Amboy at 6:00 P. M. RETURNING.

Leave Long Branch at 7:00, 8:15, 11:35 A. M., 3:25, 5:35 P. M.

Leave South Amboy for New York at 6:55 A. M.

SHARPS vs. REMINGTONS.

JUNE 26, 1875.

Inter-State Match between Co. E, First California Infantry, Using SHARPS Rifles, and Co. D, Twelfth New York Regiment, Using Remington Rifles. Victory for SHARPS, 511 against 488 points.

JULY 7, 1875.

Contest at Belfast, Ireland, for the Mayor's and Citizen's Cup, Won by Col. H. A. Gildersleeve with a SHARPS CREEDMOOR RIFLE over 24 competitors, including the best shots of both Irish and American Teams.

JULY 24, 1875.

Contest at Creedmoor Range for the REMINGTON DIAMOND BADGE. Won by Mr. H. S. Jewell, of Brooklyn, N. Y., with a SHARPS CREEDMOOR RIFLE, Scoring 96 out of a possible 105.

HIGHEST AVERAGE AT DOLLYMOUNT, IRELAND.

SHARPS average, 162 points.

Remingtons average, 161 points.

Grayling and Bass.

FLY FISHING ON THE MANISTEE, AND
TROLLING ON PORTAGE LAKE.

BY THADDEUS NORRIS.

“OLD man, I would rather have been with you on the Au Sable than hooking and landing big salmon on the Little Marguerite, where we had iced champagne at dinner and slept in a luxurious log house.” Thus wrote Dr. Jim Wood, of Poughkeepsie, after reading my account of running the stream just named; he wrote me also that all the animose of former days had died out. Killing big salmon was only hard labor. We had both come to such conclusion as early as the Summer of 1869, when we explored the Grand Cascapedia and killed only one fish under twenty-five and up to thirty-five pounds. Writing this under my own name, I can take my “aff-davy” to it.) Dr. Jim said, “Let’s go to some river where there are nice little twelve pounders.” After such confession, I thought I would take compassion on Dr. Jim and ask him to go with Dan Fitzhugh and me, and run the Manistee this Summer, where the lazy superannuated salmon slayer could seat himself in the bow of a fairy little boat, never rising from his seat, and kill pretty grayling to his heart’s content. He jumped at my invitation, said “count me in—book me for the trip.” When July came he spirit had died out, he allowed business and other matters to interfere, forgetting the glorious maxim “pleasure before business.” I drew a long sigh—had laid down his letter, informing me of his disappointment, and was again at my fly tying, when a young limb of the law came on, sat down by me, and with his wonted familiarity, picked up Dr. Jim’s letter and read it. He had never killed as much as a half creel of trout on our closely-fished Pennsylvania streams; nor had I since I had taught him the art. “Uncle Thad,” said he, “I would give my forefinger to go with you. I’ll give up that cricket match.” I never had, as you know, a ‘belly full’ of fly fishing in my life. “Done,” I replied.

This boy Jay is not only a lineal descendant of John Jay, of legal celebrity, but his uncle Eusebius, now a peaceful citizen of Westchester, and an ancient chub fisher, was renowned *Jay-hawker* in Missouri during the war of the rebellion, and, of course, Jay has double right to the name. He had never camped out—the innocent child! We started for Bay City on the 9th of August by the way of Pittsburgh, Cleveland and Detroit, taking the comfortable night steamer between the two last named cities. We spent a day and a half with Dan Fitzhugh in Bay City, and on the evening of the 12th of August arrived at Crawford. Dan and I had conceived the Utopian idea of trolling and fly fishing Portage Lake for bass, maskinonge and large northern pickerel for a few days, and then running down the outlet, which is one of the sources of the Manistee, into the main stream, and coming out where the Indiana and Grand Rapids Railroad crosses it, and thence back to Bay City with our boats by rail.—Vain mortals that we were. We ascertained from the best sources of information that came within our reach, that the outlet was small, with no more water after it left the lake than would float a very lightly laden boat, even of Daniel’s admirable model, and much obstructed by brush and fallen logs. So we reluctantly abandoned our programme, and determined to fish the longer and larger branch of the Manistee, three miles west of Portage Lake, and after a surfeit of rayling fishing to cross the level land between with our boats on a wagon and fish the lake.

A few words geographically as to this noble river. There is a stream—also with many sources—flowing from the southeast and uniting with the main river, and which is called the Little Manistee. A good map of the State shows our branches of the larger stream flowing from the north; the sources generally rising in lakes. The most easterly rises in Portage and flowing some twelve or fifteen miles west with that immediately west, which is a river twice

as long and much larger, and rising much further north. West of this longer stream and flowing nearly parallel is a river with a more southerly head and somewhat longer than that flowing from Portage Lake. The most westerly of the four is even longer and, as I have heard, larger than any of the three already mentioned. All of these branches abound in grayling—most of the water being maiden to the angler. It is the second branch alluded to that Mr. D. H. Fitzhugh, Jr., explored by making two trips earlier in the Summer, one of them in company with his father, Mr. D. H. Fitzhugh, senior an old sportsman, now in his ninth decade, and still hale and full of the ardor of former years. There is a sort of a road to this branch, which is seven or eight miles distant from Crawford, almost level, over sandy, barren plains, and through sparse timber, with little or no undergrowth. Dan’s first camp was north of the parallel of Portage Lake, his second just opposite, and his third south. In the three trips including the last, in which Jay and I accompanied him, he has fished about twelve miles of the river. Just opposite the middle of the west shore of Portage Lake, a man by the name of Babbit, whose home is at Crawford, (or Grayling, as it is now called) has established a camp for the purpose of catching grayling with hook and line and sending them to the Bay City and Detroit markets. It is illegal to spear or take them with nets.

It was to Babbit’s camp on the morning of the 13th that we made our way with a two horse wagon loaded with our tents, provisions, etc. Dan and I riding or walking, as fatigue or a wish to stretch our legs prompted us. My young friend Jay scorning the indulgence which we found so convenient, footed it all the way. We found at Babbit’s camp a large Norway pine tree on the bank of the river, one side of which is smoothly hewn for a foot or so, and the figures 1840 still plainly legible on the surface. It had been an old landmark of early surveyors and the figures were neatly cut with one of their instruments. It was from this pleasant camping place that they made the “carry” to Portage Lake, which is about four miles long, and from thence, after crossing the lake, it is a distance of three or four miles across a low dividing ridge, to the upper waters of the Au Sable. Thus was a passage made by boat from Lake Michigan to Lake Huron; and doubtless it was an old traditional passage used by the Indians. Dan had left two of his boats at Babbit’s camp on a former trip, so we had none to wagon over from Grayling. Ramsdell, one of the pushers, had his boat already there. We lunched with Babbit and his friend Jones, who kept camp with him, and for an hour enjoyed the rough playfulness of his little bear, “Billy.” We were never tired of his sagacity and amusing antics. Let me give the biography of Billy.—“Born of poor but respectable parents”—as some of our school biographies of American heroes have it—with two little brothers of the same litter, Jones came upon them in the woods by the Manistee early in May. They were very poor and very small. Jones has an impression that the large, lean old bear who was with them, and who fled ingloriously at the ineffectual discharge of his rifle, was not their mother. It might have been their paternal parent for the maternal instinct was not evidenced. The infants ascended small scrubby pines, from which they were easily shaken, captured, tied with a string around the neck and taken to Jones’ tent. He fed them bountifully, and the orphans grew apace, both in bodily vigor and wisdom. But there was constant family jarring, scratching and biting, as one may suppose, for they were all boys. To preserve peace, Jones did as Jacob’s sons did unto their brother Joseph, he sold two of them “into a far country.” A wandering Hebrew peddler became their purchaser, and Billy remained the sole adopted child of Jones. Like all adopted children he was much petted and spoiled, but naturally formed a strong attachment to his foster parent. He wears a leather collar around his

NOTE.—I would here say that anglers or hunters wishing to secure good men for the river or forest, by addressing L. P. Ramsdell, or J. F. Babbit, at Grayling, Crawford county, Mich., can do so. Both of them have boats after Mr. Fitzhugh’s model, and one, or both, (Babbit being more generally at home) are ready to go with them, if engaged a week or so previous to starting.

neck, to which a short, slight chain is fastened. His master has taught him many bearish tricks. At Jones’ command he will stand up, lie down, or sit on his gracefully sloping “latter end.” He will hold a piece of fish patiently on his nose until Jones counts ten, and at the word “ten” will throw it upward and catch it before it falls to the ground. Although omnivorous he is piscivorous in the extreme. When we hauled our boats ashore to dry a little before starting down the river, he would smell around the well holes in search of a chance grayling and lick off the stale scales that might perchance have adhered to it. Len Jewel had several boxing and hugging matches with him, and received some small rents in his trowsers and the sleeves of his flannel shirt. Billy seldom plays truant. On one occasion, however, he did “abscour,” as my friend Jim Henry has it. Some days after he had disappeared, Jones was a half a mile down the river fishing, when he heard a gruff but infantile moaning whine. “Billy!” he shouted, and soon he heard his chain jingling and the penitent crept into the boat, smelt and nosed his master’s face and hands and seated himself contentedly in the bow. Billy is a robust little fellow of forty-five pounds, well furred and black as a coal. The chief plague of his life is a fine shepherd dog named Cap., who, although he loves him and plays with him, will steal from him, and go off and bury his ill-gotten food, and by many felonious devices trick poor Billy out of his choicest morsels. The Sunday following, as it was a day of temporary cessation from our sport, we had an elaborate dinner, with hock, which Jay had brought along, and we invited Jones, but he did not put in an appearance, which Dan attributed to our not having extended the invitation to his ward, Billy. Cap., however, as he belonged to Ramsdell, stayed with us all the time, and was of much service as a scullion—licking our plates faithfully after each meal, until he would make them shine again.

This brief history of Billy and his exploits will no doubt interest my nephew Charley, of Overbrook. But I know his older brother Joe, and any other young fly fishers who may read it, are as anxious as Charley’s oldest brother Jay, to hurry on and have a dab at the grayling. So let us stow our luggage in our boats, put our rods together, get in and drop down stream. Dan, who preceded us with as much luggage in his boat as Len Jewel thought it could safely carry, dropped down about four miles, where we found him, Len and Babbit about six o’clock, pitching tents and making benches, and a table. We embarked about half a mile below Babbit’s camp, and I lingered a little to see Jay make his first cast. “Not there,” I cried; “but over against the other shore by that log.” Jay dropped his flies lightly; up came a fish, and “Sug!” he had him. After a sharp scuffle and a hard strain on his rod, bending it almost double, he landed and held up a grayling of nearly a pound and a half. “Well; what do you think of it?” I asked. “Bully,” replied Jay. We dropped down stream, passing and repassing each other alternately and not stopping to fish one-third of the likely places, for we had a long way to run before we reached the supposed camping ground. I arrived at camp first. Presently Ramsdell pushed up with Jay. “What sport?” I hallowed. “Red hot,” responded Jay. We had each a little short of four dozen grayling in our wells, all alive and kicking. Len had his tea and potatoes on the fire, and soon a big frying pan sizzling, sputtering, and a dozen grayling browning beautifully in corn meal. I had partaken of but a slight lunch of bread and cheese, with a cup of tea, at Babbit’s camp, and being very hungry, of course made a pig of myself with the grayling. To such an extent, even, that I got up at one o’clock, fanned the smouldering coals, put on fresh wood and some old pine knots, and soon had a rousing fire. I took a moderate “nip” from the flask on the table, lit my pipe, and had scarcely smoked it out when Jay, who I had left asleep at my side, crept out of the tent and joined me. “Why, Uncle,” he said, “I woke up, and not finding you came out to see if you had gone down to the river and fallen in.” The truth is that he had eaten three grayling of about three-quarters of a pound each, and was too full to sleep sound. Soon after, Dan joined us, and then the

oracular Mr. Babbit. Our conversation woke up Johnny Sharp, a lad aged sixty-eight, who, like Dogberry's old friend Verges, "would be talking." He always told of a man's occupation and history before telling the story connected with him, and frequently forgot part of it, and broke down in the middle. He reminded me of Jim Henry, on Broadhead's Creek, who would commence: "Well, Thad, I'll tell you. There come a man a feller 'long here one day, peddling tomb-stones." We chatted until three o'clock in the morning, then turned in and slept until Len woke us up for breakfast.

August 14th.—We got into our boats at 9 A. M., Johnny Sharp and Uncle Thad taking the first mile of the water hitherto unfished; Jay and Ramsdell the second mile, and Dan and Len the third. Dan returned at 3 P. M., his wells full of fish. I overtook Jay, and again got the preceding day's answer to my query as to his sport, "red hot." The scamp, through mistake, had fished a great portion of the stream allotted to me. We knocked off at 4 P. M., Jay having over six dozen, and I about five dozen—all over half pound and averaging about three-quarters, for we returned to the water all under a half pound. Besides what we ate of them Johnny Sharp salted down—heads off and entrails out—three caddies of twenty-five pounds each, and we had some to put into Dan's big hamper, three by four feet and eighteen inches deep, which from a luggage receptacle was improvised into a live box and partially sunk into the stream.

August 15th being the Sabbath was, as I have already said, a day of cessation from our sport, and was given to reading, lounging, and eating.

August 16th.—We commenced two miles below our camp, where Dan had left off on Saturday, Dan taking the first mile, Jay the second, and I the third. It was deadly slaughter, the fish rose so freely, and yet we pricked many or held them only for a few moments. By three o'clock, although we had stopped at noon to take a leisurely lunch, our wells were chock full, many of the fish "belly up." We pushed back to camp. Johnny headed, gutted, and salted another caddy of those that were "belly up," and we put a goodly number of live fish into the hamper for Babbit. And so it went on for four days and a half. We threw back more than we put into our wells, and computed that we had utilized, as already described, about nine hundred, weighing, gross, five hundred and sixty pounds, Babbit taking all we could not salt down or eat. We packed, net weight, just one hundred and fifty pounds. We extended our explorations and fishing—cutting our way occasionally through trees that had fallen from each side of the river—about six miles below our camp, making in all of its sinuosities and horse shoe bends, as already stated, about twelve miles by water from the camp Dan made on his first trip. It is hardly five miles by land. This river is much obstructed by "sweepers," i. e., white cedars, which, growing on the margin, their roots are gradually undermined by the current, and they incline at a sharp angle from the bank, causing very frequently the familiar cry from the pusher "low bridge." These cedars appear never to rot; if a large tree falls across a deep pool it forms an excellent hiding place for the "big uns," and here we generally found our best fishing, taking them "at long taw" from up stream, or picking them out between the logs with little more than the eight foot leader extending beyond the tip of the rod.

Our flies were larger than those used on the Au Sable last year. I concluded that mine ancient friend Seth Green has used, and, I think, recommended much smaller hooks than are necessary, basing his theory, likely, on such as he fishes with on Caledonia stream in New York. We found Nos. 6 and 8 (O'Shaughnessy,) with legs and wings proportionate, equally as attractive and more certain of hooking and holding. If not too gaudy, almost any fly will take. I in more than one instance used one that had been reduced to only the hackle, and sometimes the barest covering of dubbing was killing. The white and lead wing coachman, the silver widow, the Jewel fly, and the professor, with light yellow died hackle, were mostly used. In fact, any fly on the sized hooks just mentioned which we use on Pennsylvania and other clear streams will kill. The flies tied for Maine or the Lake Superior region are too large and too gaudy. We did not use a landing net, but lifted the fish in—a brace on the droppers and frequently one on the stretcher—with the feeling that if one should regain its liberty there were plenty more ready to take hold as soon as we offered our lures.

Our evenings were passed in the usual jolly way, telling stories and anecdotes, and discussing the known or heard-of angling capabilities of the Michigan streams and lakes, and then there were songs in great variety. Johnny Sharp sang many doleful ditties; Uncle Thad gave the "Nigger Ginral," with banjo accompaniment; Jay gave us several good ones, but Dan, with his snatches of Irish song and Irish manner, was inimitable. One I shall never forget, the first verse of which was:—

"Ye gerrils that are pruttie,
And lads that are wuttie,
Come list to my dittie
While I do rela-a-ate
Concerning a visit
To fair Dublin cettie,
Where I was decavied
By a damsel of la-a-a-ate."

But we'd had a glut of grayling fishing, so we struck tents, stowed our luggage one morning, and while the boatmen pushed up to Babbit's camp we footed thitherward two miles by land. Here we passed an hour with Jones and Billy, when Meade, who was cutting hay in a wild meadow close by, came by appointment to the camp with his wagon. We put on two of our boats, stowing our baggage inside, and set out for the west side of Portage Lake, three miles eastward. We soon crossed the level, sandy plain and entered the woods, where Jones, being a professional engineer, took the lead, and Len, Meade, and Ramsdell with their axes cleared the way, chopping down saplings and cutting off fallen logs, Jay and Johnny Sharp following and pulling them aside, Meade blazing the road as we went through, Dan and Uncle Thad engineering the wagon and team. Within two hours from the time we left Babbit's camp we came to Portage Lake and lunched on its beautiful margin. Meade and Jones bade us good-by; Ramsdell cleaving a slab from a cedar log soon fashioned it into a paddle, with the aid of which, and Len's setting pole, in one of our boats they made the passage to Ramsdell's camp on the east side of the lake, and by 5 P. M. returned, after beating against a head wind with a sail boat. We embarked with our luggage, and having a fair wind back, landed in less than a half hour and pitched our tents, preferring them to the large log house Ramsdell has put up here. Jay and I trolled for half an hour and captured

enough bass with the spoon for supper and breakfast. This is a beautiful camping place, elevated about fifteen feet above the lake and surrounded by a fine park of towering Norway pines. The brisk wind from the south caused the mimic breakers to give forth a pleasant lullaby as they broke on the gravelly shore, and soon after supper we were asleep, unannoyed by mosquitoes and flies, which had caused us some discomfort on the Manistee.

We spent a day and a half here, killing as many bass as reasonable men could wish, supplying our table, leaving some in a live box, and taking with us for Hartwick, the landlord at Grayling, fifteen bass averaging about four pounds each, besides a large Northern pickerel of twelve pounds, captured by Jay. He hooked, but failed to get into his boat, a pickerel or maskinonge of more than twice the size for want of a gaff hook; supposing that he would meet only with bass he had only a wide-mouthed landing net. Trolling we found dull sport after hooking and playing grayling. We also found that the fishing in this lake had been overrated. We were told, however, that a great many had been taken there during the last two Winters through holes cut in the ice; for when the snow and frost makes a direct line from Grayling practicable the distance is not more than three miles. During the month of May, when bass and pickerel come into the shallow water near the shore, and fish have not as much caution as in Summer, large numbers of both kinds had been speared during the Spring of 1874 and 1875.

We made our way to Grayling with our boats and camp equipments one afternoon, and next morning were on our way to Bay City by a poor "one horse" branch of the Michigan Central Railroad, tracing on a freight train, (for the passenger train does not now run as far up that road as Grayling,) stopping frequently to hitch on lumber cars, and occupying nearly nine hours in running ninety-two miles—a great contrast to the facilities to anglers afforded by the Indiana and Grand Rapids Road on the Lake Michigan side of the State. We spent a day at Bay City on our return, as we did before going up to Grayling, wondering at its developed and still developing wealth produced from lumber, salt, and gypsum, the latter burned and ground producing the fertilizing plaster of paris so much used in agriculture. Miles of the river shore above and below are occupied by immense saw mills and their never-ending piles of boards. Here John H. McGraw & Co. and W. H. Sage & Co. own two of the largest mills in the world. In a single day McGraw's mill has cut 400,000 feet of lumber. The refuse from the saw mills is utilized for heating and evaporating the salt water, which is pumped up a distance of from seven to nine hundred feet below the surface. The "salt blocks" of Sage & Co.'s mill produce when in full operation three hundred barrels of salt in twenty-four hours.

If I should ever go to Michigan for trout or grayling fishing again I would try the Western Branch of the Manistee, approached from Fife Lake Station, on the Indiana and Grand Rapids Railroad; for those of the east, as well as the Au Sable, are being rapidly depleted for the Bay City and Detroit markets, so readily do grayling rise at the angler's lure or take the bait, and so soon are they fished out. Most of the branches of the Manistee, on the western side, are not very far from the railroad last named, and are still virgin waters, and around Little Travers Bay, approached by the same road, the streams contain both trout and grayling, and many of them are as yet unexplored. I have a number of pamphlets with maps describing and illustrating the route named, and can supply any one wishing to avail himself of the advantages so clearly set forth. There is no State in the Union where there is so fine and so great a variety of fishing, and the time and money spent in a trip to that State is not any more than in going to the hackneyed and overfished waters of the Adirondacks and Maine.

For Forest and Stream.

SPORTS IN TEXAS—A DEER (DEER) DRIVE.

FROM a recent article in your valuable paper, by "Month-mouth," in regard to deer hunting in Alabama, one might infer that you always got venison, and that too with but little effort, except that made by the dogs. Likely this is a general rule, but last Thursday I found an exception to it in the following manner:—

It was on Wednesday evening that T. passed along the street and called out, "get up your horses, boys; it will be a good time to 'drive' in the morning, after such a rain as we have had." Soon B. was driving in the horses that were grazing on the fresh grass. Next morning it was raining, and our zeal or the chase was dampened, but about 7 o'clock it ceased to rain, the clouds broke away, and the sound of T.'s horn, and the bellowing of the dogs, fired us into action. Hastily saddling our horses and tying a blanket on our saddles we mounted and started for the Red River Bluffs. As we passed the Western Hotel, Jim, Ned, T., and Walter, called out, "go slow, boys, and we will overtake you." When about four miles out, it began to rain again, and we might have turned back had we not been so close to the hunting ground. We were now at the head of the Smith Branch, which ran due north, two and a half miles into Red River. This branch has a skirt of timber and underbrush running its entire length, and from one to four hundred yards in width. I dismounted and began to lead, the water streaming off my hat into my gun barrels. Breech loaders with prepared shells suggested themselves as being more suitable for such occasions. They are not much used here yet. I should have stated that ravines with timber on them intersected the main branch from right and left, making it difficult to cross on horseback in places. As T. fired from his left shoulder, he proposed to take the west side of the branch. B. had a Ballard rifle and I suggested that he go down the branch some distance and take a "stand." I followed down the east, or right hand side of the branch and soon came upon B. sitting quietly upon his horse observing a flock of turkeys on the prairie some fifty yards in front of him. I called to him to shoot, and the turkeys flew. "Why the thunder didn't you kill one of them turkeys?" exclaimed I, as I came up. "I wasn't hunting turkeys," was his only reply. I now tried to ride into the woods, and blundered into a red bad and grape vine thicket, up to my eyes. Before I could get out I was as wet as a rat. I finally got back to the prairie, and up flew a half-grown turkey, and bang! went a load of buck shot right over my horse's head, without the least disturbing him, but the turkey went on into the thicket "worse scared than hurt." It was now

B.'s time to laugh, and I could only say, "If I'd small shot I would have got him?" T. called over, "what you found?" "Turkeys, look out!"

We failed to start a deer on the Smith Branch, and turned over a ridge on to Mann's Creek, the rain still pouring. A thought struck me that if I got a chance at a deer my gun would miss fire, and I suggested the propriety of going home, but T. said "No, it will clear up directly." There was some very dense cover on this creek, and the bushes were dripping with water, but rain and all else was forgotten as the dogs began to make the welkin ring with their music. Soon a louder and more exciting roar from the dogs showed that the gunner was a-foot; the horses stuck up their ears, and the hunters strained their eyes for a sight of the game. A spur of prairie ran clear across the valley; this stand was immediately taken possession of, but the hounds came up, passed through, and showed that we were too late. Driving the rowel of my spur into my horse, I made a considerable detour, to another stand. This time the deer turned back up the creek before it got to my stand, and I had the mortification to hear the dogs going up the creek almost out of hearing. Over hills, rocks and gullies I followed in hot haste, and could see B. and T. on the opposite side of the creek, close after the dogs. I was just edging the thicket at full speed, when the deer burst out of it, coming down the creek almost in my face; with a half backward bound, he sprang back into the thicket, and with a sudden lurch I wheeled my horse around and made for a stand. I had just passed about a hundred paces; at this place I could see clear across the valley, I hastily dismounted, turned my horse loose and cocked both barrels of my gun. Just at this juncture the deer sprang out of the brush into the opening about forty paces from me. "Whack!" went my right, "whack!" went my left, and into the creek bed went the deer. "Fits and blazes!" I fancy King Richard would have offered his kingdom for a breech loader if he had been in my predicament. The deer, now thoroughly scared, made tremendous bounds and left the dogs far behind. Jim, Ned, and Walter coming up, observed it crossing the prairie ridge, and making a bee line for the east fork of Mann's Creek. It is needless to make further details; suffice it to say that after about eight hours' run we put it into Red River, some four miles from where we started it, and called off the dogs. We got home a little before night, and to say that we were tired, wouldn't half express it, and our poor horses looked considerably "worse for wear."

It so happened that I was the only person that got a chance to shoot, and I could not. You are doubtless aware to what an extent the mind can be concentrated upon the game you are in search of, until every thing else is lost sight of, even one's safety. This was verified recently in T.'s case. He was hunting on a fractious horse, that did not fancy firing over his head. T. was riding leisurely along with his bridle down, and gun across his saddle, when a turkey sprang into the air from the dense prairie grass. Quick as thought T. covered him and down he came. His horse wheeled and plunged madly, T. meanwhile clutching at the dangling reins. Presently the horse ceased plunging, and commenced running, when T. got hold on the reins and brought him to a stand.

I hope you will not understand me that we always have such ill luck as in this case. Capt. Rowland and Mr. Reavis, citizens of our town, on a three day's camp hunt, week before last, killed six deer and more young turkeys, (now nearly grown) and prairie chickens (pinnated grouse) than they had any use for.

My experience on this has taught me that cheap water proof caps will do very well for dry weather, but will not answer for wet weather; consequently I shall be more cautious in my selections in the future.

For Forest and Stream.

A TRIP THROUGH THE ADIRONDACKS—CANADIAN SPORT COMPARED.

THE "Kahweambejewagamog Club," H. P. Dwight, Toronto, Ont., president; E. Wiman, N. Y., vice president, is an association of gentlemen who have for many years fished and hunted on the rivers and lakes and in the woods of Canada, principally in the Muskoka and Hollow Lake regions. None of the members have ever been through the Adirondacks. At the Hollow Lake meeting last Autumn, any member who could visit the Adirondacks was requested to do so and report to the club, and make comparison with Canadian sport. About the 20th of June last, by invitation of Mr. Charles Pratt, of Brooklyn, who has a fine cabin on Fourth Lake of the Fulton Chain, I joined his party, and now report, with your permission, to the members of the club in Canada and New York, and to others who, perhaps, would like to know the difference in the two places.

We left New York at eight o'clock in the evening, breakfasted in Utica the next morning. A couple of hours more by rail and we were at a hotel in Boonville. Here we put off our store clothes and "billed shirts" (as our guides called them), and donned our blue flannels, etc. A ride of a dozen miles or so brought us to a good hotel on Moose River, where we had speckled trout for dinner. The harness was taken off our horses and saddles put on; we mounted, riding about fourteen miles over an awfully rough road to the Forge Hotel, on First Lake, now kept by Arnold. There were a dozen guides here waiting for ties. Ours we engaged beforehand, so after breakfast Saturday morning, we took boats, and got to our camp in three or four hours, with a good appetite for dinner. At our first meal we had speckled trout—a speckled trout, the little speckled trout of our own catching. In fact I caught that one myself. It was a very fine and perfect specimen of *Salmo fontinalis*. It cost me about one hundred dollars a pound.

In forty hours from New York (including twelve, a night at Arnold's Hotel) we were at home in the woods. This is about the same time it takes from Toronto to the fishing grounds on the Muskoka, and a good deal less, and with half the expense, fatigue and trouble it does to get into the Hollow Lake region. There is a large tract of country, beginning about a hundred miles north of Lake Ontario, a watershed, resembling the lakes and rivers in the Adirondack region. The Canadian lakes, with their islands, bays and points, are beautiful; but around the whole shore of many of them stand tall, black stumps, monuments of carelessness in the use of fire—desolation itself. I saw hardly any of this from First Lake to the Saranacs. The land in Canada is comparatively level. If one goes fishing he must fish. There is nothing else to enjoy. The

Adirondack scenery of itself pays well for a trip; but I don't mind paying a little more to catch two or three trout. Everybody has heard of the mountains of the Adirondacks, but no one can have a correct idea of their grandeur without seeing them.

Colvin, in his most interesting report to the New York Legislature—"Topographical Survey of the Adirondack Wilderness"—gives the names and measurements of three mountains, each more than 5,000 feet high, to wit—Marcy, MacIntyre, and Haystack; seven more above 4,900; twelve more above 4,000; four more above 3,900, and nine more above 3,700. These high peaks, of course, are only one here and there, among many smaller ones. The view from almost any—even of the smaller ones—is beyond description. You see range back of range, like tremendous waves of the sea, one after another, until in the far distance the last is hardly distinguishable from the blue sky itself. Pratt and Parsons went up from Third Lake to the top of the Bald Mountain. The number of peaks visible to the naked eye from that point by actual count (according to the last time I heard Parsons tell it), is one hundred and forty.

I am not much of a fishist or shootist, but I know that the change that we have from the time that we leave civilization until we get back again—boating, tramping, eating, (don't forget the onions and bacon) and sleeping in the woods, does me an immense deal of good, and I like it. But if Pratt, Dwight, or Tom Townsend, who pride themselves on throwing a fly, want to get up with the punkies in the morning, or spend their twilights with the musquitoes and black flies at the "spring holes," they may do so. I shall, if I like, pull the net over my head, put on my buckskin gloves, or sit with my head in the smoke of the camp fire and admire old "Nipple-top," which is right in front of our cabin. This is altogether the most fascinating mountain in the whole region. The Deacon, after a week in camp, would put on the "dope," (tar and oil) and sit the whole of a moonlight evening looking at it. Colvin gives its height at 4,684 feet above tide water, or about 3,000 feet above Fourth Lake. You boys who enjoy fine scenery fool away your time when you go to Canada. By the way, we were annoyed by mosquitoes and flies very little indeed, much less than at any time when I have been in the Canadian woods this season of the year. The water in the Canadian lakes as a general thing is clear and blue, like clear spring water, much nicer than the dark water of most of the Adirondack lakes and rivers.

The beauty of Seventh Lake is impressed upon my mind more strikingly than any other. It is nearly round, from three to four miles across, and almost completely surrounded by high mountains. I happened to see it first in the light of a most gorgeous sunset. The clouds were in colors more brilliant and beautiful than can be painted on canvas, and the mountains were tinted as if by fire. The lake like a mirror, so that looking down upon the water it seemed fathomless, like the heavens, reflecting all the glorious scenery around and bright clouds above. Thus surrounded, one feels in his heart to say: "Praise the Lord for His goodness and for His wonderful works to the children of men." There is a novelty about the Canadian birch bark canoes which one enjoys; but the Adirondack boats are preferable. They are from fourteen to sixteen feet long, about three feet beam, and weigh only from sixty to eighty pounds. They are as easily carried across portages as a canoe, and a guide with his oars will pull a heavier load a greater distance and in rougher water than he could paddle a canoe.

Our guides were excellent—the best I ever had. They were pleasant and willing, and did not drink a drop of liquor during our trip. I have had the whole pleasure of a trip spoiled by a guzzling guide. One of them was a most excellent cook, keeping us in fresh bread of different kinds, griddle cakes, (maple syrup) etc., etc. Anybody who can get Jack Sheppard or Dick Creigo (P. O. address, Boonville), or those whom they recommend, will be fortunate.

In Canada we always carry along our tent. There is no need of it in the Adirondacks. On all the principal lakes there are plenty of cabins, or bark camps, built like a shed, one side open. On Third and Fourth Lakes there are several very fine private cottages, none better adapted to make one feel like staying all Summer there than Mr. Pratt's—a log hut. On the first floor is a sitting, bed room and a store room. Up stairs are four beds, a dining room and kitchen in the extension. Close by is an ice house, well filled. The only objection to such an establishment is, it affords too many luxuries. You are not likely to be nearly as glad to get home. Jack Sheppard also has a large and very nice cabin on Fourth Lake, and is prepared to entertain parties and furnish all supplies for the table for about one dollar a day. It would have been a great accommodation and saving of money if we had known it before we went in. Guides get three three dollars a day in the busy season. As only one of our guides had ever been in there before, after staying about a week on Fourth Lake, we packed up in light marching order, sending all our traps we could spare back *via* Boonville, a guide and boat for each of us, and continued our trip through the Fulton Chain of eight lakes, then Raquette, Forked and Long Lake (stopping at Kellogg's, about half way down, the first night) down the Raquette River, by Mother Johnson's and Corry's, across the Upper Saranac, by Bartlett's and across Round Lake, and through the Lower Saranac to Martin's—altogether some eighty or ninety miles—a most delightful trip. From Martin's, the next day, we had a pleasant ride on a four horse Concord coach to Ausable, thirty-eight miles; then cars to Plattsburgh, where we took steamer the same evening, arriving in New York the next day. I hardly need mention the luxurious steamers on Lake Champlain, or the Saratoga express, rushing through with only three stops, for there is nothing in Canada to compare with them.

"Well, did you get any trout?"

Yes we did, a few—enough to eat some at every meal, not a great many, nor very large ones; should be glad to have caught more; plenty of salmon trout. It is all nonsense to expect to catch many or very large trout in the main lakes and streams of the Adirondacks. There are too many fishing for them. Paul Smith can accommodate three hundred guests; Martin half as many more, to say nothing of smaller hotels. Thousands go in and out every season. The best way is to make your headquarters at a convenient place on some of the larger lakes, then go off across, several miles, to less frequented lakes and streams, and you will get plenty of trout.

"Did you get any deer?"

No, we did not; don't bother me with so many questions. It is against the law to kill them now; but they do it, and a great shame it is. We had venison all the time in camp, and at every hotel from First Lake to Martin's. I don't know where it came from. None of our party killed it. (We couldn't.) I did all I could to keep anybody from shooting one on Sixth Lake one night. Young Comachio said he got near enough with a guide from Martin's to hear a deer stamping in the water one night, at a cost of only seven dollars and a quarter. His guide blandly remarked that it was customary to drop a ten dollar bill, if they killed a deer; but as he didn't intimate that he should so drop, he didn't get a deer.

My conclusion of the whole matter is—it pays well to take a trip to the Adirondacks, and I don't know how you can improve on the route we took. But if you have plenty of time, and want to get a good many fine fish and game in season, go to Canada. ROBERT JACKSON. Brooklyn, August, 4th, 1875.

CLAM BAKES AND BARBECUES.

THESE old time feasts are indigenous to Rhode Island and Virginia, both of these States being jealous of their prestige, and allowing no other to assume first place. A Rhode Island correspondent writes us, with a pardonable degree of native pride, giving this description of a Narragansett Clam Bake *par excellence*—

"A clam bake gotten up after the old Rhode Island style is something that cannot be had outside of this State. Many clam bakes are made in Massachusetts and Connecticut, but are nothing but impositions and frauds. An old-fashioned clam bake years ago consisted of a few clams, say two or three bushels, baked upon the shore upon stones made red hot by burning wood upon them; then a little seaweed thrown on, and the whole covered closely up and left to steam away for an hour more; then stools and big stones would be collected around the clam pile and the clams would be eaten. That was years ago. Now I will tell you how our friend Hiram Maxfield, at Silver Spring, a short way down the bay, feeds thousands every year from 12 o'clock noon until late in the afternoon. Hiram puts into one bake from twenty-five to fifty bushels of clams, and sometimes double the number of bushels. The round paving stones, forming a circle of ten feet in diameter, are made hot by burning wood upon them until they become so hot that they crack and snap. Seaweed is then thrown upon the stones; then the clams are poured upon the seaweed; then comes more seaweed; next the bluefish, all dressed and stuffed full of nice dressing, the sweet potatoes and green corn, all left well covered up with seaweed and canvas for about forty minutes; and then the signal is given! Hot clams served by more than a hundred waiters direct from the bake, on nice clean tables, in a dining room cool and comfortable. Clams, clam chowder, (soup, sometimes called,) clam cakes, fish, (baked or boiled,) fish chowder, sweet corn, cucumbers, sweet potatoes, and water melons—this constitutes a dinner from a Rhode Island improved clam bake point of view. Thousands upon thousands visit these shore resorts, and live upon clams from July 1st until September 15th. Oakland Beach, Rocky Point, Silver Spring, Field's Point, and Ocean Cottage, all connected by steamers running half hourly, and now steam cars land you at all of the places, with one or two exceptions, where you can obtain the salt air, good shade, and clams. Our hard-working merchants and business men who cannot leave their business for a vacation frequently visit these places, taking a steamer for Silver Spring, get dinner, and step aboard a boat going down the bay. They consider Saratoga, Long Branch, and first-class lighted Summer resorts nowhere compared with our healthy and beautiful Narragansett Bay."

Speaking of clam bakes, the ninth annual clam bake of the Fat Men's Association of America took place last week at Gregory's Point, near Norwalk, Conn. The pounds weight of solid men was 24,617, divided among 108 persons. Eighty bushels of clams, oysters, bluefish, lobsters, green corn and sweet potatoes were cooked on the hot stones under seaweed, and the quantity of lager beer provided was 300 kegs.

Now for the Virginia Barbecue. Our correspondent is our old friend, Capt. John M. Taylor, now a permanent resident of the Old Dominion. He says:—

"I attended a barbecue which took place lately on the estate of Dr. Booth, of Shenstone. The invitation was for a barbecue and fish fry, which is somewhat interesting to the uninitiated. These *fetes* generally take place in the woods, close to a small lake or stream on the plantation of the host, where the neighbors are invited to meet. We drove up to a grove of pines on the estate, in the centre of which was a long improvised pine board table covered with a clean cloth. At the head was a barbecued lamb, roasted whole; at the bottom a barbecued shoat, also roasted whole, with fixings of vinegar, butter, red peppers, and other tasty ingredients. These immense dishes were flanked by tureens of vegetables, water melons, and cantaloupes, and the appearance of the table reminded one of the olden times. Before proceeding to eat these nice things the fish have to be caught; so a long net is furnished by one of the guests and handed to an old white-wooled negro, who is eminently respectful and understands his business, being at the head of a gang of five others, all of whom seem to take great delight in walking into the lake and hauling the seine. When sufficient fish are caught, (small perch, catfish and pike,) for the present "fry," the gentlemen proceed to clean and fry the fish as quickly as possible, the negroes continue hauling, and the invited guests to demolish this rustic meal, many of whom handle the knife and fork with a good deal of gusto and precision. This spectacle at its height presents a very animated scene, the group of friends on the wooded knoll above the lake, encircled by numerous horses and mules, hitched to the surrounding trees. The negroes in the lake beyond up to their necks singing and howling their weird nondescript songs, floundering in the water and mud as they haul the nets gradually to the shore, the rush of the guests from above to see the number of the catch, the peach and apple brandy passing around, conversation flowing, and the *fete* is closed by the assembled company collecting their horses and forming a cavalcade, and so riding through the beautiful woods to their respective homes. Altogether, these "barbecues and fries" present one of the charming phases of the interior life of Southern Virginia, and are one of the many methods by which the planters, (who are gentlemen of refinement and culture,) vary the monotony of their lives, which, to say the least, is harmless and recreative. CAPTAIN."

SEASONABLE HINTS.—The *Scientific American* says: If mosquitoes or other blood-suckers infest our sleeping-rooms at night, we uncork a bottle of the oil of pennyroyal and these animals leave in great haste, nor will they return so long as the air in the room is loaded with the fumes of that aromatic herb. If rats enter the cellar, a little powdered potash, thrown in their holes or mixed with meal and scattered in their runaways, never fails to drive them away. Cayenne pepper will keep the buttery and store-room free from ants and cockroaches. If a mouse makes an entrance into any part of your dwelling, saturate a rag with cayenne in solution, and stuff it into the hole, which then can be repaired with either wood or mortar. No rat or mouse will eat the rag for the purpose of opening communication with the depot of supplies.

Fish Culture.

FISH CULTURE:

PLANNING, LAYING OUT, AND THE CONSTRUCTION OF PONDS.

BY ICHTHYOS.—NUMBER SIX.

A SITE having been procured, the next step is the planning of the series of ponds necessary for the different ages of fish. Any mistake in the initial work will always prove a source of embarrassment to the pisciculturist, entailing constant perplexity, if not ultimate disaster. It is an easy matter for a man who is skilled in fish breeding, to plan, lay out and construct ponds; but with the beginner it is a matter about which he knows very little, therefore, the expenditure of a few dollars, paid to a competent instructor in fish culture, or to a scientific piscicultural engineer, will be likely in the end to save thousands of dollars. A well arranged and productive establishment may be taken as a model, but in each new application of the art, as applied to the development of a new site, the plan must of course vary with the ground, in fact, it would be difficult to apply one model to all localities, for it is quite impossible to find two or more sites so alike as to admit of the systematic use of one plan. But the experienced eye can discern at a glance what disposition of ponds and hatching house will be most feasible, for the successful, and above all, the economical working of them. But in the projection of what is known in modern parlance as a fish farm, it is a great mistake, that in order to be productive, its appointments must be elaborate and expensive. Such an idea is likely to have been borrowed from Roman pisciculturists, who laid out and constructed ponds and preserves regardless of expense. Indeed they were often made of expensive materials and were not only large but elaborately wrought, and constituted one of the many attractions of a nobleman's estate. Ponds must be substantially built, especially the banks, which constitute the principle wear and chief expense of the work of preparation in the establishment of a fish farm.

For successful fish culture, and with a view to the artificial production of fish for commercial purposes, three ponds are essential. In shaping and arranging them most conveniently, all depends upon the water supply, whether it be spring or rivulet, and how these sources of water are situated in reference to height above the ponds and hatching house to be projected. Four feet is the least fall consistent with the distribution of water through the series of ponds, rapidly enough to keep the water in the most distant of them cool enough for the health of the fish. The shape of the ponds has a very unimportant bearing upon the success of fish raising. Some pisciculturists aver that the ponds are more convenient if oblong, while others advise them to be pyriform, or pear shape. There might be such a conformation of the surface of the ground as to demand other shapes, long, narrow and deep, rather than wide and shallow in depth. Mr. Seth Green, whose judgment in all piscicultural matters is authority, says: "It is better for any one wishing to raise a large number of fish to have several series of ponds, than to attempt raising a larger number by increasing the size of the ponds. Fish do not feed so well in large ponds, are not so easily taken care of, and eat each other more." In order to give the reader an idea of the arrangement of a fish farm a plan is introduced, the prototype in part, representing the arrangement of ponds, etc., at Troutdale, N. J.

The spring marked S on the plan constitutes the source of all the water of the establishment, and has a capacity of twelve hundred gallons per minute, constant and undiminished in flow throughout the year. "The temperature of the water is 50°, which never varies more than one degree in the heat of Summer or depth of Winter."

The water from the spring passing down a raceway fifty-five feet long, (A) four wide and six inches deep, enters pond No. 1, and following the course of the arroyos, passes successively through 1, 2 and 3, and is discharged at the point C into No. 5. This pond is not used for fishes, but for the cultivation of watercress, a cruciferous plant much used in eating houses, which finds ready sale in the markets of all large cities. It may be well to state that the ponds for cress culture may be multiplied to any extent; for the profits in this direction are truly great, and many fish culturists derive a large revenue from this specialty. At those points in the cut marked x are sluice-gates in which are placed screens of wire cloth, which are arranged in pairs or sets, and each perform a separate duty, the one highest up arrests the leaves and other floating objects which blow or float into the ponds, while the lower screen prevents fish of different ages from mixing. When the small fry are first placed in pond No. 1, if the whole volume of the stream was permitted to pass through, the fishes would be driven against the lower screen with such violence as to cause them to perish, but by the provision of a cross race (C) the amount of water supply can be so easily graduated as to be harmless. H represents the hatching house, near the spring, where sufficient cold water passes into the

building for hatching purposes through the filters and conduits into the hatching troughs. G represents the gold fish pond, where these much esteemed pets are multiplied and sold to fanciers, who vend them. M is work shop and mill for cutting meats for the fish, the machinery being driven by water at E, which subsequently discharges into the bass pond No. 4. D is the house of the Superintendent. The dimensions of ordinary ponds run from 50 to 200 feet in length and narrow enough to easily admit of the removal of dead fish. Pond No. 1, for the smallest fish, may be from one to two feet deep; No. 2, two to four feet; No. 3, three to five.

(To be continued.)

TO RAISE BROOK TROUT.

Mr. A. Palmer, of Boscobel, Wis., gives the following instructions in trout culture:—

"They are easily bred, and grow rapidly, although they don't produce as much spawn as some fish, yet a sufficient amount to trouble the breeder to find water to raise the fish in, each female producing from five to eight hundred spawn at two years old, and about double that amount at three years old; but they cannot be raised to advantage in any other than spring or brook water. This may be either hard or soft, but not largely impregnated with minerals. Trout, in their natural state, prefer active water of even temperature, but still they do well in pond water if there is a continual supply of fresh water running into them, and will stand a temperature of sixty-five or seventy degrees; but water which runs up to a high temperature will not raise as many trout as that of more even temperature. The same applies to still water. They are great consumers of oxygen, and cold water contains more than warm water, and running water more than pond water. In building ponds we try to have a fall from one pond to another to carry this property into the water. We find in transporting trout that, as long as the cars are moving they need little attention, but if they stop for a short time the water must be agitated. They are cheaply raised. Being cold blooded, they waste no food in keeping up the heat of the body, and ponds which have been built a few years, as well as brooks, produce a large amount of insects and crustacea, and nearly enough to feed what trout the water will bear. I am feeding about fifty thousand, ranging from two to eighteen inches in length, the larger proportion small, and they will not eat a beef liver a day. Milk curds, any lean meat that is fresh, or other kinds of fish, make good food for them."

The subjoined letter from Fred Mather, Esq., which originally appeared in the *Chicago Field*, answers many of the questions which are so frequently pressed upon our attention:—

"Inquiries, as a rule, do not give particulars enough to base an opinion upon as to the probable result of an experiment in trout raising. It is something like saying to your physician, 'I'm sick; what's good for me?' To judge if a particular pond is suitable for trout culture one should know its highest temperature in Summer, its source of supply and quantity of flow, as compared to the size of the pond, as its capacity to contain trout depends more on the frequency with which the entire body of water is changed than upon the size of the pond.

The character of the water is also important, us upon this depends the kinds of vegetation suitable for the production of the natural food of the fish, as crustacea, insect larvæ, etc. Again, the locality is to be considered before it can be decided whether it will pay as a business venture or not; for upon the cheapness of food depends the profits, and if near a place where many animals are slaughtered, and the refuse, such as lights, liver, spleens, and heads can be readily obtained, then it is evident that the slaughter-house being in the neighborhood of the ponds is an element that must not be omitted from the calculations; for while the pond will sustain a few fish on its production of natural food, when we overstock it we must supply the deficiency from the slaughter-house or the dairy.

Curd has been fed in some places with good results, but in my experience it has not done well as a steady diet; it has seemed to produce a fatty generation of the vitals that often caused death; hence, if the pond was well supplied with water-breeding insects which live either on vegetation or upon each other, it might possibly correct this evil. Experiments in this direction are sadly wanted. I believe, however, that a few insects and larvæ, shrimp, (*gammarus*) and such forms of life as comprise the food of the trout in a state of nature, are very beneficial from a sanitary point of view, to the trout kept on what is called "artificial food."

Your correspondent's idea of having a spring brook enter his pond is good; this will bring in much food that he will never see, and will prove superior to a pond supplied by springs rising within itself. Now he asks, 'Can I raise trout in my pond?' My dear Sir, no man can tell you that. Try it, moderately of course, so that a failure would not be financial ruin. But the raising of any kind of stock requires not only natural facilities, but that attention from the owner that only comes from his personal interest in it. The day has gone by when it was supposed you could buy a thousand fish eggs, put them in your pond, and three years after take out a thousand fish weighing a pound each. As it is said, 'planting a tree involves a promise to take care of it,' so does making a fish pond, and each man must decide for himself the question, 'Can I take care of it?'—that is, after the novelty has worn off and it becomes a question of business routine, like feeding the other stock and fixing the fences, with this exception, that the fish can be put off a day or two without apparent suffering, but the pigs can't; therefore, the 'day or two' might possibly, with a negligent man, extend to a month. The next question, as to the price of trout, is easily answered—yearlings, \$10 to \$12; two-year olds, \$20 to \$25 per 100, larger fish in proportion, and fry according to season. The cheapest way, if you have the conveniences, is to buy spawn. This can be safely shipped in cold weather anywhere, and hatched without difficulty. As to the width of 'pickets,' it depends on the size of the fish. For fry he wants wire-cloth of ten wires to the inch for the first two months, which can gradually be increased in size as the fish grow. Trout will run down stream or up stream, or anywhere else that they can get. In my ponds, which are fifty feet long by ten wide, and from three to five deep, with a deep pool in the middle, they are often all over it; but on the approach of any person they gather

in the deepest water. I often see them lying near the outlet screen, and know of several cases where they went through a broken slat. I use telegraph wire screens, as muskrats gnaw wooded ones."

—The Maine Commissioners of Fisheries have lately been distributing black bass caught in Phillips' (or Fitz) Pond in Dedham, which was attacked in 1869 by the introduction of 60 small specimens from West Winsted, Conn. Several hundred have been caught there this year. Black bass are also making their appearance in various other localities, which were also stocked in 1869, by the introduction of still smaller numbers of fish; in one case 13 fish (proportions of sexes unknown), proved sufficient to stock a large pond nine miles long.

Natural History.

TAME SNIPE.

A CORRESPONDENT of *Land and Water* writes that when visiting the Zoological Gardens at Amsterdam, in the year 1869, he saw a tame woodcock confined in a small cage, with a turf and some finely chopped meat. It looked quite healthy. He believes that the sandpipers in the Regent's Park collection have been fed in the same way. During hard frosts he has thus kept the green plover alive, removing it from the garden to the greenhouse.

We once tried the experiment of keeping English snipe alive, but met with only partial success, arising from the difficulty experienced by the birds in finding their food in the natural way. It has been accomplished successfully, however, in England. *The Field*, some years since, printed an instance, which is reproduced by the Rev. Mr. Wood in his work on natural history, published in London in 1869. In this instance, a gentleman named Upham, of Starcross, Devon, had a common snipe, which had been caught by some boys in a warren in a starving state, which afterwards became very tame and would follow Mr. Upham around a room for a worm. Her bath was a good sized pie dish, her dining-room an abandoned flower pot, and her amusement probing in a large damp sod of rushes placed fresh for her every day on a piece of brown paper. The quantity of worms consumed by this bird was enormous, nearly double her own weight in twelve hours. Mr. Upham kept a diary, noting down "Jenny's" habits and peculiarities, but her fate or length of life is not given.

Our experiments in this direction were made at Hankow in China, more than six hundred miles west of the coast, in the year 1863-4. It is a matter of surprise to all "barbarians" on their arrival in China that live game, particularly pheasants, can be bought in such large numbers, and in no portion of China, perhaps, was this peculiarity more marked than at Hankow. In the city of Wuchang, the residence of the Viceroy of the Hupeh and Honan Provinces, and a place supposed to be tabooed to foreigners, the market contained almost every variety of game bird known in China, the list of which, by-the-by, corresponds very closely to that of Great Britain. The pheasants are, of course, the same, the bird having been introduced into England from China; the quail is the same small variety, and woodcock equal in size to the English bird, largely exceeding ours in weight. The Chinese are poor shots, but exceedingly expert netters and trappers, and it was frequently a source of great amusement to follow a party of snipe catchers in their peregrinations through the low-lying wheat and bean fields. The indignation that would otherwise be felt at witnessing this mode of capturing game is repressed by the uselessness of opposition, and a knowledge of the great abundance of the birds. The mode of netting was as follows: A large and very light net, square, or nearly so, in shape, was borne lightly over the tops of the wheat by four men, one at each corner, the operation being always conducted at twilight. Behind these walked another man, carrying a long bamboo, which he waved gently in the tall grain. The birds being startled, rose to fly, when their heads became entangled in the meshes of the net, from whence they were withdrawn and placed alive in wicker baskets. These could always be bought in Wuchang, in the Spring and Fall, for about twenty-five cents, each containing a dozen snipe. Adjoining our residence was a garden fitted up in the native style, with much rock work and miniature ponds. Numbers of snipe were placed within an enclosure in the garden, where they had access to an abundance of water and some moist ground, but one after another they died, one occasionally surviving several weeks, and in one instance, several months. They showed but little wildness or inclination to fly, but appeared generally to be dazed and in a state of stupor, although the ground showed where their long bills had been at work probing the earth for worms. The other birds confined at the same time, golden and silver pheasants, mandarin ducks, etc., did very well. The quantities of English snipe in some localities in China is almost incredible. Deserted lotus ponds, where the water has been allowed to drain off and nothing remains but the soft, black mud and slimy ooze of great and dangerous depth, with a deceitful mantle of half decayed leaves, are their favorite resorts, the attraction, no doubt, being the excess of insect life and worms to be found. At the report of a gun they rise from the ponds in myriads. In the Fall of the year snipe are sometimes found on very high ground; every spot available for agricultural purposes being terraced, sometimes to the very summit of the hills, where irrigation is practicable, the snipe seeking the little detached wheat and bean fields, where the rich black loamy soil

furnishes them with food. They are also abundant in the Spring of the year on the marshes and meadows, where the grass affords good cover and capital walking. Among the birds always to be seen exposed for sale alive in Chinese markets are different varieties of the heron or crane families. These invariably have the lids of their eyes sewed together, the object being to prevent their pecking out the eyes of the passers by.

DROPSY EXTRAORDINARY.—An extraordinary event occurred the other day to a dweller in the Rue Andrae, in Paris. For the last fourteen years a woman living in that street has been believed to be a sufferer from dropsy. She has had all the symptoms of that disease, besides the extraordinary swelling or inflation of the body. A few weeks since she went to Burgundy to make a visit, and while there she felt indisposed. At the end of a few days she experienced the pangs of child birth and gave birth to a dead child. The child was of ordinary size, but its teeth and nails were full grown. The body has been sent to the Academy of Sciences. This birth, after a fourteen years' period of gestation, is unparalleled in France. In 1832 a lady died at Pas de Calais, who believed herself to be affected with dropsy for seven years. An inquest was held, and the body of a child, completely ossified, was discovered.—*Exchange*.

A FLYING SNAKE.—Yesterday we were met by a friend, who inquired, in an excited manner, if we had ever seen a snake that had wings, and "flew through the air with the greatest of ease?" From his statements we learn that while two boys, named Remington and Jenkins, the former from this city, and the latter a Platte Countian, were hunting in the woods, a serpent was seen approaching them, about four feet above the earth. Jenkins took off his hat, and throwing it over the snake, succeeded in capturing it. It is over one foot long, spotted, and has wings about the size of a man's head. The boys have the serpent preserved in alcohol.—*Leavenworth Times*.

THE BOSTON AQUARIUM.

DANVERSPOET, Mass., September 6th, 1875.

EDITOR FOREST AND STREAM:—

In company with a friend I recently paid a visit to the Aquarial Gardens, 13 West street, Boston. These gardens are owned and carried on by Wm. E. Baker, of the firm of Grover & Baker, sewing machine manufacturers. Collected in the fresh water tanks were a variety of fish, among which we noticed bream, dace, suckers, shiners, pickerel, catfish, lake trout, eels, sticklebacks, goldfish, etc. Each of these tanks were appropriately marked by neatly printed cards bearing the scientific and common names, with notes upon the objects contained in them. There were several large tanks, one of which contained a family of frogs, another a lot of tortoise, embracing the speckled, painted, sculptured, and snapping varieties; two large wooden tanks contained seven seals from the coast of Maine; another contained an alligator seven feet in length, while another contained one four feet long. Besides these there were several tanks containing fresh water crawfish or lobsters, English lizards, American water newts, a leatherback turtle from Nebraska, and a small sea turtle. In another room were arranged a number of salt water tanks, most of which have not been filled yet. A few contained several varieties of British anemones, which exhibited a variety of colors; another was filled with American anemones, mollusks, etc., while still another had a couple of sea-horses from the coast of France, which were very curious. I believe it is the intention of Mr. Baker to charge an admission fee and give the proceeds to the poor as soon as he gets it well arranged. As it is it is well worth a visit, and one may spend an hour advantageously in looking over and studying the specimens which he has brought together. Yours, A. F. GRAY.

CONFIDENCES OF WOODCOCK.

MURKIRK FURNACE, Md., Sept. 1st, 1875.

EDITOR FOREST AND STREAM:—

A few weeks ago I noticed an article in your paper on the courage of birds. I am informed by Mr. George W. Mitchell, Jr., (a farmer of this county, and reliable) that some years ago he found a woodcock's nest and made up his mind to watch the nest and see if he could see the young when hatched. He used to visit the nest every day, but the old bird would not leave it after he began to set, striking at him with her long bill if he attempted to touch her. One evening at dusk he left her, sitting on the nest; the next morning early she was gone, and only the broken shells were left in the nest. CHAS. E. COFFIN.

WHITE SQUIRRELS.

WETAUWEGA, Waupaca County, Wis., September 3d, 1875.

EDITOR FOREST AND STREAM:—

Being a reader of your valuable paper I would inquire through its columns if any one has ever seen a white squirrel? I saw one yesterday that was killed near this place by a boy, and is now in the possession of Prof. H. T. Boreham, taxidermist, of this place. It is a male of the size of the gray or black squirrel, perfectly white, with eyes as white as two glass beads. Yours truly, GEO. W. TEAL.

[Albino squirrels are not uncommon.—Ed.]

HANNIBAL, Mo., Sept. 2d, 1875.

EDITOR FOREST AND STREAM:—

Allow me, in behalf of the Hannibal Shooting Club, to thank you for the fine specimen of South American teal, just received by the hand of M. M. Barker, Esq. Truly, etc., G. M. HEWITT, Vice President Hannibal Shooting Club.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, }
NEW YORK, Sept. 5, 1875.

Animals received at Central Park Menagerie for the week ending Sept. 4th, 1875:—
One Virginia Deer, *Cariacus Virginianus*. Presented by Master D. B. R. Champan.
One white-haired Porcupine, *Erethizon dorsatus*. Presented by Mr. A. P. Ransom.
One South down Ram, *Ovis aries*. Presented by Mr. L. G. Morris.
One Rhea, *Rhea Americana*.
One Red Coatimundi, *Nasua narica*. Presented by Master David Rode. W. A. CONKLIN, Director.

—Old Tiger Tail, the Seminole, is endeavoring to concentrate his people upon the Big Cypress, in Florida, and induce them to more thoroughly occupy themselves with agricultural pursuits.

Woodland, Farm and Garden.

GRAPE CULTURE IN TEXAS AND CALIFORNIA.

A CORRESPONDENT writes from Gainesville, Texas, under date of August 20th:—

"I mail you to-day in a small box a sample of our wild grapes. They grow on the upland in the lower cross timbers in great quantities. The raw land can be bought at from \$3 to \$5 per acre. Seeing an article in your paper about California raisins has caused me to think they might be raised here."

The box containing the grapes has reached us in good condition, and the contents found to be very similar to our own wild grapes. We fear, however, that this grape, even when transplanted and treated with the greatest care would never be suitable for raisins; the skins are too thick to dry readily, and the fruit is not sufficiently delicate for this purpose. There is no reason, however, why Texas should not produce grapes as well adapted for both raisins and wine-making as any now grown in California. In fact, in some respects that State has an advantage over California, inasmuch as her Summer rains would render unnecessary the artificial irrigation, which in the latter State is advantageous, if not absolutely necessary to the young plants in the earlier stages of their growth. In fact, it is only of late years that it has been discovered that the regular Summer soaking given to the vineyards could be dispensed with, and native viniculturists in the southern counties still adhere to the old custom at the expense of the richness and wine-making properties of their grapes.

Vines appear to love a stony or sandy and sterile soil, where the requisite amount of heat is also to be found, and viniculture in Texas would probably be, as it is in California, exempt from those diseases and difficulties which are the bane of growers in Europe and other portions of our own country. There are thousands, yes tens of thousands, of acres of land in Texas admirably adapted to this business; not the rich river bottoms suitable for other agricultural purposes, but hill sides and sandy mesas, where the cactus and horned toad now hold undisputed sway. We remember seeing on the magnificent vineyard of Sunny Slope, in Los Angeles county, a corner inclosed within the rabbit proof fence, which was cut off from the former bed of a mountain stream, and on which, on the surface at least, was apparently pure sand. The vines on this spot were in the most flourishing condition, and the proprietor informed us that the grapes were of a superior quality.

Any of the varieties grown in California would probably answer equally well in Texas. In fact, the vine in the former State, and the immense business which has sprung from its introduction, can almost be called the result of accident; the padres who founded the missions brought cuttings with them from Old Spain and Mexico, and from these has sprung the common variety known as the "Mission." With the spread of viniculture as a business came also the introduction of almost every variety known to the world, the qualities of many for table, wine, or raisin making, being still in embryo; hybridization has also been attempted, and in some cases with great success. The common mission variety alluded to above, the white muscatel of Alexandria, the Zagos, and probably other varieties, would succeed for raisin-making in Texas. The first named is the hardiest and easiest to propagate. In fact, nothing can be easier than the laying out of a vineyard, and the subsequent cultivation on the California plan. The ground, after being thoroughly broken up and harrowed, deep plowing being essential, is laid off with a marker in parallel lines six feet apart each way. The cuttings, which are in lengths of two and a half to three feet, are inserted in the ground at the points of intersection with the simple aid of a crowbar, two buds being usually left exposed. The after cultivation is very much the same as that followed for corn, no stakes or trellises being used, and the vines trimmed back to one bud each year. Vines planted in this manner are expected to bear the third year, and to produce profitable crops in the fourth and fifth.

Upon the completion of the Texas and Pacific Railroad it will be very easy for our Texas friends who may desire to engage in this business to procure an ample supply of cuttings from Southern California, and we shall be happy to put them in communication with the leading vine culturists of the State. The price of cuttings of the mission vine extends only to the expense of cutting and labor involved in shipping; the choice varieties, such as the muscatels and Hamburgs, rose of Peru, and others, are worth \$10 per thousand; rooted vines can be bought in the nurseries for \$2 to \$4 per hundred at from one to three years of age, but for cultivation on a scale of any magnitude the cuttings would be preferable.

The greatest enemies to the vine culturist in California are the rabbits and gophers. The latter can be kept away to a great extent by having a patch of alfalfa in the vicinity of the vineyard, but during the long and dry Summer, when every other green thing has been devoured, the rabbits play sad havoc with a young vineyard, although the older plants, from the height of the stalk, escape.

The usual complaint against California wine is that it is too "heady." This the wine makers attribute to the soil possessing too much of what they technically term "fat," and anticipate that when it has been longer worked this quality of richness will leave it and improve the wine-making qualities of the grape. In addition to this the mission grape, of which a large proportion of the wine is made, contains so much sugar that it is necessary to add a certain proportion—say twenty gallons to the pipe—of native brandy to prevent the fermentation which would repeat-

edly ensue. This, of course, adds to the strength of the wine, and is the fruitful source of complaint from visitors to the State. The wines sold here under the name of California are generally composed principally of a mild juice imported from Europe, advantage being taken of this very quality of the true native wine to foist an adulteration on the public.

THE NELUMBUM LUTEUM.

THIS beautiful, and in northern latitudes exceedingly rare, water plant was discovered in the vicinity of Monroe, Mich., nearly twenty years ago in the waters of La Plaisance Bay, a beautiful sheet of water five miles long and one mile wide on the west extremity of Lake Erie. Its presence there, and the astonishing growth and natural increase of the plants in those high latitudes, have been a source of great interest to the botanists who have come in contact with the plant and the circumstance of its existence in those waters. Mr. Whelpley, who first called attention to the fact, was a meteorological reporter for the Smithsonian Institution at Monroe, and communicated the discovery to that institution, and received the following reply:—

WASHINGTON, D. C., May 20th, 1875.

THOS. WHELPLEY, Esq.:

DEAR SIR— * * * * The plant in question is no doubt the *Nelumbium luteum* of Willdenow. It is common in the extreme West and South. The Asiatic species, I believe, is *Nelumbium speciosum*, and is supposed to be represented on the Egyptian monuments. The plant, however, has long since disappeared from the valley of the Nile. The above are the only two species known, and constitute the *Nelumbiacæ* of Lindley. When the seeds are ripe, we should be pleased to receive a specimen, if a convenient mode of transportation can be devised—probably by mail.

I am, respectfully, your obedient servant,

E. FORMAN, Assistant Secretary.

In compliance with this request Mr. Whelpley transmitted a package of seeds, which were planted in the aquatic department of the public gardens, and also by private gentlemen near Washington. The *Nelumbium speciosum* has been successfully cultivated by artificial means in tight tubs and excavated tanks, proving that the *Nelumbium luteum* can certainly be domesticated, and become one of the most interesting individuals in the great floral family, and if those found in the waters at the head of Lake Erie prove to be the hybrids, as above suggested, a hardihood of plant and facility of culture can be reached that might be attained in the unmingled class, besides the addition of fragrance from the nymphia oduta. It seems the Asiatic lotus was held in high esteem by the ancients. Not only was it thought sacred by them and an object of worship, but was considered a model for Indian architecture, the same as the bud or germ was for the Gothic, and the acanthus leaf for the Tuscan, the domes of their temples being copied from the inverted corolla of the lotus.

We notice in monuments that have been exhumed from Ninevah that the lotus flower occupies a prominent place, and always appears in connection with their altars for religious worship. It doubtless grew in the valley of Euphrates, and was held sacred by those people the same as by the Egyptians. The flower is now in full bloom in Monroe, and the bays and bayous are in many places covered with the leaves and flowers, while the air is fragrant with the rich perfume.

Judge Conger, of Michigan, read an essay a short time since touching upon this plant and the island near which it grows in such abundance.

PLANTS FOR THE HOUSE.

LADY writes to me to know what plants I would recommend, and how many for two south windows of a sitting room. She wants something of a variety in the collection, and prefers those which give good satisfaction as regards constancy of blooming, and are not very particular as to the treatment they receive.

Sixteen well grown plants are enough for two ordinary sized windows. There may be five or six hanging plants, if desired, and no plants are more ornamental than our best drooping plants are when grown with care.

I would recommend four flowering geraniums. For scarlet, I would take Hector, which is large of flower, has immense trusses, and a very profuse bloomer. For rose, Master Christine, a very beautiful plant every way. For salmon, Fritz, or Mrs. Austin, both desirable. For white, the White Princess, or Madame Vancher.

For roses, I know of none more desirable than Hermosa, bright rose, double and very fragrant, and a profuse bloomer; Agrippina, small, blooming in clusters of very rich dark crimson, and Safrano, pale sulphur yellow, large, full and delightfully fragrant. The Marshal Neil and Bon Silene roses are beautiful, but more difficult to grow satisfactorily than the other three mentioned. I have never had any success with Marshal Neil.

You will want two carnation, and among a large number of splendid kinds I know of none better than La Purite, bright, clear rose, and Peerless, pure white, both profuse bloomers and very fragrant. Of course the collection should include a calla and oleander, and an abutilon, and it ought to have a couple of bouvardias, say Davisonii, pure white, and Hogarth, rosy scarlet. Then you want a heliotrope for fragrance, and a rose geranium. This gives you sixteen plants. But if you want some ornamental leaved plants omit a rose, or the salmon geranium and put in a coleus, than which none are better than Setting Sun, bright crimson edged with yellow, and a plant of the abutilon Thompsonii. This is one of the most striking and effective variegated plants. The leaves have two shades of green and two of yellow, and the colors do not blend into each other, but are clearly defined like mosaic work.

For hanging plants take Moneywork, Saxifraga, Kenilworth ivy and Wandering Jew. These grow readily and are all fine and effective plants. And you want an English ivy, too, to clamber up between the windows, and a double Chinese primrose. With this collection you ought to have

flowers all Winter. They are all easily grown in any good rich soil with an admixture of sand to keep it light and porous.

There are scores of other plants nearly as described, but these are kinds which flourish best under the treatment of an inexperienced person, and I am quite sure they will give good satisfaction.—[E. E. Reaford in *Western Rural*.]

CURE FOR RING BONE.—A correspondent of the *Western Rural* gives this cure for ring bone:—"Pulverized cantharides, oil of origanum, oil of amber, oil cedar, Barbadoes tar, British oil, each two ounces; oil of wormwood, one ounce; spirits of turpentine, four ounces; common potash, one-half ounce; nitric acid, six ounces; oil of vitriol, four ounces; lard, three ounces. Melt the lard and slowly add the acids; stir well and add the other ingredients, stirring until cold. Clip off the hair and apply by rubbing and heating into the parts affected. In about three days, or when the part is done running, wash off with suds made with white castile soap and apply again. In old cases it takes three or four weeks, and in recent cases two or three applications have cured."

The Kennel.

A VISIT TO NEWTON.—We have just returned from a flying visit to Newton, N. J., where we were introduced to the kennel of Mr. Theo. Morford. Mr. M., it is well known, makes it a specialty to breed orange and white setters with black points, and now he can show four or five brace of magnificent dogs of those colors, and we assure our shooting friends that it would be worth a visit to Newton to see their performance, and the easy and great control he has over them. And then at Newton can also be found the breeding kennel of Mr. A. C. Waddell, who now has quite a display of thoroughbred setters and pointers and their whelps, among which is Fanny, a full-sized liver-colored pointer bitch, which has recently been served by the famous black pointer Phil. The pedigree of Phil is well known, but having no better pedigree than said bitch Fanny, she being by Dandy out of Moll; Moll out of Nell by Shot. Shot was imported by Dr. Alsop, of Middletown, Conn. Dandy is the property of Mr. James Wabberton, and Moll is owned by Mr. Krechus, both of New Britain, Conn. Fanny is certainly a magnificent specimen of a high-bred pointer bitch, and from her and old Phil something altogether extra may be expected.

A FINE RETRIEVER.—The *Halifax Herald* says that a pointer dog the other day drove a handsome peacock into the water of the Northwest Arm. Several boats went to its rescue, but not in time to save it. The dog witnessed the scene from the shore, not venturing into the water, and when the boats headed for the land it sagaciously turned tail and fled, and was soon no more. The bird was the property of a gentleman residing at the Arm, and was a valuable one.

MORE POISONING.—A letter to John Avery, Esq., President of the Blooming Grove Park Association, from the Superintendent at the Park, dated Aug. 31, says:—

"Four of our dogs, yours, one of mine, the black setter Fanny, and the hound Storm, died the other night. I suspect they were poisoned by some of our pseudo friends. When you come up try and bring dogs with you."

[We have been pained to record the death by poison of a score of most valuable dogs within the single month just past, and the villiany is not confined to one locality, but extends from Maine to Kansas. There is no doubt but that the miscreants above alluded to, could be indicted and punished severely for malicious mischief, in any State of the Union, and the sooner the law is enforced the better! There are precedents enough on the court records to guarantee this.—Ed.]

ON BREEDING HOUNDS.—In breeding hounds we have to be fully as particular as we are in breeding pointers and setters. Before choosing our dogs and bitches, their characters ought to be fully developed, and it will take at least two seasons for us to be thoroughly acquainted with them, and if three all the better. The sire should be a hard worker, a quick hunter, and a good drawer. By quick we do not mean fast; a quick hound turns with the scent, a fast one overruns it. The bitches must have width in their loins and length in their flanks. Never breed from an old bitch, although you can put a young bitch to an old dog, with expectation of a fine litter. In shape, hounds should have a wide head, wide chests and wide ribs, hams long, short from hocks to feet, thighs muscular, feet round, forelegs short and straight, shoulders well set back, the neck long and clean, although we prefer the neck a little throaty. The earlier in the year the pups are born the better. A diary should always be kept, and after every day's sport the performances of the different hounds who have distinguished themselves noted down in it, as well as remarks of wind and weather, etc., and it will prove hereafter when choosing your sires from your two or three seasons' hounds an invaluable record, by help of which you can at once choose exactly what hound you wish to mate, for you must mate mental qualifications, as well as a symmetrical form—i. e., what qualities your bitch may be deficient in, should be in preponderance in the sire. If your diary is kept alphabetically, very little trouble will be experienced in running back two or three years to see the performances of different hounds in the field. When your brood bitches are heavy, they should no longer be left in the kennel, but have a place appropriated to themselves, with an inclosed place to run in, the larger the better. If they can be left loose, only shutting them up at night, it will be a great benefit to both mother and pups. Four are sufficient to leave with the mother; the longest and heaviest. When the puppies are a few days old, cut off dewclaws and a bit of the tail with a pair of sharp scissors.—*Canadian Sportsman*.

DISTEMPER IN DOGS.—There are various remedies for distemper, and the malady assumes somewhat different forms, if allowed to run its course. It usually makes its appearance about the seventh or eighth month of puppyhood, and it is half the battle to attack it in its incipient stage. The disease commonly assumes the form of continued fever, like influenza; and, not unfrequently nervous fits constitute the premonitory symptoms. These are often mistaken for rabies, and many a valuable dog, under their attacks, has been unnecessarily destroyed. Some years ago I gave a terrier puppy to a Highland gamekeeper, and on afterward inquiring how it was getting on he answered, "It was rinnin' roun' aboot an' wadna tak' its meat, an' I knockit its head against the wa'." There is a striking resemblance in the symptoms of distemper to those of general fever in the human species. In both we have great prostration of strength, with loss of appetite, heat, and thirst, difficulty of breathing, a discharge from the nose and eyes, great depression of spirits, etc. The animal must be kept warm, and a pill administered, consisting of one grain of tartar emetic and one grain of calomel. This will produce vomiting and purging, and lower the pulse. When the action of the medicine has ceased, if the dog be small and manageable, bathe him in a tub of warm water for ten minutes, rub him dry, and dress his coat; pour down his throat half a tumbler of warm rice water or thin oatmeal gruel, containing from six to eight grains of saltpetre, and give him a warm bed for the night. Next morning he will probably show an inclination to feed. Put within his reach a plate of thin gruel and buttermilk mixed, or rice water, and at night administer a small dose of castor oil. He will probably require no more medicine. Feed him for a few days on broth made with bones and vegetables, to which may be added a handful of oatmeal or barley dust, and give him a bone to pick. Keep cold water always within his reach. A puppy pampered with butchers' meat is almost sure to succumb to distemper under any treatment. If kept lean he will probably only refuse his food for a day or two and shake off the disease without requiring any medicine beyond a slight dose of castor-oil, or a bolus of sulphur and butter.—*Fancier's Gazette.*

KENNEL NOTES FROM GERMANY.

MUNICH, Germany, August 18th, 1875.

EDITOR FOREST AND STREAM:—

There is no part of your paper that I read with greater interest than the articles under the head of The Kennel, and have thought perhaps it would interest some of the readers of the FOREST AND STREAM to know what is expected of a dog here. The most important things are, of course, that he point partridges well and does not spring after hares. After he does these two things well, he is taught to stand ducks and range in the high grass. He must, in fact, be good with everything—snipe, roc and large birds. The setter is preferred here, as he goes better in water. It seems to me that these are the kind of dogs needed in America, being strong, quick, and having excellent noses. There is an English friend of mine here who has been in America, and says he thinks they are better adapted to our shooting than English dogs.

Now, one word for the little dachshund. These small dogs are of great service in what are called "Treib-jagd." They are sent into the centre of the circle formed by the jager and drive out all the game. They look like a dwarfed fox hound, with bow legs, and weigh from twelve to twenty-four pounds. Enclosed please find a photograph of my setter. He is black, with the exception of a few white hairs on breast; height, 22 inches; from shoulder to tail, 26 inches; nose to point of skull, 9½ inches; tail to end of bone, 14½ inches; chest, 29 inches in longest; feathering 6½ inches. I bought him from Prince Karl's Stall Master here. I should like to know what you think of him. His name is Hector. The photograph was taken without any brushing or preparation at all. I shall come to America next Summer, and then I hope you can see him in the field. I shall try and write you an account of the hare shooting, which is about the best sport here.

Hoping that you may find a part of this letter interesting enough to publish, I remain yours sincerely,

W. S. MACY.

FANCY PRICES FOR DOGS.

RUTLAND, Vt., Sept., 1875.

EDITOR FOREST AND STREAM:—

Will you allow me to say a word or two on dog matters. The article which you copy from the Philadelphia Press is apt to produce a wrong impression about the prices of dogs in England. By the rules of the dog shows every exhibitor is obliged to put a price on his dog. The fixing of the enormous prices mentioned in the Press, is but another way of saying, "not for sale." When the dogs on exhibition are offered genuinely for sale, the price named is generally a moderate one. Very well bred and well broken dogs can be bought all over England and Ireland for about \$50 each. \$100 is a high price, and one seldom asked, except for a noted dog, or for one from some very distinguished kennel, like Llewellyn's or Shorthouse's. There is to be seen at almost all the shows in England a Doctor Stone. He "totes" round some handsome red Irish setters, and he takes many Bench Show prizes. He is a twin to our razor strop man. They call him "Blarney Stone." If I remember aright his best dog is priced £20,000. I have no doubt I could buy his whole stock for £100. Some celebrated dogs are sold as high as an hundred and fifty pounds; but such prices are paid chiefly by breeders of both kinds, i. e., by those who breed for their own use, and breeders of dogs for sale exclusively; for, as will be seen at once, a dealer who comes into possession of a noted field trial or other winner, can make sale of such dog's stock at considerably more than the average prices. But of this your readers may rest assured, that nobody, unless some one with more money than brains, ever pays any such prices as are mentioned in the Philadelphia Press article.

A YANKEE WHO BOUGHT DOGS IN ENGLAND.

BELLE FORTE, Nottoway County, Va., September 4th, 1875.

EDITOR FOREST AND STREAM:—

In your issue of 26th of September the account given by a London correspondent of a Philadelphia paper of the marvelous prices stated to be given for dogs at a recent show is calculated to mislead the general public. In some instances the correspondent says they were labeled so and so, mentioning incredible sums of money; in another instance he states they brought £1,000. I assure you this is all a delusion. As I heard a gentleman say in reading your journal last night, "What! a dog worth \$5,000?" I took the liberty of explaining the matter to him in this wise: It has long been the custom at dog shows in England to label the animals with prohibitory prices, and the uninitiated might fancy that these sums of money actually change hands. The facts are simply as follows: For so many thousands sterling read, "Not to be sold." I believe the largest sum that ever was paid for a pointer, setter, or any dog used by the sportsman was something between £300 and £400. Some of the largest sized dogs, such as the wolf hound and those from the Pyrenees, occasionally bring fancy prices, but never do they reach the thousands. For gambling dogs, such as the grayhound, I am credibly informed that Lord Lurgan was offered £5,000 for Master McGrath. Why was this? Because this unequalled animal had won in stakes alone somewhere between £7,600 and £8,000, to say nothing of immense sums of money in bets. Faithfully,

JNO. M. TAYLOR.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

Land-locked Salmon, *Salmo gairdneri*. Salmon Trout, *Salmo confinis*. Black Bass, *Micropterus salmoides*, *Micropterus nigricans*. Striped Bass, *Morone lineatus*. Sea Trout, *Salmo immaculatus*. Bluefish, *temnodon solitarius*. Weakfish.

Trouting is permitted in Maine until October 1, and in Canada until September 15th. Salmon fishing with fly is permitted in New Brunswick until September 15th. Land-locked salmon and salmon trout in season till September 15th.

Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

FISH IN MARKET.—We have to report this week a more plentiful supply of fish, the recent westerly winds having driven them on the coast in larger numbers than at any time during the past thirty days. Spanish mackerel are more abundant and now sell for 40 cents per pound. Of fresh mackerel there are none in market. Sheepshead are worth 25 cents per pound; eels, 18 cents; bass, (striped) 25 cents; bluefish, taken all along the coast, from New Jersey to Massachusetts, are worth 8 cents per pound; blackfish, 15; pompano, \$1 per pound; sea bass, 18 to 20 cents. Refrigerated salmon bring 50 cents; halibut, 18 to 20 cents; green turtle, 15 cents; frog's legs, 50 cents per pound; soft crabs, \$1.50 per dozen; scollops, \$1.50 per gallon.

BAIT.—Shrimp are selling for \$1 per quart; shedder crabs, \$1.50 per dozen; sand worms, \$1 per 100; soft clams, 40 cents per 100.

THE GREAT SOUTH BAY.—Notwithstanding the presence of fish in great numbers, both inside and outside the bay, we hear of but few catches of consequence being made. On two or three days of the past week the waters outside Fire Island Inlet have apparently been alive with bluefish, but neither the seductive squid or the odoriferous chum of mossbunker have been of the slightest avail in alluring them to the hook. In other words they wouldn't bite. In the eastern part of the bay some few weakfish have been caught, but the only catches in the neighborhood of the inlet were, we regret to say, taken by a small party of gentlemen who hitherto have enjoyed reputations as fishermen, from one of the pound nets in the channel. It was rather singular that fish should bite when confined within a net, but in this instance both young bluefish and weakfish took bait readily. We have no fears, however, that this aquarium fishing will become popular, and our sympathies in the present instance are divided between the deluded fishermen and the impoverished pound owner.

SQUETEAGUE.—Any of our Massachusetts friends who wish to try squeteague (weakfish) fishing are recommended to visit Wareham, Mass. Stop at the Kendrick House, P. S. Hackett, proprietor, to whom they should previously write in order to have a boat and boatman engaged to take them down the river into Buzzard's Bay to the fishing grounds. A party who are fortunate in securing the services of that renowned and jovial colored gentleman, Dempsey (Hill), who carries parties from the Kendrick House, and his fast and well found yacht, "Dempsey's Dream," will be sure of a pleasant time, even if they experience "fisherman's luck." Dempsey is *au fait* in everything pertaining to capturing fishes in those waters.

—There seems to be no doubt that the bass fishing at the Twin Lakes, that lie on the State boundary line between Massachusetts and Connecticut is very fine at this time. Mr. Cooper, whose advertisement of a private boarding house has stood in our columns all Summer, assures us that there are plenty of bass to be had there this month and next, and that they are frequently taken weighing three and four pounds. The Twin Lakes are very beautiful sheets of water, and accessible in four or five hours from New York. It is one of the pleasantest resorts we know of. Our readers who want a day's fishing will do well to take a run up there via the Harlem Railroad to Millerton, and thence via Connecticut Western Railroad.

—Dr. John P. Ordway, President of the Massachusetts Angler's Association, and Elnathan Delano, another prominent and active member, left Boston on Saturday last for a month's sojourn in search of rest and recreation among the Rangely Lakes in Maine. The Doctor has not yet recovered from the effects of the injuries received, occasioned by participating(?) in a railroad accident last Winter. This leaving all care behind is by order of his physician.

—Gen. Henry W. Fuller, of Boston, and brother-in-law of his excellency Governor Gaston, caught in the Adirondacks, last month, the largest speckled trout (salmon fontinalis) that has been landed there for at least a dozen years. It weighed 7 pounds 1 ounce, and was taken with a six-ounce Thomas Tout rod. Nearly three-quarters of an hour were occupied in securing the prize.—[*Saturday Evening Gazette.*]

THE FISHERIES.—The number of fishing arrivals at this port for the week ending September 2, was 63—23 from Georges, 10 from the banks, 30 from off shore mackereling and 1 from the Bay. Amount of Georges cod brought in is 300,000 pounds; halibut, 11,500; Bank cod, 850,000. Mackerel still continue very scarce, the 30 arrivals only bringing in of an aggregate 2,000 barrels.—[*Cape Ann Advertiser, Sept. 4.*]

—Two gigantic codfish were captured by a party at the Isles of Shoals the other day, weighing 60 and 36 pounds, respectively, and measuring five and three and a half feet in length.

—A dead whale was towed into Green Cove, N. S., recently. It would yield about 40 bbls oil, worth \$200. It had a chain of 12 or 15 fathoms attached to its tail.

MAINE.—Bangor, Aug. 30.—A salmon was taken from a weir on the lower end of Verona Island on the 23d inst. This is unusually late, and probably the last of the Penobscot salmon for this season. It was in fine condition and flavor.

ROAMER.

NEW YORK.—Syracuse, Aug. 28.—Yesterday afternoon in about three hours, in Oneida River, near Brewerton, and about four miles below Oneida Lake, I took seventeen black bass (and a lot of cheap stuff) on a trout fly rod, using my trout leader and cast of small trout flies. That was an experiment, but eminently satisfactory. I found I could "set" the hook every time and the fish couldn't get away. Four times I took a pair of black bass, and once I took two black bass and two rock bass—twelve fish at five hauls—and got them all in. I had on four flies, and took all there was room for, for once.

A. J. N.

NEW JERSEY.—Carman House, Forked River, Sept. 7.—The fishing during the last week has been poor, weakfish being very scarce and small. Some few sea bass and kingfish are taken daily at the inlet, and this constitutes the sport. To-day the bluefish have again struck in from outside and several boats have made fine catches with the squid, averaging 30 or 40 each. Capt. F. Mathews and Mr. J. L. Frame, of New York, caught 39 to-day, and report the fish plentiful, running from 2 to 5 pounds each. How long this will last we cannot tell—probably not many days. Striped bass are coming along slowly, some fine ones being taken at Meadow Bank opposite here, but they are not plentiful enough yet to warrant much encouragement.

II.

THE LAST DAY OF THE SEASON.

RALSTON, Lyecoming county, Pa., August 17th, 1875.

EDITOR FOREST AND STREAM:—

The streams had been swollen for a week past, giving the trout a chance (which ought to be secured to them by law after August 1st) to escape the temptations put in their way, and to run up to their spawning grounds. After a good breakfast at the Ralston House, Squire Myer (he is Justice of Peace, and a good landlord, too,) proposed a day on Roaring Branch to close the season. Soon, seated in a wagon, we were bowling along over a good road for the Branch. The Lyecoming was bank full and discolored, but when we reached the mouth of the Winslow, a side stream, I thought that its clear waters might have tempted some nice fish; so after arranging to meet the wagon a mile above, I started up the stream. I soon found I was right. The stream was small and very clear, requiring careful fishing with long casts. When I reached the wagon I had some nice fish—enough to make us hopeful of a large basket. The road up the Branch is not Macadamized, but it climbs the mountain through a beautiful gorge made by the stream, and occasional openings through the forest reveal beautiful scenery, with the Branch glittering like a thread of silver beneath us. After following this course for four miles we came to a clearing, where we left the wagon, and taking our rods the Squire and I started down the mountain for Roaring Branch. We struck it at the forks, and there took lunch, after which the Squire took one branch and I the other. A few hundred rods' walk brought me to a splash dam up the left branch, and after a few successful casts was rewarded by an eight and a ten-inch fish. I began to think that I had reached Mecca and the reward of the faithful fisherman, but a shower above discolored the stream, and my fun was spoiled; not, however, before I had secured a good addition to my morning's take. I met the Squire at the junction, as agreed upon, and he, too, had found another splash dam on his branch, and his experience had been good, although I blush to say that he was *bait* fishing. We fished down the main stream—the roughest stream bed you ever encountered—and some two miles down met "Shorty," our wagoner, who had put up the team at a house below and borrowed a "rig" from a boy, with a few worms, with which he had caught a respectable string, as he came in search of us. Our united take was not unworthy of the talent employed, and we reached home in time for a late supper of trout and other dainties. I look back upon the past season, as I hope all good fishermen do, with pleasure. I have taken all the fish I desired, and have never once disgraced my hand or rod by a bait of any description.

NEW ROCHELLE REGATTA.—The second annual regatta of the New Rochelle Yacht Club was sailed on Saturday last, resulting in one of the finest small yacht events of the season. By noon the following large fleet had reported to the committee, and were classed in five divisions:—

FIRST CLASS—JIB AND MAINSAIL.

Name.	Owner.	Length.
Elcamer.....	N. Edgar.....	26 06
Susie S.....	Ira Smith.....	27 04
Chemman.....	F. W. Meeker.....	25 01
W. T. Davids.....	T. Kissam.....	27 07
Journeymen.....	R. McWhinney.....	28 08

SECOND CLASS—JIB MAINSAIL.

Sarah H.....	W. S. Hains.....	21 00
Mary Emma.....	Iselin Bros.....	23 11
Emily P.....	James Sweeney.....	21 08
Pidgeon.....	F. Pidgeon.....	20 13
Sophia Emma.....	J. Varian.....	21 10

THIRD CLASS—CAT BOATS.

Fron Fron.....	Thorn Brothers.....	23 09
Kamehameha.....	Capt. Van Cott.....	24 10
Favorita.....	G. W. Byron.....	20 02
Lurline.....	George J. Bradish.....	24 00

FOURTH CLASS—CAT BOATS.

Four Brothers.....	E. Spahee.....	18 06
Byron.....	Capt. Baker.....	17 10
Only Daughter.....	Commodore Farley.....	16 06
Gertrude.....	Capt. L. W. Gulager.....	18 05
Ella.....	W. H. Johnson.....	18 04
Fidget.....	Mr. Van Wyck.....	19 10

FIFTH CLASS—UNDER 15 FEET.

Lulu.....	G. T. Penfield.....	12 06
Lavonia.....	H. Orcott.....	12 11
Shanghaum.....	J. Hickey.....	14 11
Susie.....	George Lambden.....	13 02
Ripple.....	A. Hoffman.....	14 00

The course was from the schooner yacht Meta, anchored a short distance from the pier, to the Mattinecock buoy and back for the fourth and fifth classes, a distance of twelve miles, and for the first, second, and third classes, from the

SOUTH BOSTON, Sept. 6th, 1875.

EDITOR FOREST AND STREAM:—

The third championship regatta of the Dorchester Yacht Club was sailed on Saturday. The breeze was strong from the southwest, and the day was all that could be desired. The only accident was the capsizing of the Wanderer, which occurred when she was approaching the last buoy on the home stretch. At the time her chances for winning the prize were excellent. The crew clung to the bottom of the boat, and were soon after taken off by the Mabel, which towed the capsized yacht to South Boston. All the boats sailed over the usual course—about nine miles—with the exception of the fourth class, which sailed the short course—something over five miles. Below is a summary:—

FIRST-CLASS CENTRE-BOARDS.

Yacht.	Owner.	Corrected time.	H. M. S.
Lillie.....	Babb.....	1 25 08	
Eva.....	Bangs.....	1 26 21	

SECOND-CLASS CENTRE-BOARDS.

Fannie.....	B. Dean.....	1 29 02	
Queen Mab.....	Halsall.....	1 35 44	
Niagara.....	A. Dean.....	1 41 09	
Mabel.....	Roberts.....	Not timed.	
Wanderer.....	Russ.....	Capsized	

THIRD-CLASS CENTRE-BOARDS.

Water Witch.....	Gorman.....	1 35 31	
Bristol.....	Mann.....	1 36 42	

FOURTH-CLASS CENTRE-BOARDS.

Rocket.....	Bass.....	1 13 19	
Tulip.....	Burgess.....	1 14 00	
Virginia.....	Plimpton.....	1 17 17	

FIRST-CLASS KEELS.

Mariquita.....	Dexter.....	1 38 17	
Sunbeam.....	Mickerson.....	1 38 39	
Lidie.....	Whorff.....	1 44 19	
Saxon.....	Clarke.....	1 53 35	

SECOND-CLASS KEELS.

Ruby.....	Preston.....	1 48 44	
-----------	--------------	---------	--

The Lillie, Mariquita, and Rocket, each having won in a previous contest, take the prize in their respective classes. In the second-class centre-boards the Fannie won, and a special race will have to be sailed by the Fannie, Mabel and Wanderer, as a boat is required to win two races before taking a prize. In the third-class centre-boards the Water Witch won, tying the Bristol, and in the second-class keels the Ruby sailed the course alone, thus tying the Macduff, and these boats will have to sail again. This race will take place at an early date, and the final regatta of the club will be held on the 20th of September.

READY ABOUT.

THE TROY REGATTA.—The rowing season may be said to have been brought to a close with the regatta of the Amateur Association at Troy. A series of well contested and interesting races were witnessed by a large congregation of spectators, although the narrowness of the course, which rendered it necessary to row the races in heats, militated somewhat against the effectiveness of the contest. On Tuesday the events were the first two heats of the four-oar race, three heats of the single scull race and a pair-oar race. In the first heat of the four-oar race three crews appeared, the Friendships, Atalantas and Mutuals. The Atalantas pulling an easy stroke of thirty-four to the minute, won the heat in 8m. 22½sec., the Mutuals second in 8m. 40½sec. Immediately after the conclusion of this heat, three other crews started, the Beaverwycks, Argonauts and Quaker Citys. The Argonauts started with the lead, but were soon passed by the Beaverwycks, who won the heat, doing the mile and a half (which was the distance in all the races) in 8m. 22½sec.; the Argonauts 6½sec., and the Quaker City crew a dozen lengths behind. In the first heat in the single-scull race, Young, of the Arlington Club, having withdrawn, Riley, of the Neptunes, Ackerman, of the Atlantics, and Randall, of the Potomacs, were left to compete for the heat. Riley was the favorite, and won in 9m. 24½sec., Ackerman second in 9m. 35sec. The second heat brought out four contestants, R. H. Orr and J. B. Maxwell, of the Sevanhaka Club, and George W. Lathrop and T. McCormack, of the Beaverwycks. McCormack got the best of the start, but was soon passed by Orr and Lathrop, the latter winning the heat in 9m. 41½sec.; Orr second. The third heat was a forgone conclusion for Courtney, of the Union Springs Club. Roach and Bainbridge pulled against him, but could never hurry the champion, and he won the heat in 9m. 34sec. The pair-oar race was won by the Argonauts, represented by Ed. Smith and J. Eldred in 9m. 39sec.; the only competitors being Gorman and Wilson, of the Beaverwyck Club.

The first event of the second day was the concluding heat of the single-scull race between James Riley, of the Neptune Boat Club, West Brighton, Staten Island, and Charles E. Courtney, of the Union Springs (N. Y.) Boat Club. Courtney won in 9m. 46sec. The event of the day was the concluding heat for four-oars, between the Beaverwycks and Atalanta crews. The latter, comprising the four college men, Rogers, Downs, Eustes and Gunster, won in 8m. 34½sec.; the Beaverwycks time being 8m. 42sec. The concluding event of the regatta was the double-scull race between the Neptune, Beaverwyck and Union Springs pairs, the latter, having the invincible Courtney as stroke, won in 8m. 50½sec.; the Neptunes time being 9m. 06sec., and the Beaverwycks 9m. 13sec.

Our thanks are due to Capt. J. K. How, Col. Lee Chamberlain and others of the Laureate Boat Club for courtesies extended to our representative and we regret that want of space prevents us from giving a more extended account of this interesting and successful regatta.

THE WATKINS REGATTA.—As we go to press this event is in progress, and there is every prospect of the regatta being a success. The two Cornell crews have been at the lake for some days. The course has been laid on the western shore of the lake and a good stand with a seating accommodation for a thousand spectators has been erected opposite the starting point. Gil Ward has also gone to Watkins to row in the professional single scull race today.

—The Schuylkill Naval Board met September 6th and perfected their arrangements for the Local Regatta of the 18th inst. The races will be in the following order:—Double sculls, single sculls, six-oared barge, four-oared gigs, pair-oared shells, and four-oared shells. The members will take the champion flags for the respective classes, besides a handsome special flag. Each winning oarsman will receive a handsome badge, which has been adopted for the "Local." It is unfortunate that the regatta could not be arranged to meet the programme of the Cricket Tournament, or perhaps it is unfortunate that the cricketers didn't accommodate the programme to the date of the regatta.

SCULLS.

TYPO RACE.—The Union and Herald Boat clubs rowed their third annual race on the Harlem River on Tuesday, September 7. The members of both clubs are compositors employed on morning dailies in this city. The crews were composed as follows: Union—J. P. Schofield, bow; D.

Kells, No. 2; J. Macbeth, No. 3; Al. A. Mohr, stroke; C. Gatter, coxswain. Herald—J. Armstrong, bow; G. Johnson, No. 2; J. Veitch, No. 3; W. Clack, stroke; J. Dutton, coxswain. Their galleys are built by Chris Thomas and John Kyle and there is not a stick among these minions of the oar. The Union crew won—Time 15m. 20s.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

S. K., Jr.—Who is the best maker of American paper shells? Please send me the address. Ans. The Union Manufacturing Company, Bridgeport, Conn.

ZEKE, Augusta, Ga.—Please inform me where I can find some honey bees for sale? Italy bees are preferred. Ans. Address Jasper Hazen, Woodstock, Vt.

W. H. B. Leicester.—Will you please send me the rules of the Creedmoor Rifle Association? Ans. Address Secretary National Rifle Association, No. 93 Nassau street.

Y. S., New Orleans.—Will you inform me where I can procure the best book on Trapping and the best traps? Ans. Newhouse's "Trapper's Guide." Address him, care Oneida Community, Oneida, N. Y.

E. B. S., Syracuse.—If a metal shell fits a gun, should the burnt powder cover the outside of the shell after being fired? Ans. No; but the gas formed by the combustion of the powder would probably penetrate the shell and discolor it.

F. B. F., Paris, Ont.—What is the latest edition of "Fur, Fin and Feather?" Ans. A revised edition just printed. We can send you a copy. What is the price of the Hart shell? Ans. Twenty cents each, plain; twenty-five cents nickle plated.

STYX, Baltimore.—"The Fly Fisher's Text Book," by "Theophilus South," &c., Chitly, can likely be had through Scribner & Co., or some importer of English books. Published by Henry G. Bohn, York street, Covent Garden, London, 1845.

RAIL, Philadelphia.—Can you give the laws and restrictions regulating the gunning by non-residents in the counties of Burlington and Camden, New Jersey? Ans. Apply to any officer of the West Jersey Game Protective Association. Address, B. W. Richards, Philadelphia.

G. N. A., Montreal.—Please give me your opinion on the Parker gun, manufactured by Parker & Co., of Connecticut. The gun is selling a good deal here, and for the price asked, viz., \$55, greenbacks, seems a good article. Ans. The Parker gun compares favorably with any of American manufacture.

W. L., Bridgeport.—Having heard many inquiries and some disputes in regard to the height and weight of Capt. Bogardus, the champion wing shot of the world, would ask you to give the desired information, and much oblige many of your readers. Ans. Capt. Bogardus stands six feet in height and weighs 200 pounds.

H. B. S., Newton.—Are Colvin's boats manufactured and sold now; if so, where can I get one and at what price? Where can I get any wild rice? Please give the address. Ans. Colvin's boats can be purchased from Messrs. Eaton & Co., No. 102 Nassau street, this city. For wild rice, address Richard Valentine, Janesville, Wis.

NESTOR, Sloatsburg.—Will you kindly state in your well-informed journal how many Government fish hatching establishments there are in the Dominion of Canada, and where located? Ans. Six; on the Mirimichi and Restigouche Rivers in New Brunswick, at Newcastle, Ontario, at the Dartmouth River (Gaspe) and Tadoussac, Quebec, and at Windsor, (now building) Nova Scotia.

D. M. Y., Morristown, Pa.—In a recent number of your valuable paper I saw a recommendation of Belmontly oil for protecting guns from the action of salt water. I cannot find it in this vicinity. Will you please inform me where to get it? Ans. From Henry C. Squires, No. 1 Courtland street.

FRANK, East Liverpool, Ohio.—Will you please give receipt for preparation to resist the attack of the festive musquito? Ans. Tar, sweet oil and pennyroyal, in proportion three each of the latter to one of the first, or try "culexifuge," to be had of druggists, or Eaton & Co., 102 Nassau street. We have printed many other recipes in this paper, but think these the best.

J. A., Salem, Mass.—Will you please inform me what you think of the W. & C. Scott gun that is sold for \$25, having the name of that firm on the lock. Are they genuine Scott guns and good shooters, and should you consider them a good gun for the money? Ans. No genuine W. & C. Scott & Sons guns can be sold for that price; an old second-hand muzzle loader might be, but we doubt it.

M. W. A., Brooklyn.—1st. During the latter part of this and the beginning of next month what sport could be relied upon in the shooting and fishing line at Alexandria Bay? 2d. What are the essentials of an outfit to one making his headquarters at the Crossman House? Ans. 1st. Wild ducks, black bass and maselongo. 2d. No outfit required; everything furnished. Take your own gun, of course.

S. O. P., Yonkers.—Will you inform me and other readers what positions were taken by the members of the Irish team in rifle shooting? In short, I would like to know whether they shot off-hand, or had also their patent contortions? Ans. No off-hand shooting is done at the long ranges. The Irish riflemen shot lying at full length in various positions.

JNO. S. R., Philadelphia.—1st. What is the cost of a four-oared shell bottom gig, medium quality? 2d. Do any of the boat or barge clubs in Philadelphia take contributing members, and if so, which one? 3d. What is the cost of a contributing membership in the different clubs? Ans. 1st. About \$300, with oars. 2d. Yes, several. 3d. From \$5 to \$15 per annum.

E. M. G., Solon, Somerset county, Me.—We are going to organize a rifle club here; where can I get by laws, etc.? Where can I get a good book on fly fishing? Ans. Have sent you by-laws, score book, etc. Write Secretary of National Rifle Association, No. 93 Nassau street for their report, for regulations regarding shooting, etc. No strictly American work on fly fishing.

S. K., Concord, N. H.—Will you please inform me how many genuine Laverack setters there are in the United States, and whether any can be purchased? Ans. Mr. C. H. Raymond, of Morris Plains, N. J., and Mr. L. H. Smith, of Strathroy, Canada, possess the only genuine Laveracks of which we are aware. We know of none for sale, although a puppy might, in time, be purchased of the former gentleman.

HOWARD, New York.—1st. To whom shall I apply for general information about Florida? 2d. What kind of rod would best suit for fishing in the waters of the Southwest coast? Ans. 1st. See answer to "Pawpaw," in our issue of August 26th. Also address editors of Florida Agriculturist, Jacksonville, Fla. We can furnish from our files as much general information as any one, and may compile into form of a pamphlet. 2d. Get a stout trolling rod, such as are sold for striped bass, with reel to hold 100 yards braided linen line.

E. S. G., Brockport, N. Y.—Is there such a thing as a plover whistle, or anything made to imitate their call; if so, please send me one by return mail and I will remit you whatever the cost of same and trouble is. Ans. Take a round miniature tin box three quarters of an inch in diameter and a quarter of an inch thick, or less, and a small hole exactly through the centre. If it does not answer fully on trial, ream out the hole a trifle. We have seen these whistles on sale at toy stores. A little practice will enable you to call any whistling bird.

DIXON.—I send you a parasite found upon the gills of a bluefish. You will see that it resembles a centipede somewhat. Are such parasites common, and what is the scientific name of this? Ans. Science has not delved very deep yet into the study of fish parasites. It has been ascertained, however, that nearly every species of fish has a parasite peculiar to itself. The scientific name of this is *Lizoneco ovalis*, Harger. These parasites are not uncommon.

same starting place to Mattinecock's buoy, thence to Throgg's Point and return to the place of departure, a distance of a little over twenty-one miles.

At 12:23 the final gun started the largest yachts, the little ones of the fifth class have received the signal five minutes earlier. The Susie S. and W. T. Davids, the latter celebrated for her many victories last year, were soon leading the fleet, and were first around the buoy, followed at short intervals by the entire fleet, the little Ripple bringing up the rear. At Throgg's Point the Susie S. was nine minutes ahead of the Davids, and had the race in hand. The Sophia parted a shroud, and afterward broke her traveler, but kept in the race. The following is the result:—

FIRST CLASS.

Name.	Start.	Finish.	Elapsed time.	Corrected time.
H. M. S.	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Eleanor.....	12 33 00	4 29 15	3 56 15	3 51 35
Susie S.....	12 33 00	4 11 31	3 38 31	3 35 51

Pidgeon.....	12 33 00	Not timed.		
Sophie Emma.....	12 33 00	4 52 47	4 19 47	4 15 37

THIRD CLASS.

Frou Frou.....	12 33 00	Not timed.		
Kamehameha.....	12 33 00	4 43 25	4 10 25	4 11 25
Favorita.....	12 33 00	Not timed.		
Lurline.....	12 33 00	4 40 24	4 07 25	4 05 35

FOURTH CLASS.

Four Brothers.....	12 33 00	3 50 40	3 17 40	3 16 10
Byron.....	12 33 00	Not timed.		
Only Daughter.....	12 33 00	Not timed.		
Gertrude.....	12 33 00	Not timed.		
Ella.....	12 33 00	4 01 05	3 33 05	3 26 29
Fidget.....	12 33 00	3 38 40	3 05 40	3 05 40

FIFTH CLASS.

Lulu.....	12 33 00	Not timed.		
Livonia.....	12 33 00	5 16 30	4 48 00	4 45 57
Shaughraun.....	12 33 00	4 45 15	4 17 15	4 17 15
Susie.....	12 33 00	4 40 55	4 12 55	4 11 04
Ripple.....	12 33 00	4 59 00	4 31 00	4 29 51

The Susie S. wins \$150, the first prize, beating the W. F. Davids 11m. 34s. The Mary Emma wins \$100, the second prize, beating the Sarah H. 8m. 10s. The Lurline wins \$75, the third prize, beating the Kamehameha 5m. 50s. The Fidget wins \$50, the fourth prize, beating the Four Brothers 10m. 36s. The Susie wins \$25, the fifth prize, beating the Shaughraun 6m. 11s.

The judges were Messrs. John Sawyer and H. D. Phelps, while Capt. J. Devoe acted as umpire. The time allowance was two minutes per foot for the first three classes, and one minute twelve seconds for the others.

MONROE, MICH., REGATTA.—A report of this regatta was shut out of our last issue. The Raisin River Navy, in whose hands had been placed the management of the affair, is composed of the Floral City, Amateur, Sho-wae-cae-mette, and Independent Scullers' Clubs, which may be considered quite a navy for a city like Monroe. The following events were contested:—

Entries.	Distance.	Crew.	M. S.	Time.
Four-oared shells.....	3 miles.....	Sho-wae-cae-mettes.....	19	42
Junior double sculls.....	1½ miles.....	White Fawn.....	9	58
Senior double sculls.....	1½ miles.....	Dolly.....	10	01
Junior single sculls.....	1½ miles.....	W. C. Walldorf.....	12	06
Senior single sculls.....	1½ miles.....	H. Durrell.....	11	06½
Lapstreak race.....	1½ miles.....	Amateur B.....	8	51½
Four-oared shells.....	3 miles.....	Sho-wae-cae-mettes.....	17	47

The last race was a spirited one, and excited the utmost interest and enthusiasm, as the clubs were pitted against each other in the late regatta at Toledo, in which the Sho-wae-cae-mette Club won the junior four-oared race, and the Undines came over to give the Monroe boys a friendly pull for the prize at this regatta, but they were not successful. The Sho-wae-cae-mettes put in their best strokes, and won the race by some seven lengths. The visitors were entertained in the evening by Monroe crews, and everything was pronounced good.

KEOKA.

REGATTA AT HAMILTON, ONTARIO.—The yachtsmen of Hamilton held their first regatta on the 4th inst., under the most favorable auspices of weather and attendance. In the first class race the Ida, Annie Cuthbert, Lady Stanley, Brunette, Mocking Bird and Dauntless competed. The Ida was the winner by twenty-five minutes, the Dauntless being second and the Lady Stanley third. The race for second class yachts was not sailed.

ROYAL ALBERT YACHT CLUB.—This is one of the most flourishing clubs in Great Britain, and their regatta, held last month, for richness of prizes and number and importance of entries was not second to that of the Royal Yacht Squadron itself. The most valuable prize sailed for was the piece of plate of the value of \$1,000, presented by our countryman, Mr. J. F. Loubat, owner of the Enchantress. The course was from Spithead, round the Nab Light, thence westward around a mark boat moored off Yarmouth and back to Spithead. The following yachts entered:—

Yacht.	Rig.	Tons.	Owner.
Iona.....	Cutter.....	56	Mr. J. Ashbury M. P.
Cuckoo.....	Cutter.....	92	Mr. H. Hall.
Kriemhilda.....	Cutter.....	105	Count Batthyany.
Neva.....	Cutter.....	62	Mr. R. Holmes Kerr.
Onnara.....	Cutter.....	159	Mr. J. Wylie.
Fiona.....	Cutter.....	78	Mr. E. Bontcher.
Vol-au-vent.....	Cutter.....	104	Colonel Markham.
Arrow.....	Cutter.....	115	Mr. Chamberlayne.
Olga.....	Schooner.....	220	Mr. J. A. Hankey.

Heron.....	Yawl.....	45	Mr. W. Blackwood.

Owing to the lack of wind the race was not a first rate one. The Vol-au-vent, a new cutter, was the winner of Mr. Loubat's gift, arriving some hours before the other competitors. The Corinne took the second, and the Gertrude the third prize, the distribution of prizes being on the plan of the first yacht in to determine the rig of the winner, etc. We observe that Mr. Ashbury, our old competitor for the American cup, had one of his fleet entered, but his name has not been as prominently before the yachting public this season as heretofore.

DROWNING OF A YACHT CAPTAIN.—Capt. E. Smith, sailing master of the schooner yacht Eva, of the New York Yacht Club, Mr. E. Burd Grubb, was lost overboard on Thursday, Sept. 2, at 2:30 P. M., about forty miles south of Cape Henlopen. There was a gale of wind at the time, with a heavy sea. The yacht was running before the wind, and the Captain was sitting on the rail. He lost his balance and fell overboard. The yacht was immediately hove to and a boat lowered, but in the darkness and heavy sea it was impossible to save him.

A WEEKLY JOURNAL,
DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY,
FISH-CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS,
AND THE INDOOR RECREATION OF MEN AND WOMEN OF A HEALTHY INTEREST
IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[POST OFFICE BOX 2832.]
127 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, SEPTEMBER 9, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, September 9th.—Racing at Lexington, Ky., Prospect Park. Trotting at Syracuse, N. Y., Dubuque, Ia., Sycamore, Ill., Gardiner, Me., Milwaukee, Wis., Northampton, Mass. Dog Show at Manchester, N. H. Regatta at Watkins, Seneca Lake, N. Y. Shooting for FOREST AND STREAM Badge at Conlin's, 930 Broadway. Base ball—Philadelphia vs. Boston, at Philadelphia; Alaska vs. Chatham, at Melrose, N. Y.

FRIDAY, September 10th.—Racing at Lexington, Ky., Prospect Park. Trotting at Syracuse, N. Y., Dubuque, Iowa; Sycamore, Ill.; Gardiner, Me.; Northampton, Mass. Dog Show at Manchester, N. H. Regatta of Palisade Boat Club, Yonkers, N. Y. Base ball—Tournament at Elmira, N. Y.; Athletic vs. Mutual, at Philadelphia; Doerr vs. Active, of Reading, at Philadelphia.

SATURDAY, September 11th.—Racing at Lexington, Ky.; Prospect Park. Trotting at Macomb, Ill.; Deerfoot Park, N. Y. Base ball—Athletic vs. Mutual, at Philadelphia; Riverton vs. Germantown, at Germantown; Hoboken vs. Chatham, at Hoboken; Star vs. Wilkesbarre, at Irvington, N. J.

MONDAY, September 13th.—Trotting at Deerfoot Park, L. I. Cricket—International Tournament commences at Philadelphia, Philadelphia vs. Canada, at Philadelphia; Canadian Team vs. St. Georges Club, at Hoboken. Base ball—Star vs. Chelsea, at Irvington.

TUESDAY, September 14th.—Trotting—Stallion race at Mystic Park, Boston; Kingston, N. Y.; Pittsburgh, Pa.; Cleveland, Ohio; Dixon, Ill.; Fort Wayne, Ind.; Nashua, Ia. Regatta of Genesee Yacht Club, Charlotte, N. Y. Cricket—Philadelphia vs. Canada, at Philadelphia. Base ball—Doerr vs. Shibe, at Philadelphia.

WEDNESDAY, September 15th.—Trotting as above. Regatta of Genesee Yacht Club, Charlotte, N. Y. Cricket—British Officers vs. Canada, at Philadelphia.

FOREST AND STREAM AT THE CENTENNIAL.

WE gave an imperfect outline two weeks ago of our arrangements to have the sports of the Land and Water fully represented and illustrated at the Philadelphia Centennial Exhibition next year, inviting contributions from any source whatever that might add interest to the exhibition. It gives us great pleasure now to state that we have been invited by Prof. Baird, of the Smithsonian Institution and United States Fishery Commission to incorporate our display of sportsmen's goods and implements into the grand exposition which he is preparing under the auspices or sanction of the United States Government. It has been a desire of his to combine the aesthetics of the angle and chase with those of physical elements that have a more practical relation to the world's economy, and we have no doubt that under the plan proposed, the collection will prove one of the most interesting features of the Centennial Exhibition. We shall do our level best to further and promote the efforts of Prof. Baird, and to secure such a success that no American sportsman need be ashamed of it. Next week we shall probably be able to delineate the Professor's plans in detail.

A valuable sketch of Nantucket, with some notes of the operations of the United States Fishery Commission at Wood's Hole, by "Piseco," will appear next week.

"MARSH TACKIES."

A CORRESPONDENT of the Richmond Dispatch gives an interesting description of the swamp ponies, or "marsh tackies," as they are called, that are found in certain localities along the coast of North Carolina, and which correspond very nearly in their characteristics to their congeners of the Florida peninsula. One of these localities, described by the writer, is Shackleford Island, about twelve miles from Beaufort. It is twenty-five miles long by from a quarter to three miles wide. The growth is of stunted live oak, cedar, pine, and a variety of shrubbery. The marshes are extensive, and well supplied with marsh grass, upon which the ponies live. They have no shelter save the stunted growth and the sand hills of the island. Nature provides them with ample clothing for their hard lives, and their hair sometimes grows to the length of six or eight inches. They, however, improve rapidly when once broken and taught how to eat civilized food—a process in which they sometimes die, so hard is it to change their habits. They will not eat anything but marsh grass until they are induced to eat from starvation. They graze often in water that covers their food, and they bite it from the bottom with their heads immersed. They get water to drink by pawing the sand near the sea, and drinking the water that rises in the hollows they make with their feet. The water thus brought to the surface is fresh.

These ponies have inhabited the island from time immemorial, and are supposed to be descendants from the stock which the Spaniards brought to Florida. They are not handsomely formed like the Shetland ponies. They are a little larger than the Shetlands, and are hardy to a degree above the horses that are raised in a civil way. They are not symmetrical. Their heads are generally over large, necks small but ungraceful; their hindquarters what are styled "cat hams," and their step cow-like though very firm. Their faces are their comeliest part. Their eyes are gentle, and their features show kindness and docility. They become very affectionate, and have seldom any bad habits. Their worst caper is to endeavor to scrape off their load, whether it be live or not, against a house, or a fence, or a tree. Their colors are not much varied—generally bay or sorrel, though sometimes we have black and gray.

The owners of these ponies are the inhabitants of the island or of the mainland near the sea. They generally follow the sailor's or fisherman's life. They have stated periods for penning the ponies, when "the little devils" are caught, branded, altered and sold. They sell for from \$20 to \$50 each at three years old. The owners will only sell a few mares, those being kept for breeding. The pen, as it is called, is made by forming two lines of pine trees, cut and laid in lines approaching one another until a sort of throat or opening to a pen is formed. Through this opening the animals are driven by a strong force of men, and the opening is closed behind them. The very stout and skillful men employed for the occasion enter the pen, and seizing the little colts, lock their arms around their necks, and soon have them thrown to be branded. There is no lassoing, the little fellows being so small that it is not deemed necessary.

In Harper's Magazine for 1869, vol. II, there will be found an interesting description by Chas. Hallock, the editor of this paper, of the ponies that inhabit Sable Island, off the coast of Nova Scotia, and whose traits are in some respects similar to those of the Southern stock. The article is illustrated.

"GLOAN" ON THE DITTMAR POWDER.

I am utterly disgusted with black powder and all its details of dirt and smoke, and therefore am anxious and willing to herald some new substitute for it. For two years I have been shooting the English Schultze powder, and am delighted with it. Its lessened recoil, freedom from smoke, absolute cleanliness and safety are enough to make any one delighted with it. But my stock of it is well nigh gone, and there is no more of it to be had in the country. A dangerous imitation of it is sold in Canada, against which sportsmen should be warned.

I was in hope that the Dittmar powder would prove a desirable equivalent, but so far I am afraid of it. The company publish assurances that "if their printed directions are followed," the powder is as safe as black powder, if proper precautions are observed, and cite the undeniable fact that black powder is dangerous if not properly used. But it seems to me that the statement is put fallaciously, and instead of dispelling increases my doubts. I fear that the danger in black powder is not the danger in Dittmar, because I fear that the Dittmar has chlorate of potash or some similar chlorate as a basis, and if so, no man can say when it is safe.

Mr. Dittmar some weeks ago promised, through the papers, to publish a chemical analysis of his powder. He has not done so as yet. He has pledged himself most solemnly, in answer to one correspondent, that there is no nitro-glycerine in it, and I am quite ready to believe that; but he should have gone a step further, and said that there is nothing of a rending, annihilative character in it.

Gunpowder and explosive agents of which the chlorates are the base have been known to chemistry for many, many years. Sugar, starch, vegetable tissue and other like bodies enter into their composition. But they have never been adopted because they are always uncontrollable. They are like gun cotton and nitro-glycerine. No care in manufacture or uniformity of preparation will insure uniformity of results. They are not of the slowly accumulative propelling nature required for guns. They are instantaneous, rending, shattering and demolishing. They ignite instantaneously and en masse, not grain by grain as black powder does. The suddenness of the discharge, the great volume and elasticity of their gases, particularly when rammed down and confined in a small space, strain the gun, if they do not burst it. Even when they are so far controlled that the strain is not at once perceptible, yet clearly a season's

shooting under such strain must make the best barrels worthless.

I have watched carefully the reports in the sporting papers. Several accidents have been stated, the cause of which seemed to me to be directly traceable to the pressure of these chemical ingredients. Many commendatory letters have been published by men who evidently had not studied the chemistry of the powder, but spoke only of its performance. I find they all unite in praising it, but all agree in saying, "it seems a little too quick;" "I think it is rather too quick for my gun."

To me this indicates the danger I have suggested, and confirms my belief of the materials employed. In the printed instructions there is this suspicious statement: "Care must be taken not to press it into too small a space, as is more elastic than the black." And again: "Don't use more than one-third of the amount in weight that you would of black powder, or it will strain the gun."

Many guns have been reported strained and some worse. Now we all know that whatever danger there may be in the use of black powder, it is not of this kind. It may be that Mr. Dittmar has discovered a process whereby he thinks he can control this sort of explosive, but if he has, he ought in candor to tell the sporting community what its character is, and just where the point of danger is in handling it. Give us the reasons for the caution, and it will be instinctively observed. If you are told you are driving a runaway horse, you understand the necessity of watching him.

The Schultze powder is made of grains of wood steeped in alkalies and acids, and finally saturated with a solution of saltpetre. It is safe under all circumstances. Mr. Dittmar proposed at one time to make the Schultze, having been, as he claims, foreman of Capt. Schultze. I trust he will not abandon the idea. He may be satisfied that if he makes it well, there will be for it an immediate and profitable demand by gentlemen who know all about it. When once used, it will never be discarded. And he may be satisfied, also, that half of his time will not be then taken up, as it is now, in writing pledges of safety, in answer to suggestions of danger.—[Gloan in Turf, Field and Farm.]

Mr. Dittmar has replied to the above letter, asserting positively that his new powder is a great improvement on, and in every way superior to, the Schultze. He gives instructions for its use, which are identical with those previously published in these columns. With regard to the composition of the powder, he declares most positively that no substance such as chlorate of potash or nitro-glycerine enters into its composition, nor will he use any picric acid combination, or any kind of fulminate. This can be ascertained by analysis. It contains all the ingredients of Schultze powder, with the addition of starch, and he argues that his powder is absolutely safer than that preparation. He says that he proposed at one time to manufacture the Schultze powder, and had a perfect right to do so; but the parties connected with him did not want an inferior article made, even if it is more profitable, and are entirely satisfied that his new product will, in time, be universally adopted. If there is any danger in using his powder not inherent in the black, he desires to know it, and will be most grateful to any gentleman who will convince him of the fact.

SHOT PISTOLS.—The editor of the Manchester Mirror and Farmer, who is an ardent sportsman, and well acquainted with the use of firearms, is urging the manufacture of a breech loading shot pistol for use against tramps, burglars, and depredators of all kinds. He very truthfully states that not one man in twenty can by daylight, when perfectly calm, hit a foot circle a hundred feet off with a common revolver once in three trials, and the men who can tumble out of bed half asleep and shoot a dodging burglar in the dark are as scarce as any kind of men we ever heard of. What is needed is a pistol that will carry a heavy charge and scatter at a distance of twenty feet over the size of a cart-wheel, like an old arquebuse—a breech loading, single barrel, of about navy size. Loaded with buckshot it would prove most serviceable.

SWIMMING EXTRAORDINARY.—A few months since when Capt. Boyton armed with an india rubber life saving suit, accomplished the feat of swimming across the English channel, the world rang with acclamations, but it has been left for a hardy Englishman, one Capt. Webb, to out do, not only Capt. Boyton, but Leander himself, clad only in the garb presented to him without cost by Nature, and without any life saving apparatus whatever. Capt. Webb has succeeded on the second attempt, in swimming from Dover to Calais. The first effort was made on the 12th of August, when after being seven hours in the water, owing to the high sea running he was obliged to give it up. The second attempt was made on the 25th when, after swimming for twenty-one hours and forty minutes, he landed safely on the pier at Calais, in perfect health, but somewhat naturally fatigued. Capt. Webb, who is in the British merchant service, may now safely claim the title of champion swimmer of the world. It seems incredible that man should possess powers of endurance sufficient to sustain him in the water for over twenty-one hours, and while the case is not paralleled with one wherein a man was forced to sustain himself without assistance at hand, it is none the less creditable to his perseverance and remarkable abilities as a swimmer.

—The Quebec Chronicle mentions the arrival in that city of two gentlemen who have traversed the entire distance from Boston by ocean, gulf and river, by the way of the Maritime Provinces and the St. Lawrence in an open boat. A schooner has been chartered by them to go to the Labrador coast, for the purpose of a shooting and fishing expedition, combined with a scientific investigation of the flora and fauna of that desolate coast.

IN A QUICKSAND—HORRIBLE SITUATION.

AN incident which recently befell one of our esteemed contributors, Mr. Frank A. Wade, of Indianapolis, involved some experiences of such a remarkable character that it is deemed worth narrating. Mr. Wade is the General Passenger and Ticket Agent of the Indianapolis, Peru and Chicago Railroad. He is about thirty years old, unmarried, good looking, genial, and popular. A short time ago, in company with a few friends, he went up to Lake Maxincuckee, a small but beautiful body of water in Marshall county, Ind., on a fishing excursion. He had noticed some magnificent water lilies in full bloom along the southern shore of the lake, and one day he concluded to gather a few. Perhaps he intended to present them to some fair lady, and perhaps not. (This is not a narrative of conjectures but of facts.) Taking a row boat he had proceeded a short distance up the lake shore when he came to a little rivulet not more than four feet wide. There had been a heavy rain the day before, and the inflated rivulet had left quite a deposit of sand and light debris along its sides, partially concealing the character of the ground, and making a smooth and apparently solid surface. On the opposite side of the rivulet a little above where he stood there bloomed a huge water lily—a perfect marvel of beauty. Frank's soul went out toward it with a true inwardness. Selecting what appeared to be a good landing place on the other side of the little stream he cleared it at a leap. The moment he struck the earth he felt it giving way beneath him, and in less than a second he was up to his thighs in a soft mud. His first impulse, of course, was to get out, but he found he could not move his legs. Worse than this he found that every movement he made sunk him deeper. The situation began to look serious. By this time he was half immersed and rapidly losing control of himself. The more he struggled the faster he sank. Then the horrible truth burst on him that he was in a quicksand. The sensation was dreadful. The mud grasped him like a vise. His legs were helpless, and his feet seemed to be treading on nothing. And still he sank. Now he was above his waist and rapidly losing strength. Up to this time he had indulged the hope of extricating himself, but now he began to call for help. Again and again he called with all his strength. His cries were heard by two companions, Messrs. Elliott and Gall, about a quarter of a mile distant on the lake, and by some instinct they at once took in the situation. In a moment they were making toward him as fast as oars would carry them, but moments are years to a man in Frank's situation. By this time he was up to his armpits. The mud and sand seemed to press him from all directions. Respiration was difficult, and his breathing was growing shorter. Each breath was drawn with a distinct effort. He grasped at a little bunch of grass and held to it like a drowning man to a life-preserver. With the other hand he managed to get hold of a small piece of an old barrel stave, which lay within reach, and worked that under his arm. Both these stays soon failed him, and he continued to descend. The other boys were fast approaching, but now his arms were extended above his head, and his rescue seemed doubtful. He thought of home, of mother, sisters, and friends. He wondered what he had done to deserve such an ignominious death. He wondered if his body would ever be recovered if he sank out of sight. His senses reeled, and his head seemed to be bursting. The approaching rescuers struck a bar. In an instant they jumped out and were dragging the skiff over it. It was hard work, but soon done. The life of Frank Wade was at stake. In deeper water again they rowed toward him like athletes. The boat strikes the land. They leap out and run to Frank, bringing an oar with them. When they got to him the mud was within an inch of his mouth. His head was thrown back, and the back part of it imbedded in mud. He was pale and helpless. With all possible haste an oar was extended to him. He was too weak to grasp it firmly, but managed to get it under his arms, and thus sustained himself. Then hope revived. After a few minutes of rest he worked the oar into such position that he could seize it with both hands, and then the work of extrication began. Little by little he managed to loosen his body, though he could not move it. Then the boys would work him back and forth with the oar. Without describing this process in detail suffice to say that after about half an hour of hard work he was finally dragged out, leaving his rubber boots behind, the most exhausted and most beslimed man ever seen. Pale, weak, and sore, he submitted himself to his friends, who hastily stripped off his clothes and put on dry ones. Two or three stiff drinks of good brandy revived his strength and brought the color into his face. As soon as he was able to move he was placed in a boat and rowed to the landing, and thence led to the hotel. It was several days before his system recovered its tone, and a fortnight before the effects of his squeeze passed away. Frank is as fond as ever of water-lilies, but would rather somebody else would gather them.

THE FLOATING HOSPITAL.—If there is one charity more than another which excites our sympathies and is deserving of encouragement, it is that of the Floating Hospital, organized by the officers of St. John's Guild, by which sick children and their parents can have one day at least of pure air and enjoyment. The success that has attended the efforts of the Trustees, will be greatly enhanced through the benevolence of Messrs. Jarrett & Palmer, who have kindly tendered the gratuitous use of their magnificent steamer, the Plymouth Rock, for a select family excursion, on Tuesday, the 14th of September, to West Point, returning in the evening. Gilmore's Military Band, the Mozart Glee Club, the Madrigal Bell Chimes, &c., will furnish their usual entertainment. Tickets, costing one dollar, may be obtained from any of the Trustees, Banks, Insurance Companies and principal Hotels.

The Rifle.

CREEDMOOR.

THE CROUCH BULLSEYE BADGE WON BY A. V. CANFIELD, JR., OF THE AMERICAN RIFLE TEAM.—The third competition for this badge took place at Creedmoor on Saturday last. Conditions, fifteen shots at 800, 900 and 1,000 yards; any breech loading rifle; excluding the members of the American team who shot in the International matches of 1874 and 1875; the badge to be awarded to the competitor making the largest number of bullseyes, and to be won three times before becoming the personal property of the winner. In the first two competitions the badge has been held by Mr. L. Geiger, making in each competition eighteen bullseyes in a score of 176 points. It is now held by Mr. Canfield with a total of twenty-three bullseyes in a score of 188 points, which has only been surpassed by the best scores made in the Leech cup competition at Creedmoor May 29th, 1875. Shooting opened at 11 A. M.; weather clear and hot; thermometer 90°; strong wind from southwest prevailing during the match, and requiring constant watching and changing to keep on the bullseye. The scoring was in charge of Mr. George S. Schermerhorn, of the Amateur Club. The following are the scores:—

Yards.	Score.	Total.
800.....	5 4 4 5 0 4 5 4 4 4 5 5 3 5 5—62	
900.....	5 3 5 4 4 5 5 4 5 5 3 3 4 5 4—65

1000.....	3 0 0 0 2 2 3 0 3 0 3 2 2—17—103	
Number of bullseyes, 5.		

The scores made in this match are to count as forming the first competition for the Amateur Club team.

BANQUET TO THE AMERICAN TEAM.—The last of the festivities attendant upon the reception of the American team of riflemen occurred at Delmonico's on Monday evening in the form of a banquet. Many distinguished gentlemen were present and many more would have been had not other engagements prevented. No less a personage, however, than Henry Wilson, Vice President of the Republic was on hand, and made a speech eulogistic of the team and the manly way in which they had deported themselves while abroad. Col. Gildersleeve also spoke in response to the toast of the evening "The American Rifle Team," and speeches were made by Gen. Hawley, Gen. Horace Porter and others. The dinner was in Delmonico's best style.

MATCH WITH THE VICTORIA RIFLE CLUB, OF HAMILTON, CANADA, AND THE AMATEUR CLUB.—The Executive Committee of the Amateur Club held a special meeting on September 2d to take measures toward the selection of a team for the above match, to be held at Creedmoor on Saturday, the 25th inst. It was resolved to invite the members of the Amateur Club to take part in three competitions at Creedmoor September 4th, 8th, and 11th, after which the Executive Committee will select eight members to constitute the team.

Mr. Alford submitted a letter from Mr. F. P. Fairbanks, late Secretary of the club, acknowledging the receipt of the testimonial presented to him on his retirement from the office of Secretary last Winter. The testimonial consists of a handsome bronze clock, surmounted with a female figure, and mounted on a black marble base. It bears an inscription:—"Presented to F. P. Fairbanks by the Amateur Rifle Club as a testimonial of their esteem, and for the services rendered as their first Secretary and one of its founders."

The President next read a communication from Col. G. W. Wingate, tendering the resignation of his office as member of the Executive Committee. On motion of Mr. Johnson, his resignation was accepted, and a vote of thanks was tendered to him. Mr. G. S. Schermerhorn was unanimously elected to fill the vacancy, and was subsequently appointed by the President to take charge of the competitions previously mentioned for the selection of a team. Col. Wingate reported the receipt of the following subscriptions toward procuring a testimonial for the American team:—Gen. Hiram Duryea, \$25; Oswald Ottendorfer, \$50; Allan Campbell, \$25. After some further routine business the meeting adjourned.

YONKERS RIFLE CLUB.—A number of citizens of Yonkers assembled last week and formed themselves into an Association with the above title. The officers elected were:—G. L. Morse, President; Col. Matt. H. Ellis, Vice President; H. L. Garrison, Secretary; William B. Edgar, Treasurer; Douglas Smyth, Range Superintendent; Frederic Shonnard, Robert P. Getty, Hugh Hughes and M. K. Couzens, Directors. An admirable range has been found on the premises of the President, affording ranges up to 600 yards. The rules of the club are similar to those governing the National Rifle Association. Mr. L. M. Ballard, of the American team, is a member and some good shots will doubtless be developed.

THE FOREST AND STREAM badge was shot for again last evening in Conlin's gallery, 930 Broadway, but too late for the result to appear in this issue of our paper.

CALIFORNIA RIFLE ASSOCIATION.—The opening meeting of this association will take place at the Presidio range near San Francisco, on the 24th and 25th insts. Gov. Pacheco will open proceedings by firing the first shot. The matches comprise a military short range match, similar in conditions to those of the National Rifle Association; the Kellogg Challenge Cup, presented by Major S. J. Kellogg, late of Co. A., Twenty-third Regiment, Brooklyn. A match for enlisted men of the United States Army stationed at the Presidio; a military long range match at 1,000 yards; a team match, and various subscription matches, conditions of which will be determined on the day of shooting. The prizes are very valuable, the four in the team match aggregating \$850.

CAPT. BOGARDUS AS A RIFLEMAN.—A number of gentlemen assembled at Jones' Wood, on Saturday afternoon, to see Capt. Bogardus execute his remarkable feat of killing fifty pigeons in eight minutes, and to witness a match with the rifle between Messrs. T. Broadway and Bogardus. The last named has had no experience in rifle shooting and it was almost his initiation. Broadway is an old rifle hand, as well as pigeon shot, being a member of a Brooklyn club. The score for Broadway was:—12, 17, 12, 18, 14, 15, 17, 18, 18, 14, 15, 14, 15, 16, 18. Total, 233. Bogardus, 18, 12, 9, 14, 18, 18, 14, 16, 14, 5, 16, 15, 14, 16, 16. Total, 215. The highest figure that could be made was 18, and the highest possible score in the 15 shots was 270. The rifle used was a muzzle loading German rifle. Capt. Bogardus will make a rifle shot of no small calibre, if he will study up, as he has coolness, nerve and eye to make one of the best marksmen of the day. We will before long expect to hear his rifle crack at long range and his shooting equal if not surpass the scores of some of the big guns of the Amateur Rifle Club.

—During the recent encampment of the Seventy-first Regiment, N. G. S. N. Y., at Oakland Beach, R. I., they were challenged by a picked eight from Prescott Post, G. A. R., to shoot a friendly contest at 200 yards from the shoulder, standing; each man was allowed five shots. The Rhode Island men shot with Henry-Martini rifles, and the Seventy-first with regulation military Remington guns. The new Wimbledon target was used. Shooting commenced at 4 o'clock, the Rhode Islanders shooting first:—

SCORE OF 71ST REGT TEAM			SCORE OF RHODE ISLAND TEAM		
Name.	Score.	Tl	Name.	Score.	Tl
Lieut. O. C. Hoffman.....	3 4 4 4—19		O. Gifford.....	3 2 3 4—15	
Sergt. Serverer.....	4 3 4 5—18		C. Grey.....	3 4 0 3—14

Total.....	127		Total.....	86	

The 71st winning by 41 points.

ONTARIO RIFLE ASSOCIATION.—The annual prize meeting of this organization commenced on the last of August and continued for the four following days. The number of competitors was smaller than last year. In the all-comer's match the number of entries was 198 against 266 last year, and in the affiliated association's match 199 against 262 last year. The most important events and the results were as follows:—

Match.	Distance.	Shots.	Winner.	Pnts.
All Comers' Match.....	200 and 500 yards..	5	Sergt. Lewis.....	37
Affiliated Association.....	300 and 500 yards..	5	Dr. Aikins.....	32
Battalion Match.....	200, 500, 600 yards..	5	Gov. Gen Foot Gds*.....	466
District Match.....	500 and 600 yards..	7	Capt. Anderson.....	47
Nursery Stakes.....	500 yards.....	7	Major White.....	26
Small Bore Match.....	700, 800, 900 yards..	7	G. Murison.....	54
Do 2d stage.....	1000 yards.....	7	Major Gibson.....	24

Ten men.

The weather throughout the meeting was warm, but the meeting generally was a success and but few complaints were made.

Adjutant General Townsend has issued an order announcing that the revised manual of rifle practice, prepared by Col. George W. Wingate, General Inspector of Rifle Practice, is adopted for the instruction of the National Guard of the State of New York.

A match was shot on August 30th at the Cedar Grove range by the members of the New York and Staten Island Amateur Rifle Club for the Donvan cup. Distances, 200, 400 and 500 yards, five shots at each range; position, standing; any rifle. Won by Mr. F. Miller. The following are the scores:—

SCORE.				
	200 Yards.	400 Yards.	500 Yards.	Total
F. Miller.....	5 3 5 4 2—19	4 3 5 3 5—20	4 0 5 0 2—11	50
G. Wilson.....	4 4 4 4 5—21	2 0 5 4 3—14	4 2 4 0 4—14	49
F. Gordon.....	2 4 4 4 4—18	3 0 5 3 5—16	3 5 4 0 0—12	46
B. McCabe.....	2 0 5 4 3—14	3 0 4 3 5—15	2 0 3 4 0—9	38

—Company B, Sixty-sixth H. V. B. I., Capt. Hart, had its annual target practice at Bedford, Nova Scotia, on August 26th. The day was fine, and the shooting better than that of previous years. Range, 200, 400, 500 and 600 yards, ten shots each distance. The first prize, a medal, one silver badge and \$5, was won by Private Alex. Myers, with a score of 127 points, being 39 points more than won last year, and 19 points more than in 1873. Altogether there were twenty-four prizes presented, the last being a

leather medal. Company H of the same regiment had their meeting on the 28th of August at Bedford, Nova Scotia, eleven prizes, the first being won by Private Merson, score 129 points, eleventh prize by 70 points. Best score at 200 yards, 39 points; best score at 500 yards, 42 points.

—A Remington rifle and complete outfit is to be shot for at Halifax, N. S.

—The Rifle Range of the 7th Division N. G. S. N. was opened with very interesting ceremonies and in presence of a large attendance of spectators at Rochester, Sept. 3.

—The Sixth Division is also actively at work procuring a range.

—The 50th Baltimore 28th Brigade, 6th Division, will encamp at Sheldrake, N. Y., (Cayuga Lake) September 7 to 11, inclusive. During the encampment a team will be chosen from each company to compete for a Prize Drum, offered by the Colonel commanding. The shooting to be done under the direction of Captain Bradford Almy, Inspector of Rifle Practice.

—A rifle match was held in Oswego, Sept. 2, open to all comers and all military rifles.

—A meeting was held at Buffalo, September 4, to take measures for the establishment of a rifle range.

—The marksman's badge was competed for on Sept. 7, by the members of the 2d and 3d Brigade who have qualified in the first and second classes.

—The annual competition of the Dominion Rifle Association commenced at Ottawa on the 7th of September.

—The Chicago Rifle Club had its first practice at the South Park on Aug. 28; distances, 100 and 200 yards. After Saturday, 4th September, Tuesdays and Saturdays will be the regular practice days of the club.

—The Seventh, Twenty-second and Twenty-third Regiments have each established a camp at Creedmoor for the use of their teams.

HOLYOKE, Mass., Sept. 4th, 1875.

EDITOR FOREST AND STREAM:—

The score of the Holyoke Rifle Club in their eighteenth field meeting is as follows. Distance, 200 yards; position, standing, off-hand; Creedmoor third class target; seven shots, with a possible 35:—

Name.	Score.	Name.	Score.
E. C. Smith*	31	J. Mercier	25
H. White	29	R. Goodall	24
J. Chase	29	H. J. Frink	24

A. Knight	27	E. Rhodes	16
H. A. Smith	26	J. Munn	11
E. A. Whiting	25		

*Winning the badge. Respectfully, S.

AMERICAN AND IRISH RIFLEMEN AT WIMBLEDON.

DUBLIN, August 21st, 1875.

EDITOR FOREST AND STREAM:—

I have collected for the information of your readers some details of the shooting at Wimbledon, selecting only for comment those competitions in which the members of the American team took part or were especially interested. I am induced to do this by noticing in yours of July 22d and 29th reports of the proceedings there which, in common with almost all accounts of that meeting published in the daily press here, is unavoidably imperfect. The fact is that unless to one who thoroughly understands the system followed there, Wimbledon is a most confusing place, and the information obtained from competitors or bystanders is usually incorrect. Numbers of competitions proceed simultaneously at nearly one hundred separate firing points, which are spread over a distance of about a mile, and even the competitors themselves require to have their wits about them, and to give to the arrangements their full attention, in order to fulfill their several engagements.

A camp had been prepared for the members of the American team and the Irish eight, but owing to the incessant rain it was but thinly occupied. Of the Americans, Col. Gildersleeve and Major Fulton only slept in camp occasionally. The attractions of London, which can be reached in half an hour, proved too strong for the remainder. Of the Irish, Messrs. Hamilton, Fenton, Greenhill, John Rigby, William Rigby, Milner, and Doyle camped out during the whole of their stay.

On Saturday, the 17th of July, the Americans made their debut in the St. Leger—a competition with match rifles at 200 yards, any position, three prizes, 180 entries. Major Fulton, J. Rigby, and Mitchell, of the Scotch eight, tied with the full score, 35. Gildersleeve and a host of others made 24 each. The tie was shot off on Monday, and resulted in placing the three winners: Fulton first, Mitchell second, Rigby third. It will thus be seen that at their first appearance the Americans did well. On Saturday, also, Coleman made the fine score of 49 out of a possible 50 at 600 yards for the Members' Cup, value £50; Gildersleeve second, 48. This cup remained open for several days, the members choosing their time to shoot when not otherwise engaged. Coleman's score was considered safe to win, and was not tied until the following Thursday, when a Lieut. Birch, an Irishman, of very limited experience in the use of the match rifle, was fortunate enough to make ten bullseyes, and so beat it by one point.

On Monday, the 19th, some of the Americans shot in the Albert, which is the most important prize competition open to match rifles. The prizes amount to £500. In the first stage there are ten at 200 yards, fifteen each at 600 and 900 yards, making forty prizes; varying in value from £5 to £20. To these are added six prizes for the best aggregate scores at the three distances. All the winners in the first stage are entitled to shoot on a subsequent day for the prize of £100 which forms the second stage, and is given for fifteen shots at 1,000 yards. There were over 200 competitors. At 200 yards five made full score, including Hamilton, Rigby, and Greenhill. At 600 Col. Gildersleeve took second prize (£15), with 34, and Messrs. Young, Johnson, and Greenhill won prizes of £5 each. At the conclusion of this range no one stood better for the aggregate than Gildersleeve, his total so far being 38; J. Rigby and Greenhill and one or two others were 37. None of the three were fortunate, however, at the 900 yards, at which range Capt. Bruce won third prize, £15; E. Johnson fifth, \$10, and Hamilton one of £5. None of the Irish or American party secured an aggregate prize except E. Johnson, who came fourth with 98. This score is in your report attributed to Sir H. Halford, who did not win any prize, either range or aggregate. Major Fulton was also unfortunate, and so was excluded from competing at the 1,000 yards, where he would doubtless have been formidable.

The second stage was shot on Wednesday, and was won by Mr. E. Ross. Gildersleeve and Rigby commenced well, but were delayed by slow shooting of others in their squads until a heavy shower of rain came on and spoiled their chances.

On the same (Wednesday) evening the cup presented to the Americans was shot for and won by Major Fulton with a fine score, Mr. Canfield being a good second. In his last fifteen shots at 1,000 yards, Fulton scored 71 out of a possible 75, made up of twelve bullseyes, two centres, and one inner. This was the best score at 1,000 yards made during the meeting excepting that of Mr. Boyd, of the Scotch eight, who in the Elcho Shield match made also 71 at 1,000 yards, made up of thirteen bullseyes and two inners.

While this shooting for the American Cup was proceeding the Any Rifle Wimbledon Cup (£100 value) was being contested at adjoining

ranges by all winners of £20 prizes or upward at previous meetings. J. Rigby scored 45, (ten shots at 1,000 yards,) for it, viz., two inners, one centre, and seven bullseyes. This was the best score for some time, but quite late in the evening Mr. Ward, a volunteer, residing in England but Irish born, made two inners and eight bullseyes, thus securing the cup by one point. I have now noticed all the competitions in which the Americans took part, with the exception of pool and carton shooting, which are always going on briskly at special targets. At the latter Mr. Ballard was very successful, securing a prize at 600 yards, (value £19,) for the second best shot by actual measurement made at that distance during the whole meeting.

Thursday, the 23d, was devoted to the International match for the Elcho Shield. Great interest was manifested in it by the American party, and a larger number of spectators attended than on any other day during the meeting. Messrs. Gildersleeve, Fulton, and Coleman gave their assistance at the telescopes, and kept diagraphs for the Irish team, who were also supported by many well-wishers, including their Captain, the Duke of Abercorn, and his adjutant, Major Fairthorough, Major Leech, Messrs. Foster, Bake, Mulliner, and others. The proceedings commenced at 800 yards, and the Irish team at once took the lead, the English being second, and the Scotch third. This was the state of affairs at end of tenth round. The English shot rapidly, and pulled up in the last five shots, but the Irish were delayed by a long stoppage to examine a disputed shot on one of the Scotch targets, and were thrown into a change of wind, in which they lost over twenty points during their concluding rounds. A pause was made for lunch, and the shooting commenced again at 3 P. M. at 900 yards. The Irish now made the running, beating the English score at the range by 23 and the Scotch by 16. One squad of the Irish, consisting of Young, Hamilton, Fenton, and Johnson, made the finest score yet recorded in any match at this range. The 1,000-yard range commenced with Ireland 10 points ahead of England, and 20 of Scotland. The sun began to shine in front, and the light became very bad, and seemed likely to get worse; nevertheless in the first three rounds Ireland had increased her lead by ten points more, when an accident befell Dr. Hamilton which nearly changed the fortunes of the day. He found it very difficult to see, and missed three out of four shots. He then fortunately changed his foresight, and immediately began to score again. A subsequent examination showed that he had bent the foresight without perceiving it, and his failure to see or score was explained. The English finished first with 1,503; the Irish were 1,487 and four shots to fire. J. Rigby, W. Rigby, and Wilson scored bullseyes, bringing the score up to 1,502, and Greenhill finished with a centre, landing his country four points ahead. In the meanwhile the Scotch were shooting splendidly, and had got one point ahead of England, but failing to do more, finished a good second with 1,503.

I have described the match minutely because it has been taken as a test match to measure the strength of the American team. I do not think, however, it is available for this purpose. The relative strength of the Irish team at Wimbledon and Dollymount can hardly be compared. Only three of the Dollymount six shot in the eight, and their scores at Wimbledon were fourth, sixth and eighth, indicating that the Wimbledon team was the strongest, if, indeed, any comparison can be made. As, however, many statements have been made on this subject, I have taken the trouble to reduce the scores for the Elcho Shield to old scoring, adopting a method which I have proved to give results if anything unfavorable to the reduced scores—i. e., it rather understates what the scores would be if made on the old target. I find that neither the average per man of the winning eight, or the average score of the best six in the winning eight, are equal to the average made by the American six at Dollymount. This is due to the good scores made there at all three distances, and so far the remark quoted by you from the *Mail* is correct, but the further statement that "at no range were the American scores equalled," is not so. An examination shows that the Irish score at Wimbledon at 900 yards was slightly better than even the famous score of the American team at Dollymount. It averages 54½ per man over the whole team, or 55, omitting scores of the additional men, Young and Greenhill, as against 54½ made by the Americans. Again, the Scotch score at 1,000 yards at Wimbledon stands yet unrivaled at that distance. It averages 51½ per man over the whole team, and 51 per man for the best six. The American score at 1,000 yards averaged 50 5-6 per man.

With one exception every member of the three eights and their Captains were in favor of the proposal that the Americans should shoot alongside them at Wimbledon, and nothing but an impediment created by the conditions under which the Elcho Shield was given prevented that arrangement being carried out. It would not, however, have been possible for Col. Gildersleeve to enter an eight, whose average strength would have been equal to the Dollymount six. We look forward to the time when not only an American eight but other national eights will join in a grand friendly tournament at Wimbledon, and if America be as well represented there as she has been this year at Dublin, it will require a very powerful effort on our part to prevent the crown of victory being carried again across the Atlantic.

The principal events at Dublin and Wimbledon open to any rifles give the following as the winning makers:—Irish-American Match, first score, Remington; Competition A, first score, Rigby; B, Rigby. C, Rigby; D, Remington; Abercorn Cup, Rigby; *Freeman's Journal* Cup, Metford; All Ireland Shield, Rigby; Wilkes' Medal, Rigby; *Illustrated Sporting News* Cup, Remington; Wimbledon Cup, Rigby; Albert, first stage, Metford and Ingram, tie; Albert, second stage, Metford; St. Leger, Remington; Members' Cup, Metford; Elcho Shield, Rigby and Ingram, tie; Dudley, Rigby; Lloyd's Cup, Rigby. I am yours, JOHN RIGBY.

POINT BLANK.

MAPLEWOOD, Mass., Sept. 1st, 1875.

EDITOR FOREST AND STREAM:—

Having read in your paper the recent articles on the meaning of point blank, and seeing that our friends have not presented the matter fully, and consequently are inclined to dispute, I would like to give you the whole matter in a very few words. I quote from Benton's Ordnance and Gunnery, the text book used at West Point, which authority cannot be questioned: "The point blank is the point at which the line of sight intersects the trajectory. Strictly speaking, the line of sight intersects the trajectory at two points; but in practice the second intersection is only considered. This distance is called the point blank distance. The natural point blank corresponds to the natural line of sight; all other point blanks are called artificial point blanks. In speaking of the point blank of a piece, the natural line of sight is supposed to be horizontal. In the British service the point blank distance is the distance at which the projectile strikes the level ground on which the carriage stands, the axle of the piece being horizontal."

Thus we see that the natural point blank is at a distance which is constant and fixed for any piece of ordnance, the charge remaining the same, and is a measure of the power of the piece. I hope this will set this matter before your readers in a manner which can be understood fully.

ENQUIRER.

POWDER MEASURE.

WILMINGTON, Del., Sept. 2d, 1875.

EDITOR FOREST AND STREAM:—

In almost every number of your valued journal I find that some one is perplexed with the "drachm," powder measure question. Allow me to explain it. The drachm meant is the one-sixteenth of an avoirdupois ounce, and is not an arbitrary weight at all, but such as is used for all coarse articles and all metals, except gold and silver. Now one ounce avoirdupois weighs 437½ grains, and one drachm avoirdupois, being the one-sixteenth of an ounce, of course weighs 27 1-3 grains (as near as may be). I have repeatedly tested Dixon's measures, and find them very generally correct, my three drachm measure (usual load) weighing 85 grains. Every careful sportsman should test his measures and know them to be correct. To do so requires very little time and almost no

trouble. Let him take measure and powder to the nearest druggist and request the weight of each gauge in grains; then, knowing that 27 1-3 grains equal one drachm, he can at once prove the correctness of the measure.

LAMBDA SIGMA.

Game Bag and Gun.

GAME IN SEASON IN SEPTEMBER.

Moose, <i>Alces macchis</i> .	Snipe and Bay Birds.
Elk or Wapiti, <i>Cervus Canadensis</i> .	Caribou, <i>Tarandus rangifer</i> .
Hares, brown and grey.	Red Deer, <i>Caricars Virginianus</i> .
Wild Turkey, <i>Mileagris gallapavo</i> .	Squirrels, red, black and grey.
Woodcock, <i>Scolopax rusticola</i> .	Quail, <i>Ontyx Virginia</i> .
Ruffed Grouse, <i>Tetrao umbellus</i> .	Pinnated Grouse, <i>Tetrao cupida</i> .
Esquimaux Curlew, <i>Numenius borealis</i> .	Curlew, <i>Numenius arguria</i> .
Plover, <i>Charadrius</i> .	Sandpipers, <i>Tyingane</i> .
Godwit, <i>Limosa</i> .	Willetts.
Rails, <i>Rallus Virginianus</i> .	Reed or Rice Birds, <i>Dolichonyx orizivon</i> .
	Wild Duck.

GAME IN MARKET.—The display of game on the stalls is not such as to excite the appetite of the epicure or the imagination of the sportsman. A few pinnated grouse (prairie chickens) are being received from Iowa and sell for \$1 25 per pair, but there is not that abundance to be seen as is usual later in the year, when the thrifty granger having stored his harvest can give his undivided attention to netting and trapping. Ruffed grouse sell for \$1 50 per pair, but there is not a superabundance of this variety. Woodcock are still offered for sale at \$1 50 per pair. The market is but moderately supplied with bay birds, indicating a scarcity of this game in our immediate vicinity, they sell for various prices, ranging from 75 cents per dozen for the diminutive sandpiper to \$1 50 per dozen for the greater yellow legs.

SNIPE SHOOTING AT OAK ISLAND.—Oak Island is a portion of that long ridge which keeps the Atlantic from washing on the fertile shores of Long Island. It commences on the west of Fire Island Inlet and extends for miles in this direction. The following is an account of the way in which some of our hard-worked letter carriers attached to Station C enjoyed their vacation, making their headquarters under the hospitable roof of Rube Anderson, "a perfect host and genial comrade."

"We took the last train from New York to Babylon, on the South Side Railroad, and were met at the depot by Rube, who set us on the island by 8½ o'clock. The next morning we were up before daybreak, and as the house is in sight of a great many of the beds, we were not long in getting to them, and when daylight did come at last, it brought with it flock after flock of yellow legs, willet and tedars, of which we bagged plenty. We shot until the signal was raised for breakfast, which consisted of clams, both roasted and fried, soft crabs and eels, cooked to a turn, for Anderson keeps a good cook and the material is just at hand, fresh from the South Bay, where it may be had for the labor of taking. On counting up our birds that night we had 86 yellow legged snipe, besides other various kinds which we always cooked down there, while the large ones we sent up to the city. On Monday three more friends came down, and after three day's shooting, took away over 200 snipe. When the ducks come Anderson's place will be about the centre of the feeding ground, and I will predict success for any one shooting in that neighborhood.

SILAS.

—Wild ducks have made their appearance on the eastern end of Long Island, and in two weeks there will be fun among the broadbills and their cousins.

—Rev. James Beecher, youngest brother of Rev. Henry Ward Beecher, has purchased 600 acres of land on the Beaverkill, Sullivan County, N. Y., and erected a log shanty on the margin of Homer Lake, where he is residing with his family. The nearest settlement is three miles away. There is good hunting and fishing all around him, and he intends to enjoy these and act in the capacity of a backwoods missionary at the same time.

MASSACHUSETTS.—Wood's Hole, Sept. 6.—Duck shooting will soon be prime in Buzzard's Bay. Saw a large flock of broadbills and some green head plover to-day. In about two weeks let the sportsmen come. Will notify you in time. Take New Bedford steamers direct from pier 39, New York, reaching here early in the morning. You can leave New York on Saturday at 5 P. M., take the return steamer on Monday at 5 P. M., and be back in New York at 7 A. M. on Tuesday, thus exacting but one day from business. If you want a good bayman write to J. Lafayette Sisson to meet you on the arrival of steamer. He can furnish stools and all appliances.

Salem, Sept. 6.—A friend and myself shot 135 birds on the 3d ult., including Winters, Summers, snipe, grass birds, and other kinds. A party recently returned from Rowley report a few "black-breasters," and another party in a week's rustication shot rising 200 birds. Saw a loon yesterday and one coot the day before. Shot the first rail, a chicken bill, (*P. Carolina*) on the 31st of August. Part-ridges are numerous in some localities about here, one gentleman whom your kennel editor knows, and a friend, were out the other day; they say they did excellently. Others also are holding up their ends. Quail are not very plenty. Snipe and rail grounds are very dry, and we need rain. Last Friday there was quite a flight of scattering shore birds. South Boston flats are reported thick with peeps and ring necks. Woodcock scarce.

TEAL.

NEW JERSEY.—Carman House, Forked River, Sept. 5.—Sport generally has improved during the past week, and several good bags have been made. Mr. Oscar B. Smith killed 26 snipe during the fore part of the week. Capt. Potter killed in all 139 bay snipe, and Capt. Mathews, (out only one day) 39. E. H. Frame killed to-day 46. Mr. Fraser, yesterday 39. All the above were either marlin, willet, yellow legs, dowitch or plover, some few robins and brant snipe. To-day we have seen a better show of bay birds than for two weeks past, and noticed several good bunches coming down the bay from the North. The birds have not yet come in any great numbers, therefore we look for a flight every day. The indications are that we will meet with good sport the coming week. The late departure of the birds this Spring for the north (June 22) makes their return equally behind time, but it insures

splendid sport for those who may be fortunate enough to be on hand at the time. Quail are thicker than known for several years, and unless something unforeseen happens to prevent, excellent gunning may be had this Fall. John Burnett killed, last week, 34 woodcock in the grounds back of this house, and says they are not all dead yet—pretty good for one day. Grass plover are plenty, but hard to get at. John Holmes killed, yesterday, while out bay snipe shooting, two English snipe in fine order.

E. H. F.

PENNSYLVANIA.—*Philadelphia, Sept. 6.*—The marshes both above and below the city are full of gunners, but as far as I can find "big boats" are not plenty, and the birds, (both rail and reed) as far as I have seen, are not fat yet. The reeds are still strong and make hard pushing. A big flight is expected in about two weeks.

Delaware Water Gap, Sept. 3.—Grouse very plenty in the backwoods.

T. D. W.

DISTRICT OF COLUMBIA.—*Washington, Sept. 4.*—Reed and blackbirds and ortolans very scarce on the marshes hereabouts, averaging about as one to five on an ordinary season. My bag to-night shows thirty as against sixty for same day last year. Reed birds in exceedingly thin flocks, and but little fat on the birds when bagged. None but keen and patient sportsmen need go to the marshes this year.

UPHOLME.

MICHIGAN.—*Monroe, Aug. 30.*—The prospects for game the coming Autumn and Winter are very good, and the probability is that quail, partridge, and turkeys will be abundant in this locality. Woodcock have thus far been quite plenty, but owing to the unusually wet season they have almost abandoned their usual haunts and taken to the uplands, and are very much scattered, though some very good bags have been made by some of our sportsmen within the past few weeks.

WISCONSIN.—*Madison, Sept. 4.*—Grouse shooting, this season, has been nearly as good as last, notwithstanding the severity of last Winter. The season, however, has been favorable for the young birds, which no doubt accounts for the fact. The organization of the "State Association for the Protection of Fish and Game" has done considerable towards an observance of the game laws, but they are very far from being effective as yet. Quail are almost extinct, but ruffed grouse are plenty. Very few ducks have been seen this year in this part of the State, and, although the season is now open, (since the 1st inst.) there is no sport as yet in this direction. Florida gallinules are plenty and in fine condition.

M. T. B.

—On Saturday last Capt. Bogardus gave an exhibition of his shooting powers at Jones' Wood in presence of a large number of spectators, the object being to kill fifty pigeons within eight minutes, at 21 yards rise. At 5 o'clock Capt. Bogardus began to make his arrangements for his shoot. The portion of the programme regarding the traps could not be carried out as there was not room enough, so the pigeons were brought on the ground in a box and basket. The ground chosen was close to the main building and facing the open lot. Miles Johnson, at the word from Bogardus, threw up two birds at a time—time being taken from the death of the first bird. At it he went knocking down his birds, not only killing them, but almost picking them. Some two or three birds only were missed. So perfectly cool was he, when at his work, that he gave one the impression it was the easiest thing to do in the world. Sixty-two birds were shot at, of which fifty-two were killed with half minute to spare. In fact he killed his fifty birds in six minutes and fifteen seconds, for it was found there were two dead birds on the roof within thirty feet of his stand point. There was a short delay after the time mentioned, forty-eight birds only being supposed to have been killed, after which he shot at four more birds, killing two, which made the fifty. Bogardus uses two barrels, fitting to the same stock, one a twelve bore and the other ten. He used both pair in this feat. When he had finished both barrels were so hot that they could not be held in the hands without a thick pair of gloves.

NARRAGANSETT GUN CLUB.—The members of this club shot a match on their grounds at Newport on Monday last for \$500. Subscription cup. Nineteen competitors out of the twenty entered appeared, and the shooting, for amateurs, was first class. The match was a handicap, entrance \$5, ten birds each. The following is the score:—

Name.	Score.	Name.	Score.
E. W. Davis—23 yards.....	10	E. Stephenson—23 yards.....	7
C. Livingston—29 yards.....	10	A. T. Rice—23 yards.....	5
T. Van Buren—29 yards.....	10	A. Belmont, Jr.—26 yards.....	5
H. S. Bloodgood—23 yards.....	9	G. A. Post—23 yards.....	5
M. Van Buren—29 yards.....	9	S. S. Howland—26 yards.....	4
J. P. Grund—29 yards.....	8	J. A. Post—23 yards.....	4
F. P. Sands—29 yards.....	8	P. A. Post—26 yards.....	4
E. A. Post—23 yards.....	8	J. G. Heckscher—28 yards.....	3
C. D. B. Wagstaff—28 yards.....	8	G. Douglas—27 yards.....	2
Count Castelli—27 yards.....	7		

Messrs. Davis, Livingston and Van Buren having killed all their birds and tied, shot off, and Mr. Livingston took the cup.

NEWPORT, R. I., Sept. 3d, 1875.

EDITOR FOREST AND STREAM:—

I send score of match for \$500 Cup presented by Mr. Bennett. The day was all that could be desired for the "pop." The winner of the cup, Mr. F. P. Sand, is new at the trap, this being his first season in the club; but his reputation as a gentleman and sportsman is first-class. The cup was of solid silver, with two pigeons facing each other on the rim, with crossed guns and sporting implements on the sides, gold lined, and in every way fit to represent its generous donor.

SNOR.

Narragansett Gun Club, Newport, R. I., Sept. 2d, 1875. Cup presented by James G. Bennett. Handicap; \$10 entrance, p. p.; \$30 to second; third save entrance; ten birds each. Mr. Robbins, referee.

National Pastimes.

CRICKET—THE INTERNATIONAL TOURNEY.

We last week gave the programme of the tourney which begins at Germantown, September 13th. Below will be found the names of the Philadelphia team, which consists of the following gentlemen:—George M. Newhall, Captain; Charles A. Newhall, Daniel S. Newhall, Robert S. Newhall, Spencer Meade, John Large, Robert Pease, Francis E. Brewster, Lopen Baird, Magee, John Hargreaves, Caldwell, Henry Newhall, and Thomas Hargreaves. Scorer, Alexander J. D. Dixon. Umpire, Thomas Rhoades.

On Wednesday and Thursday the British officers' team will play against All Canada.

On Friday and Saturday the All Philadelphia eleven will play against the military team, and on the following Monday the last match of the tourney will take place, when the American team of Philadelphia will play against a combined eleven of All Canada and the British garrisons.

—The Staten Island Cricket Club defeated the Syracuse Club, at Syracuse, Aug. 23, by 8 wickets, and the Central New York Club, at Oswego, on the 25th by two wickets. The Syracuse Club was the victor in its first match with the Staten Islanders.

BASE BALL—THE PROFESSIONAL ARENA.

The middle of September sees the Boston Club virtually champions for 1875–6, for 1875 from winning the majority of games, and for 1876 from legally carrying the champion pennant for that year as a reward for their success the previous season, that being the rule of the championship code. Last week the Reds played their last games in Philadelphia this season, and out of four games played their last but one. They may therefore be said to have "passed the Rubicon," and now their road to ultimate victory is clear and unobstructed. Nothing but a series of dire mishaps can now prevent them from winning the pennant, and well will they merit the trophy; for it is a triumph of discipline, training, integrity in play, and general good management over undisciplined and badly-trained nines in some instances, and over unfair play in others. It was pretty generally supposed that the Reds would have found their toughest opponents in the Hartford team, but the Athletics have been the hardest nine to defeat, that team "playing for the side" better than the Hartfords have done.

The past week's play was marked by some striking illustrations of the glorious uncertainty of the National game. On Sept. 3, for instance, the Reds, apparently not in the best of trim, met the triumphant Athletics—in the best fighting order—and gave them the worst defeat known in the history of the club. The next day, however, saw the now exultant Reds defeated at the hands of the Athletics through the assistance of a couple of young amateur players—a pitcher named Knight and a catcher called Coons—these two young "Coons," causing Harry Wright to "come down" in a style which was surprising. The Reds, however, managed to leave the Quakers only winners in two games out of four, and with but one defeat scored against them, they having defeated the Athletics and Philadelphia clubs eleven times out of sixteen games, three of which were drawn games, and but two of them defeats. This fully shows that the Philadelphias cannot cope with Boston this season.

—The record up to Sept. 7, inclusive, is as follows:—

CLUB.	Boston.	Athletic.	Hartford.	St. Louis.	Philadelphia.	Mutual.	Chicago.	New Haven.	Atlantic.	Games Won.
Boston.....	2	6	5	6	5	9	6	3	5	45
Athletic.....	2	1	2	6	6	4	6	2	6	39
Hartford.....	0	2	1	2	1	3	2	9	3	32
St. Louis.....	2	1	2	2	1	6	3	2	2	22
Philadelphia.....	0	1	3	2	1	1	4	4	2	22
Mutual.....	0	1	3	0	4	1	3	4	5	20
Chicago.....	2	1	2	3	2	2	3	4	2	16
New Haven.....	1	0	1	1	0	0	1	2	0	4
Atlantic.....	0	0	0	0	0	0	2	2	0	2
Games Lost.....	7	12	18	19	25	29	25	31	36	202

—The professional contests played since our last issue are as follows:—

Aug. 30—Boston vs. Mutual, at Boston.....	9 to 1
Aug. 30—Hartford vs. Philadelphia, at Philadelphia.....	11 to 3
Sep. 1—Boston vs. Mutual, at Brooklyn.....	13 to 7
Sep. 2—Boston vs. Philadelphia, at Philadelphia (10 in.).....	9 to 8
Sep. 3—Boston vs. Athletic, at Philadelphia.....	16 to 0
Sep. 4—Athletic vs. Boston, at Philadelphia.....	6 to 3
Sep. 4—Mutual vs. Athletic, at Brooklyn.....	13 to 4
Sep. 6—Mutual vs. Atlantic, at Brooklyn.....	8 to 2
Sep. 6—Boston vs. Philadelphia, at Philadelphia.....	9 to 4
Sep. 7—Boston vs. Atlantic, at Brooklyn.....	15 to 3

—The Bostons play in Brooklyn three days this week, and the Mutuals play two days in Philadelphia.

THE AMATEUR ARENA.

—The best amateur games played since our last issue include the following:—

Aug. 30—Stars vs. Flyaway, at Syracuse.....	3 to 1
Aug. 31—Hartford vs. Expert, at Harrisburg, Pa.....	3 to 1
Aug. 28—Philadelphia vs. Burlington, at Burlington.....	4 to 0
Aug. 23—Blue Stocking vs. Star, at Cincinnati.....	4 to 2
Aug. 31—Nassau vs. Eagle, at Prospect Park.....	4 to 2
Aug. 23—Star vs. Red Stocking, at Covington, Ky (12 in.).....	5 to 5
Aug. 25—Champion vs. Abingdon, at Abingdon, Va.....	5 to 4
Aug. 24—Young America vs. High Boy, at Harrisburg.....	6 to 4
Sep. 4—Active vs. Beacon, at Boston.....	6 to 4
Sep. 3—Mutual vs. Resolute, at Brooklyn.....	6 to 3
Aug. 30—Rallston vs. Beacon, at Kitchburg.....	7 to 6
Sep. 1—Expert vs. Dover, at Harrisburg, Pa.....	7 to 1
Sep. 2—Chicago vs. Aetna, at Detroit.....	7 to 4
Sep. 4—Maple Leaf vs. New Haven, at Guilford.....	7 to 5
Sep. 1—Bluff City vs. Phoenix, at Syracuse, Ill. (12 in.).....	7 to 6
Sep. 3—Resolute vs. Live Oak, at Portland, Me.....	7 to 6
Sep. 4—Eureka vs. Eagle, at Holliston, Mass. (10 in.).....	7 to 7
Aug. 28—W. Philadelphia vs. Riverton, at Oakland, Pa.....	8 to 3
Aug. 28—Wilkesbarre vs. New Haven, at Wilkesbarre.....	8 to 5
Sep. 4—Haymaker vs. Pioneer, at Boston (10 in.).....	8 to 7
Aug. 30—New Haven vs. Ithaca, at Ithaca.....	9 to 5
Sep. 3—Fall River vs. Rhode Island, at Fall River.....	9 to 7

SAVANNAH, Ga., August 24th, 1875.

EDITOR FOREST AND STREAM:—

The base ball spirit runs high, even to fever heat, in our midst, notwithstanding the protests of some of its strongest opponents. Last Thursday the last game of the season for the championship between the Dixies and the Savannah Juniors came off, resulting in a victory for the latter by a score of 23 to 18. The Dixies played under the disadvantage of not having their catcher, Bailey, who is the best in that position in the South, and I doubt if he is to be excelled by many of the crack professionals North; and during the late tour of the Dixies in Florida it was said that Lincoln's pitching and Bailey's catching won them all their matches. The Juniors earned but very few of their runs. Next Thursday afternoon the Dixies meet the Georgias, and though the defeat of the former last Thursday throws the champion bat into the possession of the Georgias, yet the Dixies are going to show them the metal of which they are composed.

GEORGIA.

EXTRAORDINARY CHESS-PLAYING.—Mr. Wm. H. Mundy, of Seneca Falls, N. Y., recently played at that place twenty-four games of chess at one time against twenty-four different players without sight of men or boards. The games were played at the residence of Judge Josiah T. Miller, the player meanwhile sitting on the stoop, chatting and answering question about the games. This is eleven more games than were ever attempted at one time before. A dispute arose about the position of the pieces in two of the games, and Mr. Mundy stood up before the guests and called off all the moves that had been made in the games and the position of the pieces on the boards. He had previously played six games at once in Hudson, N. Y., and again in Geneva, N. Y. When fourteen years old he beat some of the best players then living, but has played little since. Mr. Mundy is at present in this city.—*New York Evening Post.*

SCOTTISH SPORTS.—Lion Park was on Thursday last the scene of the nineteenth annual gathering of the Caledonian Club of this city, assisted by a large number of invited guests from other cities. Ten thousand persons were present at the opening, and, after a Scotch reel performed by Highlanders in costume, the competitors were called for the games with the following result:—

Putting the Heavy Stone—1st, John Anderson, 36 feet 7 inches; 2d, H. McKinnon, 33 feet 7 inches; 3d, James Melrose, 23 feet 1 inch. Standing Jump—1st, Alex. McKay, 9 feet 8 inches; 2d, J. Anderson, 9 feet 1 inch; 3d, Andrew Rennie, 9 feet. Running Jump—1st, Andrew Rennie, 19 feet 5 inches; 2d, Robert Mitchell, 18 feet 10 inches; 3d, Geo. T. Addison, 18 feet 5 inches. Short Race (100 yards)—1st, A. C. Reid; 2d, Andrew Rennie; 3d, Robert Mitchell. Throwing the Heavy Hammer—1st, Hugh McKinnon, 96 feet 7 inches; 2d, James Melrose, 89 feet 7 inches; 3d, A. McKay, 88 feet 8 inches. Standing High Leap—1st, A. Tasker, 4 feet 5 inches; 2d, J. McMillan, 4 feet 4 inches; 3d, James Corsair, 4 feet 2 inches. Broadsword Dance—1st, J. McLaren; 2d, John West; 3d, L. D. Robertson. Throwing Fifty-six Pound Weight—1st, Hugh McKinnon, 24 feet; 2d, John Anderson, 22 feet 9 inches; 3d, A. McKay, 22 feet 3 inches. Long Race (140 yards)—1st, Wm. Sutherland; 2d, Thomas B. Irvine; 3d, A. C. Reid. Tossing the Caber—1st, James Melrose, 41 feet 4½ inches; 2d, H. McKinnon, 41 feet; 3d, M. E. More, 40 feet 2 inches. Three-legged Race—1st, W. Robertson and Hugh Graham; 2d, Andrew Rennie and Wm. Todd; 3d, L. D. Robertson and Robert Mitchell. Hitch and Kick—1st, James Corsair, 8 feet 3 inches; 2d, G. T. Addison, 8 feet 1 inch; 3d, A. Donelson, 8 feet 1 inch. Boys' Race—1st, T. Grassick; 2d, M. Baxter; 3d, Robert Smith. Mile Race—1st, Peter McIntyre; 2d, Wm. Forsyth; 3d, Wm. Parker. Vaulting with the Pole—1st, Wm. Robertson and Alex. Donaldson, 9 feet 9 inches (tie) 31, F. Duke, 9 feet 2 inches. Walking Match—1st, Thomas McEwen; 2d, John Henderson; 3d, John Lowe. Sack Race (over Hurdles 18 feet high)—1st, W. Robertson; 2d, D. Knox; 3d, R. Carmichael. Hop, Step and Jump—1st, G. T. Addison, 40 feet 1½ inches; 2d, Robt. Mitchell, 39 feet 8½ inches; 3d, A. Tasker, 37 feet 8½ inches. Bagpipe Playing—1st, Peter Bowman; 2d, Wm. Clelland; 3d, Angus Rankin. Putting the Light Stone—1st, John Anderson, 42 feet; 2d, Hugh McKinnon, 40 feet 7 inches; 3d, Wm. Robertson, 39 feet 9 inches. Highland Fling—1st, James Kennedy; 2d, James Atchison; 3d, L. D. Robertson. Special Race (2 miles, for cup presented by R. Gordon, President of the St. Andrew's Society).—Wm. Parker. Throwing the Light Hammer—1st, Hugh McKinnon, 114 feet; 2d, James Melrose, 110 feet 4 inches; 3d, John Anderson, 103 feet 3 inches. Boys' Hurdle Race—1st, T. Grassick; 2d, M. Baxter; 3d, P. Smith. Hurdle Race—1st, A. Mitchell; 2d, John West; 3d, Bennett Greig. Running High Leap—1st, Wm. Robertson, 5 feet 2 inches; 2d, John West, 5 feet 1 inch; 3d, James Corsair, 5 feet. Best Dressed Highlanders—1st, John Watt; 2d, J. Jamieson; 3d, Geo. McKay. Quoits—1st, Geo. Henderson; 2d, Alex. McGregor; 3d, William Kellock.

The prizes were distributed at the Club room in the evening.

New Publications.

HOW TO USE THE PISTOL. Very opportunely at this time is published a little handbook by the Industrial Publication Company, 176 Broadway, entitled "How to Use the Pistol." Printed instructions in pistol practice have long been much needed, and this work will in some measure supply the want. The author claims in his preface that it is the first of the kind ever published. Accepting this statement as fact, and we believe it is, the book ought to be spoken of with favor, for it certainly contains much information, and is quite correct so far as it goes. However, the instructions are given in such a general way, and so much is omitted that might be said, that it is far from complete. Perhaps we expect too much; but one will certainly look in vain for many of those little rudimentary points which would naturally occur to an instructor to give to a pupil. The writer's treatise is written from the standpoint that the pistol is strictly a weapon of defence. He very justly asserts that for long ranges and deliberate aim the rifle is to be selected. Therefore he recommends that pistol practice should be at short ranges of a very few yards and at sight; for it is only at short notice and in emergencies that this weapon is likely to be brought into use. The suggestion is good, but we think that what might be styled *emergency practice* might be coupled with good advantage to long range practice with deliberate aim. We can readily conceive of circumstances where skill in the latter would prove most serviceable. However, not to be too severe in our criticism, we will simply state that the price of the book is trifling (fifty cents, we believe), and that all sportsmen should buy one. The author deserves thanks for his efforts in bringing it out.

ACCIDENTS, EMERGENCIES AND POISONS. CARE OF THE SICK.—These are the titles of two little books issued to its policy holders by the Mutual Life Insurance Company. The first contains explicit directions as to what should be done in cases of accident, emergencies and poisons until the arrival of skilled assistance, and is a most valuable addition to the family library. The other gives some practical hints as to the nursing of sick persons, with observations on diet, ventilation, etc., and will be found of great aid to those having the care of invalids. That practical benefactress and philanthropist, Florence Nightingale, is largely quoted.

The *Overland Monthly* for September has been duly received, and as the merchants say "contents noted." Mr. Joaquin Miller, the ubiquitous, contributes two characteristic selections, one in prose and the other a short poem. We do not think that Mr. Miller is making a success of his story "In a California Eden." Aside from the fact that that peculiar style of literature of which Mr. Bret Harte was the first exponent, has about reached "hard pan," the pathos of Harte's sketches, although aimed at by the great Joaquin, is entirely wanting, and but the harsher and exaggerated side of early Californian life appears to us. The articles in the *Overland* are generally very good, and there is sufficient lightness in it to counterbalance any more ponderous themes. The American News Company are the New York agents.

The *Scientific American*, published by Messrs. Munn & Co., No. 37 Park Row, is unequalled in this country as a scientific journal, and probably unexcelled by any in the world. Buy the issue of August 21st and judge for yourself. The engravings depict the whole *modus operandi* by which Hell Gate is being undermined, preparatory to a grand blast in honor of the Centennial. Nor are the illustrations confined to this subject. Recent inventions of value are described and made simple by drawings, and the letter press displays much literary ability. The editors of the *Scientific American* appear to have more than their share of "learning"—more than enough to divide and pass around—but then we can't all of us expect to know everything.

HURST'S Stereoscopic Studies —OF— Natural History For Object Teaching in Schools —AND— PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various Animals and Birds in grotesque attitudes, never however violating their natural instincts.

We offer these views not as pictures only, but as studies from nature. One of the great moving elements in our modern system of education is object teaching. The unerring fidelity of the stereoscope transfers the animals and birds from their natural habitat to the rooms of the student and the fireside of our homes, where they cannot fail to leave a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and in gathering his large collection of native and foreign specimens, enables Mr. Hurst to combine in every view the locality of the specimen with its appropriate rocks, woods or water, and coloring from the originals.

1. Wild Cat, or Bay Lynx.....*Lynx rufus*.

White Manufacturing Co., Bridgeport, Conn. E

Miscellaneous.

THE HAZARD POWDER CO., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of
strength and cleanliness. Packed in square canis-
ters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb.
kegs. A fine grain, quick and clean, for upland and
prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters
and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very
clean, shooting remarkably close, and with great
penetration. For field, forest and water shooting
it ranks any other brand, and it is equally service-
able for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25
12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also
packed in 1 and 1/2 lb. canisters. Burns strong and
moist. The FFG and FFG are favorite brands
for ordinary sporting, and the "Sea Shooting" FG
is the standard rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.
GOVERNMENT CANNON AND MUSKET POW-
DER; ALSO SPECIAL GRADES FOR EXPORT,
OF ANY REQUIRED GRAIN OR PROOF MAN-
UFACTURED TO ORDER.

The above can be had of dealers, or of the Compa-
ny's agents in every prominent city, or wholesale at
our office.
88 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1
to 7, packed only in sealed 1 lb. canisters. The coarser
sizes especially are recommended to owners of fine
breech-loading guns, giving great penetration with
very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to
5. Packed in metal kegs of 6 1/2 lbs. each, and in canis-
ters of 1 and 5 lbs.

AUDUBON POWDER,

Very quick. For woodcock and quail Nos. 1 to 4.
Packed in metal kegs of 12 1/2 lbs. and 6 1/2 lbs., and in
pound canisters.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes.
Sizes F.g, FF.g, FFG, the last being the finest and
most used. Packed in wood and metal kegs of 25
lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and
1/2 pound.

All of the above give high velocities and less resid-
uum than any other brands made.

LAFLIN & RAND POWDER Co.,

21 Park Row, N. Y.
(OPPOSITE ASTOR HOUSE.)

BREWER'S

PATENT

Chute and Fishway.

The Fish-way is constructed in the bottom of a
chute of any desired width, by means of timbers
forming triangles, making a zig zag course, breaking
the force of the water in its descent, enabling any
kind of fish to ascend it. It may be constructed on a
rise or grade of one foot in ten. Its upper end ex-
tends into the pool of a dam. The water flows with
a uniform swiftness over a smooth bottom. It does
not form any "pools or eddies."

This Fish-way can be seen in a dam in the Mohawk
River near Schenectady, N. Y., and for its success-
ful working see the Report of the New York Commission
ers of Fisheries for 1874
may 6-1y JAS. BREWER, Muncy, Pa.

SCOVILL'S

Blood and Liver Syrup

All cutaneous eruptions on the face or body indicate an impure condition of the blood, and this may or may not be SCROFULA; but in either case is nothing more than an insidious poison, that

BURNS LIKE A TERRIBLE FIRE as it courses through the veins, sowing seeds of death with every pulsation.

In this condition of things something is needed at ONCE TO CLEANSE THE BLOOD; and

Scovill's Blood and Liver Syrup

will positively effect this desideratum, expelling every trace of disease from the blood and system and leaving the skin

SOFT, FAIR AND BEAUTIFUL.

Hundreds of certificates attest its value. Price \$1 a bottle.

FOR SALE BY ALL DRUGGISTS.

Dr. Rogers's
VEGETABLE WORM SYRUP

A brave man may suffer pain, when inflicted upon himself, heroically; but he

Cannot see his Child Suffer.

There is no other malady incident to childhood that is accompanied with more indescribable wretchedness to the little sufferers than that

Produced by Worms;

and when the parent fully comprehends the situation he will not delay a moment in securing the most prompt and efficient remedies to insure the expulsion of the intruders. The remedy may be found in

Dr. Rogers's Vegetable Worm Syrup.

Please bear in mind that ROGERS' WORM SYRUP is the reliable preparation.

ROGERS' WORM SYRUP is a palatable preparation.

ROGERS' WORM SYRUP is liked by children.

ROGERS' WORM SYRUP positively destroys worms.

ROGERS' WORM SYRUP leaves no bad effects.

ROGERS' WORM SYRUP is highly recommended by physicians, and is unquestionably the best WORM MEDICINE IN THE WORLD.

Price 25 cents. For sale by all druggists.

HENRY'S
Carbolic Salve.

FOR SALE BY ALL DRUGGISTS.

The wonderful celerity with which this combination of Carbolic Acid with other soothing and Curative Emollients acts, is something akin to the marvelous.

It is with pride that the proprietors call attention to the gratifying fact that

Physicians give it the highest meed of praise,

and use it and prescribe it in their practice.

NEW YORK, Dec. 22, 1869.

JOHN F. HENRY, Esq.:

Your CARBOLIC SALVE proves an excellent article, and I thank you for it. This is another evidence of the great value of the discovery of Carbolic Acid. Yours truly,

Geo. B. LINCOLN,
Pres't Board of Health.

Price 25 cents per box.

REV. R. B. LOCKWOOD'S

Catarrh Cure!

The Best Remedy Known, and Endorsed by all the Principal Physicians of the Country.

Rev. R. B. Lockwood's Nasal Douche will be found valuable in obstinate chronic cases.

Rev. R. B. Lockwood's Liver and Stomach Pills

indispose, receive the endorsement of thousands.

Price 50 cents each.

JOHN F. HENRY, CURRAN & CO., Proprietors,
8 and 9 College Place, New York.

HENRY'S
SEWING MACHINE OIL

A PURE OIL that does not gum up and has the endorsement of the principal Sewing Machine Companies.

Price 25 Cents per Bottle.

MOTT'S LIVER PILLS

It is easy enough to make a pill, but to make a good pill, ah! that's the difficulty. There are cheap, harsh, drastic pills, that are of even less benefit than a dose of salts. But a good medicine, like Dr. Mott's Liver Pills, which penetrates to the seat of disease, is a desideratum indeed. Will positively cure all diseases of the Liver. Sold everywhere. Price 25 cents per box.

Green's Oxygenated Bitters.

At certain periods of life a tonic is a necessity; but there is danger in using stimulants that injure the organs of digestion while giving temporary relief. To obviate this and present to the public a tonic free from Alcoholic Poison, Dr. Green prepared the Oxygenated Bitters, a sure cure for dyspepsia and all kindred complaints. Sold everywhere. Price \$1 per bottle.

Packer's All-Healing Tar Soap.

It cures all kinds of Skin Diseases with a most wonderful certainty; it promotes cleanliness, personal purity and general health; it is a preventive of many kinds of disease, and it is an absolute necessity in the nursery. Price 5 cents.

Miscellaneous.

Breech Loaders.
W. & C. SCOTT & SONS.

Winners of the "Turf, Field and Farm" Gun Trials.

(See issue October 3d, 1873.)

In which competition the committees have awarded our guns, First and Second for POINTS OF MERIT OF ACTION, MATERIALS, PROPORTION, AND SHOOTING QUALITIES combined, in all the four classes.

THE PREMIER GUN.

W. & C. SCOTT & SON call attention to their very FINEST weapon, combining all their recent improvements, marked on the rib between their name and London address the brand—"THE PREMIER QUALITY."

Medium and fine guns bear full name and address, and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped with name and trade mark.

W. & C. SCOTT & SON, Sole makers of the Patent Top Lever, solid, Double Locking Bolt Breech Loader, bearing the full name of the firm. W. & C. SCOTT & SON caution sportsmen against imitations of their patent and name. Guns bearing the name abbreviated, or with different initials, are not genuine.

TRIAL OF SCOTT & GREENER'S NEW SYSTEM OF BORING, BY THE EDITOR OF "THE FIELD," LONDON.

(See *The Field*, January 30th, 1875.)

"From a comparison of the two tables it will be seen that with Walker's shot, Messrs. Scott's guns showed a marked superiority over Mr. Greener's, both in average and in the highest score made. Indeed, with the left barrel, in his third shot, Mr. Scott got a selected group pattern of 239 and a penetration of 37, equalling the highest pattern made by Mr. Greener, and exceeding the penetration of that particular shot by eight sheets."

New York.

THE GREAT
London Gun Trial,
1875.

W. W. GREENER begs to inform his numerous clients in the United States that he has been very successful in the above trial, having secured the first prize, a silver cup, value 40 guineas—class 2 for 12 bores; also winner in class 1 for 8 and 10 bores, and class 4 for 20 bores. He has won in all the classes for improved boring, which is upon a different plan to any other maker, and is far superior in the three most essential points, viz., PATTERN, PENETRATION, and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Cortlandt St., New York, is now importing my DOUBLE CLOSE-SHOOTING GUNS to order, an invoice of which will be shipped to him on the 1st July, and can be examined about the 15th. All special orders given to Mr. Squires will be carefully filled. A full report of the GREAT TRIAL, showing the marked superiority of my guns over guns made by Dougall, Pape, Westley Richards, Tolley, Scott, and others, will shortly be published, and can be had on application at No. 1 Cortlandt St.

W. W. GREENER,
Champion Gun Maker,
St. Mary's Works, Birmingham, England.

HENRY C. SQUIRES, of No. 1 Cortlandt street, has just received an invoice of these close-shooting guns, and from him any information in reference to the results of the Great Trial can be obtained on application.

Miscellaneous.

WILLIAMS & POWELL,
Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE OF THE BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET,
LIVERPOOL.
Established 1780.

J. D. DOUGALL'S

EXPRESS SHOT GUNS.

(Title registered.)

SHOWN by trials at Wimbledon by Editor of the *Field* to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thus: Circle, 30 inches; 300 pellets; average, 191; penetration, 37. The Editor's trial of Greener guns with 340 pellets of same shot and same charge of powder, gave 180, and penetration 30, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is our own invention (though founded on the American idea) and is DURABLE, a fact remarked on by the *Field*, that the guns tried had been in use during last season, and references permitted to the owners. Send for Illustrated Circulars to

59 St. James's Street London.

BROWN'S
ESSENCE OF
JAMAICA GINGER

PREPARED ONLY

—BY—

FREDERICK BROWN,
PHILADELPHIA, PA

THIS RELIABLE PREPARATION; one of the oldest of American Pharmaceutical Products, still maintains its enviable reputation, and finds a steadily increasing sale without advertising, and in spite of piracy.

Its high reputation has tempted the cupidity of parties, whose only excuse for their unfair simulations, exists in the great popularity of the original, and accidental similarity of their names.

BROWN'S ESSENCE OF JAMAICA GINGER is protected by the private Proprietary Stamp of the manufacturer, which is incorporated with the steel plate label.

The attention of Druggists and the Trade generally, is called to the Price List of

**ENGLISH & FRENCH
MEDICINES & PHARMACEUTICAL
PREPARATIONS,**

Which will be mailed on application.

Attractive Route

To the Trout and Grayling Fisheries of Northern Michigan,
VIA GRAND RAPIDS AND INDIANA RAILROAD, MACKINAW GRAND RAPIDS AND CINCINNATI SHORT LINE.

The attention of SPORTSMEN and TOURISTS is invited to the many attractions offered by this line, now completed from Richmond, Ind., to Traverse City, on Grand Traverse Bay, and to Petoskey, on Little Traverse Bay. The waters of the Grand Traverse region and the North Woods of Michigan are unsurpassed, if equalled, in the abundance and great variety of the finny tribe. BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING, now attracting the attention of Sportsmen everywhere, is found only in these waters. BLACK BASS, PIKE, PICKEREL, and MASCOLOGE are also found in great numbers in the many lakes and lakelets of this territory.

LUXURIOUS SLEEPING AND CHAIR CARS run through from Cincinnati to Traverse City; also PULLMAN PALACE SLEEPERS from Detroit over Michigan Central and Grand Rapids and Indiana road, via Grand Rapids, to Petoskey, with SLENDID STEAMER making DAILY CONNECTION at latter point for the Island of Mackinaw.

For Tourists' Guide, containing complete and accurate maps, with full information as to Fishing Grounds, transportation facilities, and in short all that could be desired by Sportsmen or Tourists, send to Forest and Stream office, or to the undersigned. Low Round Trip EXCURSION TICKETS good until SEPTEMBER 30th. J. H. PAGE, Gen'l Passenger and Ticket Agent, Grand Rapids, Mich. July 1

Tourists' and Sportsmen's Route.

THE ERIE RAILWAY.

THE ROUTE OF THE ERIE RAILWAY is peculiarly rich in the variety and extent of its scenery, and while the tourist has alternating glimpses of the beauty of rivers, gaps and mountains, the sportsman has within easy reach many localities that afford him every facility for the enjoyment of the sports of the field and stream. We enumerate a few of the pleasure resorts which crowd the line of the road.

Rutherford Park.—9½ miles from New York. Fine hotels and boating pastimes on the Passaic.

Clifton.—13½ miles from the city, overlooking the picturesque Lake Dundee.

Lake Mohonk.—A beautiful body of water 1,200 feet above the Hudson—splendid hotel accommodations.

Orange Lake.—Six miles West of Newburgh, and noted for its fishing attractions.

Milford, Pa.—About eight miles from Port Jervis. Is noted for its trout fishing, woodcock shooting and superior hotels.

Avon Springs.—Celebrated for 20 years as a resort for invalids, the waters possessing many valuable healing qualities.

Watkins Glen.—This beautiful gorge is distant 294 miles from New York, via Erie Road to Elmira. Its wild and picturesque attractions are second only in reputation to those of Niagara.

Chautauqua Lake.—18 miles long, 3 miles wide; said to be the highest navigable water on the American continent, being 730 feet above Lake Erie and 1,290 feet higher than the Atlantic Ocean.

Niagara Falls.—This great cataract is reached by the direct line of the Erie Railway.

There are along the line of the road no less than

Ten Large Lakes, Abounding with Fish,

and affording most delightful sport for black bass and pickerel. Their names are—Lakes Greenwood, Orange, Mohonk, White, Otsego, Cayuga, Seneca, Keuka, Silver and Chautauqua.

The following schedule will afford a partial guide to the numerous fishing localities reached by this road:

July 17-3m

Chicago, Milwaukee and St. Paul Railway.

Traverses a finer country, affords views of grander scenery, and passes through more business centres and pleasure resorts than any other Northwestern line. Its forests, prairies, lakes and streams, abounding with game, present unequalled attractions to the votaries of Nimrod and Walon. It is the only railway route along the valley of the Upper Mississippi. It is also the shortest as well as best route between the great metropolitan centres of the Northwest—Chicago, Milwaukee, St. Paul, and Minneapolis. Track and equipment unequalled, and its trains of palace-coaches and sleeping cars run through without change.

New York Office, 319 Broadway.

Chicago Depot, cor. Canal & W. Madison.

City Offices, 61 and 63 Clark St. Apr 29-6m

Magic Lantern and 100 Slides for \$100.

jy29-3m**SMOKE VANITY FAIR.**It is shaved from the best Natural Leaf, of Meershaum and Cig arettes. Does not make the tongue sore. Liberal sample on receipt of money. Highest award, Vienna, 1873. Send for circular. **WM. S. KIMBALL & CO.,** PEERLESS TOBACCO WORKS, Rochester, N. Y.

VIENNA, Austria, Nov. 30, 1873.

Messrs. Wm. S. Kimball & Co.:
Sirs: A friend of mine sent me, with a transport of Indian skulls, two pounds "Vanity Fair," which I declare to be the best tobacco I ever smoked. We have very good tobacco in Vienna—Turkish and Hungarian, but "Vanity Fair" is the King of all, by its aromatic flavor and the right sort of strength. My friend in New York got an appointment in California, by that reason I apply immediately to you, begging you to send me for the inclosed ten dollars a supply of "Vanity Fair," and send with the next steamer to Germany. If there is a German firm that sells your excellent "Vanity Fair," I beg you to inclose me the address. Your respectful servant.DR. JOSEPH HYRTL,
Prof. of Anatomy in the University of Vienna.

It is like your first love—fresh, genial and rapturous. Like that, it fills up all the craving of your soul.

From C. A. WORDEN, Lieut. 7th Inf., Fort Ellis, M.T. I assure you that I never smoked better tobacco than your Vanity Fair.

BREECH LOADING GUN FOR SALE.

HOLABIRD'S Shooting SUITS,**DIXONS & HAWKLEY'S SHOOTING TACKLE****STURTEVANT BRASS SHOT SHELLS,****BUSSEY'S PATENT GYRO PIGEON AND TRAP****WITH CASE, AND 100 BIRDS.****Black's Patent Cartridge Vest.**

This Vest affords the best arrangement yet invented for carrying cartridges. The weight is so evenly distributed that it is scarcely felt. Cartridges can be carried with the heads down in this vest, which is of great importance when brass shells are used, as when carrying them with the head up the weight of the shot often forces the wad forward, when bad shooting is the result. In ordering send measurement around the chest. PRICE \$7.50.

Nantucket Notes.

ALTHOUGH out of sight a good portion of the time for the last three weeks, the *Bluelight* has not been out of mind. Daily we have gazed upon a solid bank of fog that has shut from our view our neighboring islands, even closing in on the little harbor to such extent that our fleet of yachts and sailboats became invisible; and Nobsca Light House, a light of other days, tolling its own funeral notes from its lugubrious fog bell. Fog everywhere, outdoors and in, our beds, our carpets, our curtains, limp and steaming, our boots, our books a bed for the mold fungous, our Lone Jack and Brown Dick, a green, moist, unpleasant mixture—hard to light, fearful to smoke, and good Havanas reduced below the grade of first-class Connecticut cabbage. Now and then a heavy shower would deposit some of our own immediate wrapping, and for a moment when the rain ceased, we could see the shores of the Vineyard, but behind them to the southward, the dense bank rolling up before the constant breeze from the south, and before we had fairly realized that we had light, we were again in darkness. The *Bluelight* could not work, at least not much, for she did manage to dodge in and out a few times, and time hung heavy on our hands. There was no fishing; the constant southerly wind drove the warmer water of the southern coast into the Sound, and the bluefish left us for cooler climes; 78° to 80° temperature they did not fancy, and even the all-absorbing pounds yielded but poor returns. One bluefish was one day's record at a pound, when one barrel would have been held in former times as but slight returns. The lobster pots came up empty of lobsters, and without their seductive tails, the saucy tautog, and dandy scup ("scupoug,"—Chester has got it on one of his boats) were not to be wiled from their eel-grassy banks.

Our only source of satisfaction was to read in our daily papers that we were not alone in our dampness. From Oak Bluffs and Nantucket came the same dismal story, and the crowds who daily left the cars for the boats, bright, happy and dry, were supplemented by as many wilted voyagers returning with limp dresses, disordered crimps, and unhappy faces. Such a difference as there was between the comers and goers! Nor were we at this end of the Sound alone in our moisture. A trip to Newport and a drive on Bellevue Avenue, left on my mind but an impression of dissolving views—carriage after carriage appeared—first the horses, then the coachmen in their livery, and then when nearly alongside, almost too late for my friends to recognize and exchange salutes with the occupants, away they sped into the mist to be followed by a seemingly endless procession.

By the way, running into Newport there occurred a phenomena; at least a delusion. We caught faintly sounding in the extreme distance the sound of the fog bell on Brenton's Reef; heading directly for it again, we just caught the sound and every ear was strained; we approached it slowly, when suddenly as we listened in silence the bell boomed out loud and distinct, apparently not three hundred yards away. This occurred again, and we slowed down; the next peal startled us; it was as distant and as faint as when we first heard it; and this occurred the second time, when to our surprise the light vessel loomed out from the fog close aboard, and the bell clanging loudly. Now fog and its acoustic properties have been made subject of research by learned men, and I will not undertake to account for this strange increase and diminution of the sound, but it did occur, and was freely commented on by all on board. It seemed as though the fog at times interposed a wave, and that through this the sound barely penetrated; and that at the reflux of this denser wave the sound was uninterrupted. One practical lesson I learned from it, viz: not to feel sure that a fog bell was two miles distant because it so sounded.

But our fog is gone; it has yielded to a sharp northeast wind that for a day white capped the Sound and brought the schooners down to close reefs, and the out-going passengers bound to Nantucket on the *River Queen* and the

Island Home to a realizing sense that it is not necessary to cross the ocean to enjoy the delights of sea sickness. I made a trip that day myself, it was a little too rough for the *Bluelight* to work; she tried it, but when the spray came flying over the pilot house, it was thought best to leave the following out of the lines of dredging in Buzzards' Bay until a more auspicious occasion. So I went to Nantucket on the Island Home, and the sights I saw, and woes I witnessed are indescribable.

Our first voyage to the Vineyard was a little rough, but nothing very bad. As we approached the landing of the Camp Meeting Association, the usual crowd was not there, and the hack drivers were in oil skins and umbrellas. But one sign of comfort met our view, a portly white vested gentleman standing like a sign of "good living here" in a door of the little building on the wharf and on which is the sign of the "Highland House," and "Seltzer Aperient" equally conspicuous. Quite a number, though, got on board there and at the Sea View Landing, and we started fairly full for Nantucket. As we got along to the eastward, the northeast swell began to tell, and a good many funny scenes took place. I sat on the starboard after guards, smoking my pipe, when out rushed a lank, pallid creature in female attire. I saw her situation and knocked out my pipe in deference to her feeling. She saw I noticed her, and snapped out, "I aint sick." The exertion was too much for her, giving a spasmodic grasp at her mouth and thus saving a fine set of false teeth, she rushed for the side, and she would have lost them if she had not.

That afternoon we were content to stay indoors at Nantucket, and good dinner and supper and good attendance at the Ocean House did what they could to make up for horrible weather outside. And the evening passed delightfully at the pleasant home of Capt. Sanford, who, although we were strangers, took us in, in the most Scriptural manner. A mutual acquaintance with nearly every man who had been in China for years back, and with the many noble ships and their captains, who in the days of "Tea Clippers" made an American proud as he came in from sea, and without seeing its colors, could pick out every American ship by her beauty from the maze of spars in the crowded harbors—proved a link between us, and but for the stronger attractions, and the lapse of time, we'd have been exchanging notes until to-day.

The next day was pleasant, and we did Nantucket! We wandered through the grass-grown, cobble-stone streets, and noticed, as required by guide book, the "quaint old buildings"—that is, those left by the fire—the balustrades on the roofs where the women, legend says, used in whaling days to sit and watch wearily for the arrival of their lords (skippers, mates, harpooners, &c.) We took in the shingled sides and gable ends of the houses; we visited the well-arranged bathing establishment, where you can take your sea water hot or cold; investigated the museum, and listened to the minute description, given by the custodian of the place, of his decidedly unique collection; from the eighteen-foot-long jaw of a sperm whale, "in more perfect preservation, Sir, than has been obtained for one of these"—down to little bugs and shells—not half so little though as we have in our collection. (I'm rather neglecting the Fish Commission so far in this letter.) His descriptive powers were good, but when he showed me a case of insects and hippocamuses and little pipe fish mixed as only Yowhee or Hyqua, of Canton, could mix them, and told me they came from Nantucket, and I told him they didn't, and turning over the case, showed him Chinese hieroglyphics on the back part—I thought perhaps he was a little uncertain in his foreign relations. And a mean little Turks' head pipe—evidently bought by some hard-up sailor at a Dutch tobaccoconists—wasn't a "Japanese pipe," although so labeled, and I stuck to it; and he cut me and devoted himself to believers. However, I must do him justice. On every point with which he ought to have been familiar, he was posted and interesting, and his description of the whale, its habits and mode of capture, illustrating as he went on, by drawings, models, and actual implements—was correct and graphic. And so in regard to the many curiosities from the sea, and trophies from the South Sea

Islands; and his story of the olden days when the laden whale ships had to be lifted over the shallow waters of the bar at the entrance of the harbor by means of a camel—showing us the camel, with a ship six feet long in its embrace—was worth our fifteen cents admission; and I don't want to discourage any one from spending an hour in the midst of this curious collection, mostly composed of the contributions of the hardy mariners whose deeds in their contests with the Leviathans have rendered Nantucket famous.

Then we wandered through the business streets; dropping in here and there as the display at the windows tempted us. Perfect little schooners and cat boats full-rigged, every rope in place and capable of being used to furl or spread the canvas, were prominent; and ingeniously arranged ornaments, bouquets, and baskets made from brilliant shells and sea mosses were plentiful. At one cosy little "shell store," kept by a cheery little middle aged lady, by name Miss Coffin, we were well entertained. Miss C. possessed good taste, as her wares, of her own workmanship showed; was social and pleasant. In five minutes she knew all of our names, invited us in to an inside room, and two strange (to us) ladies coming in, she introduced us all to each other by name, and explained where we came from. I remember the amused look of the lady from Northampton, Vermont, as she exchanged bows at the introduction. Miss Coffin, as her name implies, is one of an old, old family. Probably it was one of her forefathers who had the honor of discovering the only land in the world not in our country, but owned by it, by all the forms and ceremonies that can establish such ownership; and as all of them I saw, and part of them I was, I will digress for a moment, in return for Miss C.'s politeness, and give you and her an item not connected with the original subject of this letter.

Years ago, we of the sloop of war *Plymouth* were in the East Indies, and there came up talk of a project for running a line of steamers from San Francisco to China. The only trouble (that I remember of) was want of a midway coaling station, and to find such was a duty committed to Commodore Perry, our Commander-in-Chief. A group of little islands, far out in the Pacific, originally discovered by Capt. Nathaniel Coffin, a whaler captain from I believe Nantucket, and bearing still his name, were selected for examination. They are in latitude 27° north and longitude 142° east, and part of the Bonin Group. Launch and first cutter were fitted out for the work of survey, and leaving the ship at anchor in Port Lloyd, some thirty miles away, three officers, of whom I was the junior, started for the work. Eight days we spent in boat and tent life, experiencing a terrific typhoon, during which the *Plymouth* lost a boat with Lieut. John Mathews and eleven men, who left her side and never returned. Our survey and explorations finished, the *Plymouth* came down and was piloted to a poor harbor which we had charted. Then with pomp and circumstance we took possession. Under a tall flag-staff that we cut and raised, a casket was buried containing coins and papers. At its base stood our captain and officers in uniform, and from its truck at due noon, our flag floated to the wind, and as our cannon thundered a national salute our captain in the name of the United States of America took possession of the island. A copper plate with suitable inscription was fastened to a large adjacent tree, and then after appointing the milder of two ex-pirates—who with their three wives (one had two—that was our Consul) were the only inhabitants—U. S. Consul, we withdrew to the ship, and sailed away to China. And that was the last I heard of this portion of our beloved country. I presume our Consul and his friend hooked the casket, and appropriated the coin, sold the flag to a whaler, tied up wild pigs with the halliards, and left for other isles—when the steamers failed to come.

But *revenons a Nantucket*. Miss C. showed us among her curios, various antiquities—cups and saucers of unknown age, plates and platters of genuine blue willow ware, truly genuine because they each had two little birds cooing and billing on the wing. And such a wonderful old clock—a tall, old-fashioned corner clock, imported in

1720 by her great-grandfather, and still running, and running well. Its upper portion was of English make, the round copper face surrounded by carvings and bas-reliefs in brass, with queer masks and heraldic dolphins. In a circle was a legend of the maker, "Dan. Keaden, in Noble street, near Cheapside, London." The works were inclosed in an oak frame with European adornments, but the weights and pendulum in a box that suggested a history; made unmistakably of English black oak, the front was covered with *Japanese* art. Raised in the thick gold relief peculiar to Miako were birds, a high mountain, willow trees, and natives of Japan in costume—unmistakable Miako work on English wood, and at that date England had no commerce with Japan. Miss C. could give me no data except that her great-grandfather's father, Mr. Eliacum Swayne, brought it over to his bride.

Nantucket is full of relics of olden times, and reduced as are many of the best families to make shift for a living, these relics—valuable to one who, like an illiterate acquaintance of mine, "likes them antique things; they're so modern, you know"—are parted with reluctantly from necessity. A Mrs. McCleaves has, it is said, a stunning collection, on which she lectures to strangers at fifteen cents a head for the benefit of the poor of the island. Mrs. McC., though, wouldn't let us in, as she was too busy making pies to attend to us before her regular hour—2 P. M.—although we had to leave in the boat. So I can't give her a puff. Well, that's about all of Nantucket that I saw, and now I'll get back to Wood's Hole, gladly, as I always do, not stopping to bore you with that oft-told tale of "how I went bluefishing," except to say that for that business Nantucket is a quite sure place.

The Blueblight had done nothing during our absence, but in little boats and on the sea beach the collectors had been busy, and I saw in the aquariums quite a number of new fishes, among others little pompanos, mackerel, pipe fish, etc. Some people think pompanos are peculiar to Florida—thay should take a peep into our aquariums. The pounds, too, had contributed freely, and we have added to our collection of casts and pictures largely. A magnificent bill fish, a horse mackerel nearly nine feet long, weighing 550 pounds, a *new* shark, and lots of varieties not so rare, sturgeons of immense size, and sucker fish, and what not, have been drawn, painted, photographed, cast in plaster, dissected, measured, weighed, skinned, and described, and their *fac similes* in plaster will enrich our National Museum and the Centennial. The sucker fish bothered Mr. Palmer, who makes the casts. If there is anything that the file-toothed, oval apparatus which he has on the back of his head isn't well adapted for, it is letting go. Its best hold is hold on, and holding on by this contrivance, like a boy's toy with which he lifts stones by means of atmospheric pressure on a wet leather disk, the sucker clings to larger fish and gets free rides. Palmer got a "good contact" with his soft plaster, but it didn't let go worth a cent.

A party have made an expedition to the northern shore and made fine collections in the neighborhood of Sandwich, in Cape Cod Bay, and now that the weather is getting fine again the Blueblight is making up for lost time. I hope in my next to give you a full resume of our Summer's work, etc. Yours, PISECO.

For Forest and Stream.

FISHING ON THE ZUMBRO.

MANY, if not all, of your readers being sportsmen, are more or less interested in that paradise of game and fish—Minnesota. As the Zumbro has its *locus in quo* in that State, it will not be wholly uninteresting to have a detailed account of the fish which abound in its waters, and the fortunes and mishaps of a small party of Waltonians bent upon securing a fair share of the finny spoil.

A cursory glance at the map of Minnesota shows that the Zumbro rises in Rice County, and flowing southeast through Goodhue and Wabasha Counties, its volume continually increased by the waters of translucent trout streams, debouches into the "Father of Waters," three miles below the town of Wabasha, and seven from the foot of Lake Pepin. Having now understandingly designated the seat of our piscatorial operations, we must invite the reader to accompany us from Lake City, a pretty little watering place midway on the western shore of Lake Pepin and twenty miles from the Zumbro. On the morning of August 5, due preparations having been made, three hail fellows, well met, could have been seen busily engaged in transferring numerous camping utensils to a well constructed sailboat, having in tow a duck punt, to serve as a tender and facilitate fishing operations. At 8 o'clock A. M. we got under weigh, a stiff breeze blowing from the southwest, which increased as we proceeded, until white caps lent spice to the excitement, and reached Read's Landing at the foot of the lake about 12 M. After a short rest and a light lunch we floated down the Mississippi, the current being very strong, to our destination, our passage being enlivened by frequent sand bars, upon which we religiously struck and profanely quit, one man's time being wholly engrossed in endeavoring to keep our craft in the channel by preserving a keen lookout ahead. Admonished by black and ominous looking clouds and an occasional peal of thunder, we lost no time in selecting a suitable camping ground, and running up our canvas; nor were we any too soon, for hardly was the tent pitched and the luggage safely housed when down came the rain with northwestern impetuosity. Our camp was situated on a triangular sand island, bounded on the east and west by the Mississippi and on the south by the Zumbro. Its surface rose gradually from the water's edge, and in places was covered with a dense growth of willows, in which the Spring floods had deposited drift wood in large quantities, the very thing for firewood. The rain having held up, we were all impatient for the fray. Our first essay was still baiting with live minnows, in the main stream, but for divers reasons this kind of bait had no charms for the fish. Then spoons of different makes were produced, and our sail-boat being cleared for action, with a rod over each corner of the stern and a man at the oars, we started on a voyage up the river.

Our party consisted of Mr. N., a resident of Memphis, Tenn., his red Irish setter, Harry, and E. and D., the one a banker and the other a contractor, of Lake City, Minn.

Having proceeded up stream some half a mile or so, a tempting slough invited us to explore its depths. Hardly had the boat passed over the bar, when a stout pull at the end of one hundred feet of line showed that the game was awake and hungry. In a moment or two a black bass of large size sprang into the air in his frantic endeavors to disgorge the nauseous bait, a gananoque spoon. N. being

an old hand at the business, and handling a fine rod with a Meek & Milan reel and one of Abbey & Imbrie's best braided silk and hair lines, feared not the issue of the struggle which was about to follow. Hastily reeling in a few yards of line, he directed the oarsman to land him on a smooth sand bar, and in a twinkling the battle grew warm. The bass proved particularly active and showed enormous strength. His runs were fierce and long, now leaping from the water, now seeking the bottom, sometimes heading for shore and again rushing riverwards. The gananoque refused to budge, however, and in about fifteen or twenty minutes the bass, twenty inches in length, and a prince in beauty and symmetry, lay gasping in the bottom of the boat. Scarcely had we gone a hundred yards further on when a whoop from E. informed us that something a few sizes smaller than a shark had taken a desperate fancy to his spinner. A few minute's hard tugging, some skill on the part of E., and a fine pickerel was scraping acquaintance with the dusky beauty already in limbo. Our success continued as we ascended the slough to its source, till seven more bass had fallen victims to an inordinate love for spoon victuals. The keen edge having been worn off our excitement, on our return we had more leisure to admire the scenery and the stream we were fishing. Its waters, fed by numerous springs, were clear as crystal. In the bends its surface was dotted over with lily pads, the emerald of their leaves being relieved by the lilies themselves, which waved their graceful heads in snowy purity everywhere. Its banks were fringed with tall grasses, ferns of endless variety and stunted trees of soft maple and willow. It must be a famous habitat for the wild fowl in the Spring and Fall. The whole surroundings were highly suggestive of the noble game we were catching. In every deep pool, shaded by the pads, large bass could be seen breaking water. The daylight was fast waning when we reached camp, and in a jiffy we were all busily engaged in preparing our supper.

To the uninitiated and the onlooker perhaps no more romantic phase of camp life could possibly present itself than that of the preparations of an evening. The well replenished fire throwing its genial light and tinged with its mellow glow the surrounding woods and waters; in the foreground a busy sportsman with frying pan in hand; another struggling under a heavy load of drift wood; a third just discernable in the dim light, at the water edge busily engaged in cleaning fish, and Harry on his beam ends in the tent door philosophically contemplating proceedings, and evidently satisfied that ere long any vacuum in his interior would be stopped with savory morsels. With keen appetites we discussed the supper, consisting of black bass, breakfast bacon, fried eggs, bread, butter, coffee, &c., &c., each one slowing away his full share of eatables, and N., especially, doing justice to his reputable ability to dispose of a square meal. E. and N. devoted the whole of the next day to exploring the surrounding waters, and returning toward evening happening to detect a shadowy figure wading in the headwaters of a hitherto unexplored slough, upon nearer approach found it to be D. The string of bass and pickerel which he then and there produced as the result of his afternoon's fishing was a sight for sore eyes.

In accordance with our plans the next day was to be our last in camp, and therefore we determined to catch as many fish as possible and exhibit them on our return as a portion of the trophies of the trip. The first streak of dawn then, found us upon the ground disguised and wading out to the site of D.'s operations of the evening before. We succeeded after two hour's fishing in capturing seventeen pickerel and bass, the smallest of which weighed not less than four pounds. Satiated with sport, and loaded down with fish we wended our way back to camp, cooked our breakfast, struck tent at half past ten, and started for home. There being no wind, we were obliged to row up stream to Read's Landing, at the foot of Lake Pepin; which we reached at 5 P. M., after several hour's hard pulling at the oars, diversified by numerous impromptu halts on the sand bars. From thence we hoped to sail home, but not a zephyr was there to gladden our hearts! The lake was as smooth as glass. We were all anxious to get home, and there was no choice but to pull for it, and pull for it we did! To make a long story short, about 9 P. M. the lights in Lake City began to twinkle on the water and at eleven we arrived safely, feeling considerably exhausted after our row of twenty odd miles.

In conclusion we can fully endorse the high encomiums that have been bestowed upon the climate of Minnesota. The air is highly oxygenated, and, of course, particularly beneficial to invalids. Sparkling springs of the most delightful coolness everywhere abound. The days are bright and clear, and though somewhat warm at noon, the nights are all delightfully cool and bracing, necessitating the use of a blanket. The accommodations for travelers and tourists at Lake City are superior. All kinds of amusement can be freely indulged in, fishing, shooting, yachting, dancing, &c. The citizens, many of whom are ardent disciples of the rod and gun, are kind and hospitable, and ever ready and willing to assist in furthering the pleasure and happiness of strangers and sportsmen. The Lyon House is the principal hotel and is owned by a well-known merchant of that name in New York. It is delightfully situated close to the lake shore, is fitted up with all modern conveniences and is presided over by as genial and accommodating a landlord as can be found anywhere. Next season the proprietor contemplates making many improvements and rendering his house as attractive as any in the northwest. A fine yacht, pleasure boats and a bath house on the lake shore will be amongst some of the new features.

R. C. N.

For Forest and Stream.

SNIFE UPON THE ICE.

THE Spring came in rather mixed, as usual. We had a week or more of warm weather, which brought many a bird from his Winter quarters. The change to cold left him in a sad plight—without overcoat or muffler, or sense enough to return whence he came. I had heard of snipe here and there. A carpenter who was working upon a cheese factory three miles out of the village came into the store where loafers most do congregate. He recognized my face as soon as he saw it, once familiar, when Hernierania had hold of him, driving him almost crazy and half blind. I routed the enemy with quinine and strychnine, thereby acquiring the everlasting gratitude of the worker in wood. I had been absent two years—now returned on slaughterous deeds intent, not to cure but to kill. "Why, Doctor, how are you? Why don't you come

down and attend to those snipe? We have seen them flying about all day long, close by where we are at work; they have been there four or five days."

I knew that he knew a snipe when he saw it—a fragment of knowledge quite rare among non-sportsmen. But he, as I remembered of old, was somewhat of a sportsman himself, for always on one day in the year, in the Winter, he would drop work and go hunting rabbits with a spade and pickaxe. The next day there came a heavy snow storm—snow eight inches, and froze hard that night; the second day was bitter cold—did not thaw at all. That evening I called upon James S., and made arrangements to go with him upon the morrow; for it must turn warmer. That night was cold, and the next morning when I went down to see if James was ready, the weather had not improved a cent's worth. "Why," said he, "this will drive every snipe out of the country, or freeze them to death." I replied, "It will surely be warmer by noon. Having made up my mind to go I do not like to give it up." "All right," said he; "if you say so, go it is." At eleven o'clock we got into a covered buggy, hauled the pointer, Sam, in by the neck, and were off. Three miles over a road, rough as only clay frozen after a thaw in the Spring could be—one hour and more it took us. There was a large marsh and a brook—and a cheese factory. The brook ran near to and parallel with the road for half a mile, and was lost in the marsh at a point, say thirty rods from the cheese factory. We stopped where the brook first approached the road. As we took off our overcoats and shivered, instead of growing warmer it grew colder. The idea of looking for snipe! Either they or we were fools!—this to be soon proved with little chance in our favor. As we came to the brook we found the snow over the ankle, the brook frozen, except a few inches in the centre. We followed down almost to the marsh, starting a killdeer. "There," said James, "is the kind of snipe and the only one you will see this day. A farmer came across the brook with his horses. We enquired if he had seen any snipe about. "Yes," said he, "plenty of them; but they are very wild to-day." This mystified us. "Just over there towards the cheese factory you will find them." A few rods further and we reached the marsh, and what was more, up went a snipe twenty rods off, and they kept getting up—one, two, half a dozen at a time—until about forty had started, and never a chance had we at them. They flew up by the cheese factory, and pitched down close to the road. James went up there and I went out in the marsh. Soon I heard the reports of his gun, and the snipe began to come back. We hammered away at them, having all our shots up in the air, as they came over in twos and threes. Some alighted upon the ice and ran for the grass, but would not lie. The shooting was all overhead, and very bad work I made of it. Not over an hour and there were no more birds left. We found we had twenty-three English snipe and two yellow shanks. Where the rest had gone we knew not, and certainly they had not stopped anywhere near us. There seemed to be two places, not very large, one above the road the other below, which they fancied, and we routed them out of there completely. They were not extra fat, but in good condition—not poor by any means.

Albany, N. Y., September, 1875.

Fish Culture.

RUNNING STREAMS FOR TROUT CULTURE.—A. J. Hines, of Patchogue, L. I., informs the *German town Telegraph* that he has sold a one-third interest in his "Pallus Brook Farm" to A. S. Collins, former partner of Seth Green, who proposes to remove to that vicinity, to raise trout for market, as soon as he can make the necessary arrangements. This information is of value to trout culturists, because it shows them that an old expert like Mr. Collins believes there is money in the business. It helps to answer the oft-repeated question "whether trout culture will pay." So far as that gentleman is concerned, Mr. Hinds advances the opinion, endorsed, he says, by Mr. Collins, that ponds are entirely unnecessary in raising trout for market. This new firm of trout producers will, therefore, not prepare or use any ponds for their purposes, except a small one of about one acre for fly-fishing. Mr. Hinds says in his letter:—

"I often have letters of inquiry about how many fish can be kept in a pond of such and such a size. The quantity is governed by the amount of water running in and through a pond and not by the size. Indeed, no more trout can be raised in a pond, and that not of as good a quality, by ponding up the water, as can be raised in a canal or canals. We then get rid of all danger of freshets, as dams breaking, and the water keeps cool in Summer and does not freeze in Winter, but maintains an even temperature the year round. I used to get in 1836 two shillings per pound, or eight cents apiece alive, for trout. They have constantly advanced in price ever since, and now we have no trouble to sell all we can raise for one dollar per pound, as Long Island trout bring two shillings per pound more than any others."

Mr. Collins estimates that I have on my place waters of the right quality and of a sufficient quantity to raise 100,000 pounds of trout a year, and says as we obtain food in great variety from the Great South Bay for less than one cent per pound, we can raise trout for twenty cents per pound at a handsome profit."

We believe that Mr. Hinds is correct in his views regarding ponds, and fell assured that he will win many adherents to these somewhat advanced views. An intelligent treatise might be written in favor thereof.

FISH AT THE CHICAGO EXPOSITION.—Among the interesting features in the Chicago Exposition is a display of live fish in aquaria, including brook trout, grayling, several varieties of bass, etc., also salmon one and two years old, as well as those hatched last Winter. The mode of artificial propagation by hatching the ova in hatching-boxes is shown, and also the plans that have been adopted to enable the migratory fish to ascend rivers over high dams by means of fishways. A model of Brackett's fishway over a dam thirty feet high at Holyoke, Mass., and one of Brewer's chute and fishway over a dam in Schenectady county, N. Y., are made in the Exposition.

CARP FROM GERMANY.

NOVEL EXPERIMENTS IN FISH CULTURE.

It was announced in the *Tribune* several weeks ago that a number of living fish had arrived in a Bremen steamer, and that the fish had been imported by the United States Fish Commission for the purpose of adding to the food resources of the United States. These fish were under the charge of Mr. Rudolph Russel, and consisted of carp, golden tench, and common tench, all having special qualities, which were described fully at the time. Unfortunately many of these fish died, most of them owing to unavoidable delays in the transfer of the fish from the Hoboken dock of the North German Lloyd line to the Pennsylvania Railroad Depot. The survivors are now suitably cared for in charge Mr. Hessel in ponds constructed especially for their reception in Druid Hill Park, Baltimore, by the Park Commissioners, and under the supervision of Mr. T. B. Ferguson, the Fish Commissioner of Maryland. About the time of the arrival of the fish referred to, Prof. Spencer F. Baird renewed the effort of last year to send some young shad to Germany, in return for a very liberal gift of eggs of the Rhine salmon made to the United States by the German authorities in 1873. The experiment was made under the charge of H. W. Welsher and Monroe A. Green, to whom, as to Messrs. Anderson and Mather in 1874, the North German Lloyds gave free passage to Bremen and back. As it had been found impossible, starting with the young fish, to keep them alive to the end of the voyage, the trial was made of shipping the eggs and having them hatched out during the voyage in a special apparatus devised by Messrs. Welsher and Green. This attempt, however, failed also, owing, as was supposed, to the jarring of the eggs on the cars while coming from Holyoke, Mass., and the wagons in which they were transported from the depot to the steamer's wharf. A third effort will probably be made next year, varied by bringing the eggs all the way by water to the ocean steamer. The attempt, it is hoped, may be successful.

For the purpose of securing an additional supply Mr. Welsher was instructed to bring back with him as many carp as could be conveniently transported, and with the assistance of Dr. O. Finsch, the eminent naturalist of Bremen, he obtained what he wanted in Oldenburg, and Wiesbaden, to the number of 60 carp and 40 golden tench, mostly yearlings, although some were two years old. These arrived on board the Bremen steamer Hermann on Wednesday afternoon last in excellent condition, only one fish having died on the voyage. The travelers were met at the wharf by Prof. Baird and Ferguson, who were provided with tanks filled with fresh water, and the fish were shipped by the evening train in charge of Mr. Alexander Kent of Baltimore, to the pond in Druid Hill Park, where they will be cared for by Mr. Hessel. The North German Lloyds Steamship Company brought these fish and their attendants free of charge, and Capt. Reichmann, captain of the Hermann, spared no effort to secure a satisfactory result to the experiment. Of the best varieties, namely, the mirror and leather carp, no specimens were brought by Mr. Welsher, as they were considered too precious by their owners to be disturbed in their ponds during the breeding season. A supply of these will probably be forwarded during the month of November next. The carp and other fish constituting the importation will be kept in the ponds of Druid Hill Park as breeding fish, and the young will be distributed throughout the country, principally by means of the various State Fish Commissioners. It is probable that the first distribution will be made in about a year, and be continued from time to time. The experiment of their multiplication will be watched with much interest in view of the very great economical value of the carp and tench. They are especially fitted for the waters of the more southern States, much more than replacing the brook trout of colder waters.—*New York Tribune*, Sept. 11.

FISH CULTURE IN VIRGINIA.

BLACKSBURG, Va., September 8th, 1875.

EDITOR FOREST AND STREAM:—

Last week I transferred the first lot of black bass from Roanoke to New River, and made arrangements for the complete stocking of the latter with these fish. Below the Kanawha Falls the fishing is very fine. Above that point there are nothing but catfish, chubs, suckers, etc. The Roanoke is the only stream in Virginia where bass have long been found. In Roanoke there are also plenty of red-eye perch, a fish nearly equal in size and game qualities to the bass. I do not know whether it will take the fly; I think not. Notwithstanding the presence of these two predaceous kinds, I know no stream that so abounds with chub, minnows, suckers, and small fry of every kind—a fact which does not tally with the notions advanced by some. Bass are now plenty in the James and Rappahannock, where they have been put in the last four years. A letter to-day received informs me that a gentleman caught near my old homestead on Goose Creek, in Loudoun county, thirty-seven fine bass in a few hours. The same letter states that salmon have been caught in Goose Creek and the Potomac recently—some of those put in that river last Fall. The size is not mentioned. Some have also been caught both in the Roanoke and New Rivers. When those in the New River go below Kanawha Falls they will be lost to Virginia. We hope to have a fish way ready for them at the Great Falls of the Potomac when they wish to return. A good many trout have been caught in Big and Little Stony Creeks, in Giles, and Dismal and Walker's Creeks, in Pulaski county; also in the headwaters of the Rapidan near Gordonsville. The State hatching house will probably be put here, with the Professor of Natural History of the Agricultural College in charge. Hatching establishments will also be placed at the University of Virginia, Virginia Military Institute, and perhaps other colleges, with a view to the education of experts and the spreading of a general knowledge of the principles of fish culture through the State. We hope to get good protective laws passed next Winter. Very truly yours, E.

—Michigan can now be ranked among the first as a fish State. No State in the Union exceeds her natural supply and advantages. The lake coast of Michigan is over 1,400 miles long, and she has a water surface of nearly 40,000 square miles.

THE SEA SERPENT.—The monster must be on his travels. Wilmington, N. C. is the last place heard from. There he was ninety feet long and as big as a barrel. He ran on one of the shoals and a party of brave men ran to attack him, but he raised his head and threatened to swallow them, so they retreated and left him undisturbed. We trust he will return to the vicinity of Cape Cod or Martha's Vineyard. Some old whaler may yet get an iron in him and settle the long disputed question.

Natural History.

THE WINNINISH OF THE SAGUENAY.

ITS IDENTITY WITH THE SALMO GLOVERI, OR LAND-LOCKED SALMON.

WE have recently sought the best authorities upon this interesting question, and with the more earnestness, because we understood that the Smithsonian naturalists entertained doubts thereon. We have caught both of these fish, the winninish and the *salmo gloveri*, but never having compared them side by side, were obliged to trust to memory, which is often treacherous, for justifying points of identity. Our impression has been that they were the same fish. What we have now been in search of is the person who has had the rare opportunity afforded him of examining the two simultaneously. In one instance only has our endeavor been fully satisfied. The subjoined letter tells us that both the writer and Prof. Agassiz compared the two together and pronounced them identical:—

CALAIS, Me., Sept. 8th, 1875.

EDITOR FOREST AND STREAM:—

I have compared the winninish of the Saguenay with the land-locked salmon of Maine, *salmo gloveri*, and think them the same. Some years ago, some of the Saguenay fish were sent to Cambridge. Prof. Agassiz, Mr. Putman and myself compared them, and Agassiz thought them the same. I have no doubt that the *salmo gloveri* is quite common in most of the rivers about the Bay of Fundy, as well as along the State of Maine, and when taken have been called the young of the sea salmon. Unless you have both to compare, it is not easy to tell the difference. They have been examined as to all their measurements so scientifically, their markings, etc., which I have no doubt you have seen, that it is not hard to tell the *S. gloveri* from the true salmon. The number of vertebrae differ—fifty-nine in the salmon to fifty-seven in *S. gloveri*, a double row of small teeth in the vomer of the young salmon, a single row in the smolt of the *gloveri*. Some of our English fishermen thought our fish the same as the European *S. trutta* and *S. cambricus*. Some specimens were sent to Dr. Gunther, F. R. S., of England, who pronounced them different, and nothing to do with the sea salmon. I do not understand how they ever got the name land-locked salmon, as they always had access to the sea, and in my boy days *S. gloveri* was common to the tide waters, and more often taken as far down as there were fish weirs. They have been identified in several of our Maine rivers, also in Lock Lomond and Mespeck, N. B., in Nova Scotia, in St. John's Lake, Grand Lake, Salmon River, and Pockwock Lake, and I have no doubt it will be found in many of the rivers of clear water coming into the St. Lawrence, and when caught are called young salmon. I have seen specimens of *S. gloveri* caught on our rivers that weighed ten to twelve pounds. The large fish seldom take fly or bait, but keep in the deep water.

GEO. A. BOARDMAN.

This is well, as far as it goes. However, our data are meagre enough, and it is probable that little definite and convincing information can be gathered at present. Very few of those gentlemen who are familiar with the winninish, have ever seen the other; and *vice versa*. It affords us some gratification, however, to know that Mr. B. F. Bowles, of the Springfield (Mass.) *Republican*, who visited the Saguenay this past Summer, and caught "ouininish," or win-o-nish, or winninish, has undertaken to secure specimens and by sending them to Prof. Baird, to settle the question forever. We copy from a private letter from that gentleman:—

SPRINGFIELD, Mass., Sept. 7th, 1875.

EDITOR FOREST AND STREAM:—

I have killed the Schoodic salmon at Grand Lake stream for three seasons. When I was not actually fishing or killing skeeters, I was pawing over and admiring these fish, which so delight the eye and the heart of the angler. I killed the win-o-nish—I like this orthography better than yours—at the headwaters of the Saguenay this season for the first time. I have never seen the two fish side by side; I have never articulated either, except with a knife and fork on my plate. My examination of the two fish, therefore, has been nothing more than a critical one as to their place of habitation, their manners and customs, their action, as relates to the sport of killing them, and a careful scrutiny of their external features. Now, if you deem these grounds sufficient to enable me to give an opinion, you have it for what it is worth. I believe them to be one and the same fish. On comparison side by side, very slight variations may be discovered, but I do not think there will be sufficient to construct a different variety.

I have sent to a friend at the headwaters of the Saguenay for specimens of the win-o-nish, to be sent to Prof. Baird, and confidently expect they will reach him soon, and then we shall know in full what we know now in part. Yours, B. F. BOWLES.

THE WESTERN MUD FISH.

FERNSBURGH, Vt., Sept. 10th, 1875.

EDITOR FOREST AND STREAM:—

Will you please give me the scientific, and also the common name of the fish whose portrait and description I enclose with this? I have never seen any description of him which I recognize. He is a worthless fellow, or at least is so considered by almost every one, though some pronounce him good when salted. He is known here as the "bow fin." There is some fun in catching him, for he makes a vigorous fight, though not a very long one. He inhabits our sluggish, marshy streams, and is caught most in the latter part of Summer and early Fall, when he bites freely at worms, frogs, or minnows, alive or dead, and sometimes at the trolling spoon. He not infrequently attains to eight, ten, and sometimes twelve pounds weight. Yours truly, W. E. ROBINSON.

This fish, of which your drawing is remarkably correct, is the Western mud fish (*Amia occidentalis*). It belongs to the genus *amia*, of Linneus, the characteristics of which are: small paired teeth behind the acute conical ones; head flattened, naked, with conspicuous sutures; twelve flat gill-rays; dorsal long; anal short; air bladder cellular, like the lungs of reptiles. The Western mud fish is in color brown; elongated; lateral line, tubular; tail unspotted; length two feet. "The only species," says DeKay, "as yet described, is the *Amia calva*, which is found in Lakes Erie and Ontario." Dr. Kirtland speaks of it as the dogfish, and says that in Lake Erie it is frequently called the "lake lawyer." It is distinguished by its ferocious looks and voracious habits. The flesh is rank, tough and uneatable. To the angler it is a troublesome nuisance, often breaking their hooks and lines. As yours is the only description we find of the *A. occidentalis*, we print it, remarking that Dr. Richardson's description of the *Amia ocellicaudal* of Lake Huron, is identical with it, and that they are undoubtedly

one and the same fish: "*Amia occidentalis*, Vermont—Back greenish black; top of head, do; gill covers, yellowish green and olive: sides dark olive, fading to yellowish white on the belly; dorsal fin (47 rays, soft) and caudal (20 rays) dark olive; pectoral, ventral and anal fins, lighter; a jet black oval spot encircled by a narrow border of golden yellow at base of upper half of dorsal; branchiostegous rays, 11; a range one-half inch wide on upper jaw of smallish, slightly curved, sharp teeth; on lower jaw a row of similar teeth, behind which is a band of very small ones. Length of this individual, 22½ inches, weight, 3½ pounds. Much larger ones are often caught."

THE SPOTTED LAMPUGUS.—Among the novelties to be seen at Mr. Blackford's this week is a fine specimen of that excellent, rare, and beautiful fish, the spotted lampugus (*lampugus punctulatus*), caught by the smack Wallace Blackford while bluefishing. De Kay, who mentions but one specimen of this fish as having come under his observation, describes it as sea green in color above the lateral line; silvery on the sides, with metallic reflections on the opercles; pupie black; irides yellowish; dark reddish brown stripes across the head; a series of distant rounded spots along the base of the dorsal fin, the last ten or twelve rays of which are somewhat elevated. The spotted lampugus is a tropical species and its farthest range hitherto discovered is the latitude of New York, the present one having been taken off Sandy Hook. In comparing with a fine specimen of the dusky balistes (*balistes fuliginosus*) or trigger fish, so called on account of the first dorsal setting as a trigger. It will be sent to Prof. Baird for preservation. Another extremely rare specimen received by Mr. Blackford this week is the black pilot (*palinurus perciformis*). In 1815 several dozen followed a ship into New York harbor and one of them was taken at the wharves with a hook and line. It is sometimes called the rudder fish, and has been taken at Shrewsbury and on the Massachusetts coast. The fishermen call it the snip-nosed mullett.

PINNATED GROUSE IN ENGLAND.—Our readers have been informed of the recent latest effort to introduce the pinnated grouse into England and Wales by transportation of the eggs. The eggs were forwarded by us for Mr. Richard Valentine, of Wisconsin, in two lots—one lot to Mr. Frank Buckland, of London *Land and Water*, and the other to Mr. R. J. L. Price, of Bala, Wales. Mr. Buckland's acknowledgement is printed in our issue of August 12th. To-day we have this very courteous note from Mr. Price:—

RHIFLAS BALA, Merionethshire, North Wales, Aug. 26, 1875.

EDITOR FOREST AND STREAM:—

I notice in your issue of August 12th, 1875, a paragraph in reference to some pinnated grouse eggs sent to me by Mr. Richmond Valentine. The same gentleman was kind enough to forward a quantity last year, but in both cases the eggs arrived either addled or with dead chicks inside them. I fear that the distance is too great to admit of eggs from America arriving in England in a state fit for hatching, unless perhaps very great care was taken only to choose fresh laid ones, and those packed immediately tight in ice, although it is possible that full-fledged chicks, if very carefully tended on board steamer, might reach their destination alive. I can do no less than ask you, through your valuable columns, to express my gratitude to Mr. Valentine, and my extreme regret that we have failed in adding to our too small list of British game birds the beautiful American grouse. Should I ever visit your country I shall hope to call on Mr. Valentine and personally discuss the matter with him; also to witness some of the Bench Dog Shows and Field Trials, which seem to be getting more common across the Atlantic.

Your obedient servant,

R. J. L. PRICE.

A STRANGE FISH.—Mr. H. W. Johnson, of the Marine and Fisheries Department, has presented to the Provincial Museum a large sized specimen of the *Physalis pelagica*, or Portuguese man-of-war, as the strange thing is called by sailors. It was caught off the mouth of the harbor yesterday morning. Its body is oblong, and consists of an air sack, so constructed that the creature floats on the surface of the sea. It has numerous appendages hanging from its sides. With these it procures its prey. Some of these appendages, it is said, are capable of extension to twelve or eighteen feet, and they possess a remarkable stinging power. It is a common trick with sailors to make a novice pick up one of these fish, whose beautiful colors always attract attention; the novice is sure to receive a sting, not merely a local pain, but one to produce constitutional irritation.—*Halifax (Nova Scotia) Herald*, Sept. 4th.

IS THE YELLOW-BILLED CUCKOO PARASITIC?

EDITOR FOREST AND STREAM:—

The question whether any of our American cuckoos are parasitic, like the European species, I believe has been decided in the negative. But this Summer I made some observations which lead to the contrary opinion. While on a visit to Farmington, Ct., last June, I spent several days collecting, and during that time I found five nests of the two species of cuckoo—one of the yellow-billed cuckoo (*Coccyzus americanus*), and four of the black-billed, (*C. erythrophthalmus*). The first, found on June 6th, was placed about five feet from the ground in a small poplar, and contained a young bird, just hatched, and three eggs. The identity of the species was certain, as the old bird did not leave the nest until almost touched with the hand, thus giving a good opportunity to observe her. The next day I returned to it and found the bird on the nest, but the young one and one of the eggs gone, the nest and ground covered with feathers of the old bird. It looked as if a fight had occurred; whether between two of the birds or a cat I could not decide. On visiting the nest again three days after, the old bird was gone, the eggs were cold, one of them broken, and with these two was a perfectly fresh egg of the yellow-billed cuckoo. This egg was larger and much lighter colored than the others, and could not be distinguished from three fresh eggs of the same species taken with a nest the day before. The measurements are as follows: No. 1, (that of the yellow-billed, 1.20 by .94 inches; No. 2, 1.04 by .85, and No. 3, broken, but in size like No. 2.

FRANKLIN BENNER.

—Big Jones had to laugh when he saw a hen fly out from a hay loft on to a barber's pole, and yell out "cut-cut-cut-har-cut!"

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, }
NEW YORK, Sept. 13, 1875. }

Animals received at Central Park Menagerie for the week ending Sept. 11th, 1875:—

Three Pea Fowls, *Pavo cristatus*. Presented by Master Robbie Shannon.Two Pekin Ducks, *Anas domesticus*. Presented by Mr. James E. Sisson.One Bonnet Monkey, *Macacus radiatus*. Presented by Mr. William O'Connell.One Mexican Deer, *Cervus Mexicanus*.One Hog Deer, *Hyelaphus porcinus*. W. A. CONKLIN, Director.

Woodland, Farm and Garden.

PEACHES FOR EUROPE.—The steamship Ohio sailed for Liverpool from Philadelphia on the 26th ult. with a cargo of 2,400 crates of Delaware peaches. The steerage of the ship was turned into a refrigerator and lined with ice, a current of cold air being kept constantly in motion by means of fans connected with the machinery, but the experiment proved a failure—probably because the ice gave out three days after the steamer left port and seven days before arrival at Liverpool.

SEPTEMBER:

THE MONTH AND ITS DUTIES.

"Thou waitest late, and com'st alone,
When woods and bare and birds are flown,
And frosts and shortening days portend
The aged year is near its end."—Thomas Moore.

AS we journey on, the months swiftly glide on their way to complete the cycle of the constellations, and each in its time takes its place in the Zodiacal circle. Another sweet season of buds and blossoms has appeared and is now passing in all its loveliness, casting over our earth its many blossoms of beauty and sweetness. The ripening leaves are even now reminding us of the days of Autumn's fruits; they are at this early time parting with much of their deep and cooling greenness, and the russet tint, the golden and crimson band are even at this early day seen as heralds of the tints and varied beauties of Autumn's fullness. Soon our fruit season will be upon us. Pomona, with her horn of plenty will pour her rich profusion of fruits of all kinds at our feet. Our eyes will be gladdened with the peach, the plum, the nectarines, melons and all the many delicious fruits of the season. These in their time will abide with us for a while, giving us new and varied blessings; bringing with them new and instructive lessons of the skill and devotion of the gardener and the horticulturist for the gratification and pleasure of man. Every year adds to the usefulness, and gives value to the mission of the scientific gardener. He works slowly and carefully, it may be, in the great laboratory of the earth, but he brings forth as the results of his application and carefulness the most astonishing results. Therefore, to the educated and skillful gardener we must look for those timely hints given "in season and out of season," as well as forethought and suggestions of what we are to do to-day, as well as to-morrow and next week. You have a fine garden we will suppose, well attended, and well cultured; within its ample domains the lily and the rose are blended in richness and beauty. Here winding walks lead you to scenes of almost tropical beauty; you lose yourself amid the tall ferns, and you repose amid the purling murmurs of woodland streams, you rest yourself beside the clear, sparkling waters of a beautiful lake, or gaze in admiration upon the miniature cataract as it flings its silver waters into the basin below. All this is yours to command, and you can say "this is all mine, this beautiful garden, the golden fishes, this sunny lake, the flower bedecked island, this enchanted spot—all are mine!" We wonder not that you love it—we should do so if we owned it.

We who can share with you all these mosaics of earth, rejoice also with you in contemplation of them. Yet love them as we may, we cannot linger longer with them, and regretfully bid them adieu to enter the more secluded Autumn walks. Autumn has its demands upon the landscape artist and practiced gardener; and we have now to call your attention back from the golden tinted month of flowers just past, to the sere duties of the months to come. There is no season so favorable as Autumnal September for the re-arrangement, or making over anew of the beds for herbaceous plants, such as the hollyhocks, pœnies and the like. Now, while you are preparing your beds for the reception of the above roots, it will be found a very good time, and a saving of time can be made if you now divide the roots of all the tribe, and all your hardy bulbs. This is probably the best time to do it. Divide your lilies and all bulbs, and replant out at this time. You are to remember, also, as a rule, that all beds of hardy bulbs, such as the hyacinths, tulips, &c., are to be completed as soon as the Fall bulbs (last of Sept.) can be had of the importers and florists. This is the month *par excellence* for our amateur and practical gardeners, ladies as well as new beginners, to do all they can for next year. To our lady friends we would say a word in passing, and that of encouragement to those who have been among our friends, patrons and readers of the FOREST AND STREAM from the commencement. Our efforts to serve you will be redoubled as the weeks of the new year roll on.

Now, as our Autumn is upon us, you will cast your eyes forward a little towards the colder months. Winter will soon be here, and now we are to look to these things of Autumn that Autumn demands. Autumn says to you: "Will you plant any bulbs for the coming Spring?" "I love blossoms of sweet flowers," say you. "Well plant out the bulbs now, do not wait until cold weather; do not even wait until next month if you are ready to do it to-day, to-morrow, why not do it?" It will be very important, sensible work, to dig up and finely pulverize any old bed in which you propose to renew the coming Spring. This will

save you much time, and a bed, nicely dug up and prepared for Spring planting looks better thus than when covered with the dead stalks of last Summer's flowers. As every season hath its charms, so every season hath its duties also; and the duties for this September month is to do as much as you possibly can for the month of April next. You can now prepare seed beds for and plant many kinds of seeds for next Spring, particularly the "self-sowing" kinds, such as drop their seeds profusely in Autumn, and which spring up early the next Spring—among them we place the clarkias, nempholias, larkspurs, sweet allysium, candy tuft, portulacas, pansies and Chinese pinks. These when sown need only to be protected by a covering of which pine boughs or sprigs of hemlock thrown over the beds in Winter and removed in the Spring, when they come forth bright, green and lovely.

H. D. L., New York.—Will you oblige an old reader of the FOREST AND STREAM and give your advice as to the cultivation of the *Passiflora*, otherwise known as the Passionate Flower Vine? I propose planting the seed in a large pot, and by keeping the same in the house during the cold months to raise plants sufficiently large to have flowers next season, but don't know what treatment is necessary during the Winter.

Ans. There are several varieties of the *passiflora* differing in characteristics. The more delicate kinds will require a great deal of warmth, while the common variety is hardy and can be kept under glass without artificial heat. Water every day; in other respects the treatment is the same as with other potted plants.

The Kennel.

THE GIANT BREED OF SETTERS.—H. C. S., a correspondent in Bridgeport, Conn., informs us that Mr. John Walker, of that city, had a thoroughbred setter that measures 31½ inches in height at the shoulders. Length of head, 11½ inches; around the head, 1 inch back of the eyes, 19½ inches; around the body, back of the shoulders, 33 inches; length entire, from tip of nose to stern post, 55 inches. Our correspondent inquires if giant dogs like these are a strain by themselves, or whether they "just happen that way." We know of no strain of such large dogs, but have known dogs to grow to an immense size when they have been kept about slaughter houses and fed all the meat they would eat.

—We are in receipt of a letter from Mr. E. L. Francis of West Stratford, Conn., informing us that the splendid setter bitch "May," imported by W. A. S. Hubbell, was poisoned last week, and died on Thursday evening, leaving eleven whelps eight weeks old, sired by Marshall's red setter "Rock."

—One of our wool-growing readers suggests that the reason why so many dogs have died recently, is because the mutton they eat is "pizen."

SINGULAR BIRTH.—A correspondent at Janesville, Wis., sends us the following account of the remarkable manner in which his setter bitch recently gave birth to a litter of puppies:

"I keep Gyp at the club house, and last week while she was whelping was on the dock jumping the other dogs in the water. Gyp hearing the noise left her kennel and came out on the dock, and before I could prevent it, was in the water with the other dogs and swimming about. After a while she waded out, but when still about fifteen feet from the shore I noticed that she squatted down on the water. We rubbed her dry and returned her to her kennel. I thought nothing more about the matter, but an hour afterwards the club house man in passing the spot heard a faint cry, and on investigation found a puppy just crawling up the bank. The little thing must have swam fully fifteen feet, and is now as lively as any of his brothers. We named him Moses on account of his fondness for bull-rushes. Two pups were born after this one, making seven in the litter, and as fine a lot as I ever saw.

RICHARD VALENTINE.

ANOTHER CURE FOR HYDROPHOBIA.—A correspondent in Washington, D. C., sends the following:—

"I see in your issue of September 2d an article on the use of chick weed and clacampine in cases of hydrophobia, and thinking that another remedy may be the means of doing some good, I here give it; it is simply a tea made of skull-cap, (*Scutellaria lateriflora*.) This was used by a former physician of New York city, and who is well known there, on a gentleman living near Alexandria, Va., who was bitten by a dog showing every symptom of the hydrophobia. The gentleman is still living, while dogs that were bitten by this same dog died with hydrophobia. He also remembers the case of Mr. Luther Hersey, of Cummington, Mass., who was bitten by a dog supposed to have the hydrophobia, as were also a hog and a dog. The hog and dog were kept penned up, and died with the hydrophobia. Mr. Hersey used skull-cap, and lived over forty years after he was bitten. Skull-cap may be bought at almost any drug store, either in ounce packages or in fluid extract. When using it in ounce packages make a tea as strong as our ordinary tea and give two tea-cupfuls a day. In using the fluid extract take a tea-spoonful to a tea-cup of water. Give twice a day. It should be used for at least three weeks. One thing must be distinctly understood—that no case of hydrophobia can be cured after the spasms and frothing at the mouth have set in; therefore it is necessary that whatever is done must be done as soon after the person is bitten as is possible. B."

MR. LAVERACK AND TRUE COLORS.

DELAWARE CITY, Del., September 2d, 1875.

EDITOR FOREST AND STREAM:—

Breeding dogs, horses, cattle, pigeons and chickens, in my opinion, is just as much a science as is chemistry, astronomy, geology, etc. The rules applied are just as positive and uniform in their results, and if they are departed from the result is sure to be contrary. Mr. John M. Taylor, (FOREST AND STREAM, July 29th, 1875,) certainly deceives himself when he predicts the deterioration of the Laverack setter unless Mr. Laverack discloses all of his system of breeding. We would ask, has not Mr. Llewellyn improved Mr. Laverack's setters by a Gordon cross? General average results say so. No man in Europe has had better opportunities (or is better qualified,) to judge of the Laverack setter as a class than Mr. Buckell. He has handled many of Mr. Laverack's own breeding and bred them pure himself; he (Mr. Buckell) pronounces the Field Trial superior to the pure Laverack, and for work says they

are the best he ever saw, but that the Irish (by Irish he means the red Irish,) run them very hard. Another reason why the cross is to be preferred is the *extreme mortality* among the young dogs. Mr. Buckell says "I do not believe, counting puppies and all, there are at this minute 100 pure Laveracks in England, and I am sure every year will lessen the number. Out of thirty-one of this breed Mr. Llewellyn has had in his kennel sixteen have died, while five were only kenneled for a few weeks and then sent off again. These are statistics; they serve to show what those who go in for breeding Laverack setters quite pure must expect. I do not care to discuss the merits or demerits of any particular strain of dogs only so far as they are useful in illustrating my "hobby," "the breeding of dogs." It has always been an enigma to me how from one pair of dogs and their progeny, and they both blue Beltons, Mr. Laverack could produce almost every known setter color. Color is an unmistakable mark of purity. When bred to color, (such as the red Irish, black and tan, Gordon, etc.) an accidental connection with a dog of impure breeding or of a different color will tell its own story. Mr. Laverack at one time bred from a bitch belonging to a Mr. Walker (pure Laverack) five red whelps in a single litter, supposed to be by his black and white dog Jet. I think I am correct in saying that this same dog Jet before and since this litter has *always* failed to produce a single red whelp. Mr. Buckell says, "I have had some of these red ones to try, but they were returned because we could not discover in them the characteristics of the rest of the breed." He also says that he doubts the purity of these red dogs, and so would any one who has bred setters *observingly* for any great length of time.

Mark the first appearance of these red dogs; (Mr. Buckell says they they were red Irish color,) both sire and dam bred through a period of forty years or more without a trace of this color in their pedigree, and behold in one litter five red whelps. Next comes the liver and white ones, how many in the first litter I don't know, but I do know that these liver and white ones throw their own color amazingly thick considering, and I predict that by breeding from none but the liver and white get of Pride of the Border that it will take a less number of generations than seven, (which is his remove from Ponto and Moll,) to make the color exclusively liver and white. I don't wish it understood that I am trying to dispute the purity of Pride—not at all; he has proven his royal lineage in the stud. The purity of a dog is better judged by his get than by his performances; in his get you may have dozens to judge by while he is but one; he may carry all before him both on the bench and in the field and yet be a grand imposter; we have had several such *public* examples. What I do mean to say is, that Mr. Laverack made a mistake in publishing the sire of Pride, (which also changes the color,) through a defective memory, and that it is just as probable that he has made a mistake in some other of the dogs or in their color in Pride's pedigree, which would account for the liver and white. Mr. Hope, in commenting on Mr. Burges' letter on "True Color in Setters," says that he (Mr. Burges) mistakes the cognomen of black and tan Gordon for Gordon setters, and red Irish for Irish setters. I do not understand him so. Mr. Hope might as well say that Mr. Burges believed that Irishmen were not allowed to breed any other than the red setter. The red setter, of course, is not the only color bred in Ireland, but this red setter is the dog which has made Ireland famous for her setters. When pure he breeds true to his color; you can't put hound, colly, spaniel, or what not into his blood (unless of the same color) without its showing itself. There is no doubt that this is one of the reasons why he has been kept pure. In all of the works on dogs where the Irish setter is mentioned this is the dog meant and *generally* understood. So also the Gordon; all of the Gordon setters with a public record were black and tan. The Duke of Gordon bred black, white, and tan dogs by crossing with black and white stock, but they were not so famous as the black and tan, and by common consent, (as in the case of the red Irish,) the black and tans only were understood as Gordons unless qualified. In my experience I have never known the dog to fail in marking some of the litter after his own color, and often more than half of them. On two occasions all of the litter were marked after the dog; one of these litters contained eleven whelps and the other eight. Let who will try it, they will find it an impossibility to breed to color by the selection of bitches. Whelps *very seldom* throw back to the bitches color. I mean to the grand dam or great-grand dam, when they do, the dam, whose color they throw, was well (or long) bred to color. Many are the slips in pedigrees which would not happen were color adhered to. The most expert dog breeders cannot always distinguish the long-haired dropper from the setter, or the setter and water spaniel cross. So well do these three dogs, (setter, pointer, and water spaniel,) cling to their physical characteristics that frequently the sham is not discovered until they are taken into the field, and *sometimes* not until they are bred from. I can call to mind a number of cases as evidence, but will give only those cases which can be proven by the living dogs and owners.

	{ Jerry, (setter dog.)
Steel Hammer.....	{ Ned, (setter dog.)
	{ Flora.....
	{ Nig, (water spaniel bitch.)

This Steel Hammer, you will see, is three-fourths setter. His hair is as long and nearly as curly as the bitch Nig, and is nearly as good a specimen of the water spaniel. This dog has a full brother who is as well marked after the setter; but how about the get of these so-called setters and spaniels? They have no progeny to my knowledge, and I hope for my country's good that they never will. Known laws which govern the breeding of animals were discovered in exactly the same way that chemical and mechanical laws were, by experiment and observation. In breeding dogs many laws have been discovered, and many more will be discovered. Let the experience of each be given for the benefit of all in well authenticated cases, but let no man's theories, dogmas, or experience, because it happens to differ with ours, lead us to forget ourselves in the use of ungentlemanly personalities. Yours truly,

M. VON CULIN.

LAVERACKS IN AMERICA.

CRAIG OF DOUGLAS, BY SELKIRK, Scotland, August 28th, 1875.

EDITOR FOREST AND STREAM:—

I saw in the FOREST AND STREAM a statement that there were only three pure Laverack setters in America. At the request of the owner of one I write to say that Pickle, the property of C. Demuth, Esq.; Victress, the property of L. H. Smith, Esq., and Carlowitz, in the kennel of the same gentleman, are all pure Laveracks, and, unlike one of those named by you as the only three in America, they have no "Mystery" blood in them, a cross which is not admired by most breeders in this country. I have never seen it stated in any American paper that Fairy, when the property of Mr. Llewellyn, won first at Bangor and second at the Birmingham dog shows, facts which Mr. Raymond may like to know. I cannot agree with a correspondent of yours who declares none are Laveracks except those bred by Mr. Laverack himself. Not one of the most successful Laveracks of the last few years was bred by Mr. Laverack, but by Mr. Pilkington, who bred Rock and Dash II.; Mr. Llewellyn, who bred Phantom, Petrel, and Princess, and Mr. Dickens, who bred Peter. Pride of the Border has been successful in America, but in this country he never won a prize, although often exhibited.

I believe no one besides Mr. Laverack and the three gentlemen named has ever bred a good and successful Laverack setter. There are two reasons against breeding them:—First, every one knows they require fresh blood; second, it is nearly impossible to breed them owing to their excessive weakness when young. Yours faithfully,

G. T. TEASDALE-HICKELL.

THE MANCHESTER DOG SHOW.

PORTSMOUTH, N. H., September, 1875.

EDITOR FOREST AND STREAM:—

I wish to make a few remarks in regard to the Bench Dog Show at the New England and New Hampshire State Fair, of which I was a close observer. It would have been much more attractive had more of our sporting friends owning good dogs taken interest enough to have shown

them, although, as it was, the show was a grand success, and its management by Mr. Clark, of Manchester, could not have been better. Some very fine dogs were shown, and for the interest of sportsmen I will speak a few words in their favor. The celebrated Dick and Shamrock, two very fine red Irish setters, owned by Mr. Jarvis, were the winners of the first and second prizes in their class, and they were well worthy of the same, Shamrock taking first prize, Dick second prize. Don, a black and white Gordon setter, owned and shown by Dr. Wheeler, of Manchester, was a fine looking dog and called one of the best broken dogs in the field. Don was winner of the first prize in the class. Snipe, a native setter pup, sixteen months old, owned by P. H. McGuire, of Salmon Falls, N. H., very promising and showing some good marks, was winner of second prize in his class. Bounce, a fine Laverack and Irish setter pup, nine months old, owned and shown by C. H. Loud, of Portsmouth, N. H., was bred in California by his owner from pure imported stock, having a pedigree tracing him to the best kennel in England. Bounce was winner of the first prize in his class. Mr. Loud is about importing a pure Laverack bitch for the purpose of breeding his Bounce. Grouse, in the opinion of all sportsmen at the show, was one of the handsomest pointers ever exhibited. Grouse shows all the good points of his breed, has had a very careful and perfect training, and is one of the staunchest pointers I ever shot over. He was trained by his owner, our forest champion. Grouse was entered by Youatt Potter, of Manchester, N. H., and is owned by J. S. Sides, of Portsmouth, N. H. Grouse was the winner of the first prize in his class. We have some very fine dogs in Portsmouth which ought to have been on the bench at Manchester: Dandy, a fine brown colored pointer, owned by James Carroll, well broken under the care of his staunch master; Lem and Joe, two fine setters, owned by Capt. Eastman, of the United States Navy; they are fine bred dogs, and well broken; Dandy, an Irish setter, owned by John Sides, is a fine dog, and would have stood a good chance for a prize had he been at the show; Dash, a fine liver and white pointer, owned by W. Young, shows very fine marks, and ought to have had a chance on the bench; Dash, a fine black and white setter, owned by Capt. Nelson, United States Navy, is a very powerful dog with plenty of bottom, and good for a long hunt.

QUAIL.

SALEM, Mass., Sept., 1875.

EDITOR FOREST AND STREAM:—

A visit to the Dog Show at Manchester, N. H., gave me the following impressions: In the red setter, or Irish class, only two dogs put in an appearance—one of Mr. Wm. Jarvis' of Claremont, N. H., Shamrock, who took first prize, and the other, his old Dick, who took second prize; both were very nice dogs, and Shamrock's pedigree traces to Plunkett on both sides. I should have liked him a little deeper red, and without any white, but his owner said he was shedding his coat, and therefore it had not that evenness of color so desirable. Notwithstanding they had no competitors, the verdict as regards prizes would probably have been the same, for both Shamrock and Dick are able to win in the best company. The other setters were ordinary, excepting a rather pretty pup owned by a Mr. Loud, of Portsmouth, N. H. He seemed lively and bright, and his owner said he was part lemon and white Laverack, and showed me the pedigree, which seemed very fair indeed. In the spaniel class one little liver and white bitch (cocker) seemed the right sort. She took the first prize for bitches and her color was marked—Kilteary, Maine. I think she was imported. The pointers were about the same as is usually seen, except a small liver and white flecked one, owned by John Sides, of Portsmouth, N. H. He was of the small breed, but had an honest, tough look, with a fine eye, and was shown in very fine condition. There were quite a number of sheep dogs, or collies, but none of them had the coat that "Stonehenge" says they should have; but I should not like to judge them hastily, as I have never seen many of them, nor paid any attention to the breed. A very fine mastiff named Samson, said to weigh 160 pounds, seemed the right sort. He was fawn with black muzzle, the only objection to him being his head which, from his eye to nose, looked too short; but he was not underhung. A fine tawny St. Bernard, nearer "Stonehenge's" description of the true rough breed than I have ever seen. The only other noticeable dogs were a pair of Scotch greyhound pups, one light and the other dark brindle, both legitimate colors and nice looking pups. The show was not as large as I had hoped, but still in each class there was certainly one good type of the breed, and that part of the fair seemed to be always crowded, and certainly was a good beginning. Mr. Clark and Mr. Jarvis were present most of the time, giving information to all and answering questions and receiving all criticisms with pleasure and urbanity. Dr. Rowe was not able to be present to read his paper on dogs, which was a disappointment to a good many. Now that we have got started in New England on dog shows, I do hope that this Winter we shall have a show at or near Boston that may approach, in the dogs shown and interest taken, some of the English shows. So mote it be is the wish of

DRY LAND.

DOG FARES AND THE NEWARK SHOW.

MARLBORO, N. J., September 11th, 1875.

EDITOR FOREST AND STREAM:—

I forwarded by express Don, one of "One-eyed Sancho's" pups, to a friend of mine at Burkeville, Va. He writes me the express charges were \$9.50, a pretty large amount, I take it, for that distance. In this connection I am glad to see the efforts your paper has successfully made in the interest of traveling sportsmen for the reduction and abolishment of dog fares. It is my experience that where the officials of railroad lines are sportsmen all charges, if any, are moderate and reasonable. Myself and friend in the Fall of 1862 had to pay from New York to Washington, D. C., a charge of \$9 on two dogs, and the trouble and responsibility of their attendance was thrown upon us in the smoking car. My objection to this was I did not smoke, but on account of my dog was obliged to stand it all the way through. I have since come to the conclusion that there are no sportsmen in connection with this line as I hear of other complaints from good authority of a similar nature.

I am glad to inform you that my red Irish bitch Nell, the only living dog of this sex, (if not incorrectly informed,) out of S. Rodman's Dash, has just been introduced to Pride of the Border, and I am anticipating excellent and handsome stock from this cross. The red Irish and the Laverack strain, I am told, blend well together and make reliable and serviceable dogs.

I think the Bench Show of Dogs to be held at Newark will be eminently successful, as it is sustained by the best sportsmen of the State. I hope to be able to have a number of my dogs on exhibition at that time, and only wish it was in season to have a "field match" at the same time and place. In the field is the place to test the real merits of dogs for the use of practical sportsmen, and I sincerely trust that these trials will become abundant and central.

M.

MONTELLA, Wis., September, 1875.

EDITOR FOREST AND STREAM:—

In the report of the Bench Show at Watertown, N. Y., I noticed the entry of a Gordon setter bitch of fine stock, owned by J. E. Fisher, of Brooklyn, N. Y., and entered by the name of Plint. Will Mr. Fisher please send the pedigree of his Gordon bitch for publication in FOREST AND STREAM, as the pedigrees of good stock is a matter of importance to all sportsmen.

FRED.

[We shall be pleased to publish this dog's pedigree, as requested.—ED.]

—The Thirty-Fourth Annual Exhibition of the Queens County Agricultural Society will be held at Mineola, Long Island, on the 28th, 29th, and 30th of this month. The premium list is very large, and the celebrated stallions Blackwood and Dictator will be on exhibition.

A SEASONABLE QUESTION FOR NATURALISTS:—What is an equine-ox?

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

Land-locked Salmon, *Salmo gairdneri*. Salmon Trout, *Salmo conflinis*.
Black Bass, *micropterus salmoides*, *micropterus nigricans*.
Striped Bass, *Roccus lineatus*. Sea Trout, *Salmo immaculatus*.
Bluefish, *temnodon solitator*. Weakfish.

[Under the head of "Game, and Fish in Season" we can only speak in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—The severe storms of the past week have contributed to make fish scarce. Spanish mackerel are selling at 40 cents per pound; sea bass, 18 cents; striped bass, 25 cents; black fish, 15 cents; large weakfish, 12, small weakfish, 10 cents; halibut, 18 cents; cod fish, 10 cents; bluefish, 10 cents; eels, 20 cents; flounders, 10 cents; green turtle, 15 cents; scollops, \$1.50 per gallon; soft crabs, \$1.50 per dozen; hard crabs, \$4 per 100. BAIT.—Shedder crabs, \$1.50 and \$2 per dozen; shrimp, \$1 per quart; soft clams, 30 to 50 cents per 100; sand worms, \$2 per 100.

—On Sunday last a party fishing on the banks near Sandy Hook caught a large dolphin. Not knowing what manner of fish it was they took it to Mr. Blackford of Fulton Market, who, with his usual liberality and desire to further the interests of science and add to our store of knowledge, purchased it for Prof. Baird. It is probably the finest specimen of this fish in the possession of the Institution.

—Quite a number of the spotted lampurgus have been taken recently on our coast. The lampurgus closely resembles the dolphin in form and color, but the two are easily distinguished by experts.

—Advices from the Newfoundland fishery show that there has been no improvement in the catch, and many vessels have abandoned the voyage.

—The cod fishery at Labrador is announced to be a complete failure, and a hard Winter is anticipated for the fishermen.

—Mackerel are reported as striking in on Halifax shores. One day last week, at Ketch Harbor, 800 barrels were caught.

—The North Sidney, N. S. *Herald* of the 1st inst. reports large schools of mackerel outside their harbor.

—A species of fish called clam crackers have made their appearance in Skidaway River, at Isle of Hope, Ga., being attracted by clams which are planted on the beach. They are from four to six feet wide across the back and are spotted like leopards.

—The Pensacola *Gazette* says a party of fishermen caught in one hour on the snapper banks of Pensacola, two hundred and one of these noble fish.

—Our Rhode Island correspondent, "Shot," asks:—

"Have any of the chummers for blue fish tried a float in fishing. The idea came to me as I was having very poor luck some time ago (not getting my hook in the right place at the right time you know) to attach a cork to my line about a foot above the wire. I took in three blue fish in as many casts, and was not so much annoyed by the small fish tearing the bait from my hook. I wish some of the fishers would try it and report for the sake of the brethren.

—Valentine Bachman, while fishing near Indian Rift, up the Delaware, last week, caught a black bass weighing seven pounds.

—This item about salmon seining in Puget Sound looks marvelous, but is corroborated every year by similar catches. We quote from an Olympia paper:

"One company, consisting of citizens of Olympia, whose business is managed by Mr. V. Tull, and another known as Vining & Beinheimer, are catching salmon by the thousand at Mukelteo. The first company caught at one cast of the net, last week, 2,900 fish, of an average weight of 7 lbs., or about 20,000 pounds all told. Of course such a weight could not be hauled in, so the net was kept in place until the tide went out and then the fish were secured. Every available barrel and kit on the Sound has been secured, and every cooper is at work making more, and yet not enough have been secured to hold the fish as they are caught. The fish are of the variety known as silver salmon, and are as rich, juicy and fat as any salmon in the world."

OUR FISHERIES.—The number of arrivals of fishing vessels at this port, for the week ending Sept. 9, was 81, an increase of 18 over those of last week. They are classified as follows: 35 from Georges, 17 from the Banks, 27 from off-shore mackereling and 2 from the Bay of St. Lawrence. Mackerel still continue very scarce, and the news from the fleet is not of an encouraging nature. There is, however, time yet for the vessels to get good fares, ere the season closes, and this is most anxiously expected. The receipts of fish at this port during the past week, are as follows: Georges codfish, 564,000 lbs.; halibut, 16,200 lbs. Bank codfish, 1,700,000 lbs.; halibut, 150,000 lbs. Shore mackerel, 1,700 bbls.; Bay mackerel, 440 bbls. —*Cape Ann Advertiser*, Sept. 11.

NEW YORK.—*Chittenango*, Sept. 10.—Oneida Lake, Madison County, is a place which I will recommend for good black bass fishing. One day this week two men went out after 4 o'clock in the afternoon and caught twenty-four fish, averaging about four pounds, the largest weighing four and a half. This was at Lake Port, three miles and a half from Chittenango Station, N. Y. C. and H. H. R. R. SHEP.

VIRGINIA.—*Leesbury*, Sept. 8.—The bass fishing in the Potomac near this place has not been so good this season as formerly. The few caught, however, have been of larger size than the many of previous seasons. Maj. Murray, on Goose Creek, a tributary flowing into the Potomac near Edward's Ferry, caught 37 bass one day and 32 the next, and reports them to be increasing in that stream,

The Monocacy in Maryland muddies our fishing grounds often when the rest of the river is clear. I thought I would never tell a fish story, but to-day I hooked a fall fish, and in his first flutter a bass seized him and fought so well that I thought both firmly fastened. I landed the fall fish after some time, badly bitten, but lost the rascal that tried to swallow him. Please give me in your Answers to Correspondents the scientific name for fall fish. It is a handsome fish from 6 to 22 inches long, silvery white on the sides, with greenish tinge on back and white on the belly; has scales; 7 fins; 1 dorsal; 1 caudal; 1 anal; 2 abdominal; 2 pectoral; is soft rayed, with the caudal forked; rises to a fly; is gamy and good to eat; in small streams will continue to bite at fly, bait or wheat dough until all the school is caught. Is caught in the Fall of the year, and generally in swift water (some think the name is from their being caught near falls.)

T. W.

INDIANA.—*Connersville*, Sept. 6.—We have just returned from a ten day's fishing trip to Rome City, Ind., with (to us) remarkable good luck, our catch averaging about 40 pounds per day to two rods, using live minnows for bait. Fish caught principally black bass and pike; largest pike weighing 14 pounds; largest bass, 7½ pounds. They are often taken here much larger than this. Small fish, coppers, ring perch, blue gills, &c., can be taken so fast that the sport becomes wearisome. For the benefit of the angling fraternity I will say that Rome City, Ind., is situated 35 miles north of Fort Wayne, on the G. R. and I. R. R. The Lake Side House, kept by J. N. Berry, a true gentleman and thorough sportsman, affords good accommodation. By inquiring for "Fawn" Roby you will find a courteous and agreeable young man who will accompany you and point out the best fishing grounds, and who is well posted. There are fifteen lakes within a radius of five miles, which are all accessible from this place, the largest being six miles long by one-half to one and one-half miles wide. Duck shooting begins here about the 20th of this month and lasts until extreme cold weather sets in.

S. W. B.

⚔ A BOY'S TUSSELE WITH A SMALL WHALE.—A young friend of ours who has been spending the Summer at Libby's Neck, in Maine, writes the following account of his attempt to capture a blackfish, which is a species of whale. The boy is only sixteen years old, but has pluck enough for twice sixteen. We quote:—

LIBBY NECK, August 28, 1875.

EDITOR FOREST AND STREAM:—

I have had some very good fun fishing since I have been here, with both large and small fish. This morning I got up quite an excitement by striking a blackfish. There were three or four swimming about the bay, and everybody was watching them. After staying for an hour or so they disappeared, and everybody thought they had gone out to sea. I was sitting down on the bank by the water in front of the house when one came up within fifty feet from shore. I jumped up, and it was not long before I was in my dory with a sculpin spear, rowing after him. The water was so shallow that where he went he made a large ripple on the surface, so it was very easy to tell where he was. I headed him off, and kept driving him nearer shore until I got him in water about three and a half feet deep, and then he kept trying to get by me. At last he gave it up and made right at the dory, head first, and I thought I was in for a ducking sure, but I could not get out of the way. So I stood up and grabbed my spear, and when I saw him within about three feet I got ready for him, but just then he saw me and turned his side toward me and gave a mark I could not miss, and I drove the spear into his side, and I tell you there was some water flying for a minute. He swam off with the spear in him and went toward shore. I shouted to the fellows on shore for help, but they did not get there soon enough, for when he felt the shore he turned right about and went under my dory with the spear in his side. So he got off. I turned to row home, and out in the bay I thought I saw my spear. I went out, and there it was with the iron drawn out of the handle, and I guess that blackfish has got something to remember me by. The barbed part drew out of the handle, and is in the fish. The fish, I should judge, was about ten feet long, and if more boats had put out to help me we might have got him. I caught a pollock day before yesterday that weighed 21½ pounds, which is a pretty good fish. Mackerel have been plenty, but there are not many now.

CHAS. D. SANBORN.

THE MAGNETEWAN AS A TROUT STREAM.

TORONTO, Canada, August 23d, 1875.

EDITOR FOREST AND STREAM:—

I returned from Doe Lake last week, and, according to promise, send you a short account of my trip, in which I faithfully record my experience and my impressions. My party consisted of Major S., two sons of Dr. R., and my own three boys. We had made arrangements through Mr. Stenatt, who lives about nine miles to the west of Doe Lake, to have a commodious boat ready to transport us along the lake and the Magnetewan River; but to make sure of having one which we could manage without too much fatigue, we took with us from Toronto a light cedar, double sculled, one capable of carrying six or eight comfortably, and which proved very serviceable on the trip. In consequence of some defect in our telegram there was no conveyance ready at the Severn to transport our boat, and consequently Major S. remained over to bring it along the next day. I arrived at Rosseau about midnight of Monday, 26th July, stopped at Pratt's that night, and the next morning started with Marshall's team for Doe Lake. Our route was along the Nipissing Road for about twenty miles to Adams', thence on a road running eastward nine miles, to Stenatt's, near the head of Rainy Lake. It was near ten o'clock before we got off, and in consequence of this delay night overtook us about four miles from Stenatt's, and as there are no settlers along that portion of the road, we would have been obliged to camp out if we had not availed ourselves of the light of two of our camp candles. We were kindly accommodated at Stenatt's that night and the next day until Major S. arrived with the boat, which came safe and sound, notwithstanding the severe strain it had been subjected to over the terrific roads.

On Thursday we started for Doe Lake, nine miles to the east of Stenatt's, which we reached about noon, and where, after dinner on a beautiful sandy beach, we embarked in Bob McMichael's and our own boats for the Magnetewan. Four miles row to the north end of the lake brought us to the outlet into the river, up which we proceeded two and a half miles to the first rapids; but as the prospect for trout was very unpromising, we turned about, without landing, passed the outlet of Doe Lake, and descended the Magnetewan to the first rapids, about seven miles below, reaching them in time to get our camp nicely arranged before night set in. Our first approach to the river made it evident that we were on no trouting ground. From the rapids above, down to our camp, a deep, dark, dirty river, full of leeches and all manner of abominations, wound tortuously between level banks, about four or five feet high, with scarcely an appreciable current.

The rapids where we camped were about 150 yards long, with a fall of about 3½ feet. The rocks were covered with a dirty, slippery, brown moss—certainly a most unpromising place for trout. I had carefully chosen my ground high up on the river, with the reasonable expectation of these findings, if anywhere, my favorite sport; but the illusion was soon dispelled. We spent three days there, and as might be expected, found no trout—no, that is incorrect; we did get one, about

three-quarter pound weight, but that was all, and accordingly we struck camp, returned to Doe Lake and camped first on the northern end and afterwards about the middle of the northern part on the west shore, where we found bass and pickerel, and where we spent a very pleasant week. We made four excursions in hope of finding trout. The first one was to Ragged Creek, about half a mile above the upper rapids on the Magnetawan, where Champion, a settler on the north end of the lake, said we would get good trout. Here we found a little spring brook, about five or six feet wide, rushing over a rocky bed, and falling into the deep, dark, sluggish waters of the river. Where it joins the river there were traces in the slimy mud of previous fishermen. Here we took one trout, about 1½ lbs. weight, and by following up the creek as far as was practicable, I succeeded in getting half a dozen more, but small ones; so disgusted with the Magnetawan, we left, with the firm determination of never again wetting a line in its dismal waters.

We were informed by a hunter named Crooks, whom we met on the lake, and also by one named Haines, who lives near the outlet, that we would find good sport if we went up about ten miles, to Love Lake, an enlargement of the river; but I had had sufficient experience of the river to enable me to form an opinion as to its character as a trout stream, and I could not bring myself to believe that it was such in my sense of what a trout stream should be, and consequently did not think it worth my while to go further up. No amount of trout, if they really are there, would to my mind compensate for the dreary, dirty character of the river, which I felt sure must continue to its source.

We made three attempts to find trout in streams running into Doe Lake, but found none, excepting in Bear Creek, which we reached after a four mile tramp from the south end of the lake, and where, after hours of determined bush fishing, we took nine fish, the largest of which was about three-quarters of a pound. After this we contented ourselves with bass and pickerel. My young friends were blessed with an inexhaustible fund of good nature and good spirits, and we found enough about our camp to make the time pass pleasantly; so that we returned home after a three weeks' absence greatly invigorated and refreshed, despite our failure in trouting. If trout do not abound, deer do; for wherever we went we found traces of them in great abundance, although I fear from the number of hounds we came across at every settlement it will not be long before they are thinned out or driven away.

Yours ever, JAMES H. RICHARDSON.

PREVENTIVE AGAINST MOSQUITO BITES.

EDITOR FOREST AND STREAM:—

Having read of late many inquiries in your paper for a good preventive against mosquitoes and black flies, allow me to send you the following, which any druggist will compound. It has been used many years, and found to act as a perfect safeguard against these annoying pests: Olive oil, two ounces; camphor, two drachms; carbolic acid, one drachm; acetic, one-half drachm; oil cedar, one drachm; oil pennyroyal, one drachm. Mix.

BROOKLYN YACHT CLUB.—The regular monthly meeting of this club was held on Wednesday evening last, when it was reported that the new club house on Gravenstein Bay was finished and would be ready for occupancy in a few days. The date of the Fall regatta was fixed for Saturday, October 2d, which was also appointed for the opening of the new club house, when a dinner will be given to the members and their friends. The prizes won at the June regatta were then distributed. Capt. W. H. Langley received the club prize for schooners, a handsome silver breakfast set, won by the Comet. Commodore Dickerson took the flag officer's prize, a silver wine cooler, won by the Madeleine. Messrs. Brasher & Fowler, owners of the Undine, took a marine telescope as the prize for first-class sloops. The Scherer, Capt. Charles Hall, received a silver punch bowl, the prize for second-class sloops. Gen. Tom Thumb, owner of the Maggie B. received the flag officer's prize in this class, and in the third-class, the Wm. T. Lee, Captain Charles Cheever, and the Victoria, Capt. Thos. Fry, received the prizes. The prizes won at the Greenpoint regatta were not delivered, protests having been entered by the White Wing and Kate, against the Sadie, and the matter was referred back to the committee for final adjudication.

SCRUB RACE IN THE SOUTH COVE.—The cat boats had a fine race in the South Cove, Jersey City, on Thursday of last week. Messrs. Frank Bates, George Boyd and B. Byron were judges. The course was around the cove five times, making a distance of twenty-five miles. The boats were divided into three classes, and started as follows: First class—Ella, A. J. Martin, Four Brothers; second class—Tough, Only Daughter, Teresa; third class—Aunt Jerusha, Ed. Hunting, Three Brothers. In the third round the Tough broke her gaff and was withdrawn. The Ella maintained her lead throughout. The following shows the result of the race:—

FIRST CLASS.					
Name.	Start.	Finish.	Elapsed time.	Corrected time.	
	H. M. S.	H. M. S.	M. S.	M. S.	
Four Brothers	3 00	3 40 55	37 55	37 45	
Ella	3 20	3 38 55	36 55	36 53	
A. J. Martin	3 30	3 42 35	40 05	39 35	
SECOND CLASS.					
Only Daughter	3 40	3 42 40	38 10	38 10	
Teresa	3 50	3 48 46	43 46	43 41	
Tough	4 00	Withdrawn.			
THIRD CLASS.					
Aunt Jerusha	3 60	3 47 50	41 50	41 45	
Ed. Hunting	3 30	3 48 35	42 05	42 05	
Three Brothers	3 70	3 49 45	42 45	42 42	

The Ella wins in the first class, beating the Four Brothers 55 sec. The Only Daughter wins in the second class, beating the Teresa 5 min. 31 sec. The Aunt Jerusha wins in the third class, beating the Ed Hunting 20 sec.

SENACA LAKE REGATTA.—This event, having been postponed for one day on account of the roughness of the water, was commenced on Wednesday last. The lake presented an animated picture, a large concourse of people having assembled from Ithaca, where boating is now at

par, and other cities within easy distance. The wonderful glen of Watkins was deserted, the lake steamers were crowded with spectators, and steam yachts were whizzing about in every direction. Altering the programme slightly on account of the water being still a little rough, the six-oared race at three miles was rowed first. The contestants were the Cornell Universities crew, composed the same as at Saratoga, the Cornell Freshman crew and the Watkins crew. The University crew won in 19 min. 28 sec., and the Freshman last in 19 min. 48 sec. The second event was the junior single scull race, two miles—Robinson, of the Union Springs Club, winning in 14 min. 37½ sec.; Francis, of the Cornell Navy, second in 14 min. 49 sec.; and Lefman, of the Neptune club, third in 14 min. 54 sec. The third race, three miles, for four-oared boats, resulted as follows:—

Union Spring.	M. S.	Watkins.	M. S.
Stars (Rochester).	19 55	20 20	
	20 07		

A pair-oar race, two miles, between Ostrom and King, of Cornell, and Courtney and King, of the Union Springs club, wound up the day's sport. The Cornell men won easily in 14 min. 46½ sec., the Union Springs time being 15 min. 57½ sec.

On the second day the weather was fine and the water smooth. The races commenced with the single sculls for professionals, three miles, Gilbert Ward, Biglin, Daniel Ward, Kilsby, of Philadelphia, and Powell, of Pittsburgh. The latter won in 15 min. 52 sec., Gil Ward second in 16 min. 4 sec., and his brother 20 sec. behind. The second race was the amateur senior single sculls, between Francis, of Cornell, and Riley, of Staten Island; Courtney, the champion, not opposing, Riley won in 15 min. 10 sec. The professional pair-oar race, three miles with a turn, resulted as follows:—

Ellis Ward, Gil Ward—Cornwall.	M. S.		
John Biglin, Frank Kilsby—New York.	21 54		
Charles L. Smith, Frank P. Crouch—Rochester.	22 55		
	23 04		

The next was a professional four-oar race same distance. Two crews, Ward's and Biglin's, contested, the former winning in 20 min. 3 sec., Biglin's time being 20 min. 31 sec. The last race of the day and of the regatta, was a special match in single sculls, between Smith, of Rochester, and Daniel Ward. It proved to be the finest race of the regatta—neck and neck from start to finish—Ward winning by half a length; time 16:48. The prizes were presented to the winners in the evening.

CEDAR POINT REGATTA.—On Thursday last an interesting race was sailed in Westport Harbor, Conn., between yachts owned by gentlemen residing in that vicinity, the prize being a purse of \$50. The following contested:—

Isabel, Wm. R. McCready, Westport.	Feet.	Inches.
Ida, Capt. W. Meeker, Southport.	30	00
Mystery, John Sturges, Southport.	30	30
Louise, C. Street, Norwalk.	28	05
	25	02

The course was triangular and comprised a distance of about twenty miles. The Isabel took the lead at the start and kept it to the finish, winning the race in three hours, 17 min. 20 sec. corrected time. The Ida was second by only 56 sec., the Louise third and Mystery fourth. Messrs. Eli and Noah W. Bradley were judges and T. H. Nash, timekeeper.

QUEENS COUNTY YACHT CLUB.—The fourth annual regatta of this club will be sailed in Flushing Bay on the 29th inst. There are now 120 members, representing seventeen yachts in the Queens County Club. The following officers were recently elected to serve for the ensuing year:—Commodore, I. J. Merritt; Vice Commodore, J. Higgins; Secretary, W. Cheeseman; Treasurer, R. Wilets; Steward, Theodore Dummont; Committee on Regatta, Messrs. W. McManus, S. A. Seaman, G. V. Carl, Louis H. Watts, Louis Peck, Jacob Lang, and R. S. Munson.

—The Fall regatta of the Central Hudson Yacht Club was sailed at New Hamburg on Tuesday but our report reached us too late for this issue.

—The match between the yacht Madeleine and Mohawk was to have been sailed yesterday over the New York Yacht Club course.

—The regatta for the small yachts of the Atlantic Club, which was postponed from Friday last, will be sailed today.

ROYAL CANADIAN YACHT CLUB.—The annual regatta of this club was held at Toronto on the 6th and 7th insts. The principal event of the first day was the race for the champion flag and \$200, with a second prize of \$75. Six yachts entered, the Orioli, Lady Standley, Brunette, Ina, Annie Cuthbert and Dauntless. The success of the race was somewhat marred by the fact that two of the crew of the Ina, Colonel Shaw and the sailing master, Capt. Lee, were both knocked overboard, the Dauntless in each instance being the rescuer. The Annie Cuthbert was the first yacht in, but protests being entered by the owners of the Ina and Dauntless it was decided that the race should be sailed again on the following day, the Annie Cuthbert sailing for first prize against the Dauntless and Brunette, and the Orioli for the second prize against the same yachts. In the race for second class yachts the Surprise beat the Mazeppa and Jacqueline.

On the second day the Annie Cuthbert won the undecided race of the day before, taking the pennant and \$200. In the race for the challenge cup, the gift of H. R. H. the Prince of Wales, and the challenge cups presented by E. M. Hadder, M. D., the Commodore, eight yachts competed. The Orioli was awarded the Prince of Wales cup and the Commodore's cup for centre board, the Brunette the \$50 prize, and the Geraldine the Commodore's cup for deep draught yachts.

RED CAP REGATTA

TORONTO, Canada, Sept., 1875.

EDITOR FOREST AND STREAM:—

Knowing you take a lively interest in sports in all parts of the globe, I take the liberty of requesting an insertion in your valuable columns of the enclosed programme of the Balmy beach Red Cap Regatta. The beach named above is situated on the North Shore of Lake Superior, about four miles east of Toronto city. It was my good fortune to be one of those who received an invitation, the regatta being, in a measure private, being originated with and carried out by the gentlemen and ladies living in that delightful situation for the summer months. The afternoon was lovely, and the waters of the lake calm as a mirror. On arriving at the beach the banks and wide sandy shore were crowded with the elite of the city (the news of the sport having been unaccountably noised abroad) anxious to witness the several races. Of course the la-

dies race was the topic of the day, and a pretty sight indeed it was to see three double scull boats range in front of the judges' boat, ready to start, manned—if I may use the term—with the young and beautiful. On the gun being fired, off shot the boats together, the occupants pulling with a will for the mastery. After a very hard pull the Will O' the Wisp was declared winner. After the races an adjournment was made to a shady grove, where tables were spread, loaded with all the delicacies of the season, which were provided by the ladies. After keen appetites had been satisfied, the several prizes were presented to the fortunate winners by Mrs. Judge Wilson and Mrs. Dr. Winstanley, these ladies in each case making neat and appropriate speeches. The programme and result was as follows:—

FIRST RACE—Double Scull.—One mile, 1st prize, value \$50; 2d prize, value \$25. Entries, Bluebell, H. E. White, J. Wallis; coxswain, J. Brown; colors, blue and black. Water Lily, R. Winstanley, A. Winstanley; coxswain, G. Hallowell; colors, red and white; won 2d prize. Nighthawk, W. Osler, W. H. Banks; coxswain, W. C. Adamson; colors, white; won 1st prize.

The Nighthawk came in ahead, winning first prize, the Water Lily second.

SECOND RACE—Canoe Race.—Half mile, 1st prize, value \$10; 2d prize, value \$5. Entries, No. 1, R. Winstanley, A. Winstanley; No. 2, H. N. Wallace, P. Mason; No. 3, W. H. Banks, W. C. Adamson.

Messrs. Wallace and Mason won first prize and Messrs. R. and A. Winstanley the second.

THIRD RACE—Double Sculls.—Rowed by ladies, half mile, 1st prize, gold medal, \$100; 2d prize, silver medal, value \$20. Entries, Violet; colors, red and white; Miss Winstanley, Miss Banks; coxswain, R. Winstanley; Wil O' the Wisp; colors, black and red; Miss E. Winstanley, Miss A. Winstanley; coxswain, W. H. Banks; Mignonette; colors, black and blue; Miss Paterson and Miss Ince; coxswain, H. E. White.

This was the great event of the regatta. The Misses Winstanley took the lead, and aided by the skillful guidance of their coxswain, won the race. Miss Winstanley and Miss Banks in the Violet were second.

FOURTH RACE—Single Sculls.—One mile, 1st prize, value \$100; 2d prize, value \$50. Entries, W. C. Adamson; colors, red; R. Winstanley, pink; J. Wallis, green; A. Winstanley, blue; H. E. White, black and blue; W. H. Banks, white; W. Osler, red and white.

Mr. W. H. Banks won 1st prize, Mr. W. Osler 2d prize.

FIFTH RACE.—Prize value \$10; 3 entries, 50 yards. Messrs. J. Wallis, W. H. Banks, and A. Winstanley.

DUCK HUNT.—Prize value \$5. H. N. Wallace, duck; pursuers, Messrs. Osler and Banks, Wallace winning.

The judges were Hon. Adam Wilson, O. Winstanley, Esq., M. D.; Jas. Beaty, Jr., Esq. Starter, Charles Winstanley, Esq. Umpire, J. Maughan, Jr., Esq.

—See advertisement of sloop yacht wanted in another column.

REGATTA OF THE COLUMBIA BOAT CLUB OF BROOKLYN.—The annual Fall regatta of this organization took place on Saturday the 11th inst. in Gowanus Bay, and consisted of a four-oared gig race, the crews being made up as follows:—

Dandy (colors blue.)	Dixie (colors red and black.)
R. Blecker, stroke.	H. T. Dunham, stroke.
W. Chapman, No. 3.	C. O. Lewis, No. 3.
J. S. Stokes, No. 2.	C. Sanderson, No. 2.
G. F. Bassett, bow.	H. Leland, bow.
Coxswain—F. F. Leavens.	Coxswain—J. D. Halsey.

The course was a two mile stretch from the railroad dock near Bay Ridge to the lumber dock near the boat house. At 5:30 Mr. C. S. Osborn gave the word "go" and a good start was affected, both crews getting the water nearly together, the advantage, if any, being with the Blues. When within half a mile of the finish the Dandy crept a length ahead. The crew of the Dixie tried by an extra spurt to overcome this lead, but were unable to do it, the Blues crossing the line seven seconds ahead, winning the race in 13m. 20s. Mr. C. S. Butler was judge.

ARGONAUTAS AND ATALANTAS.—A very exciting race occurred on Wednesday last between two four-oared boats of the above clubs, pulled by the same crew who have met in so many recent contests at Saratoga and Troy. On those occasions the Atalantas had proved victorious and their opponents have attributed their defeat to the fact that their boat was unfit for pulling in fresh water. They have recently purchased a new one built by Fearon, being forty feet in length and eighteen inches wide. The result of Wednesday's race seemed to justify their excuse, as the Argonautas proved the winners by an open length. The race was rowed in the kills, over the three mile course, the prize being the championship of the Kill Von Kull. The crews were composed as follows:—

Argonautas (blue.)	Atalantas (red)
Ed. Smith, bow.	W. H. Downs, bow.
Walter Mann, No. 2.	H. W. Rodgers, No. 2.
B. Stephenson, No. 3.	John Gunster, No. 3.
F. C. Eldred, stroke.	John E. Eustis, stroke.

The betting was in favor of the Atalantas at odds of about three to one. The Argonautas won the toss and chose the Staten Island shore. They started with a lead of three-quarters of a length, the Atalantas pulling a little ragged, and throughout the race the steering was wild. Only once did the boats get even. Both boats took the swell of a passing steamer and shipped a little water. The Argonautas passed the line a length ahead in the excellent time for three miles of 15 m. 37½ sec.

These clubs rowed on the Harlem River on Thursday last. Since the defeat of the Atalantas by the Argonautas a change has been made in the crew, Gunster, who had rowed No. 2, being retired; Downs, who had rowed bow, taking his place, and Edward Blake, the new man, taking the bow oar. The crews were composed as follows:—

THE ATALANTAS.			THE ARGONAUTAS.		
Weight, lbs.			Weight, lbs.		
Edward Blake (bow)	153	W. H. Downs	151		
H. W. Rogers	174	John E. Eustis (stroke)	155		

THE ARGONAUTAS.			THE ATHLETICS.		
Weight, lbs.			Weight, lbs.		
R. W. Rathbone (bow)	148	H. C. West	144		
H. S. Mack	142	C. H. Cone (stroke)	136		

The course was from the powder boat near the railroad bridge to High Bridge, the distance being two miles. The Atalantas started with a length advantage, which was increased to three after Macomb's Dam Bridge had been passed, owing to the bad steering of the Athletics. The Atalantas won by this distance in 11 min. 35 sec.

NEMUS ROWING ASSOCIATION.—We have received the prospectus of this new organization, whose headquarters are in Brooklyn. It numbers at present about twenty members and the ranks are open to any gentlemen who are interested in rowing matters, and who desire to commence with a new club. The proposed initiation fee is \$5, and annual dues, \$3. It is proposed to build a pleasant boat house in South Brooklyn, which will be ready for use later in the Spring. A. E. Wood, 409 Union street, W. L. Puffer, 121 Macon street, and Geo. H. Stetson, No. 215 Halsey street, are the committee, to either of whom application for further particulars can be made.

NEREID BOAT CLUB.—The Nereid Boat Club of Brooklyn, closed their ninth regatta season on Saturday last with three races, rowed in Gowanus Bay. The first race was for the challenge cup, single-sculls. Messrs. J. P. Earle, J. C. Egerton, F. B. Rogers and B. A. Jessup were the contestants. Earle led from start to finish and won by a length in 15m. 52s. The second race was for pair-oars. Two boats entered, the Thetis, Messrs. Hardy and Brown, and the Erato, Messrs. Morrison and Johnson. The latter won in 14m. 43s. The regatta closed with a four-oared gig race. The following are the boats and crews:—*Eudora*.—Colors blue; bow, W. A. Brown; No. 2, C. T. Jefferis; No. 3, Benjamin A. Jessup; stroke, J. P. Earle; coxswain, C. M. Bull. *Panope*.—Colors red; bow, J. A. Soutter; No. 1, H. B. Willard; No. 2, J. L. Galdwin; stroke, D. C. Broun; coxswain, C. L. Middleton. The *Eudora* crew won by a short length in 12m. 4s.

YALE AND HARVARD.—The *Troy Press* is responsible for the following paragraph with regard to the new move contemplated by the boating men of these colleges. "Harvard is, in conjunction with her old rival, contemplating a new move—but it might be called an old one, as it necessitates the going back to the eight-oared crews. The colleges, we are informed, intend to withdraw from the association of American college and hereafter have the old contest among themselves. The boat will be light, and a coxswain will be carried. This will make a race similar to Oxford and Cambridge, and it is no doubt in imitation of those clubs that the change is contemplated. Both of these crews have studied the English stroke and style, and if we are to judge from the contemplated change, we have about concluded that our brethren across the water are the best sportsmen. A few years ago there was no doubt on this point, but at the present day there are many Americans who are slow to believe it, and are quick to give utterance to this belief."

MORRIS AND COULTER.—The long anticipated single-scutt race between these men for \$500 a side and the championship of America, was rowed on the Alleghany River, twelve miles above Pittsburgh on Saturday evening last. The distance was five miles. Coulter took a slight lead at the start but before rowing half a mile Morris had passed him and the turn was five lengths ahead. Coulter pulled a game race but Morris maintained his lead and won by four lengths. The time given by the referee was 37m. 3s., but it is claimed that the actual time was 45 seconds less.

ENGLEHART AND O'NEIL.—The final deposit of \$500 a side in the match between the above named men has been placed in the hands of the stakeholder. The race will take place on Saratoga Lake on Tuesday Sept. 21st.

—Detroit, Mich., has a large river navy with a membership of eight boat clubs. About 400 young men of Detroit belong to these clubs. They have just closed on this river three races between ten oared barges. The prize was a champion flag. The best crew, two out of the three races, to have it. It was won by the Phoenix Club. The races were pulled one week apart and created as they always have done, a great interest.

—A match race between the Atlanta and Nassau Boat Clubs will be rowed early next month.

AN AQUATIC VELOCIPED.—Some Philadelphian has invented a velocipede for use upon the water, which when suspended by three cigar shaped zinc floats is propelled in the same manner as the common velocipede, the wheel having floats attached to it like those on the wheel of a steamboat. As a means of amusement it may succeed, but for practical utility is useless.

PHILADELPHIA, Sept. 13th, 1875.

EDITOR FOREST AND STREAM:—

The entries for the Fall regatta promise some good racing for Saturday. There are four-oared shells entered from the Quaker City, Undine and College Clubs. The former will have the same crew as at Troy, while the latter have imported a four from Princeton—Addicks, stroke; Parmelee, Ely, Van Lenape (bow). Six-oared barges are entered from the Malta, Pennsylvanian and Crescent clubs. The Quaker City and Pennsylvania will each have a four-oared gig, and there will be at least two and perhaps three double sculls entered. Much curiosity is felt in regard to the College club's crew, and many comments are made among the boatists on this imitation of New York aquatics. It seems to be conceded that John McBeath can walk away with the single championship again this year, if he is so disposed.

SCULLS.

Rational Pastimes.

BASE BALL—THE PROFESSIONAL ARENA.

—A \$1,000 tournament will be held under the auspices of the Rome Base Ball Association, commencing on Oct. 17th, and continuing for one week. The tourney will be held on the Rome Riverside Park, and the games will be played directly in front and in full view of the grand stand. The premiums will be divided into two purses, one of \$500 for competition by professional clubs, and one of \$500 for amateurs. The Atlantic club will enter the list.

—All lovers of honorable play, and all advocates of the "Boston plan" of playing with well-trained and disciplined nines, will be gratified at the almost assured success of the Boston "Redstocking" as victors on the grand annual race for the professional "whip pennant." The season, of course, is not ended, but sufficient has been already done to set down the Bostons as sure victors, their record being one it is almost impossible for the Athletics to equal, and no other club stands the slightest chance of doing so. A glance at the Boston club record, thus far shows a list of victories hitherto unequalled in the annals of professional play, except that of the original Redstocking nine at Cincinnati in 1869:—

BOSTON.	Mutual.	Athletic.	St. Louis.	Philadelphia.	Chicago.	Atlantic.	Hartford.	Centennial.	Washington.	New Haven.	Western.	Red Stocking.	Total.
Games won.....	10	6	5	6	6	5	5	5	5	3	1	1	160
Grand lost.....	0	2	2	2	2	0	0	0	0	1	0	0	7

Their success is doubly creditable from the fact that it has been achieved by the most earnest efforts to win in every game they have played since the club was first organized. So much for thoroughly honest work, and strict attention to discipline and good training.

The full record of games won and lost by each club in

the arena up to September 12, inclusive, is as follows.—

CLUB.	Boston.	Athletic.	Hartford.	St. Louis.	Philadelphia.	Mutual.	Chicago.	New Haven.	Atlantic.	Games Won.
Boston.....	1	6	5	6	6	10	6	3	6	48
Athletic.....	2	2	2	6	5	6	7	6	40	33
Hartford.....	0	2	1	4	2	4	7	7	9	33
St. Louis.....	2	1	4	2	4	6	3	2	2	24
Philadelphia.....	0	1	3	2	1	4	4	7	23	24
Mutual.....	0	1	3	0	5	1	4	5	21	16
Chicago.....	2	1	2	3	2	2	2	2	2	16
New Haven.....	1	0	1	1	0	0	1	1	5	5
Atlantic.....	0	0	0	0	0	0	2	2	2	2
Games Lost.....	7	12	20	20	27	31	25	31	38	211

There seems to be quite a furore for the organization of professional stock company teams for 1876. The latest accession to the list is that announced in the *New York World*, which paper says that "several wealthy merchants of this city, who have taken an interest in commercial nines and are very fond of the game, have started a subscription to organize a perfectly reliable professional team to represent the metropolis in 1876—something the city has never had. Already stock to the amount of \$10,000 has been privately subscribed. A committee of three will manage the club, and it will be run entirely on the "Boston plan." The circular of the new association will be issued in December next. The shares will be \$100. An enclosed ground is to be leased for twenty years, and fitted up with a ball ground, a cricket field and a course for athletic games, with grand stands for the public generally and an exclusive stand for the members and their families. The organization is under the best social auspices."

—The professional games since our last are as follows;

Sep. 7—Boston vs. Atlantic, at Brooklyn.....	15 to 3
Sep. 7—Hartford vs. St. Louis, at St. Louis.....	8 to 2
Sep. 8—Boston vs. Mutual, at Brooklyn.....	8 to 5
Sep. 9—Boston vs. Atlantic, at Brooklyn.....	10 to 4
Sep. 9—Mutual vs. Philadelphia, at Philadelphia.....	5 to 1
Sep. 9—St. Louis vs. Hartford, at St. Louis.....	11 to 4
Sep. 11—New Haven vs. Atlantic, at Brooklyn.....	13 to 6
Sep. 11—Athletic vs. Mutual, at Philadelphia.....	12 to 3
Sep. 11—St. Louis vs. Hartford, at St. Louis.....	6 to 0

CRICKET—THE INTERNATIONAL TOURNEY.

PHILADELPHIA, Sept. 13th, 1875.

EDITOR FOREST AND STREAM:—

The tournament, which was opened to-day by the beginning of the game between the Philadelphia and Canadian teams, promises to be the greatest events in the cricket history of this country. The grounds are in excellent condition, and the accommodations for spectators in every respect first-class. The Committee of Management, with Mr. A. A. Suterbridge at its head, cannot be too highly commended for the excellence of their arrangements, not the least important of which are the facilities they have secured for reaching the grounds. The Germantown trains either way, from 11 A. M. to 7:30 P. M., (including the express trains) stop at a special station near the entrance, and it is but a few minutes' ride from the heart of the city.

The Philadelphians went first to the bat and ran up a score of 117, as will be seen below, the 32 of Tom Hargreaves leading the list. The Canadians went in at about 3:30, and when game was called the telegraph showed 44 runs for 4 wickets. Armstrong had trouble with the "third swift" of Charles Newhall's first over, and went out to think it over. McLean piled up ones and twos lively, off both C. Newhall and Meade, but came to grief on the first ball from Dan Newhall, who went in in Meade's place to bowl slowly. Whelan also went out on this over, for after putting a "four" under the ropes, he sent the third ball into Meade's hands at long field.

SEPTEMBER 14th.—The international cricket match was not concluded to-day, but will be finished to-morrow. The Canadians concluded their first inning, making 68 to 117 for the Americans. The Americans went in on their second inning, scoring 114; the Canadians followed for their second inning. After three men had been put out play for the day closed with 39 runs.

SCULLS.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

R. C. T., Baltimore.—Have written you giving the address of one who can supply you with a first class well broken pointer at a fair price. S. B., Sr., New York.—To make shellac varnish, how much of shellac and alcohol each? Can you give me a good recipe for furniture polish? Ans. See Vol. 4, pages 99 and 329.

B. K. D., Cambridge, Mass.—We know nothing of the firm you mention beyond that their business is of a gambling description, and that their promises of profit are specious and delusive.

S. B., Connerville, Ind.—Are Thompson's hunting suits, advertised by Eaton & Co., as good styles and as good material as Holabird's? Ans. They are lighter and cheaper, but the material is not as heavy. Both are good articles, and invaluable in bush hunting.

W. H. S., Stafford Springs, Ct.—What size of Remington's sporting and target rifles would you advise as the best for target practice at 200 to 400 yards, length of barrel, weight, calibre, etc., rim fire or central fire? Ans. 34 inches, 44 calibre, centre fire.

S. M. S., Harrisburg, Pa.—Please inform me where I can find a description of the Daniel Fitzhugh fishing boat, with "well" amidships, such as Mr. Thad. Norris used in his late trip after grayling. I wish to build a boat of same pattern. Ans. Write to Thad. Norris, 208 West Logan Square, Philadelphia.

READER, New York.—Will you inform when Edwin Booth is to appear on the stage again, and at what theatre? Ans. It was reported at one time that Mr. Booth would appear this Winter at the Lyceum, but with what authority we cannot say.

M. M. B., Lonsdale, L. L.—Please inform me where I can purchase a trap for shooting pigeons, and price of same. Does the plunge trap toss the bird up or not? Ans. H. and T. plunge traps cost \$15 per pair, and can be got from H. C. Squires' gun store, No. 1 Courtlandt street, in this city. Ground traps cost considerably less. The plunge trap tosses the bird up.

W. B. S., Fort Scott, Kan.—I have a setter pup six or seven months old who has diarrhea, passing a red colored fluid like blood; also at times something which, when dried in the sun, looks like a mixture of lime and corn-meal, of a greenish white appearance. I fear he has worms. I would like a small quantity of areca nut with directions how to use it. Ans. Have written you inclosing some areca nut with directions how to give it.

W. M. F., Newport, R. I.—My pup Spec has got the distemper while in heat. She must have taken cold; her eyes run, she has a cough, and nose is dry and cracked. A little advice would be thankfully received. Have given her five drops arsenicum three times per day for two days. Ans. We have found a dose or two of common table salt in half ounce doses an excellent remedy in common cases of distemper. But there are many phases of that disease which require different treatment.

C. H. L., New York.—Please answer the following: Supposing A has a watch which he sells for \$50; he buys it back for \$40 and sells it again for \$45, how much does he make by the whole operation? Ans. He makes \$5. Leaving the first transaction, if you please, out of the question, a man has \$50, with \$40 of it he buys a watch, retaining \$10 in his pocket. This watch he afterward sells for \$45, which added to the \$10, gives him \$55, or \$5 more than he originally had.

PLUNGER, Machias, Me.—What is the best metallic shell? I use Hart's and Starrevant's; can I do better? I have used for two years a W. & C. Scott & Sons double under-grip 13 gauge; shoots well, and is marked 13 bore. Is that at muzzle merely? At breech it is full twelve, or takes the 12 shells. Is it a choke bore? I do not understand that it is. Ans. Hart's. Your gun is not a choke bore. All guns that show under twelve when proved are marked the next gauge, viz., thirteen. The subsequent finishing brings them to a true twelve gauge.

FRED, Montello.—One of my friends reports a well authenticated case of seeing a white hare or rabbit with an ebony black head. My informant said that he and a companion saw this curious anomaly last Winter in Northern Wisconsin, and both were certain that it was a large sized hare, as they approached it very closely before it was frightened away. Can you or any of the readers of FOREST AND STREAM, (J. H. Batty or some other naturalist), give a parallel case? Ans. The hare observed was the Canadian or common "white rabbit," *Lepus Americanus*. Partial melanism occasionally occurs in the hare family. We saw a specimen of the Canadian hare with black ears in Minnesota in the Winter of '75.

BALLARD, New York.—Can any one who wishes shoot on the grounds of the Blooming Grove Park Association; if not, where and how can I obtain permission? Ans. Permits to shoot can be obtained only from members of the Association. Apply to John Avery, Room 21, City Hall, or Col. S. D. Bruce, *Turf, Field and Farm* office, 37 Park row. What outfit would I need for a two months' camp in the above-mentioned place? Had I better bring my 38 calibre Ballard rifle or my 12 bore Scott muzzle loader? Ans. Permits are restricted to ten days. The game is principally deer and ruffed grouse. Would it be absolutely necessary to have a guide? Ans. No. Where would be the best place for me to go in? Ans. From Lackawaxen on Erie Road. The club wagons are at John Williamson's.

E. D., Montreal, P. Q.—A friend of mine has a large pond or lake three miles in circumference by one mile in diameter, situated at the base of a large mountain. The water is supplied principally by springs (it is supposed from the bottom of the lake,) two small streams only running down the mountain side into it, and one large one down the valley out of the lake, driving several small mills and supplying quite a population with drinking water. Now he wishes to destroy the fish it contains at present, namely, pike, small perch, etc., and to replace them with game fish, such as salmon trout, brook trout, etc., without injuring the drinking qualities of the water. What would be the best mode of procedure? Ans. This is what "no fellow can find out." Best way is to turn in a supply of black bass that will destroy the other fish.

C. A. H., Utica.—Will you please inform me if the inclosed diagrams of targets are correct—that is, are they according to N. R. A., Creedmoor, or Wimbledon? If not, will you also inform me where I can obtain diagrams of targets and manner of counting same; also rules of the N. R. A.? I am a member of the Utica Citizens' Corps. We have organized a team, and wish to go to work right on the start. We are using the Remington Spanish arm, 50 calibre. Ans. The diagrams of the targets are correct, but they are the old system, discarded in 1874 by the N. R. A. of England and by the N. R. A. of the United States this year. For the new diagrams send to E. Remington & Sons, 281 Broadway, New York, for their score book, and by addressing the Secretary of the N. R. A., 99 Nassau street, New York city, you can obtain copies of their rules, etc. In the FOREST AND STREAM of September 2d you will find a full description of the new canvas targets at Wimbledon.

TRAPPER, Lawrenceville, Va.—The beaver has taken possession of every small stream in this county to the injury of our lands. Can you give me any information which would enable me to inform my farming friends how to destroy them? What kind and where are the traps to be obtained, and what is the bait to be used? We would welcome gladly a professional trapper, and believe that there are a thousand in the streams of Brunswick county. Ans. We have written to several trappers urging them to go to Virginia. Probably they will wish to delay until quality of fur improves later in the Fall. Newhouse's traps, made at Onondaga, N. Y., are the best to be had. Iron traps are the best; they are generally set near the edge of the water where beaver cuttings are seen, and are baited by rubbing them with the scrotum of the beaver, which imparts a strong scent.

W. H. F., Pittsburg, Pa.—I have purchased one of W. & C. Scott & Sons No. 12 gauge 30-inch barrels, 7½ pounds breech loading guns, paying for same \$175. I have never before used nor owned a breech loading gun, consequently know nothing about them, and am compelled to ask for advice on various matters. 1st. What is the proper method of loading Ely's paper shells, and also brass shells? 2d. Whose make of brass shells are the very best? 3d. Whose make of powder is best for a fine gun? 4th. Whose make of shot do you prefer? 5th. Whose make of wads do you prefer? 6th. Do I use wads in shells the same ga. as gun? 5th. Is there such a thing in the market as a very fine gun oil, one that will neither thicken and get very stiff, nor that will gum? This has been a terrible annoyance to me for many years. Ans. 1st. Use for either paper or metallic shells three drachms of powder, 1½ ounces shot, two Ely wads on the powder, one Baldwin wad on shot for upland shooting. For ducks and large game use four drachms of powder, same weight of shot. 2d. The brass shells made by Hart, of Newark, are considered the best. 3d. Hazard's, Dupont's, and Laffin & Rand's. 4th. Sparks', Tatham's, and Le Roy's. 5th. Ely's. 6th. We use wads size of the gun; some use a size larger. 7th. Fine spermaceti oil, such as is prepared for sewing machines, is as good as any.

R. M. YAG, Philadelphia.—1. I have a fine muzzle-loading rifle of about .40 bore. Now, I wish to ask what weight, ball, and charge of powder I should use to have the longest point blank range, and what will the range be, (point blank range as I understand it being the longest range one can shoot without altering the sights,) the ball I use weighing exactly 162 grains, and the charge for hunting 1½ drachms, though I have used 2½ drachms with a hardly perceptible recoil? 2. I had a Remington sporting rifle also while hunting in the Rocky Mountains which shot very wild. On examining it I found that on taking a ball out of a cartridge (45 centra 1 fire) I could push it through the barrel with no force at all, and if the paper patch were removed it would drop through of its own weight. Is this the way all the Remingtons are made, also is it right? While West I saw and handled several English Express rifles about 44 to 50 gauge, weighing about seven to nine pounds, and shooting a terrible charge (compared with the weight of the arm.) Do you think they were the regular Express rifles? And what is the philosophy in making them so light and short in barrel and the great charge of powder? I shot one, but would not be hired to try it again on account of the recoil. Ans. In reply to your first query we would suggest that you experiment with your rifle, using a gun makers rest and various charges until you have ascertained its true point blank, which probably varies a great deal with different guns. The reason why the bullet of your Remington rifle drops through the barrel is because they are made to "turn over," or through the medium of the hollow in the end to expand when acted upon by the powder, to fill the grooves. Express rifles are similar to those you describe, the low trajectory or long point blank range being obtained by using a light bullet and large charges of powder. The bullet used is generally a cone with a hollow point, which expands on striking and makes a fearful wound.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH-CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.]
127 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, SEPTEMBER 16, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, September 16th.—Trotting at Kingston, N. Y.; Pittsburgh, Pa.; East Saginaw, Mich.; Cleveland, Ohio; Dixon, Ill.; Mystic Park, Boston, and Baltimore, Md. Rifle—Contest for Luther Badge at Creedmoor. Cricket—International Tournament, British Officers vs. Canadians at Philadelphia. Base ball—Hartford vs. Chicago at Chicago; Athletic vs. Mutual at Brooklyn; Philadelphia vs. Expert at Harrisburg, Pa.

FRIDAY, September 17th.—Trotting at East Saginaw, Mich.; Cleveland, Ohio; Dixon, Ill.; Nashua, Ia.; Plattsburg, Vt.; Norristown, Pa.; Penn Yan, Chatham, N. Y.; Westfield, Mass.; Baltimore, Bangor, Me.; Mystic Park, Boston. Cricket—International Tournament, Philadelphia vs. British Officers at Philadelphia. Base ball—Athletic vs. Atlantic at Brooklyn; Peabody vs. Doerr at Burlington, N. J.; Astor vs. Red Hook at Brooklyn.

SATURDAY, September 18th.—Trotting at Mystic Park, Boston; Lockport, N. Y. Rowing—Schuylkill Navy Regatta, Philadelphia. Rifle—Franklin Rifle Club meeting, Hartford, Conn. Cricket—International Tournament, Philadelphia vs. British Officers at Philadelphia. Base ball—Athletic vs. Mutual at Brooklyn; Philadelphia vs. Cincinnati at Cincinnati; Hartford vs. Chicago at Chicago; Peabody vs. Shibe at Philadelphia; Harlem vs. Aetna at Brooklyn; Staten Island vs. Hoboken at Hoboken; Flyaways vs. Concord at Brooklyn; Aetna vs. Alert at Brooklyn.

MONDAY, September 20th.—Racing at Louisville, Ky. Trotting at Quincy, Ill. Cricket—International Tournament, All Comers vs. Philadelphia at Philadelphia. Base ball—A. H. Cain vs. Defiance at Philadelphia; Peabody vs. Camden at Camden, N. J.

TUESDAY, September 21st.—Racing at Louisville, Ky. Trotting at Framington, Mass.; Burlington, Chester, Vt.; Waterloo, N. Y.; Poughkeepsie, N. Y.; Burlington, Ia.; Beacon Park, Boston; Tiskilwa, Ill.; Ambler Park, Pa.; Cynthia, Ky.; Tiffin, Ohio. Rowing—O'Neill and Engelhardt, Saratoga Lake; Regatta of Williamsburg Yacht Club. Cricket—International Tournament, All Comers vs. Philadelphia at Philadelphia. Base ball—Peabody vs. Quickstep at Wilmington, Del.; Olympic vs. Hoboken at Paterson, N. J.; Flyaway vs. Alaska at Brooklyn; Keystone vs. Doerr at Philadelphia.

WEDNESDAY, September 22d.—Racing at Louisville, Ky. Trotting as above on Tuesday, and at Indianapolis, Ind.; Meriden, Conn.; Cuba, N. Y.; Columbus, Delphos, Ohio; Watkins, N. Y.

THE DOGS OF ENGLAND.—We would call the attention of our readers to the advertisement in another column of a fine selection of pictures of the most celebrated sporting dogs of Great Britain, including representatives from the kennel of T. H. Murchison, Esq., Rev. T. C. Macdonald, R. J. L. Price, Esq., Lord Lurgan, and others. A portion of the pictures are colored in water colors, in exact imitation of the original; all are taken from life, and the collection altogether is most unique and well worthy of examination. It can be seen at this office.

—We have been favored with a call from Mr. Tuerck, of the Chicago Field, who came to this city on business for that journal. He represents the Field as being in a vigorous condition. We wish it success.

GAME PROTECTION.

ALL through this Fall and coming Winter, in view of the thorough investigations now being made by powerful associations of qualified and competent men, to determine what improvement in our game laws can be devised, we shall make Game Protection a subject for especial study and discussion; and we herewith invite the members of duly constituted protective bodies or any qualified person, to advance through our columns such opinions, backed by natural data, as shall assist in determining habits of species and fixing suitable laws to govern fence times. It will be our especial purpose to collate all such papers as may facilitate the labors of committees, and members of committees may themselves deem it advantageous to communicate with each other through our journal, that they may thereby compare those notes that will be eventually submitted in a called session. We trust that our leading naturalists who have pledged their services to the revision of our game laws, will feel the importance of co-operating in this manner. It will materially lighten their labors, and assist to an intelligent comprehension of the subject in all its parts and their reciprocal relations.

Following this plan of action, we print herewith an intelligent paper from the pen of Hon. Wm. O. Collins, of Ohio, on Close Time for Woodcock, one of the most difficult subjects to handle in the whole category; also some short communications of a kindred character:—

EDITOR FOREST AND STREAM:—

Many of your correspondents are still harping upon Summer woodcock shooting, and most of them seem to be correct from their own standpoint, but as "circumstances alter cases" I am tempted to give a view from our outlook in Southern Ohio. About fifteen years ago I had occasion to make an official report on the protection of birds and game in Ohio, in which the woodcock is spoken of as follows:—

"The woodcock (*Scolopax minor*) is a choice game bird, but it was strangely treated in the law of 1857, which forbade the killing before the 15th of September. It breeds in vast numbers in the State, and especially in the wetter portions of the great flat extending from the counties of Brown and Clermont, on the Ohio River, to Lake Erie and the Michigan line. In the swampy forests of this section it is abundant in breeding time, but not long afterward. It arrives from the South about the 1st of March, pairs immediately, makes its nest upon the ground, hatches about April or May, and its young are generally two-thirds grown and fit for the table by the 1st of July. Few are killed on these grounds where they are produced in such numbers, as they subsist upon worms and insects obtained from a moist soil, and so soon as the Summer sun dries up these vast flats so that they cannot penetrate the ground with their long bills they change their feeding ground, getting into marshes and wet places, and at length occupy chiefly the valleys of the larger streams where the tall corn and rank weeds and bushes afford a shelter, and the rich soft mud abounds in the insects which they love. Here they are sheltered from observation and pursuit, and no one would be aware of their presence unless he came directly upon them, or heard the whistle of their wings in the dusk of the evening or the morning as they move from one feeding ground to another. Early in the Fall the woodcock moves southerly to his Winter quarters, though single birds are sometimes found as late as November; a few will remain during the whole season along spring branches and other moist places in the vicinity of their breeding grounds, and there are some extensive marshes in the State where they are found in considerable numbers, but the great part have left their early quarters for inaccessible haunts long before the present law allows them to be shot. Lying quietly in unfrequented places, rarely taking wing by day unless disturbed—and feeding and migrating by night—changing their grounds suddenly for others far distant, they are in little danger from the sportsmen in Ohio. Their killing after the 4th of July will not endanger a tithe of the number bred in the State. If their numbers decrease at all it will not be from the gun, but the opening up, ditching and drying out of our wet lands, where only they can subsist."

I still think these views substantially correct, and that in this locality their killing should be permitted after the 4th of July, for otherwise we should not get one in a hundred of the thousands we raise. The richest lands in Ohio, except the alluvial deposits in the valleys of streams, are the level wet lands once heavily timbered, but now being rapidly cleared and drained, and, of course, unfit for woodcock breeding. Where swampy forests are left they still remain. A year ago last March I saw perhaps a dozen or fifteen in going half a mile through some land of this description. They would fly but a few rods and drop again, and were evidently nesting. By the middle of July not one could be found on the same ground. It was a very dry season, the moisture had all evaporated, and they had gone elsewhere. The present Summer has been remarkably wet, about ten inches of rain falling in the month of July, and they have remained, but are scattered over so much ground, and vegetation is so rank that it is useless to hunt them. In 1849 duty required me to be often with a surveying corps on a railroad line, about twenty-five miles of which ran through a flat wet forest. In the months of April and May we often saw a dozen broods a day—cunning little black things that the mother would pick up in her claws and flutter away with. In August the ground was dry and hard, and they had disappeared. It must be remembered that in the milder climate of Southern Ohio woodcock begin to breed probably two weeks earlier than in New York or New England; that there are no large permanent ponds or marshes, and that along the water-courses the immense growth of corn, from ten to fifteen feet in height by August, with weeds in neglected portions nearly as tall, furnish an almost perfect protection, so that our woodcock shooting amounts to little at best. Nor would Eastern sportsmen be benefited by any Ohio law, however stringent. Men in this country, as a general rule, migrate by parallels of latitude, birds of passage by lines of longitude, though aquatic birds will deflect to follow the seaboard or large rivers or other water lines. Our woodcock Winter in the swamps of the Gulf and the Lower Mississippi, where few are killed by legitimate sporting, but many are ignominiously slaughtered in night fire-hunting, often by darkies with clubs and sticks.

A different rule as to time might suit the lake counties, but the Constitution of Ohio requires all laws to be general in their operation, and game laws must be the same in Cuyahoga as in Hamilton county, however unsuitable. We prefer large fat Fall birds for the gun or the gridiron, but if they cannot be had give us a chance for a few of the two-thirds grown Summer ones, as you do the prairie sportsmen for August and September grouse, when only they lie well before the dog.

VETERAN.

BELLE FONTE, Nottoway County, Va., September, 1875.

EDITOR FOREST AND STREAM:—

It is an axiom among anglers and sportsmen who have traveled, that if the game and fish of this country, (the whole of it, I mean), are killed legitimately in the shooting and fishing seasons there are not enough flies, nor even angle worms made and grown, nor powder or shot manufactured to extinguish the game and fish in our forests and our streams. As far as this county is concerned I have many friends who uphold me, and am now preparing, with the aid of other resident sportsmen, local by-laws, etc., so as to establish a "close season" club. In the county of Brunswick I believe the editor of the *Advocate*, Warner Lewis, of Lawrenceville, a gentleman and a sportsman, has already established a similar association. In Richmond, you are aware, there exists a large and influential body of gentlemen sportsmen, who also have a club. In Norfolk there is the Game Protective Association, and I am informed by Mr. W. G. Taylor, that they, with the co-operation of the people of Virginia, propose to lay a simple, honest, practical bill before the Legislature next session. If the game and fish are even fairly protected, nature having been so bountiful, there will be an abundance for

all. Some of the people here, I am ashamed to say, have been killing wild turkey poult weighing one pound a piece, when on, say November 10th, these same poult, left to themselves, would weigh six or seven pounds; also deer, does and fawns, when they are scarcely able to protect themselves from nature's annoyances. The ruthless hand of man must needs step in and slaughter these suckling babes; for what? for rum; and then boast of how many deer they killed. Wonderful! and so I might go on to the end of the chapter. For heaven's sake don't send that murdering "Jack Lamp" down here, for I predict the State that it enters will cease to protect the game. Is not this fact carried out on Cape Cod, where I used fifteen years ago to shoot the golden-and-black plover, the sickle bill, the marlin, and other beautiful bay birds. The pot-hunting "Jack Lamp" and fire arrived one fine day, which was worked with such assiduity for eighteen months that it destroyed the means of livelihood of over one hundred families. I sincerely trust that every association and club in the Union will pass a resolution to the effect that any member using this "murderous implement" will be instantly expelled, except it can positively be shown that he was procuring food for camp, and so make once again the quail, woodcock, ruffed grouse, and the noble wild turkey a food element for the people of this country.

Mr. Murray is setting a disgraceful example, and instead of protecting game he is slaughtering worse than the pot-hunter, because he knows better and can afford to purchase that murderous implement, "the Jack." We shall soon be able now to hunt and fish without the rod and gun. There is a large sum of money to be made by supplying the public with fish torpedoes, which can be manufactured for little or nothing. Then one can walk along the lovely trout streams of the country and kill all the fish he requires. They have already started "the Jack," and so it is fairly launched on its atrocious headway. Oh! that I had the power of a Webster or the tongue of a Clay to render this Mr. Murray immortal by his soulless *cervicide*. My humble pen is of so little avail that I leave the matter in your abler hands. Yours truly,

JNO. M. TAYLOR.

The Secretary of the Peterboro Game Protective Society, Ontario, Canada, writes September 8th:—

"Our Game Protective Society has had two special guards on the back waters for some weeks watching the poachers, and in this immediate locality it has stopped a great deal of illegal hunting. We have many enemies yet who we hope will some day make serviceable members, as they get to see that carrying out the law is to benefit them more than any others."

The Hudson River Association, whose headquarters are properly in Newburgh, but whose officers and executive committee are located not only in Orange county, but in Dutchess, Greené, Putnam and Columbia counties, have, during the last year, distributed over one thousand copies of the game laws of the State between Newburgh and the Adirondack region, and through the their various officers are on the lookout for infringements of the laws in every quarter. It may not be generally known that any individual citizen has the power to cause a suit to be instituted against any and all offenders, and the object of sportsmen's clubs, is to some extent, to enable gentlemen to bring offenders to justice without incurring unpleasant personal responsibility or notoriety, which many dislike, though they may fully realize the grossness of the offences committed against the game laws. Not very long since the Hudson River Association discovered, in an out of the way place in the Adirondack wilderness, an old reprobate by name of Hoxie, a store-keeper and postmaster, who employed forty trappers, to whom he paid forty cents per pound for dressed trout, and twelve cents for venison, and in one season shipped over seven tons of trout and innumerable deer. The association 'went for him,' and got out an order of arrest, but he had meanwhile left for parts unknown, afraid to face the majesty of the law.

Yonkers has done her duty in the matter of oystermen, and no dredger or raker of oysters has been seen south of Hastings or north of the New York line since June last. Now the Yonkers club propose to keep the river clean of gas tar. The laws strictly prohibits gass companies from running their refuse into the river under a penalty of fifty dollars daily. Let all citizens interested send information to the Secretary of the club of any facts in their possession, and judging from the energy exhibited in the past, the club will do its level best in the future for the preservation of fish in our noble river.

A Game Protective Association is formed in Chester, Delaware. Officers for the ensuing year:—President, Y. S. Walter; Secretary, John S. Kerlin; Treasurer, Wm. C. Gray. The association offers a reward of ten dollars for the conviction of every offender against the law.

The Norristown Fish Association offers a reward of five dollars for the arrest and conviction of any person found fishing with nets or seines, or in any other manner prohibited by law, in the river Schuylkill within the limits of Montgomery county.

The Monroe County Sportsmen's Club have voted \$100 to Game Constable Brown for his assiduity and zeal in the cause of preserving game and the enforcement of the game laws.

A Sportsmen's Club was started last week in Jersey City Heights, N. J., for the protection and propagation of game and the improving of sporting dogs. Richard von Schmiedeberg was elected President; C. F. Thompkins, Vice-President; F. V. Lengerke, Secretary. This club has adopted the rules and regulations of the Philadelphia Sportsmen's Club, with a few alterations, and from the well known respectability, skill and energy of the gentleman appointed as officers, we are convinced that the game laws in that section of the State will be promptly enforced against all transgressors.

—In the late match between the Parthian Junior Rifle Club, of Hudson, and the Saratoga Club, particulars of which are given elsewhere, the score of the Junior club, 545 points out of a possible 600, at 500 yards, is the best score on record at this distance.

—Two fourteen inch shells thrown by the British in the bombardment of Stonington, Conn., August 10, 1814, have just been brought up by steam dredges, and one of them is still unexploded.

ROUTES OF FLORIDA TRAVEL.

EDITOR FOREST AND STREAM:—

WINTER is approaching and numbers are undoubtedly looking forward with pleasure to the period when they will leave Old Boreas in the rear, and bask in the health-promoting sunbeams of Florida, and as the present seems an opportune time, I propose furnishing a few statements for the benefit of those who contemplate a visit to this State.

As the southwest coast (the scene of my last Winter's wanderings) presents an attractive field for the true sportsman, I shall refer to it in this communication. I fancied that my articles published in the FOREST AND STREAM were sufficiently explanatory, but from the large number of letters I have received, I find that something more is necessary, and I shall endeavor to furnish the required information.

Steamships leave Boston and Baltimore regularly for Savannah. Florida can also be reached by any of the various rail routes, and fares can be ascertained by inquiring at any of the principal offices. Steamships leave New York for Charleston three times weekly, and from Philadelphia every Saturday, connecting with railroad, and with the staunch, seaworthy, comfortable and ably officered sea-going steamers, the Dictator and City Point. Fare from New York to Jacksonville, including state room and meals, \$27 50; excursion ticket, \$50.

Steamships leave New York for Savannah three times weekly, connecting with the steamers Dictator, City Point and Lizzie Baker. If travelers prefer it, they can reach Jacksonville from Savannah by the Atlantic and Gulf railroad. Coupons of excursion tickets will be received by the company. Travelers will find this road supplied with excellent Pullman cars.

Gelpcke's line from New York to Fernandina consists of the well known steamships, Huntsville and Montgomery. The rates by this line are as follows:—New York to Fernandina, \$20, excursion ticket \$35; New York to Jacksonville, \$22 50, excursion \$40; New York to Cedar Keys, \$26, excursion \$45; New York to Tampa and Manatee, \$36; New York to Punta Rassa, rate not received, but presume about \$40; New York to Key West, \$46.

A direct line to Jacksonville is advertised, but we must await results before anything definite can be stated. Fare to Jacksonville as advertised, \$20, excursion ticket \$35. Jacksonville or Fernandina reached, the sportsman can take railroad, daily except Sunday, for Cedar Keys. If Homosassa is the objective point, a boat can be hired at from eight to ten dollars for the trip, or if disposed the intending tourist or sportsman can communicate with Alfred E. Jones at Homosassa, and if timely notice is given, Mr. Jones would meet his guests at Cedar Keys and land them at his attractive home, free of charge. The only difficulty attending this arrangement is the fact, that there is but one mail per week to Homosassa, arriving on Mondays. Homosassa can be reached by another route: Steamer from Jacksonville to Silver Spring, a natural curiosity that should be visited by every tourist. Hack from Silver Spring to Ocala, fare one dollar. From Ocala to Homosassa, a distance of thirty-six miles, over a good road, in comfortable vehicle; charge for carriage from eight to twelve dollars, dependent upon number of passengers. Board at Homosassa, from ten to twelve dollars per week; accommodations good, table excellent; fishing and shooting superior; and we may add, rooms large and airy; verandahs spacious; fresh milk and butter; oysters and oranges *ad libitum*.

At an early day, we propose taking a trip overland from Ocala to Homosassa, and will furnish your readers with a description of the route. But I must return to Bronson, a point on the Fernandina and Cedar Keys Railroad, thirty miles from the latter place. The ponds in the neighborhood afford fine bass fishing; quail and duck are plenty, and the sportsman may succeed in shooting turkeys or deer. Accommodations, hotels, fifteen dollars; private boarding houses, twelve; board \$1 per day or \$5 per week. For information interview Mr. G. Levett.

With the exception of climate, bathing and fishing, Cedar Keys presents but few attractions for tourists or sportsmen. We regret to state that the hotel accommodations cannot be recommended, as A. 1. Sportsmen arriving at Cedar Keys and requiring information need but call upon Mr. Gore, editor of the local paper, or on Willard and Roux, and mention that the liberty taken was in accordance with the suggestion of Al Fresco.

The steamer Valley City, commanded by that jolly sea dog, Capt. McKay, leaves Cedar Keys every Friday for Tampa, Manatee, Punta Rassa, and Key West. Parties desirous of ascending the Caloosahatchie River, or of spending a few weeks on the coast, could take steamer to Punta Rassa, and from there ascend the river or explore Charlotte Harbor. For gator shooting, ascend the Caloosahatchie to the upper islands, six miles above Fort Myers, and thirty-one from Punta Rassa. Above the islands the disciple of Old Izaak can put in all his spare time in landing cavalli ranging from five to fifteen pounds. For fight and pluck we can recommend this fish. They take the spoon or spinner without hesitation, and we are of the opinion that they would not object to a salmon fly. For hunting and sea fishing we can recommend Tanibel, Lacosta, or Gasparilla Islands. For a camping place for the invalid who requires a bracing sea breeze, an equable temperature, salt bathing, and life-giving sunbeams, we would say camp on the northern end of Gasparilla Island. The island is two miles in length, and is well stocked with

deer. At the entrance, or Little Gasparilla Pass, the fishing is unequalled. On the opposite flats beach birds are more than plentiful. The main land is distant about three hundred yards. In the centre of the island a lagoon with excellent water will be found; but by digging a hole in the sand (and planting an empty barrel in it) from twenty to eighty yards from the bay beach, fair drinking water can be obtained at low tide. If a party landed at Punta Rassa, a small sloop or schooner could be chartered to transport boat, provisions and camp equipage to camping ground. A few weeks spent on one of the islands in Charlotte Harbor would do much to restore the invalid. Frosts are unknown; northeasters and northwesterners lose their injurious influences before reaching these favored spots. A weekly mail is received at Punta Rassa, and supplies could be obtained through Capt. McKay, of the Valley City. We have advised parties to camp on the end of the island, for, by pursuing this course, bushes and grass would be distant some hundred yards, and in consequence mosquitoes would not prove troublesome. To intending visitors I would say, secure coast survey charts of this harbor, two in number, obtainable at any large nautical store.

Returning northward, sportsmen could run the coast line from Little Gasparilla Inlet to Sarasota Inlet, a distance of thirty-eight miles. But unless they are familiar with sailing, and know how to pick their way between bars, and keep clear of breakers, we would advise them to take themselves and boat on board the Valley City and land at Tampa. At Tampa they would find good accommodations by calling upon Lt. Wall. Leaving Tampa Bay, with its islands stocked with deer, and every inlet furnishing superior fishing, they would reach Clear Water Harbor by the Indian Pass. From Clear Water Harbor they could run along within two or three miles of the main land in from three to five feet of water. A barrier reef exists from five to seven miles from the main land, and owing to the shallowness of the water, and the grassy nature of the bottom, the water is smooth. Bayous, coves, and small bays will be found in numbers along the coast line, and a good harbor can always be made. The voyageurs could enter and examine *en route* the attractive and beautiful springs at the heads of the Wicawatchee, Chesowillshi, Homosassa, and Crystal Rivers. During the Winter months the gulf is usually as calm as a mill pond, and can be safely navigated with a seventeen-foot Whitehall boat; but for the purpose of navigating shoal water and carrying plunder, we would recommend a batteau, such as is used on the Delaware River. If decked over and supplied with a centre-board and sail, such a craft would be found admirably adapted to the navigation of the southwest. Arrangements could be made for the cheap transportation of such a boat from New York to Cedar Keys by the New York and Fernandina line of steamers. But if money is no object I would recommend intending sportsmen to secure a boat with sailing master at Cedar Keys, Tampa, or Manatee, at an expense of from four to five dollars per day. But I may remark that many of the boatmen along the coast have acquired a weakness, and if peace is desired the whisky bottle must be kept under lock and key.

AL FRESCO.

CHOKE BORES.—The last issue of the London *Field* contains a description of the performances in the field of one of Mr. W. W. Greener's choke bored guns ordered of that manufacturer shortly after his success in the competition for the *Field* cup. Although the report winds up with the statement that on the whole the result is favorable for the choke bore system, when used on grouse and partridge after the first week of their seasons, we do not consider the same by any means proven even by the very account in question. It says:—

"On the 16th five guns were out (by Purdey, Westley Richards, Grant, and Boss), in addition to Mr. Price's Greener; but the day was so persistently wet that the birds would not lie at all, and only a very small bag was made. The 'Greener' did well as far as it was tried, killing five out of six shots, one or two at very long distances. Of its long range powers we had no doubt, from our target experience of it; but what we wanted chiefly to ascertain was how it would act at twenty-five and thirty yards when loaded in the ordinary way. Of the six shots only two were within thirty yards, and at this distance it certainly cut up the birds very much, but not so as to spoil them for the table—nor, indeed, more than a good gun of the ordinary kind. The 17th was devoted to a trial with it at snipe; but here it certainly failed, and undoubtedly its limited killing circle is too small for this twisting bird. If the 'bog-trotter' therefore, has no other gun to use, he should adopt the plan recommended in the report of the trial committee, by which his circle will be increased sufficiently to embrace 'master Jack.'"

Two days later the choke bore was tried again, but the writer admits that a Purdey, its only competitor on that day, did equally as well, and the report also says that "the choke bore certainly is not suited to a bad shot," and those who only possess one gun would do well to have one barrel only choke bored, especially if they are not first-class shots. Mr. Price is of opinion that "the choke bore heats more rapidly than the old plan, and, and thinks in a 'hot corner' this will be a drawback; but, as far as our experience goes, we have found no difference in this respect."

Many of our friends are making enquiries regarding the advisability of purchasing choke bored guns or having their old ones re-bored on this plan. To all of these we can only say wait, and let well enough alone, until further experiment, not at targets, but in actual field work, shall have demonstrated the advantages of the new system over the old.

The Rifle.

THE LAFLIN AND RAND MEDAL.—We present herewith a cut, or rather cuts, of the handsome medal presented by the Laflin & Rand Powder Company to the National Rifle Association, to be shot for at Creedmoor during the Fall meeting, under the conditions mentioned below. Many of the Creedmoor experts use the Laflin & Rand powder and the medals are probably intended as a recognition of their efforts to excel with it. Capt. Bogardus has also made the name of these makers famous. The design of the medal is admirably conceived and the work well executed. The obverse represents the arms of the City and State of New York combined, surrounded by the national standard and various implements of war, the shields being surmounted by an eagle standing on the top of the globe, the legend surrounding the whole being "Laflin & Rand Powder Co. Prize Medal." The reverse of the medal represents the range at Creedmoor, the targets in the distance; at the firing point, Fame in the act of crowning a victorious rifleman, who, with rifle in hand, kneels to receive the decoration. The medal is suspended by a chain from a pair of

cross guns; the guns are attached to a plate, or broach, to enable it to be worn on the breast. The medal is two inches in diameter, and struck in perfectly pure gold, the attachments being eighteen carats fine. Duplicate medals have also been made in silver and bronze, which the Laflin & Rand Co. have also presented to the association.

The match is open to members of the National Guard of any State in the United States, members of the National Rifle Association, excepting, however, such members of the Amateur Rifle Club, who shot in the international matches at Creedmoor or in Ireland.

This match is to be shot for with breech loading military rifles only, and all specially made heavy barrels intended for long range shooting will be excluded. No cartridges carrying more than seventy grains weight of powder, or more than 480 grains weight of bullet will be allowed; firing position, any within the rules of the Association.

THE FOREST AND STREAM BADGES.—The eighth contest for these badges was shot on Wednesday evening, the 8th inst., at Conlin's gallery, No. 930 Broadway. A large number of gentlemen competed, Mr. Wm. Hayes proving the winner by the capital score of 10 inches, being the smallest yet made in these competitions. For those of our readers who may not be familiar with this mode of scoring, we would explain that the shooting was done at 25 yards, the shots being measured from the centre of the bullseye to the centre of each shot. Thus in Mr. Hayes' score the total measurement of twenty shots was but ten inches. The second and third badges were won by the Messrs. Thos. Lloyd and F. Hyde, those gentlemen having made the scores nearest to and over fifteen and twenty inches respec-

tively. Mr. Hayes having won the badge three times now retains it in his possession. The scores were as follows:—

FIRST BADGE.		
Inches.		Inches.
Wm. Hayes.....15 1-2	Wilson MacDonald.....13 7-16	
W. B. Farwell.....13	J. P. M. Richards.....14 1-2	
G. W. Hamilton.....13 1-2		

SECOND BADGE.		
Thos. Lloyd.....15 1-2	A. G. Hellwig.....17 1-2	
G. W. Yale.....17 11-16	L. V. Sone.....15 1-16	
Wm. Moser.....17 7-8	Edward Browne.....19 3-16	

THIRD BADGE.		
F. Hyde.....20 1-16	M. P. Lennon.....22 1-16	
Sherman Smith.....20 1-16	Jos. Woodward.....24 7-16	
T. C. Noone.....21 3-16	H. G. Taber.....26 1-16	
A. Marsh.....20 1-16	H. T. Joseline.....28 1-16	
Capt. Bogardus.....21 3-16	N. P. Gunther.....20 1-16	
Thos. Fenton.....21 6-8	Wm. G. Parks.....30 11-16	
A. B. Dodge.....23		

Several others withdrew.

Wm. Hayes.....12 3-16	Wm. Hayes.....10	

—SELECTING THE TEAM FOR THE CANADIAN MATCH.—

The second competition for places on the team to be chosen to shoot against the Canadians in the forthcoming match, occurred on Wednesday last, Mr. Canfield being the only member of the American team who participated. Weather clear, bright, atmosphere very hazy, thermometer 90°. The wind was very variable and opposed to good scores. The following is the list:—

H. S. JEWELL.		
Yards.	Score.	Total.
800.....5 5 4 5 2 5 5 5 5 4 5 2 4 5—63		
900.....5 2 3 4 4 4 3 3 2 5 5 3 3 4 5—55		
1000.....5 5 2 5 2 5 3 3 3 5 4 4 5 3 3—57—175		
A. J. ROUX.		
800.....5 5 3 5 5 5 4 5 5 4 4 5 5 4—68

1000.....5 3 5 3 2 0 3 0 3 3 0 2 3 3—48—144		
A. ANDERSON.		
800.....5 5 5 5 3 5 2 5 5 4 4 5 4 5—67		
900.....0 4 4 3 0 3 3 4 5 4 4 5 3 3—44		
1000.....4 0 4 0 3 0 5 0 3 4 4 0 0 3—33—144		
G. W. SMITH.		
800.....2 2 5 5 5 4 5 3 5 5 5 5 3 4—60		
900.....3 2 5 3 3 5 2 0 2 0 0 4 2 2—47		
1000.....4 3 3 4 4 0 4 0 3 4 0 5 0 3—29—136		
E. H. MADISON.		
800.....0 5 5 3 3 3 3 3 5 4 2 3 0 3—46		
900.....4 2 3 5 4 2 4 0 4 5 1 5 3 3—50		
1000.....0 4 2 4 4 5 0 0 3 2 4 0 3 0—31—127		
GEORGE CROUCH.		
800.....3 5 4 4 3 4 0 5 3 3 3 5 3 0—50		
900.....0 3 3 4 0 3 4 0 3 3 3 5 2 4—42		
1000.....3 3 0 1 0 3 0 2 4 5 5 0 0 4—23—125		

Mr. Canfield heads the list with a total score in the two competitions of 360 points, the others being as follows:—

Jewell.....167	175—342	Anderson.....135	144—279
Farwell.....170	168—338	Crouch.....153	125—278
Hyde.....135	166—301	Madison.....103	127—230
Rathbone.....142	144—286		

The third and last competition was shot on Saturday, eight riflemen contending. A strong wind blowing directly up the range interfered somewhat with good shooting, particularly at the longer range, as the figures below will show. The following are the totals made:—

H. S. Jewell.....185	E. H. Madison.....111
W. B. Farwell.....150	George Crouch.....102
A. Anderson.....135	R. Rathbone.....87
F. Hyde.....130	A. V. Canfield, Jr.....Retired
A. J. Hennion, Jr.....124	

—On Saturday the Irish-American Rifle Club competed for a challenge cup at 200 and 500 yards distance, seven shots at each range. The best scores were as follows:—

Gen. F. F. Millen.....58	T. R. Murphy.....48
J. I. C. Clark.....52	E. Duffy.....43
B. Barton.....50	J. J. Collins.....42
J. J. Meagher.....50	E. Browne.....42

—The third contest for the Turf, Field and Farm badge took place on Saturday. The conditions were: distance 200 yards, standing; any rifle; two sighting and ten scoring shots. There were no less than eighty-eight contestants. Private W. Robertson of the Seventy-ninth Regiment was the winner, with a score of 44 out of a possible 50. The last winner was Corporal Linton of the Seventh, whose score was the same as the winning one on the present occasion. The best twenty-five scores were as follows:—

W. Robertson.....44	T. W. Linton.....39
J. T. B. Collins.....43	J. H. Stearns.....39
C. F. Robbins.....42	W. Lindsay.....39
W. H. Murfey.....41	C. E. Huntington.....39
A. P. Clark.....41	D. Chancey, Jr.....38
L. C. Bruce.....40	J. I. C. Clarke.....38
D. E. Vannet.....40	W. C. Clark.....38
F. E. Scrymser.....40	B. Barton.....38
J. A. Gee.....39	T. R. Murphy.....38
J. K. Burlew.....39	W. H. H. Sabin.....38
Samuel Schwartz.....39	Alonso Dutch.....38
Thomas Lloyd.....39	W. J. Oliver.....37
D. C. Pinney.....39	

—The London Times notes the arrival home and reception of the American Rifle Team, giving them high praise for their bearing and achievements during their European trip. It thinks their visit there, and the consequent rivalries will be beneficial in many respects.

Mr. J. H. Steward, of London, optician to the National Rifle Association of England and the National Rifle Association of the United States, has presented the same prizes this year, for competition at Creedmoor as he presented last, viz.: a Steward's new Wimbledon Camp binocular field glass as used by the official scorers at Wimbledon this year, a Steward's improved watch aneroid barometer,

for measuring mountain heights and foretelling weather, with the addition of compass and thermometer, a Lord Bury telescope, all amounting in value to \$135.

MOUNT VERNON AMATEUR RIFLE CLUB.—The fifth regular shooting meeting of the Amateur Rifle Club of Mount Vernon, N. Y., was held on the 11th inst. This club is composed of a limited number of members, who have no expectation of becoming "crack shots," but are shooting for amusement. The first meeting was held on August 7, and the shooting has improved at a rate which is at once satisfactory and encouraging. A handsome gold badge is to be competed for on the 25th inst. at the 100 yard range. The targets used are of canvas, and at 100 yards the bullseye is 5 inches in diameter. Following is the score of last meeting; highest possible score at 100 yards, 35; 200 yards, 25.

100 YARDS.															
Prescott.....	4	5	4	5	5	4	4—31	Allerton....	2	5	3	4	4	3	3—24
W. Wilson.....	5	5	4	4	4	4—30	F. Wilson.....	4	4	2	3	3	4	4—24	
Z. Close.....	3	5	5	4	3	5—29	Embury.....	0	3	4	3	4	5	3—22	
Ray.....	4	4	3	4	5	4—25	M. Huss.....	3	3	0	4	3	3	3—19	
J. Mitchell.....	4	4	4	3	4	4—26									

200 YARDS.												
Z. Close.....	3	4	4	4	4—15	F. Wilson.....	6	3	3	3	0—9	
W. Wilson.....	3	4	3	2	3—14	Allerton.....	3	3	w'hd—6			
Prescott.....	3	2	5	dr—10	Embury.....	2	2	0	3	2—9		

It was almost dark when the shots were fired, so nearly so that the bullseye could not be seen through the sights, and next time we will show a better score at this distance.

—The match between a picked six of the Parthian Jr. Rifle Club, of Hudson, and the Saratoga Rifle Club, took place September 8th, on the Saratoga Club range beginning at half past 10 A. M., and ending at 2:15, each man firing three sighting and twenty scoring shots. The contest was between breech and muzzle loaders, and resulted in a victory for the breech loaders, by a score of thirty-three. At the conclusion of the match both teams were invited to an elegant dinner, at Myers' Cedar Bluff Hotel at the lake. After dinner were speeches, strolling, viewing the lake and course of the college crews, &c., and a drive back to Saratoga, ended the first amateur team contest in this country. The following is the score:—

PARTHIAN, JR., CLUB.

THE FRANKLIN RIFLE CLUB, of Hartford, will hold their annual meeting on Saturday the 18th inst. A number of valuable prizes will be shot for and the occasion, it is anticipated, will result most successfully.

DOMINION RIFLE ASSOCIATION.—The annual prize meeting of the Dominion Rifle Association opened at Rideau Ranges on the 7th inst. The targets used were the new Wimbledon, or Brunel canvas targets, described in these columns two weeks since. A large number of riflemen were on the ground. The All-comers' match had 134 entries; the distances were 200 and 500 yards, seven shots at each range. The winner of the first prize was private Newby of the Foot Guards, with a score of 56. The Dominion match was shot on the second day. This comprised a first stage at 300 and 400 yards and a second stage of 500 and 600 yards, five rounds at each. In the first stage, Capt. Gibson, Toronto G. A. took first prize with a score of 58. In the second stage, which was shot on the following day. Lieut-Col. Morris, Seventy-first N. B. took first prize with a score of 40 points. The Battalion match for teams of six men at 300 and 600 yards, seven rounds each, resulted with the following scores for the five highest teams:—

Foot Guards.....138	Tenth Royals.....130
Sixty-third Halifax.....132	Thirteenth Battalion.....130
Forty-second Battalion.....131	

This match was concluded on the third day and won by the Tenth Royals of Toronto, with a total score of 262 points. The McDougall Challenge Cup, shot for at 400 and 600 yards, five rounds each, had 124 entries. Sergt. Mitchell of the Thirteenth Battalion, Hamilton, was the winner with a score of 44 out of a possible 50. The next match, in which considerable interest was also manifested, was the Provincial match for the London Merchants' Cup, value \$1,000, to be shot for by five competitors from each Province. Ranges—390, 500, and 600 yards; seven rounds each. There were four teams entered, as follows:—Ontario, Quebec, Nova Scotia and New Brunswick. The following are the scores:—

Nova Scotia.....350	Quebec.....330
Ontario.....330	New Brunswick.....326

The Affiliated Association match; ranges 500 and 600 yards, seven rounds each, was won by the Thirteenth Battalion, of Hamilton, their score being 125 points.

—The second annual match of the Lenox and Addington Rifle Association was shot at Napanee, Canada, on the 9th inst. The following is the result of the all-comers' match, 5 shots at 200, 400 and 600 yards each. The wind blew in puffs across the ranges:

Paymaster Strachan, 47th Bat.....42	Capt. Hooper, N. B. G. A.....40
Sergt. M. Strachan, 47th Bat.....43	Sergt. Kincaid, 14th P. W. O. R. 39
James Loyst, 48th Bat.....43	E. Ruttan.....39
Robt. McDonald.....42	Lieut. Coburn, 15th A. L. I.....29

—The Rod and Rifle Association of Jamaica, Long Island, contested for the second time on Wednesday last for their marksman's gold badge. Mr. Wm. S. Elmendorf

who was the first winner, was obliged to surrender possession to Mr. George H. Creed, the President of the club. No scores have reached us.

HOLYOKE, September 13th, 1875.

EDITOR FOREST AND STREAM:—

The Holyoke Rifle Club, in their nineteenth field meeting, September 11th, scored as follows:—Distance, 400 yards; position, any without rest; Creedmoor second class target; seven shots; possible 35.

D. H. Smith (winning the badge).....31	D. Kelton.....24

GAME IN SEASON IN SEPTEMBER.

Moose, <i>Alces machis.</i>	Snipe and Bay Birds.
Elk or Wapiti, <i>Cervus Canadensis.</i>	Caribou, <i>Tarandus rangifer.</i>
Hares, brown and grey.	Red Deer, <i>Cariccs Virginianus.</i>
Wild Turkey, <i>Mileagris gallapavo.</i>	Squirrels, red, black and grey.
Woodcock, <i>Scolopax rusticola.</i>	Quail, <i>Ophix Virginia.</i>
Ruffed Grouse, <i>Tetrao umbellus.</i>	Pinnated Grouse, <i>Tetrao cupida.</i>
Esquimaux Curlew, <i>Numenius borealis.</i>	Curlew, <i>Numenius arquaria.</i>
Plover, <i>Charadrius.</i>	Sandpipers, <i>Tyngane.</i>
Godwit, <i>Limosine.</i>	Willetts.
Rails, <i>Rallus Virginianus.</i>	Reed or Rice Birds, <i>Dolichonyx oriz.</i>
	von.
	Wild Duck.

GAME IN MARKET.—Trappers are getting fairly at work at the West and the result is shown in an increased supply of pinnated grouse killed by this means. Iowa furnished the bulk of the supply, and the price in our market is \$1.25 per pair. Ruffed grouse are being received in fair quantities, principally from Connecticut; price, \$1.75 per pair. We saw at the Messrs Robbins, some woodcock from the same State, very neatly packed in dock leaves and ice; they retail for \$1.50 per pair. Reed birds from Savannah are in very fair condition and sell for \$1 per dozen; rail at present are very poor and scarcely worth quoting; teal have appeared and bring 75 cents per pair; wood duck, \$1 per pair; mallard, \$1 25; Bay birds sell for from 50 cents to \$1.50 per dozen according to size; wild pigeons, from the northern counties of this State are worth \$1.75 per dozen; squabs, \$3.50 to \$4.

GAME LAWS OF MICHIGAN.—The game laws of Michigan were amended at the last session of the Legislature, and some important changes made which it would be well for our readers in Michigan to note. The law now provides that no animal of the deer species shall be hunted or killed in the Upper Peninsula from August 1st to December 15th, and in the Lower Peninsula from September 15th to December 15th. Wild turkeys shall not be hunted or killed except from October 1st to January 1st. Woodcock can only be killed from July 16th to December 31st, and prairie chicken, grouse, partridge, pheasant, and wild water fowl from September 1st to December 31st. Any railroads or common carriers who shall transport such game ten days after the expiration of the time prescribed are liable to be fined from \$10 to \$100. The transportation of live quail is, however, lawful, and common carriers may also transport game from other States where it is lawful to kill such birds or animals at the time of such transportation.

GAME LAWS OF CONNECTICUT.—At the last session of the Connecticut State Legislature the game laws of that State were so modified as to do away with July woodcock shooting, and making the close time for woodcock and grouse from July 1st to October 1st, and extending the close time for quail until October 20th.

AMENDMENT TO SECTION SEVEN, LAWS OF OHIO.—An act passed March 29, 1875, declares it unlawful for any person, between the 1st day of December and the 1st day of November, to kill any wild deer." The section, other wise, is correct as printed.

—By the laws of 1875, chapter 183, the shooting of ducks, geese, brant, partridges, prairie chickens and rabbits is forbidden in Suffolk County, N. Y., prior to Oct. 1.

—Rail used to be abundant on the Hackensack River, and we have known of seventy-five being killed on a tide. What is known as the English Neighborhood is perhaps the best locality. However, returns this year are meagre as yet. Nine boats were out on the first day of the open season; they brought in eight birds, but we expect to hear of better results than this ere long.

—Wild geese appeared at Prince Edward's Island, Gulf of St. Lawrence, on the 7th instant, which is unusually early.

CANADA.—Cornwall, Ontario, Sept. 7.—Our duck shooting season has commenced on Lake St. Francis; (about ten miles below here), but the birds themselves have failed to make their appearance. Three years ago you could hardly find better duck shooting in Canada than we had in this vicinity; but now the ducks, alas! where are they? Probably frightened away by the army of breech loaders. I took my canoe and Indian down the day the season opened, expecting to have a good time, but came home disappointed enough, scarcely firing a dozen shots. We are sure, however, to have them plenty just before the lake freezes.

G. H. W.

MAINE.—Calais, Sept. 4.—The young dusky ducks have been very plenty; have killed about fifty. Within a few years there had been quite a change in the breeding of birds upon our river. A few years ago we had no pickerel to eat up the young water birds. Several kinds of grebes that used to breed abundantly have all gone, the woodducks and hooded menders are getting quite rare; and the flocks of young dusky ducks have a hard time to keep out of the pickerel throats. I have no doubt the pickerel will make the salmon a rare fish in the St. John River, as they have been put into the Upper St. John, as they will eat up the young fish. Our time to commence shooting ruffed grouse (1st of September) has got along, but the birds are small, not more than two-thirds grown, but the flocks are very abundant. Woodcock are more abundant than last

But I must stop talking. I only want to make the point that Greene won at the great gun trial, and avoid it as we may try to, *winning* a that trial meant having the *best* gun. FAIR PLAY.

HURST'S Stereoscopic Studies —OF— Natural History For Object Teaching in Schools —AND— PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various Animals and Birds in grotesque attitudes, never however violating their natural instincts.

We offer these views not as pictures only, but as studies from nature. One of the great moving elements in our modern system of education is object teaching. The unerring fidelity of the stereoscope transfers the animals and birds from their natural habitat to the rooms of the student and the fireside of our homes, where they cannot fail to leave a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and in gathering his large collection of native and foreign specimens, enables Mr. Hurst to combine in every view the locality of the specimen with its appropriate rocks, woods or water, and coloring from the originals.

Miscellaneous.

THE HAZARD POWDER CO.,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER. GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT. OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

88 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

AUDUBON POWDER,

Very quick. For woodcock and quail Nos. 1 to 4. Packed in metal kegs of 12 1/2 lbs. and 6 1/2 lbs., and in pound canisters.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.g, FF.g, FFF.g, the last being the finest and most used. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 pound.

All of the above give high velocities and less residuum than any other brands made.

SCOVILL'S Blood and Liver Syrup

All cutaneous eruptions on the face or body indicate
An Impure Condition of the Blood,
and this may or may not be SCROFULA; but in
either case is nothing more than an insidious poison, that

BURNS LIKE A TERRIBLE FIRE
as it courses through the veins, sowing seeds of death
with every pulsation.

In this condition of things something is needed AT
ONCE TO CLEANSE THE BLOOD; and

Scovill's Blood and Liver Syrup

will positively effect this desideratum, expelling
every trace of disease from the blood and system and
leaving the skin

SOFT, FAIR AND BEAUTIFUL.

Hundreds of certificates attest its value. Price \$1 a
bottle.

FOR SALE BY ALL DRUGGISTS.

Dr. Rogers's VEGETABLE WORM SYRUP

A brave man may suffer pain, when inflicted upon
himself, heroically; but he

Cannot see his Child Suffer.

There is no other malady incident to childhood that
is accompanied with more indescribable wretched-
ness to the little sufferers than that

Produced by Worms;

and when the parent fully comprehends the situation
he will not delay a moment in securing the most
prompt and efficient remedies to insure the expulsion
of the intruders. The remedy may be found in

Dr. Roger's Vegetable Worm Syrup.

Please bear in mind that

ROGERS' WORM SYRUP is the reliable prepara-

ROGERS' WORM SYRUP is a palatable prepara-

ROGERS' WORM SYRUP is liked by children.

ROGERS' WORM SYRUP positively destroys

ROGERS' WORM SYRUP leaves no bad effects.

ROGERS' WORM SYRUP is highly recommended

by physicians, and is unquestionably the best WORM

SYRUP IN THE WORLD.

Price 25 cents. For sale by all druggists.

HENRY'S Carbolic Salve.

FOR SALE BY ALL DRUGGISTS.

The wonderful celerity with which this
combination of Carbolic Acid with other
nothing and Curative Emollients acts,
something akin to the marvelous.

It is with pride that the proprietors call

attention to the gratifying fact that

Physicians give it the high-

est meed of praise,

and use it and prescribe it in their practice.

NEW YORK, Dec. 22, 1869.

JOHN F. HENRY, Esq.:

Your CARBOLIC SALVE proves an excellent article,

and I thank you for it. This is another evidence of the

great value of the discovery of Carbolic Acid. Yours

8 and 9 College Place, New York.

HENRY'S SEWING MACHINE OIL

PURE OIL that does not gum up and has the

endorsement of the principal Sewing Machine Com-

panies.

Price 25 Cents per Bottle.

MOTT'S LIVER PILLS

It is easy enough to make a pill, but to make a

pill, and that's the difficulty. There are cheap,

shabby, drastic pills, that are of even less benefit than

use of salts. But a good medicine, like Dr. Mott's

Liver Pills, which penetrates to the seat of disease, is

desideratum indeed. Will positively cure all dis-

eases of the Liver. Sold everywhere. Price 25 cents

per box.

Green's Oxygenated Bitters.

At certain periods of life a tonic is a necessity; but

it is danger in using stimulants that injure the or-

gans of digestion while giving temporary relief. To

obviate this and present to the public a tonic free

from Alcoholic Poison, Dr. Green prepared the Oxy-

genated Bitters, a sure cure for dyspepsia and all kin-

d complaints. Sold everywhere. Price \$1 per

bottle.

Dr. Green's All-Healing Tar Soap.

cures all kinds of Skin Diseases with a most won-

derful certainty; it promotes cleanliness, personal

hygiene and general health; it is a preventive of many

of disease, and it is an absolute necessity in

nursery. Price 25 cents.

Miscellaneous.

Breech Loaders. W. & C. SCOTT & SONS.

Winners of the "Turf, Field
and Farm" Gun Trials.

(See issue October 3d, 1873.)

In which competition the committees have awarded
our guns, First and Second for POINTS OF MERIT
OF ACTION, MATERIALS, PROPORTION, AND
SHOOTING QUALITIES combined, in all the four
classes.

THE PREMIER GUN.

W. & C. SCOTT & SON call attention to their
very FINEST weapon, combining all their recent im-
provements, marked on the rib between their name
and London address the brand—"THE PREMIER
QUALITY."

Medium and fine guns bear full name and address,
and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped
with name and trade mark.

W. & C. SCOTT & SON, Sole makers of the
Patent Top Lever, solid, Double Locking Bolt Breech
Loader, bearing the full name of the firm. W. & C.
SCOTT & SON caution sportsmen against imitations
of their patent and name. Guns bearing the name
abbreviated, or with different initials, are not genuine.

**TRIAL OF SCOTT & GREENER'S NEW SYSTEM
OF BORING, BY THE EDITOR OF
"THE FIELD," LONDON.**

(See *The Field*, January 30th, 1875.)

"From a comparison of the two tables it will be
seen that with Walker's shot, Messrs. Scott's guns
showed a marked superiority over Mr. Greener's,
both in average and in the highest score made. In-
deed, with the left barrel, in his third shot, Mr. Scott
got a selected group pattern of 239 and a penetration
of 37, equaling the highest pattern made by Mr.
Greener, and exceeding the penetration of that par-
ticular shot by eight sheets."

H. C. Squires, No. 1, Courtlandt st.
New York.

THE GREAT London Gun Trial, 1875.

W. W. GREENER begs to inform his numerous
clients in the United States that he has been very suc-
cessful in the above trial, having secured the first
prize, a silver cup, value 40 guineas—class 2 for 12
bores; also winner in class 1 for 8 and 10 bores, and
class 4 for 20 bores. He has won in all the classes for
improved boring, which is upon a different plan to any
other maker, and is far superior in the three most es-
sential points, viz., PATTERN, PENETRATION,
and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Courtlandt St.,
New York, is now importing my DOUBLE CLOSE-
SHOOTING GUNS to order, an invoice of which
will be shipped to him on the 1st July, and can be ex-
amined about the 15th. All special orders given to
Mr. Squires will be carefully filled. A full report of
the GREAT TRIAL, showing the marked superiority
of my guns over guns made by Dougal, Pape, Westley
Richards, Tolley, Scott, and others will shortly be
published, and can be had on application at No. 1
Courtlandt St.

**W. W. GREENER,
Champion Gun Maker,**

St. Mary's Works, Birmingham, England.

HENRY C. SQUIRES, of No. 1 Courtlandt street,
has just received an invoice of these close-shooting
guns, and from him any information in reference to
the results of the Great Trial can be obtained on ap-
plication.

Miscellaneous.

WILLIAMS & POWELL, Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the
extreme SIMPLICITY, STRENGTH and DURABIL-
ITY of their New Patent "SIMPLEX" Breech loader
and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,)
its mechanical soundness so thorough, and the
strength and simplicity of the action so great, that
W. & P. feel sure it will supercede all the complicated
and manifold grips now in use, its one powerful grip
being far stronger than any double, treble or quadruple
grip now used. In this new action LEVER and GRIP
ARE ONE SOLID PIECE OF STEEL and the AN-
GLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on ap-
plication, and orders may be forwarded through any
of the best houses in the States for execution in the
Spring.

Guns guaranteed to make patterns of from 160 to
230 with No. 6 SHOT AT 40 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET,
LIVERPOOL.
Established 1780.

aug26-tf

J. D. DOUGALL'S EXPRESS SHOT GUNS.

(Title registered.)

SHOWN by trials at Wimbledon by Editor
of the *Field* to possess the GREATEST PENE-
TRATION and therefore LONGEST RANGE—thus:
Circle, 30 inches; 300 pellets; average, 191; pene-
tration, 37. The Editor's trial of Greener guns with 340
pellets of same shot and same charge of powder, gave
180, and penetration 30, although there were 40 more pel-
lets in each charge. Should any controversy arise as
to the durability of these new systems, we herewith
warn all beforehand that our system is our own inven-
tion (though founded on the American idea) and is DU-
RABLE, a fact remarked on by the *Field*, that the
guns tried had been in use during last season, and re-
ferences permitted to the owners. Send for illustrated
Circulars to

59 St. James's Street London.

Dogs of England.

For Forest and Stream.

A Week in the Hills of Kentucky.

WE left Mount Sterling, the metropolis of Montgomery County, a flourishing town of 3,000 souls, at 3 o'clock on Sunday evening, having seven miles of good metal and eight miles of bad dirt road to traverse before reaching the banks of Red River. Montgomery is the last county in the Blue Grass belt, and the very moment you leave its eastern boundary, the untamed and untameable wilderness opens before you. Spurs of the irregular mountains subordinate to the Cumberland range reach almost down to the green pastures, and thus far, no well-graded thoroughfares have been opened beyond what is called the "Levy"—Heaven only knows why. Black Creek Mountain rears sombrely in front, and the traveler has a dreary prospect when the wheels of his spring wagon turn up the first angle of 45°. There were four of us in the party. Two "rods," one "shot," and a contraband, or man of all work. Our wagon was light in appearance, but new and well joined, and the horses, a pair of steady bays, strong and sure-footed as goats. We found them at Horace Carr's, a rather distinguished stableman and jockey of Mount Sterling, and many times had reason to congratulate ourselves upon the endurance and intelligence of the animals. The ascent of Black Creek Hill was not more abrupt and perilous than its descent, and all of us preferred the solid ground to the uncertain wheels. It was fairly dark when we entered the dismal windings of the unsettled valley, and but for the moon, which rode over us, as Read says, "swinging boat-like," we could never have solved the problem of courses with our coursers. The gnarled knees and roots of old sycamores, elms, walnuts and willows were everywhere in the way, and we enjoyed the ride about as thoroughly as a pea—if it had sensibility—would enjoy the interior of a child's rattle. It was fairly 10 o'clock when we debouched from the vale of Black Creek upon the wider bottom of Red River. Two miles above at the Forge there were several good houses where we might have found shelter and food, but Cæsar, with the enduring spirit and courage of another whose name he bore, determined we should enjoy a spring mattress of ferns and a covering of firmament. We had a tent-fly in our equipages, but the Czar, as we called our black tyrant, said we would enjoy the night better without it. Our stores consisted of a frying pan—four foot iron handle—a camp kettle, a skillet, a coffee pot, half dozen tin cups, half dozen tin plates, knives and forks and a small liquor chest containing bottles, glasses and several useful articles. The provision department was rather more elaborately furnished than either necessity or true sportsmanship required. We had a fine side of bacon, two hams, a peck of meal, a dozen loaves of fresh bread, four pounds crackers, two jars chow-chow, three pounds coffee, eight pounds sugar, and a small assortment of canned meats and fruits. Condiments of all kinds. Our supper on Sunday night consisted of bread and butter, coffee, boiled middling, and the remains of two broiled chickens, brought from Mount Sterling for an emergency *en route*. We were too much fatigued by our rough ride to remain long with the cigars after supper, so by 11:15 we were duly rolled up in blankets and off to the land of nod.

Monday. Cæsar gathered his fuel and was midway the breakfast when I arose to investigate the "krik" in my neck, and the unusual resistance at my knee and hip joints. His fire was burning brightly by the side of an old sycamore log. There was an aromatic odor of coffee and a general freshness about everything, except my joints. The sun was just struggling up, but the fog of the river obscured everything and left the impression that the hour was nearer daylight than sunrise. I called to Ed. and Bob, who were coiled together like a bunch of White & Hunt's new-fangled cigars, and they "came out of the kinks" with commendable celerity. A bath in the brook is a great aid to tired nature's sweet restorer, and in my case it did most of the restoring, as I knew it would before I took the plunge. Whilst breakfast was being prepared, Ed. and I went after

minnows. We made several hauls with a good seine, but found Black Creek rather thinly settled. We did not take more than two or three dozen bass minnows and none at all for pike. Our objective fish on this occasion was the pike, or jack, as he is called in this region, and we were anxious to open the campaign that morning at Lindsey's dam, two miles above. We failed to find the bait, however, and had no alternative but to waste the morning with black perch and rely upon taking a supply of suckers at noon and late in the evening. After breakfast we struck camp, and in the language of the immortal Livingstone, or Stanley, or somebody, "trecked up the left bank of the Lim-po-po," or rather Red River. The dam at the Forge is an old fashioned concern—a horror to any true fisherman—above fourteen feet high. It was constructed before the enactment of a law requiring dams not to exceed six feet in height. Formerly there was a mill on the right bank, but one morning there came a tide and the mill went away with it. Ed. remarked: "Here is a very fine dam by a mill site, but no mill by a dam site." All of which would have been very funny but for the staleness. I have no doubt the bass in the pool under this dam would have taken almost any fly that morning, but we did not come prepared with any flies. I secured a position on the right abutment, or rather under it, and Ed. located himself about the middle of the dam. The water was running over in one or two low places only, and there was no difficulty in crossing. Bob seized one of our large pike rods and waded over to a small island in the pool. Though he had no pretensions as a fisherman he took the first bass, striking him at the right time and landing him with the skill and *nonchalance* of a thorough Walton. He was the largest we caught that day, weighing three pounds five ounces. We took eighteen in all, and they weighed 15½ pounds. The sport was excellent whilst it lasted, but the bass refuse to eat after the sun has fairly reached the water, so we were compelled to close in an hour. We employed a young gentleman who paid us a visit during the day, to catch the pike bait, and he was very successful, bringing in about fifty fine lively suckers from eight to twelve inches long. This boy was a rare character—a thorough mountaineer—the son of a bear hunter and skilled fisherman named Sea. His christian name was Rucker. He had red hair, a freckled face, strong grey eyes, was compactly built and about thirteen years of age. Two years ago, alone and unaided, he killed and brought home a large she bear. Bob tied to him at once, and arrangements for a deer hunt were entered into without delay. In the evening we tried the pike, but without success. The mill pond or dam is about six miles long, very deep and filled with large logs and trunks of trees. It is a fine harbor for fine fish, and many very large ones have been taken here. On our way to camp we landed five more bass, one weighing nearly two pounds.

Tuesday. Cæsar made the acquaintance of a mountain lady and produced, to our astonishment, a jug of fresh buttermilk and some fried potatoes. These with our fish and coffee made a breakfast for a prince. At six o'clock we were in a canoe slowly paddling up the dam towards Lindsey's saw mill—about three quarters of a mile above—and by six and a half were comfortably established on some logs of an immense drift. I did not have much hope of taking a pike, and had brought my bass pole and was fishing with a small sucker, not more than six inches long. Ed. was using a long India cane with full rig and bait for large fish. He always had greater ambition than I, and though he caught fewer fish they were better than mine. Bob and Rucker passed us on the horses, shouting "good-by!" as they went up on the west side. They were bound for a point above the town of Stanton, the county seat of Powell, where deer were said to abound. Just as we replied to his salutation my cork—we are obliged to use corks on account of the many snags—went sailing southward and down the river. It moved rapidly and my reel sang sweetly. At first I thought it was a large bass, but it carried away so much line, and with such apparent ease that I became convinced it was a pike, and was alarmed for the security of my tackle. It was evidently

making for another drift pile on the west side more than a hundred feet from where I stood. It was clearly no time to strike, because he had not paused a single instant, and I could not risk giving the reel any slack for fear of drawing the bait from his lips. My line was more than two-thirds gone and the fish still going. Ed. noticed the condition of things and kept saying "let him run! let him run!" just as if I did not know that was the only chance. At last he stopped in the very edge of the drift, and nearly at the end of my line. He remained still at least half a minute. I did not wait longer, but pressing my thumb on the spool, I brought the rod severely to the left and hung him without difficulty. Fortunately he struck for mid-stream, and it enabled me to recover more than ten feet of line. I was using a small wire-snood about twelve inches long with a bass Limerick about three-quarters of an inch from barb to shank. I knew he would be safe as far as this was concerned, but I feared he would turn suddenly and snap the line or the rod when I was recovering the slack. Pike often do this even with much stronger tackle. I soon found he was hung in the throat and felt more confident, being able to turn him without trouble by simply holding a tight line when he started in any objectionable direction. The difficulty in taking him out was apparent in the surroundings of my position on the drift. I knew if he was allowed to run deep and come close to my station he would entangle the line and walk away almost without opposition. Ed. observed this and brought the canoe around without delay. I stepped in and we floated out to the middle of the river where we had an open field and a fair fight. In twenty minutes from the striking he was tractable and perfectly in my power. I brought him up to the side of the canoe four or five times before Ed. used the gaff upon him, and even then I was rather regretful that I had not given him a fairer show. At one time I thought he would weigh twenty pounds, but upon taking him out of the water I saw he was not so large. He drew just eleven pounds and a half on the scales at the mill. We continued in the mill pond all day with no further success of consequence. Ed. caught a long, thin, hungry looking pike weighing 4½ pounds, but there was no sport in taking him. He appeared sluggish and came out of the water making no gallant resistance. Both of us had several misses in the afternoon, and Ed. a most deplorable misfortune in losing a large fish after he had completely worn him out. I could have taken him with the gaff hook several times, but Ed. preferred to let him play until he played off the hook within ten feet of the bank where we stood. He floated away slowly, and I presume as much to his own surprise as ours. We reached camp about five o'clock, and before supper I scored eight small bass. Cæsar proved a better hand with the minnow seine than any of us, and had two full buckets of fine lively steel backs when we came in.

Wednesday. We were off again tolerably early, this time to an unfrequented place above Lindsey's mill at the head of Jackson's Bottom. The river here is very beautiful, running under great high cliffs on one side, and a magnificent fringe of elms and wild cucumber trees on the other. It is rather tortuous and winds provokingly in horse shoes and letter S's. In some places we could walk an hundred yards and cut off a full mile of water route. We paid our respects to the fish at the mouth of a small stream—the name of which I do not know—about nine o'clock. It had a most inviting appearance and many rare traditions were associated with it, but though we fished faithfully until nearly noon we took nothing but a two-pound bass and a blue channel cat. At three o'clock we returned to the mill, and whilst I enjoyed the process of plank making, Ed. sat in the canoe at the boom log and allowed his minnow to play in the deep water. One of the mill hands called my attention and I went forward to find the inveterate fisherman in a glorious struggle with a large jack. His bait had been taken with great voracity a very few moments after I left him, and he was now enjoying a hard fight. Being alone in the cause he was at a disadvantage, for the fish controlled its movement and bore him in whatever direction it chose to go. I was

anxious to reinforce him, but there was no other boat in reach and no possible chance except through a cold swim to give him any assistance. The mill stopped and all hands came forward to witness the sport. It lasted nearly a half hour, the fish making a desperate effort to approach the timbers of the log-way, or to enter a drift pile on the east side. Ed. managed to prevent either by hard work and the most consummate skill. I felt sure he would never succeed in taking the game; but he persisted manfully and at last managed to bring him near enough to strike with the paddle. The gaff-hook was unfortunately lying on the boom log where I had disembarked, and he had no weapon or retrieving instrument except the paddle. When taken out of the water the fish looked enormous for this stream. It was nearly four feet in length, but rather slender. It weighed sixteen pounds, and was pronounced the largest fish of the season. Last Fall two weighing respectively 15 and 27 pounds, were taken near the same place. This ended our sport for the day.

Thursday. A slight discoloration of the water this morning deterred us from any long journey. Red River rises with great rapidity, and frequently without any admonition it overleaps the banks, and in a single night attains a height of twelve or fifteen feet above the fishing stage. Fortunately the stream did not rise very rapidly, and in the evening we took a large number of silver perch with small river minnows. I gathered a good many rare ferns and secured some roots of a pretty variety of the rhododendron. We saw very many squirrels, and had a surprise in the appearance of a large otter just in front of camp. The deers were very heavy and we found the tent-fly useful.

Friday. The sky was heavily overcast and a rich promise of rain. We were at breakfast, when Bob came in with a wild halloo. He brought four ruffed grouse, a turkey, two opossums, a monstrous owl, and a dressed buck skin. He reported the deer abundant, but wild and wary. He had a fine chase in a cove at the headwaters of a creek joining Red River near "Kl Bowen's." The dogs belonged to Weed Gay, a votary of the chase, living about ten miles above Stanton. Two of the hounds were still out when he left. The stag passed but one stand and the shot passed under him, being fired from the lower side of the mountain. We had a hearty laugh at his ill luck, and suggested that he try the rod and abandon the "villainous saltpetre." It began raining at seven o'clock and continued without a ray of sunshine all day. Our sport was clearly broken up and we prepared for departure on the morrow. Caesar caught an immense turtle on a "set out"—a large beech branch tied to the bank with a heavy bit of cotton staging for a line, a pike hook, and a sunfish for bait. As we could not remain to enjoy turtle soup he was doomed to transportation to Mount Sterling with about thirty pounds of pike and bass.

Saturday. We left early, the rain still falling and the branches much swollen. It was a terrible journey, but we accomplished it by 3 P. M., having only suffered the loss of a broken wagon pole and a camp kettle which rolled down Black Creek Mountain. Trout.

For Forest and Stream.

DOWN THE ALLEGASH.

OF the many ways of spending a Summer vacation, there is none, in my opinion, equal to a canoe voyage. Thoreau and Winthrop have written in its praise, and next to taking the trip itself comes, I think, the pleasure of reading Winthrop's racy account of his voyage down the Penobscot or Thoreau's visit to Katahdin. The advantages of a trip of this kind over the usual "camping out" are many. There is a constantly changing view presented to the voyagers; something new and often startling is presented to the eye at every turn of the river or lake, whichever you may chance to be on, like the ever-changing forms in the kaleidoscope; there is the healthy activity acquired by every nerve and muscle in its being brought into use in paddling on through lake and river, and if the latter, and it should be the Allegash, with its almost continuous rapids, you will find a cool nerve and a quick, steady hand are requisite for your comfort if not for your safety. If, however, you have a guide, and are in the canoe with him, the labor and anxiety comes on him, while you may sit in the bow of the canoe, gun in hand, watching for game and feasting your eyes on the ever-changing scenery as you glide noiselessly along. Being constantly on the move, the monotony of camp life is dispelled by being obliged to find a new camping place every night.

The principal requisites of a trip of this kind are a good route through an uninhabited region, as there you will be more likely to meet with game. Again, a route pleasantly diversified by lakes and rivers, and where in going through the latter you can take the advantage of the current. The latter is an important item, especially if you have many rapids to encounter; and last, but not least, a good guide. Of the many voyages taken by the writer, the Allegash route answers all the requirements mentioned better than any other. The route is through the forests of Northern Maine; thence into New Brunswick. There is a pleasant change from river to lake and from lake to river throughout the entire journey; no currents to struggle against, and but few carries, and game and fish are abundant enough to give good sport, besides furnishing food enough so that one is not obliged to load down with provisions at the start.

Greenville, at the head of Moosehead Lake, is the starting point. Good guides and canoes can be obtained here by addressing Mr. D. T. Saunders, who also furnishes everything that is needed for the trip, both provisions and cooking utensils.

Our party in 1874 consisted of three besides the guide, which required two canoes for our transportation. For a guide we were fortunate in procuring Thomas Nichols, a well-known Indian guide, who knows the woods and waters of Maine and the provinces by heart, and a true son of nature, as we found him, able to imitate the whistle of the partridge or the peculiar sounds made by the mink and weasel, so that they were deceived and approached near enough to be shot. When we saw two fleet-footed caribou we had the "buck fever" for the first time. Crack! crack! went our rifles, but the animals took to the woods unharmed; but Thomas was after them, and we followed on. They heard his peculiar calls—a kind of guttural "Ugh! ugh!" and stopped to listen; one of them, a fine buck, we succeeded in bringing to the ground. With his birchen horn he could call the moose from the forests. Ah! Thomas, if you only could have caused the wind to have blown in the opposite direction when the proud buck

stepped to the shore and snuffed the air tainted with our scent, and turned on his heels and plunged into the woods. He could not stop a moose, but he did stop a runaway French Canadian, who, thinking we had evil designs against him evidently, locked his store as we approached, and "English" couldn't stop him as he ran for his house; but Thomas came to the rescue, and his French proved an "open sesame" to his store.

Moosehead Lake has been described so often that a repetition here is unnecessary. *Harper's* for August has an illustrated article, which I think is the best description of the lake and its surroundings yet published. We left Greenville Friday, September 4th, on the steamer Fairy, and after a most delightful sail reached the head of the lake about 2 P. M. Here we found a "hay rack" ready with two horses attached to transport us across the carry, two miles to the Penobscot. The canoes were placed on the top of the rack, the baggage and passengers beneath, and our Nimrod took his gun, going ahead, as he said to "frighten away the bears" and perhaps get a partridge for supper. Our course was down the Penobscot, twenty miles to Chesuncook Lake, although we could have reached the St. John River from this point by ascending the Penobscot and carrying across to Baker's Lake, thence down the South Branch, but by this route there are but two small lakes, and at the time we were there not enough water for comfortable canoeing. We launched our frail barks, and dividing our party as we thought best for each other's comfort and safety, putting the one with the least experience of canoe life with the guide, and then went on. For the first few miles the river is still water, so that by the time the first rapids are reached you feel well enough at home in the canoe to venture into the small rapids without the least fear.

We camped the first night at the mouth of the Ragmuff, a small stream, almost immortalized by Winthrop. Here we expected to catch our first trout, so while others were preparing the camp we put our rod together, and with a white miller for a leader, gently threw it on the dark still water. A splash, a whirl, a call for the landing net, and after a brief struggle a large chub is landed. Another cast and yet another, and each time we are rewarded with a chub—a fish that Thoreau, who ventured to cook and eat it, said "tasted like brown paper salted." We retired that night disgusted, but early dawn found us there again, and with a red Palmer substituted for the white miller we caught enough trout in a few minutes for a breakfast, and then went on our journey. At Pine Stream Falls we lightened our canoes and the guide run them through alone, and about 5 o'clock reached Chesuncook Lake, where we camped for the night in plain sight of Mount Katahdin, and although at this point it is over twenty-five miles away we had a magnificent view of it. Chesuncook Lake is eighteen miles long by three wide. There is nothing of special interest about the lake or its surroundings. We obtained provisions at Murphy's farm, at the head of the lake, and went on our way up the Umbazookskus River, which, with the Caucomgomuc, come together at this point. Here is still another route in which to reach the Upper St. John, namely, up the Caucomgomuc River, through the lake of the same name, thence across the "seven miles carry" into Baker's Lake. Our course was up the Umbazookskus—at first, for several miles, a sluggish, silent stream, running through a wide interval overgrown with dwarf shrubbery, interspersed with tall dead pines. The river is as crooked as the paths of the wicked, and we thought appropriately so for us, the day being Sunday, but we feared a rain storm and hence pushed on, being anxious to get across the Mud Pond carry before it rained. After following its twists and turns for seven or eight miles it dwindled to a mere brook, so that we were obliged to get out and wade, dragging the canoes after us. The stream was literally alive with wild ducks. We also saw the tracks of a bear and the bones of a moose, which evidently had been killed a long time before.

We reached Umbazookskus Lake at dark, spent the night on its banks, and, as we feared a cold night, each one of us sewed his blanket up with a fish line into a huge bag, in which on retiring he crawled, and no amount of kicking enabled us to throw off the bed clothes, hence we slept warm. Umbazookskus Lake is four miles long and one mile wide, a lovely sheet of water, and on this cloudless day looked like an amethyst set in emeralds. This was the last of the waters of the Penobscot, and we reached the carry, took a lunch, and prepared for work. The carry between this lake and Mud Pond, the headwater of the St. John, is two miles long, and is called the wettest carry in the State, but we found it in good condition, as it usually is in September. We were obliged to go across twice, the Indian carrying the canoes while we took the luggage. We met a student of Harvard on the carry who had been spending his vacation hunting about Eagle Lake, and who was now returning with his guide, bringing with him as trophies the skins of two large bears which he had shot. We communicated to him the latest news from the "outer world" and resumed our travels. We reached Mud Pond tired and hot, having been four hours making the carry. We launched our canoes, and after ignominiously "pushing" our canoes through the shallow waters of Mud Pond came to the conclusion that it was rightly named. It had never seemed right to me that while all the lakes and ponds in this vicinity with this exception should have romantic Indian names this one, which to the traveller is the most important of any of them, should be called simply Mud Pond, but, as I said, after literally pushing our canoes across it we recognized the fitness of its name. I will not acknowledge that the one that christened it was wiser than we—oh, no! he only saw the pond before we had a chance to give it a name. We saw here signs of moose, and judged that one had been feeding here the previous night on his favorite repast—the large leaves of the yellow pond lily (*Najas advena*), which grow here in abundance. The waters of the pond being covered with them, a colony of beavers have established themselves here and have built a dam across a small stream running into the pond, and have built a number of houses in the pond which they have created. The brook, which is the outlet of Mud Pond, we found so low that instead of running through, as we had anticipated, obliged us to make another carry of half a mile, where we found water enough to float our canoes. A short distance more in the brook and we came to Apmojenegamook or Chamberlain Lake. It was about dusk; we could plainly see the red buildings on the farm across the lake four miles away, and although we were all pretty well tired out, concluded to cross the lake, pitch our tent, and get some supper at the farm house; besides we feared that if we remained and built a fire it would bring some of the men

over from the farm, that being the signal when any one wishes to cross the lake. We found at the farm eight men but no women, a man cook being employed, and unless our ravenous appetite deceived us, he is a good one. We replenished our small stock of potatoes and hard bread here, paying a good round price for the same, rested our weary limbs half a day, had a good dinner at the farm house, and started for the Locks, which are situated between this lake and Eagle Lake below. These locks were built at a great expense for the purpose of rafting lumber up from Churchill and Eagle Lakes below, into Chamberlain Lake, thence into Telos Lake, from which a canal was cut into Webster Pond, on the east branch of the Penobscot. This route is sometimes taken by the tourist, who, after visiting the lakes, wishes to reach Bangor easily.

We caught a number of fine trout in the river between the lakes; and after a sumptuous breakfast of bread and milk and fried trout we started for Eagle Lake. The river between the two is short and swift, but with plenty of water it can be run with care. The men at the farm told us that they had raised the gates at the foot of the lake ten days before, so that we should probably find a "good pitch" of water in the Allegash, which was the case as we afterwards found. Chamberlain is the largest of the Allegash Lakes, but Eagle Lake is by far the most beautiful. We intended to hunt for moose on some of the brooks running into the lake, but found a party already hunting on one and a great fire raging on another favorite hunting ground, so we took Pleasant Brook and spent half the night in calling for moose on its banks, but were doomed to disappointment. This lake was for many years the home of a noted hunter and trapper named Donald, or "Dirty Donald," as he was generally called. His cabin is tenantless and fast going to ruin, and the remains of his bark canoe are strewn along the shore near by. Peaked Mountain is the show piece of this lake, and the tourist on this route will do well to arrange his plans so that he will be enabled to stay here a few days. We left it regretfully and passed on to Churchill Lake, camping at the dam at the outlet of the same and at the commencement of the Allegash River. The old dam has been destroyed and the clearing has grown up with blueberries; we feasted here on its luscious fruit, together with partridges in abundance and ducks to be had by shooting them—more than we could dispose of.

We went to the head of the rapids, which commences here, and through which we must go, looked at them and thought of the morrow, whether Thomas would "run" them or carry by; if the former, we made our minds up to follow him; and we did. Known as Chase's camp they are the worst rapids on the Allegash, one mile in length; it is a continuous run from the time you enter them until you come to the still water at the foot, and the channel through which you are obliged to run your canoe is crooked and tortuous, first to one side, then the other, or through the middle of the river, and woe be to you if you cannot hold your canoe while making the changes, as we found when congratulating ourselves that we were nearly through. A look ahead and we saw we were wrong, and must change. The sitting poles were put hard down, and we tried to go back a few feet, but the waters came into our canoe, in an instant filling it full. We jumped out and fortunately found the water shallow, and after bailing the water out of the canoe went through without further trouble. At the foot of the rapids a fire was kindled, our clothes quickly dried, in the meantime we quietly enjoying ourselves by fishing from the rocks *en dishabille*, and succeeded in catching in a few minutes all the trout we should need for two days.

We camped that night at the head of Umsaskis Lake, and having seen signs of moose started out about 9 o'clock at night to call for them. Silently we paddled along the shores of the lake, not a sound to be heard save the wild cry of the loon, the splash of the startled muskrat as our canoe came upon him, or the loud call of our Indian guide through the birch bark horn something like "oogh! oogh! oogh! oooooogh!" then a long pause of several minutes and the call would be repeated. Suddenly splash! splash! in the water, then a loud cracking of the underbrush on shore, told us that a moose had taken the scent and fled. Cast down but not destroyed, we continued the hunt, but without success. The surroundings of Umsaskis and Long Lake, which we came to next, are very beautiful. The islands are numerous and covered with a large hard-wood growth of trees, beneath which, instead of the inevitable underbrush found where pine and spruce abound, was a growth of tall rank grass, ripe for the mower, but destined to fall beneath the storms of Autumn and decay. At Long Lake lives Mrs. Johnson, husband, and family of five children. Before reaching the house we asked Thomas if we had not better get her to bake us some bread; his reply was, "You get the flour here; me bake the bread." We made a short call here, for we wanted to see the Amazon of whom we had heard so much—a noted half-breed of prodigious strength; she has married a white man and settled here in the wilderness, rearing a family in ignorance and dirt. She seemed to be posted on some of the important events that had transpired in the country during the year, and was very anxious to see a guide book, as she understood there was something about her in one of them. Although we had the book with us we did not let her see it. Our provisions getting low we procured some potatoes, eggs, and flour from her, gave the children a few pennies, and her "old man" a cup of lump sugar, bade them good-by, pitched our leaking canoes, and went on our journey down the restless Allegash, swift water and a few rapids enabling us to make a run of twenty-five miles that day, reaching Square Lake about dusk. The Allegash needs a rest, takes it here, recovers its wonted energy, and then rushes on again for thirty-six miles, when it is swallowed up by the noble St. John. There were many places where it seemed to defy us and say, "I shall crush you if possible," but we knew others had made the "run" from Eagle Lake to the St. John without a carry and we were determined to accomplish it, which we did, save the carry at the Allegash Falls, where there is a fall of over forty feet. Square Lake, also called Round Lake by some maps, is a little gem of a lake. The shores are mountainous, and as no dam has ever been built, killing the trees by the rising of the water around the shores, as was the case in some of the lakes we came through, we were all charmed with the beautiful prospect, and it being Saturday and we needing rest, the Sabbath was spent here in a quiet way, making repairs in our clothing and watching the loons on the lake. We were amply paid for our resting this day, for we had gone but a few miles on our course the next day when we saw two caribou on the shore, both noble bucks, one of which we shot, the larger one escaping in the excitement

of the chase. What trout we had we threw away, and, although the river was alive with them in places, we packed our rods, not caring to catch them and have to throw them away again. For the next seven days the juicy steaks from the fat buck was on our bill of fare three times daily, and no one cried "enough." What we could not eat we smoked over our camp fires and preserved, so that the folks at home might have a taste. That night we camped at the Grand Falls of the Allegash, and were lulled to sleep by the roaring waters as they came thundering down past our camp.

The next day we reached the St. John River, having been eleven days on our journey from Mooshead Lake. The settlements commence at the mouth of the Allegash, the banks being dotted with houses here and there, at first two or three miles apart, but after reaching Fort Kent quite numerous, and about every three miles a Catholic church has been built, while along the shores, near every house, the wooden dug-out or "pirogue," a craft peculiar to the Canadians, would be pulled up on the shore. We were six days on the St. John in going from the Allegash to Woodstock. There is but one carry—that around the Grand Falls, where we loaded everything on a team ready for jobs of this kind. Below the falls the water is very quick, but no rapids. We run forty miles the day we carried by the falls, which, considering that it took us two hours to make the carry, was quick time.

Sunday we spent at the Indian village of Tobique, and Tuesday about noon reached Woodstock, where we took the cars for St. John, while the guide came back to Bangor on the cars with the canoes, we not caring to continue our journey down the river from Woodstock as we might have done if we had had more time. The expense of the trip, everything included, was about \$45 each. The time it requires varies from fourteen to twenty-four days; we went through in twenty-one. I have never heard of ladies taking the trip, but see no reason why they should not find it a delightful one; and Nahum Smith, of Greenville, has a party from New York engaged for this trip which includes two or three ladies. We wish them pleasant weather, and hope they will be induced to relate their experiences of the voyage, they being the first of the fair sex who have ventured on the Allegash.

(Dr. E. J. THOMPSON.)

For Forest and Stream.

NEWFOUNDLAND NOTES.

WE are now approaching one of the most dangerous parts of our coast. Cape Freels is not far off. That chain of islands, the Wadhams, are in the distance. It was off this coast that we met with our first ordinary gale. Thank heaven it has never been our misfortune to be in an extraordinary gale, such as a hurricane, or typhoon, or a cyclone. We have read of them, but are of the opinion that a real one would upset our common attainments in meteorology, in which science we want sailors to take an interest. Not seldom on board ship the dinner is the prelude to a gale of wind on the ocean. The sun may cross the foreyard well, but two P. M. (observation time) develops yon sky rolling onward in sable and black and burnished gold. The wind dies away from the southwest, the sun's essential brightness becomes dim, the gloom increases, and the rumble of distant thunder is heard; the wind flies to the north. Brace up the yards sharp, or haul in the sheets, and rumble, bang, clang, clang! goes the thunder, and pierces through the gloom the executive lightning. Ah! how humanity feels its weakness, and the heart of the brave sailor is awed in the presence of the majesty of heaven! I pity the man who does not feel awe—not fear, for that interferes with duty. Finally the vessel was laid to for that night and all the next day, and we then laid in bed all day, with the exception of getting up at twelve o'clock to get some cheese and porter and bread. A friendly southeaster took us into Pond, or Green's Pond, on the next morning. It is a queer place; we'd rather make it in our handy little craft than in a brig or big brigantine. There is a succession of small, low granitic and porphyritic islands. "Green's Pond Tickle is a small harbor on the southeastern side of Green's Pond Island," so says the sailing directions. Might I be permitted to say that the harbor appears more like a ribbon of water winding its way between the island on which the small settlement of Green's Pond stands, and the opposite island. There are several rocks to be avoided in entering this Tickle. Rocks are ticklish things to deal with, and often make poor people think of kingdom come. Our seamen and captain are wonderfully fortunate in keeping clear of them. Providence is good; but then we don't race ahead like other people. We are a slow people, at least comparatively.

It is quite an interesting sight to see the girls from the islands coming in boats rowed by their beaux, or fathers, or brothers, of a Sunday morning to church, and it was grand to hear the noble, deep, solemn-toned voice and clear enunciation of the clergyman in reading the opening passages of the scripture. A fine, new Episcopal church has been built here. The road from Burkings to the Court House at one time lay over a ravine, surmounted with old and worn timbers. There is now a fine graveled road. The water was, at one time here the color of tea, but now the people have a fine reservoir. The healthiness of our climate, the fine sea air, and the azure contribute to make many of our settlements healthier than they otherwise would be.

Here on this island is granite everywhere—feldspathic, hornblende, etc., and away over the low hills is the turfy, mossy ground. And there is a fine flock of curlew. We once saw a legal friend of ours knock or shoot down seven from the wing, with an old rusty gun. We were very glad the gun did not burst. We were also glad to partake of the curlew after being placed in the hands of the cook. This island is very small, about a mile square each way. What an archipelago of islands! almost enough to make one think of the lovely Paternos, particularly when the sea is like glass. Green's Pond was, at one time, a most successful place in the seal fishery. Green's Pond men are nearly always first into St. Johns with a heavy trip. Fine vessels were owned there and well to do planters abounded. But alas! now the sailing vessel cannot cope with the steamer. The future of this fine colony of Newfoundland is a problem. We are in earnest about our railway, and I am sure any article on railways in your valuable paper, Mr. Editor, would command great attention. To one who has seen the outposts in busy times and in dull times, such as now, it seems as if his pen could never rest until something is done to increase our resources. Well, we have

plenty of granite in Green's Pond—yes, and yonder land looks copper-bearing, and that, lead-bearing. But up with the anchor and away for Stag Harbor Run.

Harbor Grace, 1875.

Fish Culture.

SHAD IN LAKE ONTARIO.—A Syracuse correspondent reminds us that some five weeks ago we stated that shad had been raised in Lake Ontario, and asks us in what part? We answer that Seth Green has been prosecuting the production of shad near Rochester for several years, and with so great success that half-grown fish have been seen swarming in the lakes in immense numbers. These have spread to other parts of the lake. Last July, early in the month, vast schools of these fish, about six inches in length, were found dead and floating on the surface near Cobourg, Canada. Much speculation arose as to the cause of the mortality, but we have never heard a satisfactory explanation given. Our own theory is that shad will not live in fresh water after a certain period in their existence, and that they must reach salt water or die. The solution of the question will come when the first full-grown shad is taken from the lake.

FISH CULTURE:

PLANNING, LAYING OUT, AND THE CONSTRUCTION OF PONDS.

BY ICHTHYOS.—NUMBER SEVEN.

MR. Seth Green's arrangement of ponds probably involves less labor in construction, and is less expensive than those described in my last.

The cut introduced illustrates a series of pyriform ponds, which are just as efficient for fish breeding as any in use. In a springy locality where sufficient water can be found for the hatching house, it often occurs that a series of springs exist, which may be let into the artificial rivulet to increase the volume of water in the second and third ponds. The spring is marked S, and supplies the hatching house, H, from which it passes into pond No. 1, which is twenty feet long and two feet deep with a race at the head for the fish to ascend into running water. The second pond is a trifle longer than the first, with a spawning race at the head six inches deep, with a slot, designated by dotted lines, and the third is a trifle longer than the second, with a spawning race at the head fifty feet long; between each pond are screens, and also below the third pond, for catching floating substances, and for separating fishes of different ages, designated by x's. A dotted line also represents slots for nets. In the construction of ponds the material point to be considered is, the proportionate size of the banks required to retain the water. This mechanical feature should command more attention than perhaps any other part of the labor involved in the perfection of the farm. In the first place, moving earth by mechanical means is very expensive, and as in road engineering or road making, every cubic yard unnecessarily removed is money out of pocket to the proprietor, while if the banks are not substantially built, the whole enterprise will collapse and end in disaster.

French engineers suggest the following proportions, which in every case has proved entirely satisfactory in constructing artificial banks, viz.: the width at base must be three times that of the height, and the width at top equal to the height. Thus, if the height of embankment is ten feet, the width at base must be thirty feet and width of top ten. This holds good in the construction of all artificial banks, and is none the less applicable, when the action of water keeps up a constant erosion until protected by grass and the roots of trees. These are the proportions of ordinary earth banks, but if stiff clay is employed the thickness may be diminished, and if soil of sandy loam, or gravel are used, the width at base and top must be increased. The ordinary water line should be within one foot of the top of the bank, never nearer.

The great enemy of the fish culturist is the muskrat; not so much on account of the alleged offense of killing trout as from burrowing propensities. If the fish farm is located where these pests abound, it may be necessary to build a wall of brick or stone, and fill in each side of the wall with earth, meantime forming the proper slope. Sheet piling of inch boards or plank is used by some, and driven down the centre of the banks, but this means will not arrest their passage, for they rather enjoy gnawing through a wooden barrier. Raceways for the same reason should be lined with brick or stone, either being effectual, and the cheapest course is advised. Where brick is cheap and stone plenty, it will perhaps pay to outline the ponds with walls of these materials and fill in with earth as directed; then burrowing is out of the question, by mink or muskrat. The mink is much more given to eating fish than the muskrat, for it lives exclusively upon animal food. As soon as the banks of the ponds have become solid and firm by settling they should be thoroughly sodded, then planted with weeping willows (*Salix babylonica*) as they soon form, from their rapid growth, abundant shade for the trout, and keep the banks from washing by binding them together with myriads of roots, which penetrate the soil in all di-

rections. The willow not only adds beauty to the farm view, but is the first tree to show its leaves in Spring and the last to shed them in Autumn.

In the arrangement of the bottoms of ponds it matters but little of what materials they are composed. "Clay, mud, or moss—anything," says Mr. Green, "except gravel, for the fish will spawn upon it and the eggs will be lost for artificial incubation." The pond where only trout are kept one year may be bottomed with gravel, but the bottom of the others in the series should not be gravelled.

The ponds in all cases should be so contrived that they may be completely drawn off at any time, where the slope of the ground is such as will permit; otherwise much labor and expense will be involved in pumping and bailing. This may be obviated in arranging the sluice-ways, which may be constructed in the form of a flume, and reaching from below the bottom of the pond to the top, with carefully fitted sluice-gates, that may be raised at the top by a lever, and the screens made so as to correspond with the size of the gates, and carefully adjusted in slots, the upper one to incline down stream at the top, while the fish screen proper may be inserted perpendicularly in reference to the flume. The screens may be made of common iron wire, painted or tarred, or of galvanized iron wire. The latter is the best as it will last longest, while the expense is but a trifle greater. The screens for keeping the small fish in this pond should be of wire, fourteen strands to the inch; for fish one year old, eight to the inch; for two-year olds, five to the inch, and for three-year olds, three or four to the inch. In all cases incline the screens to the angle of forty-five degrees, the top down stream. In most fish ponds the screens are too small, consequently they become clogged, stop the water, and thus the ponds overflow and the trout eagerly pass down into the next pond and get mixed. Screens should fit snugly, but so accurately that they may be easily removed. Extra screens should be made and kept on hand that in case of failure of one, it may be readily replaced.

So far in the description of ponds, and advice regarding their arrangement, the work applies to fish farming on a large scale. In case, however, of amateur fish culture, or the breeding of them by agriculturists, the arrangement of ponds may be simple and inexpensive, indeed may consist of one only, into which small fry may be placed, where in the main they will shift for themselves, grow and thrive, until they are sufficiently large for the table. It is true, feeding will rapidly promote their growth, and in an economical point of view the artificial food may be more than balanced by their rapid growth. Farmers may construct ponds where there are a number of springs, or they may connect several together, and by scooping out a pond of considerable size, and conducting the water into it, may have a pond of no mean capacity, where trout in abundance may be grown for family use. In such a case the bottom may be laid with gravel, for trout thus confined will spawn there in any event, and the gravel bottom becomes a fit receptacle for spawn and their subsequent hatching. A pond of this kind should have shallow borders constructed, that the small fish may escape, after being hatched, from the large fish, or the pond may be so arranged that after the fish have spawned they may be removed into another receptacle or pond, leaving the eggs to hatch out and the little fish to grow. During the next spawning season the small fish may be again removed into another pond and the parent fish let in again to spawn.

PISCICULTURE.—Few of our readers are aware of the extent to which Mr. George Jelliff, on the old Paul Taylor place, near Poplar Plains, has carried his fish breeding enterprises. He has not more than an acre of ground covered by his ponds and sheds, and yet he has propagated many millions of young brook trout and salmon. Last year he placed 50,000 young salmon trout in the Saugatuck River, 15,000 in Mill River, Southport, 5,000 in Lake Waramaug, and 300,000 in the Upper Connecticut. He put 50,000 in Housatonic near New Milford, just before Christmas, 100,000 in the Farmington River, near East Hartford, and 50,000 again in the Saugatuck. This spring he has placed 200,000 in the Farmington River, 500,000 in the Housatonic, 50,000 in the Shetucket, 30,000 at a stream in Guilford, 20,000 at Southport, and 10,000 in Saugatuck. He has also placed several thousands of land-locked salmon from Sebect Lake, Me., into a number of the larger ponds about the State, all of which is accomplished under State authority and directed by our State Fish Commissioners. It will repay any one to take a ride to Mr. Jelliff's trout propagating ponds.—*Norwalk (Ct.) Gazette.*

SANDUSKY, O., Sept. 14th, 1875.

EDITOR FOREST AND STREAM:—

The Fish Commissioners of this State will meet in this city on the 21st inst., with a view of making exploration through the islands, for the purpose of testing the practicability of establishing a State Hatchery for the breeding of white fish. It is supposed that the waters of the mid lake is better adapted, from its clearness, for the propagation of white fish than the waters near shore, or even the waters of Detroit River. This idea is advanced by H. N. Clark, of Michigan, whose services are secured by the Ohio Commissioners, and who will accompany them in their survey of the islands in and around Put-in-Bay. I understand they have secured a small stream for that purpose, and will be accompanied by many scientific gentlemen from different parts of the State, who have been invited to participate in the investigation.

B.

A SHELL HOLDER.—Take a dry pine board two inches thick, eight inches wide and long enough to hold the required number of shells. Mark it in $1\frac{1}{2}$ inch squares for 10-gauge shells, or a little less for 12-gauge. Bore a hole of the right size for the shell to fit snugly through the centre of each square. Fit a thinner board on one side of this, and hinge it there so it can be thrown back to put the shells through. Bore half inch holes through this just opposite those in the thick board. Now, supposing the shells are empty, with the old caps on, throw back the light board or lid, put the shells through from that side, close it, lay it lid side down on the table and each shell stands ready to have the cap punched out. Turn it, open the lid and recap. Close the lid and turn again and they stand muzzles up ready to be charged. Of course this contrivance is not intended to be carried while in the field, but it is a great convenience in loading, and is just the thing for carrying them in a wagon. If desired a neat box can be made to inclose the whole.

O. H. HAMPTON.

One of the Saratoga hotels has nine gunners, supplied with ammunition, constantly on the mountains killing birds for the table, which are paid for at the uniform rate of 75 cents apiece.

Natural History.

THE TESTIMONY OF BIRDS.—We copy the following very interesting letter from the London *Times* of Aug. 17:—

Sir:—Is there a warm zone at the North Pole? Most probably there is. The last American expedition saw a vast expanse of open water in that direction, but were unable to reach it. The brent geese and the knot also answer in the affirmative, but especially the former. A few nests of the latter have been found as far south as the Hudson's Bay territory, &c. But it may be interesting to many of your readers to know that only one nest of the brent goose has ever been found, either in its wild or domesticated state, and that was found at Melville Island, and it contained three young ones. All who have visited Holland, the Baltic, or our own eastern coast during a severe Winter, or even Tobay, must know this bird; it is at times sold in large quantities in Leadenhall Market, for a mere trifle, its delicious flavor being unknown here, it having the name of being fishy, which is a mistake, as it never dives, unless wounded, and is a vegetarian. It leaves our coasts in the early Spring, and appears in the Gulf of St. Lawrence and the coast of Labrador, where I have seen it in millions, directly the ice breaks up (about the middle or end of April), where it is highly prized by epicures, and is now shot in a novel manner in vast quantities, with decoys, out of a punt sunk in the middle of an eight-foot raft (below the water line), and sent to the United States, where it is highly prized.

Long after the wild geese and ducks have gone to Labrador or the Hudson's Bay territory to breed, the brent goose is seen in the Gulf of St. Lawrence, finally disappearing early in June, probably just in time for the Arctic Summer. It generally makes its flight on a moonlight night, and they are constantly seen in their progress northwards. If there is open water and land at the North Pole, we may fairly presume the brent geese breed there, as they have been seen at Melville Island; nor can it be extremely cold there, otherwise the eggs would be added; and there must be land uncovered with snow, otherwise, being a vegetarian, it could not live there.

Several brent geese have recently been sent out to the Australian Colonies by our ever active superintendent at the Zoological Gardens, to see if they will breed there. I only trust our Arctic voyagers may find them in the vast quantities that I have seen them in during their flights northwards; then, indeed, they will have a delightful change from their potted meats, &c.

I am, Sir, yours obediently,

FREDERICK SWABEY.

Coryton Park, Axminster, Aug. 13.

ALBINO FISHES.—Two interesting cases of albinism in fishes have recently fallen within my observation. The first was a specimen of the common haddock (*Melanogrammus aeglefinus*), taken off Barnegat, N. J. This fish, which was thirty-one inches long, was normal in every particular except in color. Its general hue was pinkish-white, with a pearly lustre, instead of the usual brownish-gray. The back and top of the head were slightly darker, approximating a very light salmon color. The black stripe which usually marks the lateral and the blackish-brown blotch, behind and above the pectorals—the traditional mark of the thumb of the disciple Peter—were entirely absent. The fins throughout were yellowish-white with a tinge of red, except the ventrals which were a shade darker. The slightest trace of the normal ashy tint of the belly might be discovered just below the origin of the pectorals.

The second instance is a specimen of the common eel (*Anguilla Bostoniensis*) taken in salt water at Noank, Conn., in December. In this the color is a dull, pale yellow above, becoming nearly white beneath.

According to M. Dareste albinism is not uncommon among European eels. It appears, however, to be very exceptional in our waters. I have never seen or heard of an instance besides the one just cited. True albinism is especially uncommon among the members of the family to which the haddock belongs. The ground color of the cod and haddock varies much with the bottom on which they are taken, but I have never known of a case in which the spots and other markings were obliterated. A familiar instance of the influence of the color of the bottom is found in the rosy "rock-cod" of the coast of Maine, which is usually taken in the neighborhood of ledges covered with the bright red algae such as *Ptilota sesuvata* and *Delesseria sinuosa*. In a similar manner the "butter-fish" (*Enneacentrus opacatus*) and the "grouper" (*Epinephelus fasciatus*) are influenced by the white coral-sand bottoms about the Bermuda Islands, but though they assume a very pallid hue, the character of their markings is quite unchanged. —G. Brown Good, in *American Naturalist*.

—The Cincinnati Zoological Garden was opened on the 18th inst. with appropriate ceremonies. The garden, which comprises some sixty acres of ground, has a number of lakes, fountains, etc., and is laid out in walks and drives. The collection of animals, birds, etc., is one of the largest in the country, and the buildings appropriated for their reception arranged in the most convenient and perfect manner.

BRIEF NOTICE OF SOME FISHES OF CALIFORNIA IN OCEAN, BAY AND RIVERS.

SAN FRANCISCO, Sept., 1875.

EDITOR FOREST AND STREAM:—

Names of fishes are used in this State with so little precision that no dependence can be placed on such evidence. He who should infer that anything resembling pike was taken in the Sacramento River or the San Joaquin, would be much deceived; yet I have caught these, and have seen continually in the markets and sold in abundance fishes bearing that name. In our markets, also, there are fish constantly offered for sale in great numbers under the name of rock fish and rock cod. I have taken plenty of them at different times with a rod and line and a variety of baits, the hooks used being rather large in proportion to the size of their mouths. They are captured in rocky localities along the coast and in the bay, and the title rock fish applies to them very well. One more inappropriate, on the contrary, than that of rock cod could scarcely have been selected, inasmuch as they are widely removed from the family in which the cod fishes are classed. Twelve distinct species of them at least have been already detected here, all belonging to the *Sebastes*. Of this genus I was not previously aware of more than one species.—S.

Novoegius, Cuv.—in the United States; it is the *Hemidurgun* of the Massachusetts Bay fishermen. Three of our species are very closely allied. The one most nearly typical here is the *S. nebulosus*. Their average weight is two pounds and a half, and they are about thirteen inches in length. In color this fish is finely mottled with dusky yellow and dark brown. One of this kind of fishes is a bright red, and is the most important commercially, and is consumed in large quantities daily, and it is, like the others, an excellent fish. Then we have a fish very common in our markets, sold under the name of perch, and in this case it is a correct one. It is a viviparous fish, as are some others in our waters. It is brought from the rivers Sacramento and San Joaquin, and is often caught in all parts of our bay, but chiefly on the Oakland and other wharves. This is one of our most esteemed common fishes. I have often caught many of them. Its average length is nine inches and weight from half a pound to four pounds. Its scientific name is *Centarchus muculosus*. Its color is a dark grayish brown on the upper parts, becoming lighter beneath, with large, irregular dark blotches on the sides. This fish is the representative in our Pacific region of *ceneus* in the Eastern.

The tom cods (*Morrhua Californicus*), which have been taken in such great numbers in our bay for the last three years, is without doubt closely allied to *Morrhua Prunosa* (Mitch.) the tom cod and frost fish of the Atlantic coast, and may be deemed its representative here. It differs from it, however, in form, in the relative proportions of the head and the position and size of the fins, etc.

Another good fish that we have, and which sometimes affords us good sport, is what is called by the fishermen sea trout, probably because of its elegant form and the red spots on its sides. Others do not distinguish it from the species of *Sebastes*, before mentioned, in company with which it is caught, and call it rock fish. It has, however, little resemblance to either; while its true position may be deemed somewhat doubtful, it may be judged better for the present to arrange it with the genus *gryetes*. It is not very abundant in our bay. Its length is about twelve inches and common weight from half a pound to three pounds.

The sturgeon is the largest fish on our stalls. They commonly weigh from twenty-five to fifty pounds, though those from 150 to 200 pounds are by no means uncommon; but they have been offered for sale here weighing more than 300 pounds. They are taken at all seasons of the year with large hooks and very strong lines, small fish and meat being used as bait.

Smelts were, a year or two back, the most plentiful fish in our bay, but they have lately become more scarce. The tom cod now are exceeding them in number. Next Winter we expect to have finer sport with the young salmon or grilse than we had this year, owing to our again close season this year, and to one million of fish having been hatched out and placed in the McCloud River by Commissioner Stone. Our lakes—Merced and San Andreas, near this city—also promise always good sport to anglers in the future, as they have done this year.

E. J. HOOPER.

A WHITE CROW.

CHARLESTOWN, Mass., Sept. 15th, 1875.

EDITOR FOREST AND STREAM:—

A Boston gentleman (Mr. Marston) has recently shot at Centerville, Mass., a fine specimen of a pure white crow. It is now being stuffed by Mr. C. J. Goodale, taxidermist, and can be seen at his store, No. 93 Sudbury street, Boston. This bird has been seen for several years, and efforts were made by numerous parties to effect its capture, but without success, until Mr. Marston became the fortunate possessor.

SPORTSMAN.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, }
NEW YORK, Sept. 19, 1875.

Animals received at Central Park Menagerie for the week ending Sept. 18th, 1875:—

One brown Capuchin Monkey, *Cebus capucinus*. Presented by Dr. J. K. Cheeseman.

Two Bonnet Monkeys, *Macacus radiatus*.

One brown Capuchin Monkey, *Cebus capucinus*. Presented by Mr. William Jayne.

One Seal, *Phoca vitulina*.

W. A. CONKLIN, Director.

THE ESSEX INSTITUTE.

DANVERSPORT, Mass., September 20, 1875.

EDITOR FOREST AND STREAM:—

About a year ago the Essex Institute received from Mr. C. H. Foster a valuable collection of skins, including mammals, birds, etc., collected in Australia. The mammals have just been received from Prof. Henry A. Ward, who has mounted them in life-like attitudes. They embrace the following species, viz.:—

One Kangaroo, *Macropus major*; one Wallabee, *Halmaturus walabatus*, another representative of the kangaroo family unmarked; one Wombat, *Phascolomys ursinus*; two Duck-billed Platypus, male and female, *Platypus anatinus*; two Koalas or Native Bears, male and female, *Phascogaleos cinereus*; one Kangaroo Rat, *Hypsiprymnus minus*; two Reppoon Roos, *Petaurus australis*; one Sugar Squirrel, *Petaurus sciureus*; one Tasmanian Devil, *Diabolis ursinus*; one Dingo or Native Dog, *Canis dingo*.

Besides these there is a gigantic lizard six or seven feet in length, which is also unmarked. These may be seen in the Institute collection at the Peabody Academy of Science at Salem.

A. F. GRAY.

Woodland, Farm and Garden.

CATTLE DISEASES.—County papers in the Eastern and Middle States chronicle the re-appearance of various cattle diseases. These maladies are rarely absent from portions of the West, but their visits to the East are only occasional, and they disappear as suddenly and mysteriously as they come. Caledonia, Livingston county, and Rhinebeck, Dutchess county, are mentioned as the places in this State where a very malignant disease has developed itself among the cattle. It is vaguely described as a kind of murrain, and is supposed to have been caught from Western cattle. The West and Southwest have generally, but not always, been the source of cattle diseases. At different times English and Dutch cattle have brought over a malignant distemper, commonly known as the Russian cattle plague, to this country. New York, New Jersey and Massachusetts have, in former years, suffered somewhat from this most unwelcome importation. But of late it has not appeared on this side of the Atlantic, the introduction of cattle from England and the Continent being now a very rare occurrence. This form of disease had the property of being portable in the clothing of persons touching or driving the infected cattle; and it could be spread in that way to herds without the actual presence of the diseased animal among them. Cars and boats in which these cattle were transported became seed beds of this fatal variety of murrain, and it was not safe to allow healthy animals to graze in the pastures where the sick ones had fed. The most prevalent cattle disease of the present day is of a different character, and not as much dreaded as the older form. It is popularly known as the Texas cattle fever, and, as the name implies, is believed to be primarily derived from the herds sent northward from Texas. It remains to be seen whether

the type of disease which has broken out in several counties of New York is the Texas fever or not. If so, it can be made to yield to a rigid quarantine system, and need excite no great alarm. In several towns of Massachusetts, where the people are familiar, by costly experience, with the Texas disease, they are again lamenting its manifestation among the herds. There is no doubting the origin of the trouble in their case, as a herd of Texas cattle were driven through the section infected only two weeks ago. The fever showed itself among the Massachusetts cattle immediately after the strangers had left. Massachusetts, fortunately, has a Board of Cattle Commissioners, and those officers have been summoned to use their power in staying the spread of the disease. They will at once take the high-handed measures which the law enables them to enforce, and the disease will doubtless vanish from Massachusetts as speedily as it has vanished in other years. In this State, town and county authorities assume the work which is performed in Massachusetts and other New England States by commissioners acting for the Commonwealth. It would be better for New York if she had a commission of men skilled in cattle diseases, to do for the whole State what is now left to the limited knowledge of County Supervisors, each set acting independently of others.—N. Y. Journal of Commerce.

CANNING FRUIT.—The following description of methods is taken from a prominent agricultural paper:—

"As to cans, the simplest are the best. Those of glass, with glass covers, a rubber band and a screw ring, are as easily sealed as they are unsealed, and can be managed by any intelligent child of twelve or thirteen. The porcelain-lined caps are also good. A tin funnel, just fitting into the neck of these, can be made for twenty cents, and with this the cans may be filled very rapidly and without spilling. As to fruit, it should be perfectly fresh and sound, and carefully picked over, so that no ill flavor injures its quality when it comes on the table. The time of boiling the fruit should vary somewhat with the kind, ranging from five to thirty minutes, as follows: Cherries, 5; raspberries, 6; blackberries, 6; plums, 10; whortleberries, 5; peaches, whole, 15; peaches, halved, 8; pears, whole, 30; pears, halved, 20; pineapples, sliced, 15; ripe currants, 6; grapes, 10; tomatoes, 30; gooseberries, 8; quinces, sliced, 15. The fruit keeps just as well without sugar as with it, and many prefer it without. Sugar always rises in price during the preserving season, and we can wait till Winter and then add sugar as well as to put it in now. In canning peaches, if two or three are put in without removing the pits a bitter almond flavor will pervade the whole can. As to the process: place a very wet cloth in the dish-pan; set the jar in this, having previously rinsed it by rolling in hot water; place in it a silver spoon; put in the funnel a cupful of syrup first then fill with fruit to the top. Remove the spoon, and set the jar where no draft of air can strike it. The fruit should be covered with syrup. In ten minutes the jar will have cooled and settled some, and they will be ready to seal up. Fill them to the top with syrup or hot water; put on the rubber, the glass cover, and screw ring. When the jars are cool, the covers should be tightened again, and then set away in a cool, dark place."

SPURIOUS PEDIGREES.—The *Kentucky Live Stock Journal* says:—"We have noticed with amazement the series of sales held during this Spring and Summer at leading horse markets in New York, at which large numbers have been sold as Kentucky horses with high-sounding pedigrees attached, not one of which ever saw Kentucky. We can assure the public that they are not only fictitious and spurious pedigrees, but totally unreliable. We ask our New York contemporaries, to whom Eastern readers and purchasers look for correct information on pedigrees, to reject such advertisements and expose with unsparing hands these attempts to foist bogus pedigrees on the New York public."

—New varieties of potatoes sometimes come in strange ways. Timothy Wheeler, a farmer of Waterbury Centre, Vermont, tells one of the agricultural papers how he procured some forest dirt or soil way back at the foot of a mountain, for flower boxes; in about ten days a slim stalk was noticed coming up, and it grew to about six or eight inches in height, when one leaf appeared on its end, which indicated its nature to be a potato. It was then taken up the root examined, and no signs of a potato to be seen; it was then set out in the open field.

—The Belmont Driving Park of Philadelphia is rapidly approaching completion. The appointments of grand stands, club houses, stables, &c., &c., are on a large and liberal scale, and the track is considered one of the best in this country, being of capacious width, with an unequalled road-bed. The proprietors are making extensive preparation for a grand display during the Centennial.

A NEW HORSE DISEASE.—Our city is again afflicted with a disease which during the past week has attacked a large number of horses, but which fortunately is not as serious in its effects as the epizoot which was so fatal three years since. The symptoms are a mild cough, accompanied at times by inflammation of the throat, frequent sneezing and occasionally a discharge at the nose. It is said that nearly every horse in the city has been attacked with it, but it quickly passes away, seldom leaving behind it anything more serious than extreme debility.

CARBOLIC ACID AND POULTRY.—A writer in the London *Field* recommends the use of carbolie acid in pigeon and poultry houses for destroying parasitic insects. It neither injures the birds nor drives them from their nests. He dissolves two ounces of common carbolie acid in three quarts of water, and applies once a week with watering pot to all parts of the poultry house. It destroys the lice and acari in the building, and acts also as a disinfectant. For the purpose of expelling the lice from the bodies of the fowls or pigeons, he mixes one part of liquid carbolie acid in thirty parts of water, first mixing the acid with a little glycerine, and shaking well before using. He applies this with a small brush to the roots of the feathers on

the under side of the body, and around the vent, the application killing all the parasites without staining the feathers. Two or three applications, at intervals of a few days, are sufficient for a permanent cure.

A PLANT DESTRUCTIVE TO BEES.—The large podded milk weed almost invariably causes the death of every bee alighting upon it. The bee either adheres to the plant or else bears away a small scale sticking to its feet, and cripples itself fatally in attempting to remove the annoyance.—*Agricultural Report.*

The Kennel.

[FROM OUR SPECIAL CORRESPONDENT.]
THE MANCHESTER BENCH SHOW.

The Bench Show of Dogs at the New England and New Hampshire State Fair held last week at Manchester was quite a success and attracted much attention. The building containing the canines was packed from morning till night with wondering and admiring people. It was something new for the steady-going people of the State to have a dog show at their fair, and though a few old fogies growled because a dog should take a silver medal, yet by far the greater part favored and appreciated the exhibition. The arrangement for the comfort of the dogs was admirable, they being in a long building with roomy stalls on both sides, while the many windows, and the doors at either end, admitted as much fresh air as possible, considering the crowd that filled the building. The show of sporting dogs, though good, was not so large as it ought to have been, owing probably in part to the season, since at this time most of the bird dogs are in use. I know of several sportsmen who could have had their dogs on exhibition, but thought the prizes not worth going for. Now this was all wrong, for the prizes were good; a solid silver medal for first and a bronze medal for second, and when two dogs were close for second place, a diploma was awarded for third, at the discretion of the judges. In some cases where there was no competition, and in one case where there was, the first prize was withheld, and the second awarded to the "entry," which caused a little dissatisfaction among the exhibitors, but this was right, as a dog unworthy of first prize should not take it by favor or compliment. As to the value, a medal, whether silver or bronze, with the stamp and signature of such an agricultural society as either the New England or New Hampshire State is a greater treasure than twice the value in either money or other prizes, for the very reason that these medals cannot be imitated, and are only given by the societies, they alone possessing the mould and stamp. Any one can have a silver goblet or pitcher inscribed to his liking—I don't mean that any sportsman would, but that they could do so—while one of these medals must be given by the society, and earned to be possessed, for they are *venale nec auro*. For trick dogs there were three prizes of twenty-five, fifteen and ten dollars. The entrance fee of each dog was one dollar, which entitled the exhibitor to a two dollar season ticket. Of the non-sporting dogs there was a fine show; a St. Bernard and a powerful mastiff attracting particular attention. The former, imported, was a red tawny in color, standing 31½ inches at shoulder, and weighing 160 pounds. The latter of a lion tawny in color, with black muzzle and points, stood 30 inches at shoulder, girthed 40 inches, and weighed 165 pounds. Scarcely less in size was the Siberian bloodhound which occupied the next stall to these monsters. A magnificent pair of Scotch deer hounds, imported only a short time since, one of them a perfect image of the cut in Stonehenge, drew much attention, and were really rare and remarkable specimens of the breed. The managers and superintendent of the show deserve great credit for their first exhibition, and if there is a dog show next year on the list of either of these societies, as I trust there will be, let every man who owns a well bred dog have him on exhibition, and every man who owns a cur go and see what a fine dog is like, whether it be sportsman or not, for New England and even New Hampshire, small and bleak though she may be, can send forth specimens of the canine race second to none. Below I give a list of the prize winners:—

Red Irish Setters.—1st prize, Shamrock; Wm. Jarvis, Claremont. 2d, Dick; Wm. Jarvis, Claremont.
Black and Tan, or Gordon Setters.—1st, Don; Dr. Wheeler, Manchester.
English Setters.—1st, Bounce; C. A. Loud, Portsmouth. 2d, Snipe; P. H. Maguire, Salmon Falls.
Pointers.—Grouse; Trent Potter, Manchester. 2d, Sancho; J. W. Drew, Concord. 1st for bitches, Gypsy; C. C. Clement, Manchester.
Spaniels.—Horace Greely; N. S. Clark, Manchester. 2d, Ned; N. S. Clark, Manchester. 3d, diploma, Ira Moore, Manchester. 1st for bitches, Susie; Capt. Matthews, York, Me. 2d, Fanny; Asa T. Truitt, Candia.
Fox Hounds.—1st, Lion; J. Byron Huse, Manchester. 2d, Music; H. E. Sturtevant, Manchester. 1st for bitches, Lillie; H. E. Sturtevant, Manchester.
Shepherds.—1st, Vic; Campbell Grisin, Manchester. 2d, Scott; name of owner not reported. 1st for bitches, Minnie, J. W. Cogswell, Manchester. 2d, Topsey; George Hook, Chester. 3d, diploma, Sport; E. Hubbard, Candia.
Black and Tan Terriers.—1st for bitches, Fannie; J. S. Taber, Manchester.
Scotch Terriers.—2d, Louny; E. Matheson, Manchester.
Newfoundlands.—1st, Bruce; M. V. B. Kinne, Manchester. 2d, Major; Frank E. Boyd, Manchester.
St. Bernards.—1st, Jack; Dr. A. H. Nichols, Boston.
Mastiffs.—Sampson; Peter H. Clark; New Ipswich. 2d, Andrew Jackson; Arthur Clough, Canterbury.
Spitz.—1st, Bill; George Conner, Manchester. 2d, do.
Large Greyhounds.—1st, Prince; J. Byron Huse, Manchester. 2d, Spring; James Richardson; Newburyport. 1st for bitches, Flora; S. Hayes, Manchester. 2d, Bessie; James Richardson, Newburyport.
Scotch Deer Hounds.—1st, Sir Walter; H. G. Bixby, Nashua. 1st for bitches, Mollie; do.
Coach Dogs.—1st, Tom; Edward Clark, Manchester. 2d, Spot; Cyrus W. Coombs, Manchester. 2d for bitches, Spot; — Emery, Manchester.
Trick Dogs.—1st, \$25, Turk; James Hamilton, Nashua. 2d, \$15, Light Foot, C. P. Shepard, Manchester.

—No complaints yet from the "chicken" shooters as to difficulty with baggage masters and railroad officials generally regarding the transportation of their dogs. It seems probable that the authorities have recognized the importance of showing some consideration to traveling sportsmen, and that the crop of complaints and maledictions will be smaller than last year.

—The second annual meeting of the Tennessee State Sportsmen's Association, which commences on the 25th of October, promises to be very successful. The Field Trial of dogs will occupy the three last days. Many of our local kennels will be represented, and some teams are already on the ground. It is quite a journey to Memphis, but we think that owners of fine dogs will be amply repaid for their trouble.

—The signature to Mr. Buckell's letter which appeared in our issue of the 16th inst. was erroneously printed G. T. Teasdale Hickell should read G. T. Teasdale Buckell.

—We are informed that Mr. J. T. Blackburn, of Marshalltown, Iowa, has purchased the Lavarack bitch puppy Diamond, by Mr. Raymond's Pride of the Border, out of his Ruby, imported by Dr. Gautier. Under western climate and training she should develop into a fine field dog and breeder.

—"Mohawk's" imported field trial setter bitch Kirby has been this week mated with Mr. Raymond's Pride of the Border. Both dogs are in good condition, and their produce should be the possible beginning of a fine strain of setters.

—In our advertising columns will be found a list of puppies for sale by Mr. Gardner Hammond, of New London, Conn. The prices are low, and we believe the stock to be all Mr. Hammond claims for it.

A CURIOUS CRIME.—One Symonds, a recluse, living in the northern part of Ulster county, on a spur of the Catskills, with only a daughter and a large shepherd dog for companions, concluded, a few days since, that they had lived long enough, and after crushing his daughter's skull with an axe, cut his own throat and that of the dog's. The daughter is still living, but the others are dead. The faithful dog seemed to have dragged himself for some distance after his jugular vein had been cut, in order to die at his master's feet. Old Symonds was disgusted with his own existence, and did not wish the others to enjoy their's. The daughter was an attractive girl, but the father would permit no attentions from gentlemen who sought her.

BREEDING SETTERS.

BELLE FONTE, Nottingham county, Va., Sept., 1875.

EDITOR FOREST AND STREAM:—

The public test and appreciation is the only criterion as to whether other gentlemen in England are breeding Laveracks with the success that Mr. L. has done for so many years. Friend "Dry Land" thinks that there are other breeders who can and do breed as fine Laveracks as the originator; but, unfortunately, the sales he quotes in his communication to your journal of the 26th ult. prove the very contrary, so far as public estimation goes, for "Dry Land" says in substance: "The produce of some of these dogs bred by other gentlemen brought very low prices." Now, friend "Dry Land," are not you aware of the thing called a "weed"—if not, I will inform you that most large breeders of valuable and fashionable dogs occasionally send drafts from their kennels to be sold at public auction, which pay for keep and kennel expenses, still retaining the best stock dogs, brood bitches and puppies for themselves. If you fancy you have a grand dog for a low price, you are much mistaken; fine dogs, like fine horses, command high prices anywhere. Mark: You may have the pedigree, but never the choice of the litter. At nearly every dog show and field trial in England during the last decade Mr. L's breed has taken the palm. Of all the English dogs and bitches whose pedigrees are recorded in the Kennel Club stud book of 1859-74, one-third are either pure Laverack or partly so. This breeder's secret is apparently the selection of the fittest, and the *knowing how* to select. Not every breeder who buys of Mr. L. (the only person to purchase them from)—Motto: Never play second fiddle where the first is attainable—takes into consideration the great time, labor and experience in continuing and preserving through thick and thin, and much against the advice of friends, this pure strain of animals. Most purchasers have been perfectly satisfied to improve their idea of the setter by engrafting upon it the Laverack stock, and with equally good opportunities none have succeeded in making as perfect dogs, nor to compare with the man whose name they bear. In regard to Pride's color, it is chestnut and white, not liver and white, or pointer color; and his puppies—Blue Prince, Bandit, and other prize Laveracks—have already made their mark on the show bench. I have referred above to the sale by public auction of some of the L. strain bred by other gentlemen. "Dry Land" calls my attention to the sale of Mr. Reid's, on July 31st, including several of the finest Laveracks. His pure animals offered were six in number—the grand dog Sam, seven years old, brought 37 guineas, and will soon be past service for either field or kennel; Jess, his sister, six years old, 29 guineas, both high prices for aged dogs; Rothay and Brathay, by Pilkington's Dash out of the above Jess, each two years old, brought 16 guineas apiece. If Sam and Jess had been two-year olds, instead of aged dogs, they not only would have commanded three times the sum at public auction, but Mr. Reid would never have parted with them. Clytie was in poor condition and brought 12½ guineas; Sampson, three years old, unbroken, by the above Sam, out of Mona, brought 6½ guineas. He showed me trouble. The prices and condition of these animals were sent to me by a friend, who attended the sale in person. Now, the above sums are far below what Mr. Laverack gets from his whelps *vide* Blue Prince out of Cora (Fairy's sister) £40, and all his litters are engaged in advance, while for Fairy Mr. L. informed the writer that there were more parties than one, both in England and America, who were willing to give even more than the price paid by Mr. Raymond, and in one instance a telegram from this side of the Atlantic was received by Mr. L. offering a higher price, but Mr. L., in his high-toned courtesy, sent her to her present owner, as he had promised him the first refusal. By Mr. L's personal advice Fairy was bred to Pride. This is doubtless the reason that their progeny has attracted the large offers of English sportsmen who, if "they could do much better at home for less money," would scarcely run the risk of transporting such valuable puppies across the Atlantic. So far, Mr. Editor, the facts entirely sustain the opinion advanced in my last communication to you, viz.: Mr. Laverack's unequalled and unrivalled success in breeding his own strain. In case it might be thought that I have any interest in Mr. L's dogs, I may state that I have never sold a dog up to the present, and have never received any commission for the many animals of all breeds that I have imported into the country for my friends. This makes one independent, and I write simply from my admiration of the unprecedented success of Mr. L. in breeding these world-renowned dogs.

JNO. M. TAYLOR.

—A darkey called at Owensboro', Ky., the other day, and wanted to know "Does dis postorfis keep stamped antelopes?"

Yachting and Boating.

THE MOHAWK AND MADELEINE.—The match between these celebrated yachts which was sailed on Wednesday last, has created more interest in yachting circles than any similar event since the match between the Comet and the Magic, when Commodore Garner was more fortunate in the result than he was on the present occasion. The match was made when the Mohawk was yet on the stocks, and for the large sum of \$1,000 a side. The first public performance of the Mohawk was at the Cape May regatta when, although reaching the stakeboat first, she was forced to yield the cup to the Madeleine on time allowance. The subsequent performances of the Mohawk, however, have no doubt justified her owner in assuming that with sufficient wind there was every prospect of her winning the match; but the Madeleine is a very hard customer to beat, and besides is a good all-weather yacht, requiring neither a gale of wind or a calm to bring out her best qualities. The wind on Wednesday was light and baffling in the morning, so that the start was delayed until noon, the Madeleine crossing the line two minutes in advance of her antagonist. The course to be sailed over was the usual New York Yacht Club course, from the club house to and round the Southwest Spit buoy, around the lightship and home. The wind was from the southward, and there was considerably manœuvring in beating out of the narrows, the Mohawk finally taking the lead and rounding the Southwest Spit buoy at 1:39:30, the Madeleine being 2m. 6s. later. After passing the point of the Hook, where there was some sea on, the Madeleine appeared to make much better weather than her larger rival, and at the lightship, which she rounded at 3:23:30, she had obtained a lead of over six minutes. On the run back to the Spit with the wind free, both sailed very fast, the Mohawk securing some of her lost ground, and still a little more on the run home, but the Madeleine had plenty in hand, winning without her time allowance. She passed the flagship at 5:28:17, the Mohawk's time being 5:33:33. The judges of the race were Mr. W. Bend, who was on board the Madeleine, on the part of Mr. Garner, and Mr. Alexander Taylor, who represented Mr. Dickerson on the Mohawk, with Mr. E. E. Chase as umpire. A large fleet of yachts, among them the America, Resolute, Wanderer, Rambler, Comet, Idler, Dreadnaught and Olio accompanied the racers. At the conclusion of the race Mr. Garner challenged Commodore Dickerson to sail another match twenty miles to windward from the lightship and return for \$3,000 or upwards a side, but for reasons of his own Mr. Dickerson did not accept the challenge.

ATLANTIC YACHT CLUB.—This club had a race on Thursday last for the cat-rigged boats belonging to the fleet. Notwithstanding the rain, which fell during a greater part of the day, a fine race was sailed. The course was a triangular one in Gowanus Bay, to be sailed over three times. The following yachts entered:—

Yacht.	Ft.	In.	Owner.
Thaver.....	18	0	H. Hogan.
Caprice.....	18	6	R. S. Church.
Lapwing.....	18	6	J. B. Morgan.
Ada.....	18	3	C. B. Moffat.
Vanita.....	21	0	A. H. Farrington.

The Vanita, notwithstanding her large allowance of time to the others, won by several minutes.

REGATTA ON STATEN ISLAND SOUND.—There will be a regatta sailed on Monday, September 27, for the championship of Staten Island Sound, a cup of the value of \$150, and three other prizes. The course will be from Black buoy in Newark Bay, rounding stakeboat in Staten Island Sound and return to starting point. The particulars can be obtained by addressing the Elizabeth *Daily Herald* office, or George Morthaler, No. 16 Dey st., this city.

NIAGARA REGATTA.—The fleet of fine yachts that has been participating in all the regattas held of late in the Dominion ports of Lake Ontario, assembled at Niagara on the 11th inst. to sail for the valuable prizes offered by the proprietors of the Queens Royal Hotel and the City of Toronto managers. A strong northeast wind prevailed, rendering snug canvas necessary and bringing out the weatherly qualities of the yachts. The course was in the form of an equilateral triangle, five miles on each side, the distance to be sailed over twice. The fleet came out of the Niagara River and at 10:50:15 the Oriole was the first yacht to cross the line. The Lady Standley followed at 10:52:23, the Ina at 10:56:20, the Cuthbert at 11:02:08 and the Brunette at 11:04:18. The only change in positions on the first round was that the Ina passed the Lady Standley, and the Cuthbert passed both, taking second place. The winning boat was passed in the same order, but computing for time allowance and difference in start the Ina takes first prize, the Brunette second and the Oriole third. The judges were Wm. A. Thompson, M. P., Mr. Angus Morrison and Mr. W. C. Bunting.

From Niagara the fleet proceeded to Cobourg, where they participated in a regatta organized by the citizens of that place. The course was to a buoy placed six miles to the east and thence to another a similar distance down the lake, the second-class yachts going over but half the course. The entries were, in the first-class the Lady Standley, Cuthbert and Gorilla; in the second-class the Surprise, Nioma and Fury. In the latter class the Surprise won first prize and the Nioma second. In the first-class the Lady Standley and Annie Cuthbert were the winners. Much regret was expressed at the absence of the Oriole, she arriving in time only to see the close of the race.

A portion of the fleet now sailed for Charlotte and participated in the regatta of the Genesee Yacht Club at that place on Tuesday and Wednesday of last week. The International race on the second day had but four entries, the Water Witch of Genesee, the Bessie of Sacketts Harbor and the Ina and Brunette of the Toronto Club. The distance was twice around a twelve mile course. The Ina won by a long distance. On the first day, when the second-class yachts contended, the Ocean Wave, another Canadian yacht, took first prize, the Seth Green being second.

YACHTING IN THE MEDITERRANEAN.—We hear upon good authority that the Bank of Monte Carlo intend offering prizes to the amount of 100,000 francs (£4,000) for prizes to be sailed for by yachts of all nations next Spring at Nice. The Sappho (which has been sold to Prince Schiarrà) will be probably one of the competitors; and as the Enchantress (Mr. Loubat) will Winter in the Mediterranean, she, too, probably will compete. We do not know to what extent English yachting will be represented, but we trust that some good vessels from our yards will be there to break lances with the American-built craft. The Livonia, we believe, will spend the Winter up the Straits, and she, although not good enough to tackle the Sappho, might take something out of the Enchantress. But what we should like to see—and no doubt the authorities at Nice would like to see the same—would be a whole fleet of crack racing vessels appear on the spot to meet the two large American-built craft. There should be the Guinevere, the Centonia, the Kriemhilda and Florinda, and as many more as could be induced to go. The £4,000 would make a certain bullion freight home, and all expenses would be paid by winning the magnificent prizes.—*London Field.*

LOWELL REGATTA.—The second annual regatta of the Lowell Boating Association was held on the 14th inst. on the Merrimack River near Pawtucket Falls. The single-scutt race, two miles, was won by Michael Welch in 16m. 53s. The race for single-scutt working boats, same distance, was awarded to Jos. McLaughlin. Time, 18m. 40s. J. Ladd won the race for single wherries. Time, 17m. 12½s. The Sherman brothers won the double-scutt race, two miles, in 15m. 16s. Two crews entered for the four-oared shell race, three miles with a turn, for gold medals and the city championship. The crews entered were the Lowell and Union, the former winning; no time.

—The Queens County Yacht Club will hold its third annual regatta on Monday the 27th inst., the course being from Little Bayside to and past Stepping Stones buoy, thence around a stakeboat at City Island and home. The boats will be divided in three classes, two prizes being offered for each.

HARLEM CLUB REGATTA.—The Fall regatta of this club was held on Friday on the Harlem River. The first race was for the single-scutt championship, two miles straightaway, two prizes being offered, one a gold championship challenge medal and the other a special gold medal presented by Mr. T. B. Tilghman, the Captain of the club. The contestants were Thos. R. Keator and Howard Conkling. The boats fouled soon after receiving the word, but started again. Keator won in 20m. 50s. A strong ebb tide was running. The next race was a single-scutt handicap, one mile. The entries were A. B. Hoeber, allowed 25 seconds; J. W. Arthur, 10 seconds; A. G. Scranton, scratch. Scranton easily passed Arthur but was unable to overtake Hoeber, who won in 10m. 50s. The last race was for the four-oared club championship, two miles. The entries were Howard Conklin, bow; H. W. Coates, No. 2; Arthur B. Hoeber, No. 3; Thomas R. Keator, stroke; blue and white.

Henry M. Knapp, bow; Robert B. Dodson, No. 2; Edward B. Pinckney, No. 3; Alva G. Scranton, stroke. Soon after starting Keator's crew ran ashore, owing to a broken rudder. The damage was remedied and the boats given a fresh start. Scranton's boat was fouled by a pleasure boat and the blue and white won in 13m. 20s.

PALISADE BOAT CLUB.—The regatta of this club, which was postponed from the previous week on account of the weather, was rowed on the 14th inst. at Yonkers. The first race, single-scutt, two miles with the tide, had three contestants. A. Moffat was the winner in 11m. 29s. The junior single-scutt, same distance, was won by S. S. Leo in 13m. 45s. The race for double-scutt working boats, one mile, was won by Addie, pulled by H. T. Keyser and H. M. Underhill in 7m. 19½s. The fourth was for eight-oared barges, two miles; this was won by a crew pulling in the barge Resolute with W. H. Myers stroke. Time, 12m. 2s. The judges were Charles Lyons, of the Resolute Boat Club, and S. F. Jackson, of the Pioneer Boat Club.

OWASCO LAKE REGATTA.—Owasco Lake is a beautiful sheet of water in Cayuga County, this State. On the 14th inst. a large concourse of persons assembled at Ensenore Glen, on its banks, to witness a regatta, which resulted as follows: The single-shell race was over a course of one mile and return, and was won by Charles E. Courtney, of Union Springs, the champion oarsman of the State. Time, 14m. 28s. Robinson, of Union Springs, was second, and Francis, of Cornell, third. Courtney and Robinson won the double-shell race in 13m. 6s., over a course of a mile and a half and return. The prizes were in silver-ware.

O'LEARY AND DAVIS.—The single-scutt race between these men was rowed at Portland, Maine, on the 15th inst., Davis winning in 23m., the distance being three miles; O'Leary gave up after pulling two miles.

—The Analostan Boat Club of Washington held a regatta on the 18th inst. The principal race was between a picked six and the racing four, resulting in a tie, owing to the four having been foiled in turning the stakeboat. The skiff race was won by Mr. Luckett.

—A three mile sculling race was rowed at Steubenville, O. on the 18th inst. between John Pedgrift of Chicago, and Robert Peal of the former place. Pedgrift won in 23m. 40s. Another race will shortly be rowed by the same men.

—James McMasters of Brooklyn, and Richard Hammond of this city, rowed a two mile race on the Harlem River on 20th instant for a stake of \$200 a side. Hammond won after an excellent race by two lengths in 18m. 24½s.

EDITOR FOREST AND STREAM:—

A meeting of the College was held yesterday to reorganize for the ensuing year the University Boating Association. A large majority of the College was present, and great interest was manifested. Mr. William Allen Butler, Jr., the efficient treasurer of last year, read a letter from Mr. Willard H. Porter, class of '75, stating that he presented the association with a check for \$1,000. The thanks of the college were voted to this gentleman. The following officers were then elected for the coming year: W. A. Butler, Jr., class of '76, president; F. A. Marquand, class of '76, vice president; W. Libby, class of '77, treasurer; Samuel Alexander, class of '79, secretary; Benjamin Nicoll, class of '77, captain.

LOUNGER.

—We desire to express our thanks to Mr. Outerbridge, President of the Philadelphia Cricket Club, for courtesies shown to our representative during the International Cricket Tournament held in that city.

THE SCHUYLKILL NAVY REGATTA.

PHILADELPHIA, September 18th, 1875.

EDITOR FOREST AND STREAM:—

The Fall regatta of the Schuylkill Navy is over and the prizes distributed; the winners satisfied, and losers left to talk over how "it might have been if—." The water could not have been better, the attendance moderately good, and the entries more than usually numerous, all the clubs of the navy being represented except the West Philadelphia Club. The racing was not above the average, rather below, the chief excitement being the struggle in single sculls and for second place in the four-oared shells. Holsman, of the University, showed up better than very well, and proved himself not only a goer but a stayer. Young and very slight, he does not look a match for a well seasoned sculler, but he made his opponents row hard all the way to the finish.

Umpire—Com. James M. Ferguson. Timekeepers—Vice Com. John Mockley, Jr., E. S. Miles.

The four-oared shells rowed from the Falls to Rockland, one and a half miles straightaway, while the other races were from Rockland around stakeboats off Laurel Hill, one mile and return. At 3:10 the double sculls started.

Malta Boat Club—D. Townsend, stroke; W. Trimble, bow; position, east.

Crescent—Geo. Milliken, Jr., stroke; Geo. W. Young, bow.

The *Crescent* crew won almost as they liked, going to the front from the start, turning the stake in 7 min. 10 sec., with a lead of twenty seconds, and won in 14 min. 56½ sec. *Malta*, 15 min. 58 sec.

SINGLE SCULL RACE.

University Boat Club—J. M. Holsman, east. *Quaker City*—John D. McBeath, centre. *Pennsylvania*—W. G. Thomas, west.

Thomas went to the front at once, with the University man pressing him hard. Off Berky's clearing all three were close together, and all keeping too far to the west, and to round the stakes had to alter their course, a heavy disadvantage to the eastern boat. Coming down Thomas lead to the head of the island, but showing distress. McBeath put on steam, took a lead, and came in winner in 15 min. 24 sec. Holsman, apparently fresh, was overhauling Thomas hand over hand, but there wasn't quite distance enough to close up the gap, and when the flag dropped he was still half a length behind. The timekeeper gave the time: Thomas 15 min. 28 sec.; Holsman 15 min. 32 sec.

SIX-OARED BARGE RACE.

Malta Boat Club—C. F. Gicler, stroke; J. F. Dunton, W. T. L. Warthman, P. F. Schlemm, E. Ilman, S. B. Hadcock, bow; W. F. Warthman, coxswain; east.

Pennsylvania—A. Kappes, stroke; F. Street, Emil Herline, Ed. Herline, R. T. Middleton, H. Hutchinson, bow; R. H. B. Fairman, coxswain; centre.

Crescent—C. R. Harrison, stroke; A. Sperring, George Milliken, Jr., H. W. Terry, George W. Young, C. E. Steel, bow; H. K. Hinchman, coxswain.

The *Malta* lead off, but before the boats had passed Tom Moore's cottage the *Crescents* were in front, and the *Pennsylvania* dropping hopelessly to the rear. The *Crescents* turned in 6 min. 40 sec.; *Malta* in 6 min 50 sec., and *Pennsylvania* in 7 min. 8 sec. They came home in the same order, *Crescents* in 14 min. 11 sec.; *Malta*, 14 min. 22 sec.; *Pennsylvania*, no time taken.

FOUR-OARED GIG RACE.

Crescent—H. K. Hinchman, stroke; C. P. Tasker, H. F. Witmer, W. C. Jones, bow; C. E. Steel, coxswain; east.

Pennsylvania—John Lavens, Jr., H. Conrad, Max Schmitt, Thomas Massey, bow; R. H. B. Fairman, coxswain; centre.

Quaker City—C. R. Adams, stroke; Samuel Gormley, J. D. Ferguson, C. S. Wise, bow; Geo. W. Parker, coxswain; west.

The *Crescents* lead at the head of the island, but were soon passed by the *Quakers*, the race then becoming a procession: *Quaker City*, 14 min. 18½ sec.; *Crescent*, 14 min. 34½ sec.; *Pennsylvania*, 14 min. 50½ sec.

The pair-oared shell race was between two crews from the Philadelphia Club, one of which merely entered to make a race, with no hope of winning: C. V. Grant, stroke, and J. B. Taylor, bow; J. M. Taylor, stroke, C. M. Lee, bow. Grant and Taylor pulling in beautiful shape, paddled over in 16 min. 5 sec.

FOUR OARED SHELL RACE.

Undine—John R. Baker, Jr., stroke; W. C. Madeira, C. K. Barns, J. N. De Haven, bow; west.

College—W. H. Addicks, stroke; Benj. Nicol, Richard Hall, John Ely, bow; centre.

Quaker City—J. D. McBeath, stroke; O. F. West, F. M. Hehderson, S. Stinson, bow; east.

The *College* Club jumped off with a clear lead, but at Laurel Hill the boats were almost level. The *Undines* were well over toward the tow-path, and had to come out from behind a canal boat. The *College* crew were pressing in close, and the two got their oars considerably mixed. The *Quakers* now went to a lead of a couple of lengths, and left their opponents to fight it out for second place; and a hot fight it was. From the willows to the island the *Undine* had three-fourths of a length. Along the island the boats were level, and at the foot of the island both crews spurred for the lead, and again the oars clashed. The *College* crew came out of the struggle with a few feet in front, and the boats came in, the *Quakers* in 9 min. 10½ sec.; *College* in 9 min. 26½ sec.; *Crescent*, 9 min. 27 sec. Claims of foul were made, but the umpire decided that the boats should be placed as they came in.

After the race the prizes were presented to the winners, the *Quakers* taking the championship flags for four-oared shells, four-oared gigs, and singles, rather a large proportion. Special flags were presented for each winning boat. The winning oarsmen each received a handsome gold medal. Silver cups were given to the winners of the six-oared barges, four-oared gigs, and four-oared shells.

SCULLS.

PHILADELPHIA, Sept. 20th, 1875.

EDITOR FOREST AND STREAM:—

The Fall Regatta is, as a general thing, the virtual end of the boating season here, but this year bids fair to be an exception. There is a single scull race on between George Milliken, of the *Crescents*, and the oft-defeated Frank Pleasonton, formerly of the *Bachelors*, but late of the *Quaker Citys*, later of the *Vespers*, and latest the *Quaker Citys* again. If Flip's skill did but equal his pluck and perseverance—and I hope it will, eventually—he would be a great sculler. Captain Nicolls, of the Princeton Rowing Association, who rowed two in the *College* crew on Saturday, has, on their behalf, sent a challenge to the Schuylkill Navy to row them a race on the 9th of October. If the challenge was put into a little different shape it is very likely it would be accepted; but as it stands, it is more like an invitation for the navy to hold an open regatta in the Fall. There was an open regatta in June last, and probably will be in the succeeding June for some years. By way of rarity there is to be a swimming match on Saturday next, open to all members of the navy; one mile straightaway, on Flat Rock Dam. Handsome prizes for first and second will be offered, and the entry promises to be large. There may possibly be a Schuylkill-Nassau race yet this season; but there are so many contingencies in the way that I think it doubtful.

SCULLS.

Challenge of the Princeton Rowing Association to the Schuylkill Navy.

PRINCETON, N. J., Sept. 17th, 1875.

To the Secretary of the Schuylkill Navy:—

DEAR SIR:—In behalf of the Princeton Rowing Association, I hereby challenge the Schuylkill Navy (intending to include the Vesper Club) of Philadelphia to a four-oared shell race over the national course, to be rowed October 9th, subject to amateur's rules. The said race to form a regatta for all crews that may choose to enter from the several clubs.

We leave the question of the prizes to the discretion of the Schuylkill Navy, the expense to be borne equally by the entering clubs.

Yours very respectfully,

BENJ. NICOLL,

Captain of the Princeton Rowing Association.

Rational Pastimes.

THE GREAT CRICKET TOURNAMENT.

[FROM OUR OWN CORRESPONDENT.]

The tournament is drawing to a close and it well merits the title of the Great Cricket Tournament. It more than bears out our prophecy of last week that it would be the event in the cricket history of this country. Better individual players may have been seen, but for general all-around play, it has been the finest exhibition ever witnessed on this side of the Atlantic, and is worthy of the cricket headquarters of America, which this city certainly is. There is no flattery in saying that the management has been above criticism, and every Philadelphian should feel grateful to the committees and to every member of the Philadelphia clubs for the able manner in which they have sustained the reputation of our city for hospitality.

Lovers of athletic sport, particularly those who devote their time and energy to its promotion, can but feel encouraged by the audiences that have added interest to each of the matches. No small feature of the week has been the constancy of the ladies in their attendance, and the grand stand (which resembles the parquette on opera nights) is a strong rival of the field in its attractions. The grounds, which are all that could be desired, both for the accommodation of players and spectators, have been in excellent condition, and except Thursday there has been good cricket weather. The first match, Canada vs. Philadelphia, part of which was reported in last week's issue, was concluded on Wednesday, and resulted in a splendid victory for the Philadelphia team. The fielding of the home players was excellent, and kept the score of the Canadians down close, they making only 68 in the first and 76 in the second inning, Dan Newhall taking in the first 5 wickets in 4 overs, one of which was a maiden for 12 runs. Meade took 8 wickets in the second for 20 runs off 78 balls, and nine maiden overs. The following is the full score of this meeting:—

Won by Philadelphia by 87 runs.

Immediately after the close of the first match the game between the British Officers and the Canadian teams, was commenced and fine play followed. The game was interrupted on Thursday by the rain, and was not completed until afternoon on Saturday.

The strong batting of the Officers more than compensated for the weakness at bowling, and occasional looseness in the field. Although the Canadians ran up their score to 167 in the second innings, they found themselves with over 60 runs to get, and no way to get them. The following is the score:—

SECOND MATCH—BRITISH OFFICERS VS. CANADA.

BRITISH OFFICERS.		Second Innings.

Second Innings.....	12	20	50	73	102	120	145	145	182	182	352

Won by British officers by 63 runs.

The big game of the series was begun on Saturday, British Officers vs. Philadelphia. As the Officers succeeded in making so much larger scores against the Canadians than did the Philadelphians, it was with some anxiety that the score was watched during the first inning. Although the game is not yet completed, its result may be with some confidence foretold. It is evident that although the batting of the Officers is fine, their hitting being free, and their defence stubborn, the splendid bowling of Charles and D. S. Newhall, and the sharp play of the whole field is more than a match for them. The wicket keeping of Geo. Newhall is deserving of praise, and if in addition to the analysis of bowling, we had an analysis of fielding, he could have the well merited pleasure of seeing on paper, "well done."

The Officers are noticeably weak in bowling, and they made a serious error in judgment in setting their field so wide to save the rapid run getting off long hits. The Philadelphia score was largely made up of singles made by sharp running off light hits. Geo. Newhall's score of 64 stands so far at the head of the list. Meade is suffering from a boil on his left hand, and has not been able to bowl or bat this game. The Philadelphians 230 runs were made therefore for only 10 wickets.

The Officers were at the bat all this afternoon, and were making a score rapidly, until just before game was called, when three wickets fell in rapid succession, reducing the average. At the close of to-day's play the telegraph marked 97 runs, for 9 wickets. Unless they secure more than 18 runs of the next two wickets they will have to go to the bat again at once to play their second inning.

At the time of going to press we are in possession of only the first innings. The match was not concluded until yesterday and a full report will appear in our next.

THIRD MATCH—BRITISH OFFICERS VS. PHILADELPHIA.

Philadelphia First Innings.

Players.	Score.

Total.....	230

BASE BALL—THE PROFESSIONAL ARENA.

It being now almost impossible that the Atlantic or New Haven clubs can play their quota of six games with every other club prior to the last day of October, their games have been thrown out of the championship record, and the table now stands as follows, up to Sept. 19, inclusive:—

CLUB.	Boston.	Athletic.	Hartford.	St. Louis.	Chicago.	Philadelphia.	Mutual.	Games Won.
Boston.....	2	6	5	6	5	10	38	
Athletic.....	2	2	6	6	6	5	27	
Hartford.....	0	2	3	3	4	8	20	
St. Louis.....	2	1	4	3	3	4	20	
Chicago.....	2	1	4	3	2	2	14	
Philadelphia.....	0	2	3	3	4	1	12	
Mutual.....	0	2	2	0	5	1	12	
Games Lost.....	6	14	20	20	25	22	143	

The record of games played since our last issue, is as follows.—

Sept. 13—Hartford vs. St. Louis, at St. Louis.....	3 to 0
Sept. 14—Hartford vs. Chicago, at Hartford.....	10 to 3
Sept. 15—Philadelphia vs. Athletic, at Philadelphia.....	5 to 4
Sept. 15—Mutual vs. Athletic, at Brooklyn.....	10 to 4
Sept. 16—Hartford vs. Chicago, at Chicago.....	14 to 4
Sept. 17—Athletic vs. Athletic, at Brooklyn.....	13 to 2
Sept. 18—Mutual vs. Athletic, at Brooklyn.....	6 to 2
Sept. 18—Chicago vs. Hartford, at Chicago.....	14 to 4

Only three good games out of the eight played. The Mutuals, it will be observed, are at the foot of the class, where they will generally be found as long as the club is run under the co operative system. Chicago has got ahead of Philadelphia, and St. Louis is close upon Hartford. The interest, therefore, in the contests yet remaining to be played will be chiefly in the matches to be played on the last Eastern tours of the St. Louis and Chicago clubs, when some exceedingly close fights may be expected, especially between the Hartford, Athletic, St. Louis and Chicago nines.

—A match was shot on Monday last between the Secretary and Treasurer of the Staten Island Shooting Association, of which we give a summary below. The guns used were W. W. Greener's choke bores, the close and powerful shooting of which caused much favorable comment. Match at 25 and 28 yards, 60 yards boundary, 1½ ounce No. 9 shot, birds given the wind, and extra good flyers. Chas. Tranter, Referee, and Wilton Randolph, Scorer.

							At 25 Yards.								
J. J. Rathen.....	1	1	1	1	1	1	—50	M. Johnson.....	0	1	1	1	1	—	4
							At 28 Yards.								
Rathen.....	0	1	1	0	—	3	Johnson.....	1	*	*	1	1	—	3	
							At 25 Yards.								
Rathen.....	1	1	1	0	1	1	1	Johnson ..	1	1	1	1	1	1	10

*Dead out of bounds.

*Dead out of bounds.

About 200 birds were shot at in sweepstakes. Messrs. Rathen and Johnson concluded to divide the expenses.

MORTIMER.

MAGAZINES.

Lippincott's for September contains a number of capital illustrated papers, among which "Glimpses of Polynesia" carries us to "Summer isles of Eden," and Mose Underwood gives us a view of backwoods life. The Miscellany contained in *Lippincott's* is of the most interesting description, and its corps of contributors second to that of no other periodical.

The Scientific Farmer.—This new periodical is issued monthly at Amherst, Mass., and in the interest of the Agricultural College of that place. To the farmers of New England the establishment of this journal in their midst must be of immense benefit. A corps of

scientific men, continually investigating cause and effect and scattering the result of their investigations broadcast, must tend to largely increase the store of agricultural knowledge and raise the standard of intelligence among the farming classes. The work of the college itself is too well known to require comment, and now the benefits received by the students can, through the medium of the *Farmer*, be largely participated in by the people at large. The papers on different subjects are from the pens of Professors in various departments. We can recommend this journal to the country gentleman who makes farming a source of pleasure rather than of profit, as well as to the professional farmer, whose labors will be lightened and mind enlarged by its perusal. The subscription is but \$1 per annum.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

RUSSELL, Baltimore.—Can you give me the address of any dealer who sells aquatic plants? Ans. J. Bagot, No. 31 Fulton street, N. Y.

C. M. S., Berkeley, Cal.—Rules and Regulations forwarded you as requested. We will soon issue a Rifle Manual containing all the information desired.

H. O., St. Andrews, N. B.—For a pin fire gun, No. 8, what is the proper charge for sea ducks (ciders)? Ans. Five drachms powder and 1½ to 1½ oz. No. 4 shot.

VANITY, Greenburgh.—Will you please inform me if there is an agency for Vanity Fair tobacco in New York? Ans. B. Stein, 102 Nassau street and 896 Third avenue, has Vanity Fair for sale.

M. R. N., Sudbury, Conn.—Where can I purchase a pair of leather or canvas leggings, knee high, for gunning, in connection with ankle shoes? Ans. Eaton & Co., No. 102 Nassau street.

F. C., Flint, Mich.—Will you oblige me by informing me whether there is a place in your city where they make the cleaning of velvet and clothing a specialty? Ans. No one makes a specialty of it, but any of our scourers and dyers can clean velvet.

G. W. H., Philadelphia.—Where can the Rushton boat be bought and what is the price? Ans. J. H. Rushton, Canton, N. Y.; sizes 11 to 13 feet in length, and price accordingly—say \$45. We do not know exactly.

PISCATOR.—I see frequent mention in your paper of the fall fish. "What is it? Ans. The chub—fall fish. In New York State some times called "windfish," sometimes very improperly, "dace."—*Leucosomus rhithenicus*, a species of the carp family.

F. F. B., Gouverneur.—In trap shooting, a bird (wounded) drops just inside the boundary and is challenged; the party gathering it goes around the bird, which has hopped outside, but is picked up inside. Is the bird scored as killed? Ans. No; a bird once out of bounds is a lost bird.

INQUIRER.—Where can I find a good comfortable place to spend two or three weeks, on some railroad, and not too far away, where there are plenty of gray and black squirrels? Ans. Monticello, Sullivan county, or Milford, Pa. Take Erie Railroad to Port Jervis. Delaware county is also good squirrel ground.

S. H. O. T., Olympia, W. T.—What is a cure for a timid dog? He is eleven weeks old and very cowardly—that is, if anything comes upon him suddenly he will run and cry for ten minutes at a time. I have tried different methods without success. Ans. Kind treatment and age may produce good results.

W. E. L., Flushing.—Will you be so kind as to publish in your next paper the quail law, as to when the close season is ended for this State, including Long Island, Staten Island, and all the adjoining States—viz.: New Jersey, Connecticut and Massachusetts? Ans. See Table of Close Seasons for all the States, in FOREST AND STREAM Sept. 24, 1875.

RUSS.—When out a short time ago I started an old woodchuck in the woods, and the beast went straight up an oak tree which had no limbs within thirty feet of the ground. Is this common? My friend B.—reports seeing a white one last month but could not get him. Ans. Woodchucks are good climbers, but don't practice much.

ROSS, Woodbridge.—In looking over the Table of Close Seasons in your paper of Sept. 21, I see that the close season for quail in New York is marked Jan. 1st to Oct. 1st, while in the "Fur, Fin and Feather" it is marked Jan. 1st to Oct. 30th. Which is correct? Ans. Look again, and you will find it is Oct. 1st—that is, if you have the latest edition of "Fur, Fin and Feather." The law was changed to Oct. 1st in March last.

G. B., New York.—What places on the Atlantic Ocean along the coast of Maryland, Virginia, North and South Carolina, Georgia and Florida, have the most important fish business? Could you tell me any firms of wholesale fish dealers there? Ans. Baltimore, Norfolk, Newbern, Charleston, Savannah, Jacksonville. Cannot give the names of fish dealers.

W. H. B., Pontiac, Mich.—Do you know if Kay's concentrated cartridges are for sale yet or not? Do they make any loaded with buckshot? I should think that if they shot as close in proportion as I understand they do with common shot, they would do first rate for deer hunting. How do they sell them? Ans. Kay's cartridges are now being manufactured, and will shortly be on the market, when they will be advertised with all particulars as to price, etc.

G. S., New York.—What is the proper charge for a muzzle loading shot gun, double barrel, weight 5 pounds, 28 inches long, and No. 10 gauge? And also the best way to aim at a bird flying or sitting? Also which gun shoots the best at a long range, a short or long barrel? Ans. Use 3½ drachms powder and 1½ oz. shot. You must practice at birds. 30 to 32 inches is the best length for a 10 gauge gun.

READER, Bath, Me.—1. Where can I procure Ely Bros. second best central fire, 12 gauge cartridges ready for loading, and also loaded, and the price per thousand, and price paid by mail or not? 2. Where can I get a Hart's metallic shell; also the price for same? Ans. 1. H. C. Squires, No. 1 Courtlandt street, price \$1.75 per hundred; by mail about \$2. 2. Same place; price 20 cents.

NATURALIST, N. Y.—I came across a wall chart of Natural History, showing the different orders and genera in a very comprehensive manner, published some ten years ago by E. B. & E. C. Kellogg, 87 Fulton street, N. Y. Is it still procurable, and the price, or can it be obtained in book form? Ans. We have made inquiries and cannot find one. The firm you mention are now non est.

SOUTH FORK, Pittsburgh.—Do you regard the material used by the Remingtons and Parkers in the manufacture of their plain \$45 shot gun barrels, viz.: the homogeneous decarbonized steel, to be such as will make as safe a gun—i. e., safe from bursting—in the hands of the sportsman, as a Damascus, laminated, or twist barrel? Ans. No; they would not stand the same charge of powder, although perfectly safe for ordinary use.

H. B. S., Chestnut Hill, Mass.—1. Where can I get any wild rice to plant? 2. Please give me the exact address of the person who makes Thomson's hunting and fishing suits 3. What is the best preparation for canvas shoes to keep them soft when they are wet one hour and dry the next; does oil make them rot? Ans. 1. Address Richard Valentine, Janesville, Wis. 2. J. M. Thompson, No. 328 Broadway, N. Y. 3. There is no preparation for canvas shoes; dry them in the sun when they get wet.

L. B. S., Binghamton, N. Y.—Will you please answer me the following questions: What would be the cost of a pair of German dachshund hounds? What would it cost to import them, or could they be got in this country pure? Would a letter reach W. S. Macy at Munich? Ans. The cost in Leipzig or Munich would be about \$30 each, and the expense of getting them here about that amount for a brace. See an article on page 358, Vol. III. Mr. Macy's address is Munich.

C. W. C., Alexandria Bay.—I intend going to Georgian Bay and the Magnetawan River section for deer shooting this Fall. What is the best time to go and the best route from Rochester? Can I get good guides there? Does any railroad company publish a pamphlet giving descriptions of the country? Ans. Go at once. Take steamer Norseman from Rochester to Port Hope, rail to Toronto, and thence rail to Severn Bridge, Northern Railroad. Thence boat and stage to Magnetawan.

Guides can be had, but are not numerous or generally well qualified. All those we know of are engaged by parties whom you will probably meet there. Have sent pamphlets.

ELLERSHAUS, Boston.—Will you kindly inform me whether I can obtain good hunting of deer, bears, etc., in the northern part of Maine, tolerably accessible from Eastport? Please state locality, quarters, (whether hotel or farm house) and route; also nature of ground. I have a prejudice against burned woods, having had some experience of them in Canada during the deep snow. Ans. The best place easiest accessible from Eastport is the Upper Machias River. Take the Rockland steamer to Machias town, where you can secure Indians, canoes, and provisions, and then go up to the headwaters of the river. You will find good hunting and trapping there.

W. W. E., Saranac Lakes.—You state in answer to a correspondent that "the powder drachm is an arbitrary measure, not in accordance with any organized table." Is not this an error? The Troy drachm is one-eighth of an ounce, or 60 grains. The avoirdupois drachm is one-sixteenth of an ounce, or a little over 27 grains. The drachm scale on the powder flask is in accordance with the avoirdupois drachm. Ans. Gun makers and powder manufacturers say that the drachm as used for powder is an arbitrary measure. We grant that it weighs 27 or thereabouts grains, avoirdupois; so does a bushel of potatoes weigh so many pounds. If a drachm avoirdupois is intended, how would you measure or weigh powders of different sized grains?

J. P. C. Brainerd.—Will you please tell me what the detonating powder in gun caps, rim fire cartridges, etc. is composed of, and what the proper proportions are? Ans. Usually fulminate of mercury. The formula for its manipulation is as follows: Dissolve by a gentle heat 100 parts, by weight, of mercury in 100 parts, by weight, of nitric acid of a specific gravity 1.4, and when the solution has acquired a temperature of 130° Fahr., slowly pour it through a glass funnel tube into 830 parts, weight, of alcohol, of the specific gravity of .830. When effervescence is over, and white fumes cease to rise, filter through paper wet with cold water, dry (the residue) by steam heat not exceeding 212°. If you propose manufacturing it, we will say that the Mutual Life Ins. Co., of this city is as good a company as you could insure in.

F. H., S-dalia, Mo.—1st. What are the facts about the killing of Remington & Sons' agent in England by one of their breech loading rifles, and what was the cause? 2d. What length, bore and weight of rifle would you recommend for target and game (as deer and antelope) shooting at from 100 to 500 yards? 3d. What sights would you use, and what kind of triggers, single or double, the double being made so it can be used as a set trigger or without? Ans. 1st. We have never heard of the accident to which you allude. 2d. A Remington sporting 30-inch barrel 40 calibre weighing 9 pounds. 3d. Bead fore sight and the regular adjustable peep sights attached to the Remington sporting rifle. They are also made with the double trigger.

WATTS, Little Falls.—Can you tell me how to distinguish infallibly edible mushrooms from poisonous food stools? Ans. See "Fungi: their Nature, Influence and Uses," by McCook, M. A., 109 illustrations, price \$1.50, D. Appleton & Co., New York. We find the following clipping in an exchange: "It is not impossible to know the difference between toadstools and mushrooms, but it is not worth while trying to learn this difference unless you belong to a very long-lived family, and don't object to being poisoned at the end. It takes years to find out, and authorities differ. The only sure test is to eat one. If you live, it is a mushroom. If you die, it is a toad-stool."

BEAVER, Poughkeepsie, N. Y.—Will you kindly inform me of some responsible party whom I could correspond with about the beaver and other fur bearing animals in Virginia? I read in your paper an item in regard to these animals being so troublesome down in Old Virginia. Ans. Address Warner Lewis, Lawrenceville, Brunswick county, Va., or Capt. John M. Taylor, Belle Fonte, Nottoway county. They will give you the same information that we do, namely, that these two counties and some others are so overrun with beavers that, despairing of clearing them out in other ways, the farmers are preparing to import professional trappers. If you will make either place mentioned your objective point, and go down there, you will make a little fortune. Bring a gang of trappers and as many traps as you can carry. The settlers will receive you with an ovation. This is no humbug. The appearance of the beaver is a freak of nature not yet explained. We have frequent inquiries from Virginia how to procure traps and trappers.

ENGLISHMAN, New York.—I landed in New York July 31st from England by steamship Dakota with a setter dog. The officers of the Customs on coming aboard in New York demanded \$10 duty for the dog, which I paid them, being, as they told me, twenty per cent. on the value of the dog, which cost me \$50 in England. The dog was for my own use for hunting, having come over here for a few months for that purpose. They also told me there is a duty on guns; however they passed my gun on giving them the \$10. At the same time I think I was imposed on, as I have never heard of any duty on dogs or gun for own private use. Please give me your opinion. Ans. There is no duty on dogs imported for breeding purposes, but there is on all others. Still, if you intended to take your dog back to England, by giving a bond you would have had no duty to pay, and you can now recover your \$10. There is no duty upon a gun which has been used and is not intended for sale.

J. A. D., East Orleans, Mass.—What sizes shot and quality of powder would be most desirable for the coming Fall and Winter shooting in Southwestern Florida? Can ammunition be purchased there, or had we best take it with us—if the latter, what would be the best means of transportation, as we understand it is unlawful for us to take it as baggage? What are the terms of subscription for FOREST AND STREAM for six months, and can you mail it to different points when advised of change in address? Ans. Nos. 6 and 8 shot. For powder take Dupont's Diamond Grain No. 2, or Hazard's Electric No. 4, or Laflin & Rand's Orange Lightning No. 5. These grades all correspond in quality and size. Terms for FOREST AND STREAM six months \$2.50; can be sent to any point that you may request if we are advised of the change. For information about sporting in Florida buy the new book entitled "Camp Life in Florida," a hand-book for sportsmen and settlers.

SUBSCRIBER, Pittsburg.—Will you please answer the following if in your power: A and B in playing croquet, both being "dead on each other," i. e., both having croqueted each other since they had gone through an arch. Both being for the same arch, A being on one side and B on the other, it also is the latter's (B's) shot, and in order to prevent A from going through his arch he (B) plays his ball to such a position, (touching A,) that he (A) cannot go through his arch without knocking B's ball away. Now, the question is, do the rules of the game allow A to make such a stroke? But has he not rather to play for a new position and not interfere with B? Ans. We can find no rule to govern the case, but should say that A was entitled to place his ball clear of B's, as it is manifestly unfair to deprive him of his shot, though we are of the opinion that he has no right to touch B's ball. Perhaps some of our readers who are experienced at the game will answer this problem.

FIRST LIEUTENANT, Philadelphia.—In this city there is about being organized a yacht club; the members are to wear the United States naval uniform. At the election last night I was elected First Lieutenant. Now, I am very well acquainted with all kinds of sailing boats, but still I do not know the orders for setting and taking in sails as given by First Lieutenants in the United States Navy. Now, will you please tell me of a book describing all the orders given by the First Lieutenant in hoisting anchor, setting any sail, or taking in sails, where the other officers are stationed when he gives his orders, and what are their duties? The club has already thirty members and six officers. We intend to buy a large sloop or schooner, so therefore the book need only contain the orders pertaining to a sloop or schooner; also price of book. Ans. We know of no books suitable for your purpose, but English ones, in which the terms are different from ours. We would suggest to you as the most practical mode of acquiring the desired information to take a short trip in a coasting schooner, where you could learn much better than by book. For square-rigged vessels, the naval instructor at Annapolis would probably be able to tell you where to find a manual of instruction.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.]
127 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty percent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY 23, SEPTEMBER, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, September 23.—Racing, Louisville, Ky. Trotting, Quincy, Ill.; Burlington, Vt.; Waterloo, N. Y.; Poughkeepsie, N. Y.; Beacon Park, Boston; Tiskilwa, Ill.; Indianapolis, Ind.; Meriden, Ct.; Columbus, Ohio; Watkins, N. Y.; Sharon, Pa. Sculling, Geo. Brown and Alex. Brayley, at Bedford Basin, Halifax. Base Ball, Philadelphia vs. Chicago, at Chicago; Eagle vs. Una, at Cumminpaw, N. J.; Active vs. Quickstep, at Philadelphia.

FRIDAY, September 24.—Racing, Louisville, Ky. Trotting, Quincy, Ill.; Poughkeepsie, N. Y.; Burlington, Iowa; Beacon Park, Boston; Ambler Park, Pa.; Cynthiana, Ky.; Tiffin, Ohio; Meriden, Ct.; Cuba, N. Y. Base Ball, Alaska vs. Americus, at Brooklyn.

SATURDAY, September 25.—Racing, Louisville, Ky.; Dallas, Texas. Trotting, Quincy, Ill.; Sharon, Pa. Creedmoor, Amateur Rifle Club vs. Ontario Army Rifle Club. Meeting of Mount Vernon Amateur Rifle Club. Base Ball, Philadelphia vs. Chicago, at Chicago; Hartford vs. Boston, at Hartford; Flyawa's vs. Chelsea, at Hoboken.

MONDAY, September 27.—Racing, Dallas, Texas. Trotting, Dayton, Ohio. Central New York Fair, Utica. Regattas, Newark Bay: Queens County Yacht Club, Bayside, L. I. Base Ball, Philadelphia vs. St. Louis, at St. Louis; Star vs. Chelsea, at Irvington, N. J.

TUESDAY, September 28.—Racing, Dallas, Texas. Trotting, Beaver, Pa.; Elmira, N. Y.; Salem, N. J.; Keene, N. H. Empire State Rifle Tournament, East Syracuse, N. Y. Third Annual Prize Meeting N. R. A., Creedmoor. Queens County Agricultural Society, Mineola, L. I. Athletic Games, Yonkers, N. Y. Base Ball, Philadelphia vs. St. Louis, at St. Louis; Confidence vs. Hoboken, at New Rochelle, N. Y.; Alaska vs. Keystone, at Brooklyn.

WEDNESDAY, September 29.—Racing, Dallas, Texas. Trotting, Le Roy, N. Y., and as on Tuesday. Empire State Rifle Tournament, East Syracuse, N. Y. Queens County Agricultural Society, Mineola, L. I. Regatta, Queens County Yacht-Club, Flushing Bay.

A NOBLE ACTION.—The most inveterate opponent to Mr. Bergh's system of philanthropy must give him credit for great magnanimity on reading of his action in the Court of Special Sessions a few days since. One John Sheriden was charged by the officers of the Society for Prevention of Cruelty to Animals with working a horse upon whose withers a dreadful sore was discovered. The case was not only clearly proven, but the circumstances were greatly aggravated. In extenuation, however, it was shown that Sheriden had only worked his horse to provide food for a wife and six children who were in almost a starving condition. So aroused were Mr. Bergh's sympathies that he not only withdrew the charge, but handed the man a five dollar note wherewith to provide necessities for his family. Actions of this kind on the part of Mr. Bergh have great effect in drawing toward him the sympathies of a class of persons who have hitherto looked upon himself as a meddlesome hypochondriac, and his Society as a nuisance.

A snake recently cut open on the Lehigh Mountains was found to contain a large quantity of potato bugs.

AQUACULTURAL COLLEGES.

THE wonderful growth of fish culture in this country shows that its progress is to be in accordance with the rapid strides of science of every kind and form, which is one of the marked characteristics of the day. But no step, having in view its further development, has been taken which possesses a greater amount of interest, importance and encouragement than that which emanates from the old, and as it is now customary to call her, *effete* State of Virginia. In a letter from a valued correspondent published in our last issue, we are advised that the State hatching house is to be located at Blacksburg, with Professor Ellszey, the Professor of Natural History of the Agricultural College at that place, in charge; thus allying the two sciences in one common institution and granting to agriculture the same importance and attention that is now devoted to the sister study. It is further proposed to place hatching establishments, in conjunction with the University of Virginia, the Virginia Military Institute, and perhaps other colleges, with a view to the education of experts and the spreading of a general knowledge of the principles of fish culture throughout the State. We are glad that this movement has originated with "Old Virginia," foremost in so many things in days of yore, and look confidently to see her example followed in this and other States. Why should not fish culture be placed on the same footing as agriculture? "An acre of water will produce as much as an acre of land." Its importance from the food producing point is equally as great, and the necessity of preserving and increasing equally important, and as certain ultimately to be recognized. It must be gratifying to the pioneers in this science to see the results which now flow from their humble beginnings. When Seth Green first tried the experiment of hatching shad eggs at Holyoke and his boxes were stoned by the unbelievers, who would have predicted that such a triumphant success would have rewarded his labors, and that colleges for instruction in fish culture would be established throughout the country?

THE RIFLE MOVEMENT.

IT is a matter for congratulation that the occasion which has given rise to the increased interest taken in rifle shooting throughout the country was a peaceful one, and not the outcome of some sad necessity. The reports of new rifle clubs which reach us and the enquiry for "rules and regulations" come from almost, if not quite, every State in the Union, and if the present mania for long range shooting continues the remarks of trans-Atlantic papers in extenuation of their riflemen's defeat, that the Americans were a nation of riflemen, will be amply verified. It is also true that the American possesses the foundation upon which to build the marksman. Familiarized as most of our young men are from an early age, with the use of a gun of some description, with ample room for its use, and without hampering restriction in the way of licenses or *caste*, the first great principle is learned and the embryo riflemen is fit to be initiated into the higher branches and all the apparent mysteries of elevation, trajectory, and wind-gauge.

Not the least striking result of this movement is the rapidity with which proficiency is acquired. We hear on one day of the formation of a rifle club and on the next receive diagrams of targets showing remarkable shooting. An excellent exemplification of this is shown in the case of the recent match at Saratoga between the club of that place and the Parthian Junior Club of Hudson. It was the first match in which the former club had ever participated. We have the diagrams of the targets made before us, and the array of shots in the bullseyes is really formidable. The range was 500 yards, number of shots, twenty each. The Parthian Club scored 545 points out of a possible 600, four of the team making over 90 points each, "Trustworthy" Smith alone contributing 95. The Saratoga Club scored 512 points. Of course this shooting would not be considered remarkable among the older members of the National Rifle Association and Amateur Rifle Club, and indeed at Creedmoor on Saturday last in the Ladies' Match several of the contestants scored 50 points in ten shots at 500 yards, the highest amount possible. While referring to this Creedmoor match it is rather suggestive to look at the scores made at 200 yards off-hand, where in a large number of instances the short range men who have inferior totals have excelled at this range, showing that our long range experts have not devoted as much attention as they might have done to shoulder shooting.

It is reported that the committee of the Amateur Rifle Club appointed to select a team to contend with the Canadians in the forthcoming match, have had some difficulty in completing their labors, owing to the poor scoring made in the competitions for places, and that they may yet be compelled to exercise their prerogative and select from among the members of the International team. If this is done we fear that our neighbors will form the same opinion of our riflemen as the Chinese have of our navy, the Hartford having been sent to the Asiatic station so often that the celestials believe she is the only big ship we have. It has been suggested that outside riflemen, for instance the best of the Hudson Club, might be invited to places on the team, but as the challenge was to, and accepted by the Amateur Club, the places must be filled from among their own body.

The London *Times*, which of late has been unusually complimentary to America and Americans, discusses at length, in a recent issue, the significance of the movements in this country of which the reception accorded to the

American team was a demonstration. The probability of a renewal next year of the contest for international honors on this side of the water is mentioned, and the key note to the popularity of rifle shooting given, when it is shown to be one of the amusements "into which the corruptions of the betting ring will not be allowed to intrude," a point on which we have previously expatiated. The *Times* further says:—

"No one has ever doubted the perfect integrity with which our rifle shooting competitions are conducted, and it is only bare justice to say that the American marksmen of Col. Gildersleeve's team shoot as "straight" in every sense of the word as the best of our Wimbledon prize winners. These are some of the incidental benefits to be expected from the encouragement of such rivalries as that of the American and Irish marksmen. The main advantage, of course, in every movement of the kind is that it breaks down some small portion of the thick wall of distrust, suspicion, and jealousy which a painful history, checkered with many misunderstandings, has raised up between two great nations, who ought to be one in heart as they are one in blood. We do not exaggerate the effect of a slight affair like a rifle match, but many private friendships have been cemented by a community of amusements, and communities, after all, are very much like the individuals who make them up."

GAME PROTECTION.

WE alluded last week to the efforts of the Hudson River Sportsmen's Association to prosecute and punish an old offender named Hoxie, who dwells in the Adirondacks and gains his livelihood by systematic poaching. Since then Dr. Chas. W. Torrey, the Vice President of the Yonkers Club, has handed us the following letter from John R. Wiltsie, Esq., President of the Association first named, referring to the same matter:—

NEWBURG, N. Y., September 6th, 1875.

Dr. Chas. W. Torrey, Vice President Yonkers Sportsmen's Club:

DEAR SIR:—We started our association with a view to calling the attention of sportsmen to the fact that the laws for the protection of birds and fish were violated continually by men calling themselves sportsmen. We think that we have done some good by circulating about 1,000 copies of the game law annually from our own vicinity to the Adirondacks. We have not had many suits at law. We arrested one of the chief poachers of the wilderness and broke up his business, which was perhaps the largest in this State. He had working for him about forty trappers in the Adirondacks, catching trout and killing deer. His name was Hoxie, and he was located at Indian Lake, kept a store, and was Postmaster there. In one of my tramps through the lower region of the Adirondacks I came across his place after traveling over 100 miles on foot among his employees. He sold that season over seven tons of trout to Saratoga, Springfield, and Boston, and all the deer he could ship. He paid his men forty cents per pound for dressed trout and twelve cents for venison. He visited me the day following and wished me to purchase some venison. I spoiled the sale of his venison, and one of our members had a barrel of trout seized at Poughkeepsie, in consequence of which Mr. Hoxie left for parts unknown, leaving his servants unpaid. Our friend sent the papers to Hamilton county for his arrest, as the law will reach any violator of the game law whose penalty reaches \$50.

You speak of our gas house. The law clearly forbids their running their refuse into the river, as well as all other matter calculated to destroy fish. Although the game law is not by any means perfect, if it were rigidly enforced it would answer a good purpose. I hope that the sportsmen of the State may yet meet somewhere and draft such a code of laws as may be easily understood, making them as brief as possible, and submit the same to our Legislature for their consideration. I have personally felt a great interest in protecting game of all kinds, for I have spent many pleasant days in hunting and fishing for the last half century, and am not *exhausted* yet. I enjoy the sport as well as ever, and am happy to say that I can keep close to the best of the boys, and propose to go on until the machine runs down. Very respectfully yours,

JOHN R. WILTSIE.

It will be observed by the last clause that the honorable gentleman urges a meeting of the sportsmen of the State for the purpose of drafting a new and simplified code of game laws. Surely, the ink and effort of the past two years have been to some extent expended in vain if Mr. Wiltsie has not been made aware that a Convention of Sportsmen from all the States met at Cleveland, Ohio, last June, and appointed a committee to draft suitable game laws to govern all the States. Moreover, an association of gentlemen, for the most part naturalists, was organized last May for a similar purpose. It included representatives from both the United States and Canada, and for this reason was styled the "International Association for Protecting Game and Fish." It invited the co-operation of any person interested in its objects, and has already secured a membership of over two hundred. Mr. Wiltsie should be one of the members. Any person who wishes to aid its efforts is admitted on application by the payment of \$1, and such aid, in order to be most efficient, should be proffered at once. A call will soon be issued for a meeting of the Executive Committee with a view to appoint sub-committees. These committees have power to add to their number, and any volunteer qualified to serve will be received. Any suggestions that may be offered to any member of the committees in writing, from any source whatever, will be appreciated, the object being to obtain the fullest and most intelligent information upon the general subject at the earliest moment.

A completion of this important work is sought for at a date sufficiently early to enable it to be submitted to the Legislatures of the several States the coming Winter; some law by which the public can be intelligently guided and governed being greatly needed. However, no code of laws will be submitted at any time until it is deemed as perfect in its entirety as human wisdom can make it. This law will be as nearly uniform in its application to all the States as their general and climatic conditions will permit, so that being simplified, it may be the more readily and universally understood, executed, and obeyed. This plan of uniform, or at least co-operative laws, has been much discussed during the past two years by the press, and especially by that portion of the press in the interest of sportsmen and propagation. It has been in

operation in Great Britain for many years, where it works to great advantage. In this country, whose area is broader and the number of States greater, these advantages would be more conspicuous, not only in preventing the enactment of special laws that confuse by their diversity and invite transgression by their incongruities, but by stopping the shipment of game taken illegally in one State and its open sale in another State where the law does not forbid.

It is not our desire to crush or discourage any such movement in this State as that suggested by the honorable President of the Hudson River Club. Doubtless it would prove a valuable auxiliary to the general and more comprehensive efforts that we have alluded to. We are merely anxious that its force should be utilized in the best manner, and that will be by making it tributary to the greater movement and in direct correlation thereto.

The Union Club, of South Bend, Indiana, has expelled Henry Galloway, a member, for shooting out of season. Galloway was convicted before a Justice and fined.

A "Society for the Protection of Birds Useful to the Farmer" is one of the societies in a French department. All nests found are reported to the society, and protected by it. In the past year the society protected 214 nests.

WATKINS, Schuylar county, N. Y., Sept. 2d, 1875.

EDITOR FOREST AND STREAM:—

Our citizens have long felt a just pride in the unsurpassed beauty and loveliness of Seneca Lake, and have been content to talk of the wonderful fishing it afforded when their "grandfathers were boys," and wondering why it is that the finny tribe have become so scarce within the last twenty-five years. But having found that talking and wondering will not replenish the waters while seining is continually practiced by those having no fear of the law before their eyes, they have organized and incorporated an association bearing the above name, whose chief object is to thoroughly stock the waters of said lake with those kinds of fish best adapted thereto, and use all proper means to enforce the laws for the protection of the same, and of the game in the counties of Schuylar, Seneca, Ontario and Yates.

Our lake is forty miles in length, varying from one to five miles in width. Its waters are clear, cold, and very deep, with rocky bottom, and it has been frozen over but twice in the last thirty years sufficiently to impede steamboat navigation, which is carried on here during the entire year by the Seneca Lake Steam Navigation Company, with her line of beautiful, commodious and staunch steamers, making a trip in mid-Winter with the mercury below zero, a novelty to the stranger, and causing one who chances to speak of it among strangers to be looked upon as a "yarnier." It is surrounded by the best farming lands in Western New York, and its head waters at this place, being in the immediate vicinity of the famous Watkins Glen, renders it interesting and beautiful to the tourist and pleasure seeker.

Our association means business, and intend to make this beautiful body of water productive as well as beautiful; so that of the many thousands who annually visit our glen and scenery, those who feel disposed may bring the rod and line, and dog and gun and make them available to help to while away the "lang Summer's day" on the banks and bosom of the queen of inland waters. Respectfully yours,
M. J. SUNDERLIN, Secretary.

SANDUSKY, O., Sept. 14th, 1875.

EDITOR FOREST AND STREAM:—

A few members of the Erie County Sporting Club have purchased the game right of Johnson Island, for the purpose of stocking it, as a reserve, with quail. One year ago last December they placed in it ten pairs, and now they find a liberal reward for their trouble in an abundant supply of game beyond their expectation. They anticipate fine shooting this Fall. The island is three miles from Sandusky, and contains about 330 acres, and is well protected from poachers by the inhabitants, who are interested in the sale. The Erie Club is hardly organized, but expects to be next month, when their rooms will be completed, although they have adopted their constitution and by laws. This was done May 25th last, when W. V. Latham was elected president, D. S. Worthington, vice president; T. F. Spencer, treasurer, and W. K. Marshall, secretary; Board of Directors, E. B. Saddler, J. J. Finch, G. J. Anderson, O. H. Rosenbaum, and J. W. Hunter. Thus, you will observe, the sportsmen of this section, as in every other, begin to realize the absolute necessity of organizing for the protection of game. It seems to come slow, but I trust it will be sure. There is no other salvation. As long as men will hold the game laws in contempt, so long must we expect to see a scarcity of game, which nothing but a combined and fearless action of sportsmen can remedy.

B.

CAMDEN, N. J., Sept. 16th, 1875.

EDITOR FOREST AND STREAM:—

The regular annual meeting of the West Jersey Game Protective Society was held in Camden, N. J., yesterday. There was a large attendance. All the counties embraced by the Society, as well as Philadelphia, being represented. The treasurer's report showed a balance on hand of \$970.63. The following directors were elected: Camden county, Henry Fanuxem; Gloucester county, J. C. Wood; Salem county, George T. Ingram; Cumberland county, T. W. Walder; Atlantic county, J. B. Beebe; Cape May county, Wm. B. Brown; Jesse W. Starr, Jr., of Camden, was elected treasurer, and Richard T. Miller, of Camden, secretary. A committee was appointed to purchase game birds and game fish to be distributed in the different counties, and an appropriation of \$1,300 was made for that purpose.

SECRETARY.

HO! FOR THE MOUNTAINS.—Our managing editor, Mr. Chas. Hallock, leaves us this week for a month's recreation in the mountains of West Virginia, where he will be the guest of Major Jacob Wagner, of the United States Revenue Service. The expedition will be provided with saddle horses, tents, a mess wagon, photographer, cook, &c., and contemplates extending its investigations into North Carolina and Tennessee, by way of White Top, and the Grand Unaka Range, "the highest land east of the Mississippi," and amidst the splendid scenery of the French Broad. A visit will also be paid to the Natural Tunnel, in Scott County, Virginia, a wonderful freak of nature quite equal to the famous Natural Bridge, which has never yet been fully described and measured. Photographs of this and other attractive localities will be taken. Attention will be especially paid to the quail, grouse, turkeys, squirrels, deer, bears, black bass, and other game with which this not much frequented section abounds. No doubt our readers will at some future day reap the benefits of this tour of exploration.

"Squire Smith," who is attached to the Kennel Depart-

ment of this journal, is now absent on a two week's hunt among the prairies of Iowa.

Meanwhile, in the absence of so important a part of our working force, the editorial charge of the paper will devolve upon our very efficient lieutenants, Wm. M. Tileston and S. A. Atkinson.

"CAMP LIFE IN FLORIDA."—We call attention to the advertisement of this forthcoming and very seasonable handbook for sportsmen and settlers, for which all persons who contemplate visiting Florida, for business, health, or recreation, will do well to purchase. It designates all varieties of game animals, birds, and fish found in the State, and their modes of capture; the best localities for the sportsman and intending settler; routes of travel by land and water, outfits, expenses, distances, and objects of interest; and supplies in a great measure a want that has been long felt. A book of this kind is very frequently inquired for. It is now in press, and will be issued early in October; price \$1 50; 300 pages 12 mo.

OBITUARY.—It is with pain that we record the demise of one of the veterans of the scientific world, and one to whom his adopted State is indebted for much assistance in restocking her interior lakes with desirable kinds of fish. We refer to Prof. J. A. Lapham, of Wisconsin, who died of heart disease on the 14th inst. near Oconomowoc, Wisconsin. Prof. Lapham has resided in Wisconsin since 1836, doing much to reflect honor on that State. His mode of death was most singular. The boat in which he had been fishing on Oconomowoc Lake was seen drifting near the shore with the occupant lying on his face dead, his hand clutching an oar, and a large string of fish near him. Science has lost an able exponent, and a large circle of friends mourn the personal loss.

The Rifle.

THE FOREST AND STREAM BADGE.—There are some interesting statistics in connection with the shooting for this badge, which, owing to the experience and popularity of Mr. Conlin, has been so successfully carried to an issue. There were in all nine competitions. In these competitions eighty-five marksmen took part. One hundred and ninety targets were used, and 3,800 shots were fired. The first match was shot on the 1st of June and the last on Septem-

ber 14th. It was not until the third match that the additional badges were offered. The following table shows the result of the shooting:—

WINNERS OF THE BADGES.			
FIRST BADGE.			
Inches.		Inches.	
G. W. Yale.....12		G. W. Hamilton.....14	
John Trageser, Jr.....12 6-8		M. P. Lennon.....13 1/2	
Wm. Hayes.....12 1/2		J. P. M. Richards.....13 1/2	
Wm. Hayes.....11 13-16		Wm. Hayes.....10	
SECOND BADGE.			
Inches.		Inches.	
L. Bird.....15 1/2		W. B. Farwell.....15	
Wilson Macdonald.....15 1/2		Thos. Lloyd.....16 1/2	
A. G. Hellwig.....15 2-8		Thos. Lloyd.....15 1/2	
		Thos. Lloyd.....18 1-16	
THIRD BADGE.			
Inches.		Inches.	
A. Marsh.....20 13-16		A. B. Dodge.....29 13-16	
W. A. Sherman.....21 1/2		F. Hyde.....20 1-16	
J. J. O'Kelley.....21		A. Marsh.....	
R. F. Hill.....20 1/2			

The following list shows the average targets made by twenty of the competitors:—

Inches.		Inches.	
Wm. Hayes.....11 9-48		J. P. M. Richards.....16 18-24	
W. B. Farwell.....12 5-6		G. W. Yale.....17 5-48	
John Trageser, Jr.....13 8-48		L. Bird.....18 24-48	
G. W. Hamilton.....13 17-24		L. V. Sone.....15 5-48	
Wilson Macdonald.....13 37-48		F. Hyde.....19 1/2	
M. P. Lennon.....14 1-3		Wm. Moser.....20 5-48	
Thos. Lloyd.....15 9-48		D. L. Beckwith.....20 21-24	
A. G. Hellwig.....15 9-48		Robert Faber.....20 33-48	
Fred Kessler.....15 25-48		Jos. Woodward.....24 42-48	
T. C. Noone.....15 34-48		H. G. Taube.....25 42-48	

In explanation of the mode of scoring, we give herewith a cut of the last target made by Mr. Hayes; exact size of bullseye and shots, although the target itself is extended to six inches. Another badge is now being manufactured which we offer for competition among all short range rifle-men. Mr. Conlin has had his gallery extended to 110 feet, at which distance future matches will be shot. Due notice of the first match, which will probably be early in October, will be given.

—The Union Hill Schutzen Association have tendered the American Off-hand Rifle Club the use of their range for a practice match on Friday, which will be availed of, and a large attendance is expected.

CREEDMOOR.

THE LUTHER BADGE.—Saturday was a very lively day at Creedmoor, there being two matches on the tapis. In the forenoon, when the Luther badge was shot for, the wind was very unsteady. Nine contestants appeared, the winner being Mr. Willard B. Farwell, with a score of 64 out of a possible 75. This match, which is usually shot in the afternoon, was commenced in the forenoon, no notice being given, and as we are informed, without authority, thus depriving many who had proposed to shoot of an opportunity of so doing. We understand that no less than six gentlemen went over to shoot at the usual hour, but found that the contestants already on the ground had taken charge of the match and shot it without regard to who might be coming later. The total scores were as follows:—

Name.	Yards.	Score.	Total.
W. B. Farwell.....	800.....5 4 5 3 4 21	4 5 3 4 21	64
J. S. Conlin.....	900.....5 5 3 5 5 23	5 3 5 5 23	63
General T. S. Dakin.....	1000.....5 5 3 4 3 20	5 3 4 3 20	61
E. H. Sanford.....	800.....5 4 2 5 5 21	4 2 5 5 21	59
L. Geiger.....	900.....5 4 2 5 5 21	4 2 5 5 21	58
R. Rathbone.....	1000.....4 4 5 5 3 21	4 4 5 5 3 21	48
H. S. Jewell.....	800.....3 3 4 4 5 19	3 3 4 4 5 19	48
L. Webber.....	900.....5 3 5 3 5 21	5 3 5 3 5 21	37
A. J. Hennion, Jr.....	1000.....5 3 4 4 5 21	5 3 4 4 5 21	36

Following this contest a novel match known as the Ladies' Match was shot, the conditions being that each gentleman entering should do so in the name of a lady, to whom he should act as escort during the day and present any prize he might win. Ten shots were to be fired at 200 yards and the same number at 500, which, with the large number of entries, delayed the conclusion of the match until a late hour. Gen. Dakin was the winner of the first prize, and his good lady thereby became possessed of a handsome sewing machine. We should mention that a system of handicapping the rifles, and also the contestants, was adopted, by which the latter who had won prizes were to give points, and the Creedmoor long range rifles made the same concession to the military arm. We give the abstract of a very long score list without allowances or deductions:—

Name.	Yds.	Total.	Yds.	Total.	Gr. T'l
General Thomas S. Dakin.....	200	42.....500	50	92	
H. S. Jewell.....	200	40.....500	50	90

THE RIFLE TEAM AT POUGHKEEPSIE.—The last of the receptions awarded to the American Rifle Team was at Poughkeepsie on the 14th inst. General Dakin was the only absentee. The principal event of the occasion was the shooting of a match for a valuable gold badge, presented by the Hudson River Rifle Association. An immense concourse of people had assembled in the fields which formed the range. The target was a wooden one of the same form and dimensions as those used at Creedmoor. The conditions of the match allowed the use of any rifle, distance 500 yards, two sighting and ten scoring shots. Major Fulton won the match by a score of 49 out of a possible 50. The scores were as follows:—

Name.	Score.	Total.
Major Fulton.....	5 5 5 5 5 5 5 5 5 5	49
A. V. Canfield, Jr.....	4 5 4 5 5 5 5 5 5 5	47
Colonel John Bodine.....	4 5 5 4 5 5 5 5 5 4	47
G. W. Yale.....	5 4 4 5 5 4 5 5 5 5	47
Colonel Wingate.....	5 5 4 5 5 5 5 4 5 3	46
Colonel Gildersleeve.....	3 5 5 5 5 4 5 4 4 4	45
L. Geiger.....	5 3 5 3 5 4 4 5 4 5	43
L. M. Ballard.....	3 4 5 4 4 4 5 4 4 4	42
R. C. Coleman.....	3 3 3 4 4 5 5 5 5 3	42
A. F. Lindley.....	4 4 4 5 3 4 2 4 5 4	40
J. N. Winslow.....	2 4 2 5 5 4 4 3 4 5	38
Captain Bruce.....	3 2 3 4 3 3 4 5 4 4	37
H. S. Schroeder.....	4 3 5 4 2 5 0 2 4 3	32
H. F. Clark.....	2 3 0 2 5 4 0 3 3 3	25
G. L. Dennis.....	0 3 0 3 0 3 0 0 0 0	6

For the evening a banquet had been provided, after doing justice to which the usual toasts were drunk and speeches made; in the latter performance Colonel Gildersleeve fully sustained his reputation as an orator.

—The American team visit the State fair at Waverly, N. J., to-day, as the guests of the officers of the Agricultural Society. In the evening a reception will take place, when

the Mayor and Common Council and officers of various New Jersey regiments will call upon them.

—The American Off-Hand Rifle Club have challenged the Amateur Rifle Club to shoot a team match, six or more men, at 200 yards, any rifle to be used, for the off-hand championship of America. The challenge has been forwarded to Major Fulton, but his response has not yet been received.

—A number of the members of the Second Connecticut Regiment are practicing for the competition for the *Army and Navy Journal* match to be shot at Creedmoor next month. The following is one of their scores, each man shooting two rounds with a Peabody rifle, and subsequently one with a Sharp; distance 500 yards:—

PEABODY RIFLE.			
Name.	500 Yards.	Gr.	Total.
Hooker, F Company.....	4 0 2 4 0 0 3.13	5 4 2 2 0 5 0.18	31
Sandford, F Company.....	3 0 4 0 3 0 1.13	2 2 2 2 0 0 0.18	21
Bacon, D Company.....	6 0 2 4 5 4 0.15	3 3 3 2 4 2 0.17	31
Richardson, D Company.....	5 0 4 4 2 3.18	4 4 0 3 5 3 0.19	37

SHARP RIFLE.			
Name.	500 Yards.	Gr.	Total.
Hooker.....	0 0 6 2 0 5 0.71	Bacon.....	5 3 4 4 4 3 3.25
Sandford.....	2 3 4 3 4 4.33	Richardson.....	3 3 0 5 0 0.11

Mr. Sandford is one of the best shots in the regiment, and holds a number of badges.

—The following scores were made by Company C, Sixteenth Battalion, on the range of the Yonkers Rifle Association, Sept. 20, under supervision of Inspector Douglas Smyth. Five rounds at 150 yards, standing, and five rounds at 400 yards; any position; a score of 12 out of 25 necessary to qualify at the short range, before shooting at 400. Battalion represented by 44 men. Twenty-nine qualified to shoot at 400 yards; of these 5 qualified to shoot later at 200 and 500. The following are the principal scores:—

Name.	150 yards.	400 yards.	Total.
Captain Smyth.....	4 5 4 5 23.....	0 4 5 4 5.18	41
Captain A. Jones.....	3 3 2 2 12.....	5 4 5 4 4.22	34
A. Smith.....	2 4 3 4 17.....	0 4 5 3 3.15	32
Charles Smith.....	2 3 4 2 14.....	4 5 0 5 3.17	31
Corporal Emory Acker.....	2 4 3 4 17.....	4 3 2 2 14	31
A. Tompkins.....	2 2 3 2 12.....	0 4 5 2 3.14	26

Creedmoor regulations.

NEWARK SHOOTING SOCIETY.—This society held a shooting festival on their spacious grounds on the South Orange road on the 13th and 14th insts. The shooting was all done at the 200 yards range, and the scoring was on the ring plan. Most of the prizes were in money. On the 13th Mr. Wm. Hayes took the award for the greatest number of bullseyes on that day, and on the following day Mr. J. J. Rathjen was successful. Prizes for the greatest number of bullseyes during the meeting were won as follows: First, (22,) Wm. Hayes, second, (21,) A. Hellwig; third, (20,) Wm. Knecht; fourth, (20,) J. J. Rathjen. At the ring target, Mr. Wm. Hayes made in three shots 73 rings out of a possible 75, and took the first prize of \$50. The other winners were as follows:—

Names.	Points.	Names.	Points.
J. Morf.....	69	J. Belcher.....	62
K. Klein.....	67	J. J. Rathjen.....	62
J. Almonsechner.....	66	A. Fowell.....	61
Schalk.....	66	A. Hellwig.....	61
J. F. Beck.....	65	C. Zettler.....	61
William Klein.....	64	J. Raschen.....	59
O. E. Sillard.....	64	J. Lippman.....	59
William Knecht.....	63	Cleveland.....	57
C. Christel.....	63	William Kessler.....	57

At the man target, where only shots on the line count, in five shots Mr. J. Belcher, of Newark, scored 43 points out of a possible 50, and received first prize of \$30. The other prize winners were as follows:—

Names.	Points.	Names.	Points.
J. Almonsechner.....	43	John Raschen.....	38
William Hayes.....	40	J. F. Rathjen.....	38
O. E. Tillard.....	40	G. Schalk.....	37
William Klein.....	40	Helfers.....	34
J. F. Beck.....	40	L. Graf.....	33
J. Cleveland.....	39	C. Koegel.....	31
Th. Klein.....	39	R. Faber.....	29

The total value of prizes amounted to nearly \$600, distributed as follows: Premiums on bullseyes, \$50; bullseye target, \$113; ring targets, \$273; man target, \$154.

—A number of members of the Mobile Cadets, First Alabama V. M., have been practicing with the rifle of late, and obtained a most creditable proficiency, as the following score will show. The shooting was done at 200 yards, off-hand, at Arlington, near Mobile. The target, which was 6x4 feet, was placed on a jetty with water on each side, and facing west. The following is the score:—

Name.	1st.	2d.	3d.	Gr Total
A. B. Woodcock.....	3 4 4 4 19.....	4 5 4 4 4.21	3 3 2 4 3.15	55
M. Prime.....	5 2 4 3 3.17	3 4 3 3 2.15	3 4 4 4 4.19	51
W. H. Sheffield.....	5 3 4 3 2.18	4 3 3 4 1.18	4 5 5 3 4.21	57
W. S. Moreland.....	4 4 3 3 5.19	4 3 3 4 1.17	3 4 4 4 4.19	55
C. A. Holt.....	4 3 5 3 5.20	4 4 4 4 3.19	4 3 2 2 5.16	55
L. H. Kennerly.....	3 3 3 4 4.17	4 5 4 3 5.21	3 4 4 4 5.20	58

Totals..... 110 111 110 331
Out of a possible 450.

Out of the ninety shots there were in the bullseye 12; centre, 43; inner, 29; outer, 6; no misses. The rifle used was the United States Springfield breech loader.

JOHNSVILLE, N. Y., September 20th, 1875

EDITOR FOREST AND STREAM:—

I send you the scores of a rifle match between two young ladies of Washington county. If they are as fortunate in the other matches they may have in contemplation I think we may congratulate them. Distance 50 yards, ten shots each; target, bullseye 2 inch., counting 3; centre, 4 inch., counting 2; outer 6 inch., counting 1; possible 30:—

Miss S.....	3 3 3 3 3 2 2 3 2 3-27
Miss L.....	2 2 3 3 3 3 3 3 1 3-26

These ladies are just beginning, Miss L. having fired eight shots previously and Miss S. eleven. What will they not do with practice? N.

[True enough, what will the ladies not do with practice? This is a "Ladies Match" in earnest, and if the epidemic spreads what will become of the riflemen? Seriously speaking, although we do not, as a rule, care to see ladies adopt those pastimes which come more particularly within the province of their husbands, brothers or lovers; yet we can imagine no reason why ladies should not practice with the rifle and pistol. Indeed, proficiency with the latter

weapon would be no mean addition to woman's education in these days of daring burglaries.—ED.]

—A rifle match was shot at Oswego on the 13th inst., open to all comers, distances 200 and 500 yards. The winners were J. S. Barton, C. A. Barton and J. L. Wood, their scores being 41:39 and 39, out of a possible 50. In the carbine match at 100 and 200 yards, Captain Turner took first prize with a score of 39. In the 200 yards, off-hand match J. L. Wood was first with a score of 20 out of a possible 25.

—The Franklin Rifle Club of Hartford held their annual practice meeting on Saturday last at the range in the South Meadows. The scoring was on the old fashioned measurement plan. Mr. A. F. Spencer made the best score and took the first prize, a Sharp's rifle, presented by Gen. Hawley and the Sharp Rifle Co.

—The first semi-annual rifle tournament of the Empire State Rifle Association, will be held on the grounds at East Syracuse, Tuesday, Wednesday, Thursday and Friday, Sept. 28th, 29th, 30th, and Oct. 1st, 1875. There will be five matches, all to be shot at forty rods, ten consecutive shots. Why does not the association abolish the old form of shooting and adopt the Creedmoor targets and regulations?

—The students of the University of California are forming a rifle club. They have at present a 300 yard range which will be increased. We would suggest, however, that they adopt the new Wimbledon circular target instead of the old square one.

DOMINION ASSOCIATION.—Our last issue contained the report of the shooting at this meeting up to the fifth day. The shooting on that day commenced with the Governor General's prize, open to all winners at the meeting. The ranges were 500 and 600 yards, five rounds at each. Lieut. Manachlan took first prize with a score of 41 points; Bombadier Crowe second, with 37, and Capt. Anderson, Tenth Royals, third, with the same score. This match was followed by the first stage of the Wimbledon match. The competitors in this match bind themselves, if selected, to proceed to Wimbledon with the Canadian team of 1876. The ranges were 200, 500, 600 and 800 yards. The following were the prizes winners, although a number of others were qualified to shoot in the second stage:—

Prizes.	Winners.	Points.
\$100.....	Corporal Mitchell, 13th Battalion.....	75
75.....	Sergeant Sutherland, G. G. F. G.....	74
50.....	Sergeant Flynn, 10th.....	72
20.....	Color Sergeant Grayburn, G. G. F. G.....	70
20.....	Private Cotton.....	70
20.....	Lieutenant Cole, 42d.....	70
20.....	Sergeant Mitchell, 12.....	70
20.....	Bombadier Crowe, W. F. B.....	68
20.....	Corporal Sproule, B. Cav.....	68
20.....	Lieutenant Johnston, 71st.....	68
10.....	Corporal Graham, H. F. B.....	68
10.....	Surgeon McDonald, W. F. B.....	67
10.....	Private Mason, 13th.....	67
10.....	Captain Anderson, 10th.....	66
10.....	Captain Boyd, 54th.....	65
10.....	Captain Walsh, 63d.....	65
10.....	Quartermaster Cleveland, 54th.....	65
10.....	Sergeant Lewis, Queen's.....	65
10.....	Corporal Throop.....	65
10.....	Lieutenant Barnhill, 76th.....	64

On the last day the second stage of the All-comers' Match, 1,000 yards, any rifle, was shot. Sergeant Saucier, Eighteenth Battalion, won the \$100 with a score of 56 points. The second stage of the Wimbledon Match was then shot, the prizes amounting to \$800. The conditions were the same as in the first competition. The following are the scores:—

Names.	Points.	Names.	Points.
Sergt. Corbin, 63d.....	98	Lieut. Bachille, 78th Batt.....	84
Corp. Mitchell, 13th Batt.....	95	Sergt. Flynn, 10th Royals.....	84
Sergt. Sutherland, G. G. F. G.....	94	Asst. Surg. Macdonald, W. F. B.....	83
Bomb. Crowe, Wellington F. B.....	93	Qr-Master Cleveland, 54th Batt.....	82
Lieut. Cole, 42d Batt.....	91	Corp. Langstrath, 8th Batt. N. S.....	81
Private Ross, P. W. R.....	90	Lieut. Fitch, 78th Batt.....	81
Lt-Col. Johnstone, 71st Bat. N. B.....	88	Capt. Mason, 13th Batt.....	81
Private Turnbull, P. W. R.....	87	Capt. Baillie, 10th Batt.....	79
Sergt. Mitchell, 13th Batt.....	85	Corp. Throop, G. G. F. G.....	79
Lieut. Wright, 50th Batt.....	84	Capt. Graham, Hamilton F. B.....	78

The Canadian Wimbledon team will comprise the following riflemen, together with one man each from the Provinces of Manitoba and British Columbia provided they make the necessary number of points:—

Sergeant T. Corbin, Sixty third; Corporal Mitchell, Thirtieth; Sergeant Sutherland, G. G. R.; G. B. Crome, Wellington, F. B.; Lieut. Cole, Forty-second; Private Ross, Prince of Wales Rifles; Lieut. Johnston, Seventy-first; Private Turnbull, Prince of Wales Rifles; Sergeant T. Mitchell, Thirtieth; Lieut. Wright, Fiftieth; Lieut. Barnhill, Seventy-eighth; Sergeant T. Flynn, Tenth Royals; Assistant Surgeon Macdonald, Wellington, F. R.; Color Sergeant Cleveland, Fifty-fourth; Corporal Langstrath, Eighth; Lieut. Fitch, Seventy-eighth; Capt. Mason, Thirtieth; Corporal Baillie, Tenth.

HOLYOKE, Mass., Sept. 20th, 1875.

EDITOR FOREST AND STREAM:—

At our regular weekly meeting last Saturday, Sept. 13th, the score of the Holyoke Rifle Club stood as follows: Distance, 200 yards; third-class target; seven shots, standing, off-hand:—

Name.	Points.	Name.	Points.
E. C. Smith.....	29	W. H. Heywood.....	24
E. A. Whiting.....	29	D. Kelton.....	24
H. J. Frink.....	28	R. Goodall.....	23
J. Mercier.....	27	A. Munger.....	22
S. Chapman.....	27	H. E. Nash.....	19
A. Knight.....	26	J. Snover.....	18

In shooting off the ties for the badge the score stood—E. C. Smith, 27; E. A. Whiting, 24.

A NEW GUN STOCK.—We have received from Mr. Geo. Smith, of South Bend, Indiana, a rough specimen of his new gun stock, the peculiarity of which is that the drop can be so altered and arranged as to suit any shooter. There is a pistol grip upon which the stock moves, being adjusted at any point within a certain radius by means of a screw. The curious in such matters can see it at our office.

Game Bag and Gun.

GAME IN SEASON IN SEPTEMBER.

Moose, <i>Alces malchis</i> .	Snipe and Bay Birds.
Elk or Wapiti, <i>Cervus Canadensis</i> .	Caribou, <i>Tarandus rangifer</i> .
Hares, brown and grey.	Red Deer, <i>Caricæ Virginianus</i> .
Wild Turkey, <i>Meleagris gallapavo</i> .	Squirrels, red, black and grey.
Woodcock, <i>Scelopax rusticola</i> .	Quail, <i>Oplyx Virginia</i> .
Ruffed Grouse, <i>Tetrao umbellus</i> .	Pinnated Grouse, <i>Tetrao cupida</i> .
Esquimaux Curlew, <i>Numenius borealis</i> .	Curlew, <i>Numenius arguria</i> .
Plover, <i>Charadrius</i> .	Sandpipers, <i>Tyngana</i> .
Godwit, <i>Limosina</i> .	Willetts.
Rails, <i>Rallus Virginianus</i> .	Reed or Rice Birds, <i>Dolichonyx oriz.</i>
	Wild Duck.

GAME IN MARKET.—The first English snipe of the season made their appearance in market this week, coming from New Jersey, though not in sufficient quantities to even warrant a quotation. The supply of Western game is also limited, prairie chickens holding to their price of last week, \$1.25 per pair. Ruffed grouse were worth \$1.50 per pair, but until the cold weather fairly sets in neither supply or demand will be very large; the birds, having been packed in ice, do not present a very inviting appearance, and the hotels and clubs are the principal purchasers. Woodcock are in fair supply and retail at \$1.50 per pair. Our quotations for water fowl, are unchanged: Mallard are worth \$1.25 per pair; teal, 75 cents, and a few woodcock at \$1. Reed birds are being received from the South, and also from New Jersey; the latter sell for \$1.25, and the former for 75 cents to \$1 per dozen. Wild pigeons, \$1.75 per dozen; bay birds for from 50 cents to \$1.50 per dozen, according to size.

—A. S. Kellogg, of Oswego; L. W. Ledyard, of Cazenovia; C. W. Crossmon, of the Crossmon House, Alexandria Bay, New York, and G. H. Johnson, of Bridgeport, Ct., have all gone this week to the Magnetawan region, Canada, to hunt. There are few places where deer are more abundant. The inland lake steamers will probably run until ice forms, say until November. The Lake Couchiching Hotel will remain open, (according to advertisement in this paper,) until October first, and excursionists should not fail to give it a passing visit. It is the most delightful Summer resort in Canada, and October is the most attractive month to the sportsman visiting that section. The climate, though frosty, is equable, and the days are warm.

MASSACHUSETTS.—Lexington, Sept. 16.—Ruffed grouse in this part of the country are quite abundant, more so, as old hunters tell me, than they were thirty years ago, owing, I suppose, to the destruction of the large woods and the increase of scrub oak, a great protection to the birds against both hawk and hunter. Summer woodcock very scarce this year in most places. Have seen several bevies of quail, some nearly full grown. Russ.

MINNESOTA.—Brainerd, Sept.—Messrs. Jerome Marble, C. C. Houghton, and Major White, the party of gentlemen from Worcester, Mass., that was referred to in a late issue, arrived last week, and at once commenced proceedings against the grouse. They shot two days near town with fair sport, considering that birds have been hunted more than a month, and nearly every body here shoots more or less. Last Monday, Mr. Towne, of the Northern Pacific Railroad, furnished the party with a car fitted up with berths, tables and cooking apparatus, and they are now somewhere near Crookston, on the St. Vincent Branch of the St. Paul and Pacific Railroad, not far from Pembina. J. C. Whittaker, one of the best shots on the line, is with them, and no doubt they are having any amount of shooting. Mr. Marble has his imported Gordon dog Grouse with him, and from what we saw of him we should say he will be hard to beat after he has had some work on the prairie. Deer shooting commences on Oct. 15. Deer will be very plenty this Fall, they have not been disturbed much as yet, but after the first they will have to "look a little odd" till December 15. T. P. C.

MICHIGAN.—Pontiac, Sept. 17.—Woodcock are scarce and scattering. Ruffed grouse few and far between. Pigeons are beginning to come in. I have seen several flocks and heard of quite a number being killed. S.

—In the Virginia game law there is no general period fixed. In some counties named in the act, and in such other counties as shall decide through their boards of supervisors to adopt the provisions of the act it is unlawful to hunt, shoot, or otherwise cause the destruction of partridges, pheasants, and wild turkeys from the 1st day of January to the 15th of October, or woodcock from the 1st day of January to the 1st day of July.

CAPT. BOGARDUS AND HIS ENGLISH CHALLENGE.—The *Illustrated Sporting and Dramatic News* calls attention to the fact that after the departure of the champion for this country one of its contemporaries published the following statement:—

"In reference to the challenge made at Brighton by one of the members of the club to shoot a match against the champion wing shot of America, Capt. Bogardus, for 200 sovs. a side, we are informed that the last named failed to cover the stake at the stated time. The conditions suggested were that the match should take place on Monday, August 9th, and that each man should have fifty blue rocks or thirty yards rise, five traps, five yards apart. The American says that on his return from America next May he will be happy to shoot against the representative of the International Gun and Polo Club for 1,000 sovs. a side. This is a large stake to shoot for, and if Capt. Bogardus would like the amount increased it can be made for 10,000 sovs. a side."

With regard to this piece of bombast the *News* pertinently adds "Now that Capt. Bogardus has gone away we may expect 'plucky' challenges of a like description every day in the week." While in this country he "flaunted" a challenge to shoot any body for any amount, in the faces not only of pigeon shooters but of every body else who liked to try conclusions with him; and we know with what result."

Gardiner's Island for its fish is as well known to you as the first verse of the book of St. John. But tens of thousands who like to sail and would like to catch fish don't know where to go for them until they grasp a copy of the FOREST and STREAM. All through the Summer Gardiner's Island is alive with some one variety or other of the finny game. The fishing ground is about two hours' sail from Shelter Island Hotel. Parties frequently go for a two or three days' trip. Plum Gut is also within two hours' sail of Shelter Island. You know what Plum Gut is as a fishing ground, and so know your readers. One who has read your journal for two years past, but cannot remember the best fishing localities throughout the United States and Canadas must have a memory like a sieve. Capt. George F. Randolph, of New York, was here for ten days with his beautiful yacht, now belonging to the Brooklyn Yacht Club—the Kute. He gave one delightful excursion party previous to starting on his final trip for this season, which is to Martha's Vineyard, taking Newport, etc., by the way. Yours in fishing rig, H.

HURST'S
Stereoscopic Studies
—OF—
Natural History
For Object Teaching in Schools
—AND—
PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various Animals and Birds in grotesque attitudes, never however violating their natural instincts.

We offer these views not as pictures only, but as studies from nature. One of the great moving elements in our modern system of education is object teaching. The unerring fidelity of the stereoscope transfers the animals and birds from their natural habitat to the rooms of the student and the fireside of our homes, where they cannot fail to leave a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and in gathering his large collection of native and foreign specimens, enables Mr. Hurst to combine in every view the locality of the specimen with its appropriate rocks, woods or water, and coloring from the originals.

1. Wild Cat, or Bay Lynx.....*Lynx rufus*.
2. Snowy Owl.....*Surnia nyctea*.
3. American Wolf.....*Lupus occidentalis*.
4. Wild Pigeon.....*Ectopistes migratoria*.

Miscellaneous.

THE HAZARD POWDER CO.,
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

88 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

AUDUBON POWDER,

Very quick. For woodcock and quail Nos. 1 to 4. Packed in metal kegs of 12 1/2 lbs. and 6 1/2 lbs., and in pound canisters.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes Fg, FFG, and "Sea Shooting" FG, the last being the finest and most used. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 pound.

All of the above give high velocities and less residue than any other brands made.

*** This is a book that has long been needed by Winter tourists to Florida and persons seeking settlement there. It gives a full classification of the game and fish of the Southern Peninsula, routes of interior and coastwise travel, the agricultural resources of the country, and sites for settlement, hints for camping out, resorts for game, hotels, and such other information as will be of great benefit to visitors seeking Florida for health, pleasure, exploration, or permanent settlement.

SCOVILL'S Blood and Liver Syrup

All cutaneous eruptions on the face or body indicate
An Impure Condition of the Blood,
and this may or may not be SCROFULA; but in
either case is nothing more than an insidious poison,
that

BURNS LIKE A TERRIBLE FIRE
as it courses through the veins, sowing seeds of death
with every pulsation.
In this condition of things something is needed AT
ONCE TO CLEANSE THE BLOOD; and

Scovill's Blood and Liver Syrup

will positively effect this desideratum, expelling
every trace of disease from the blood and system and
leaving the skin

SOFT, FAIR AND BEAUTIFUL.

Hundreds of certificates attest its value. Price \$1 a
bottle.

FOR SALE BY ALL DRUGGISTS.

Dr. Rogers's VEGETABLE WORM SYRUP

A brave man may suffer pain, when inflicted upon
himself, heroically; but he

Cannot see his Child Suffer.

There is no other malady incident to childhood that
is accompanied with more indescribable wretched-
ness to the little sufferers than that

Produced by Worms;

and when the parent fully comprehends the situation
he will not delay a moment in securing the most
prompt and efficient remedies to insure the expulsion
of the intruders. The remedy may be found in

Dr. Roger's Vegetable Worm Syrup.

Please bear in mind that
ROGERS' WORM SYRUP is the reliable prepara-
tion.

ROGERS' WORM SYRUP is a palatable prepara-
tion.

ROGERS' WORM SYRUP is liked by children.

ROGERS' WORM SYRUP positively destroys
worms.

ROGERS' WORM SYRUP leaves no bad effects.

ROGERS' WORM SYRUP is highly recommended
by physicians, and is unquestionably the best WORM
MEDICINE IN THE WORLD.

Price 25 cents. For sale by all druggists.

HENRY'S Carbolic Salve.

FOR SALE BY ALL DRUGGISTS.

The wonderful celerity with which this
combination of Carbolic Acid with other
soothing and Curative Emollients acts,
is something akin to the marvelous.

It is with pride that the proprietors call
attention to the gratifying fact that

**Physicians give it the high-
est meed of praise,**

and use it and prescribe it in their practice.

NEW YORK, Dec. 22, 1869.

JOHN F. HENRY, Esq.:

Your CARBOLIC SALVE proves an excellent article,
and I thank you for it. This is another evidence of the
great value of the discovery of Carbolic Acid. Yours
truly,

GEO. B. LINCOLN,
Pres't Board of Health.

Price 25 cents per box.

REV. R. B. LOCKWOOD'S

Catarrh Cure!

The Best Remedy Known, and Endorsed by all the
Principal Physicians of the Country.

Rev. R. B. Lockwood's Nasal Douche will be
found valuable in obstinate chronic cases.

Rev. R. B. Lockwood's Liver and Stomach Pills
dyspepsia, receive the endorsement of thousands.

Price 50 cents each.

JOHN F. HENRY, CURRAN & CO., Proprietors,
8 and 9 College Place, New York.

HENRY'S SEWING MACHINE OIL

A PURE OIL that does not gum up and has the
endorsement of the principal Sewing Machine Com-
panies.

Price 25 Cents per Bottle.

MOTT'S LIVER PILLS

It is easy enough to make a pill, but to make a
good pill, ah! that's the difficulty. There are cheap,
harsh, drastic pills, that are of even less benefit than
a dose of salts. But a good medicine, like Dr. Mott's
Liver Pills, which penetrates to the seat of disease, is
a desideratum indeed. Will positively cure all dis-
eases of the Liver. Sold everywhere. Price 25 cents
per box.

Green's Oxygenated Bitters.

At certain periods of life a tonic is a necessity; but
there is danger in using stimulants that injure the or-
gans of digestion while giving temporary relief. To
obviate this and present to the public a tonic free
from Alcoholic Poison, Dr. Green prepared the Oxy-
genated Bitters, a sure cure for dyspepsia and all kin-
dred complaints. Sold everywhere. Price \$1 per
bottle.

Packer's All-Healing Tar Soap.

It cures all kinds of Skin Diseases with a most won-
derful certainty; it promotes cleanliness, personal
purity and general health; it is a preventive of many
kinds of disease, and it is an absolute necessity in
the nursery. Price 25 cents.

Miscellaneous.

Breech Loaders. W. & C. SCOTT & SONS.

Winners of the "Turf, Field
and Farm" Gun Trials.

(See issue October 3d, 1873.)
In which competition the committees have awarded
our guns, First and Second for POINTS OF MERIT
OF ACTION, MATERIALS, PROPORTION, AND
SHOOTING QUALITIES combined, in all the four
classes.

THE PREMIER GUN.

W. & C. SCOTT & SON call attention to their
very FINEST weapon, combining all their recent im-
provements, marked on the rib between their name
and London address the brand—"THE PREMIER
QUALITY."

Medium and fine guns bear full name and address,
and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped
with name and trade mark.

W. & C. SCOTT & SON, sole makers of the
Patent Top Lever, solid, Double Locking Bolt Breech
Loader, bearing the full name of the firm. W. & C.
SCOTT & SON caution sportsmen against imitations
of their patent and name. Guns bearing the name
abbreviated, or with different initials, are not genuine.

**TRIAL OF SCOTT & GREENER'S NEW SYSTEM
OF BORING, BY THE EDITOR OF
"THE FIELD," LONDON.**

(See *The Field*, January 30th, 1875.)

"From a comparison of the two tables it will be
seen that with Walker's shot, Messrs. Scott's guns
showed a marked superiority over Mr. Greener's,
both in average and in the highest score made. In-
deed, with the left barrel, in his third shot, Mr. Scott
got a selected group pattern of 239 and a penetration
of 37, equalling the highest pattern made by Mr.
Greener, and exceeding the penetration of that par-
ticular shot by eight sheets."

H. C. Squires, No. 1, Courtlandt St.

New York.

THE GREAT London Gun Trial, 1875.

W. W. GREENER begs to inform his numerous
clients in the United States that he has been very suc-
cessful in the above trial, having secured the first
prize, a silver cup, value 40 guineas—class 2 for 12
bores; also winner in class 1 for 8 and 10 bores, and
class 4 for 20 bores. He has won in all the classes for
improved boring, which is upon a different plan to any
other maker, and is far superior in the three most es-
sential points, viz., PATTERN, PENETRATION,
and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Cortlandt St.,
New York, is now importing my DOUBLE CLOSE-
SHOOTING GUNS to order, an invoice of which
will be shipped to him on the 1st July, and can be ex-
amined about the 15th. All special orders given to
Mr. Squires will be carefully filled. A full report of
the GREAT TRIAL, showing the marked superiority
of my guns over guns made by Dougal, Pape,
Tolley, and others, will shortly be published, and can
be had on application at No. 1 Cortlandt St.

**W. W. GREENER,
Champion Gun Maker,**

St. Mary's Works, Birmingham, England.

HENRY C. SQUIRES, of No. 1 Cortlandt street,
has just received an invoice of these close-shooting
guns, and from him any information in reference to
the results of the Great Trial can be obtained on ap-
plication.

WILLIAMS & POWELL, Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the
extreme SIMPLICITY, STRENGTH and DURABIL-
ITY of their New Patent "SIMPLEX" Breech loader
and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two),
its mechanical soundness so thorough, and the
strength and simplicity of the action so great, that
W. & P. feel sure it will supercede all the complicated
and manifold grips now in use, its one powerful grip
being far stronger than any double, treble or quadruple
grip now used. In this new action LEVER and GRIP
ARE ONE SOLID PIECE OF STEEL and the AN-
GLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on ap-
plication, and orders may be forwarded through any
of the best houses in the States for execution in the
Spring.

Guns guaranteed to make patterns of from 160 to
230 with No. 6 SHOT AT 40 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET,
LIVERPOOL.
Established 1780.

J. D. DOUGALL'S

EXPRESS SHOT GUNS.

(Title registered.)

SHOWN by trials at Wimbledon by Editor
of the *Field* to possess the GREATEST PENE-
TRATION and therefore LONGEST RANGE—thus:
Circle, 30 inches; 300 pellets; average, 191; pene-
tration, 37. The Editor's trial of Greener guns with 340
pellets of same shot and same charge of powder, gave
180, and penetration 30, although there were 40 more pel-
lets in each charge. Should any controversy arise as
to the durability of these new systems, we herewith
warn all beforehand that our system is our own inven-
tion (though founded on the American idea) and is DU-
RABLE, a fact remarked on by the *Field*, that the
guns tried had been in use during last season, and re-
ferences permitted to the owners. Send for Illustrated
Circulars to

59 St. James's Street London.

BEWARE OF WORTHLESS IMITATIONS

AND COUNTERFEITS!

BROWN'S ESSENCE OF JAMAICA GINGER

PREPARED ONLY
BY

FREDERICK BROWN,

PHILADELPHIA, PA

THIS RELIABLE PREPARATION, one of
the oldest of American Pharmaceutical Pro-
ducts, still maintains its enviable reputation,
and finds a steadily increasing sale without
advertising, and in spite of piracy.

Its high reputation has tempted the cupidity
of parties, whose only excuse for their unfair
simulations, exists in the great popularity of
the original, and accidental similarity of their
names.

BROWN'S ESSENCE OF JAMAICA GINGER
is protected by the private Proprietary Stamp
of the manufacturer, which is incorporated with
the steel plate label.

The attention of Druggists and the Trade generally, is called
to the Price List of

**ENGLISH & FRENCH
MEDICINES & PHARMACEUTICAL
PREPARATIONS,**

Which will be mailed on application.

Polly Among the Chickens.

THE Professor and S. E. J. own a large farm in the southern part of the State, at Grand Meadow, and they find it absolutely necessary to take a trip down there each year to see how it is getting along. The farm boasts a horse and a barn, and a well, but no tenant, for this last reason it needs all the more looking after; for the geese and the chickens, and the sand hill cranes of those parts are very lawless and unmanageable. Polly has been there twice and knows all about it. During one of these visits occurred the only instance on record of Polly's failure upon ducks. The Professor and S. E. J., after much banging, had destroyed two little divers in a small prairie pond. Polly brought out one, but the other she absolutely refused to bring. She would swim out to it and smell at it contemptuously, but nothing more. They were not her kind of ducks. Polly, you were a sensible dog, a smart dog, and with all this an exceedingly active dog, as I have before demonstrated.

Manifold invitations had I received to accompany them upon these visitations; now they were inclined to compel. A gentleman of our acquaintance whose chief qualification was the possession of a steady pointer, we expected to be of the party, but at the last moment he failed us and we decided to go with Polly, for the farm had to be seen to.

"Converse" had written that the chickens were very troublesome. Polly had a personal acquaintance with every chicken in that part of the State—I knew she would be delighted to show us around. We thought in the prairie grass we could manage to shoot over her.

Experience is a great thing, but it requires so much of it to produce any permanent effect. So September 1st we three, with Polly, who made an important fourth, took the seven o'clock A. M. train for the South—rolled along through a general landscape of vast wheat stubbles and steam threshers, down through Owatonna to Ramsey, then the Southern Minnesota East about 40 miles. Two o'clock P. M. we reached Moro Station. This was our objective point, and here the conductor put us off with our plunder, plump into the high prairie grass; not a tree or a fence, and but one house in sight; the station as yet consisted of an imaginary point upon this iron road, where the grass grew a little higher than it did anywhere else. Principal inhabitants, three forlorn sportsmen and a white dog. A chicken started ahead of the engine as the train stopped; we had marked him down some thirty rods off. Changing my clothes, Polly and I went for him, but a very few minutes demonstrated to my satisfaction that neither man nor dog could hunt under such a broiling sun, so we returned to our companions, who looked very much like two big frogs lost in the prairie grass. Converse was to send a team for us, so we waited patiently, helpless as though stranded upon a rock in mid-ocean. In the course of half an hour much to our relief over the knoll appeared a wagon with attachments—soon it drove up, and we packed in. A three-mile ride over an unbroken prairie with an occasional wheat stubble in the distance, and we arrived at Converse's one story mansion, situated close to the timber. Converse is a live Yankee, herds cattle and horses at so much a head—about five dollars for the season I believe—had about five hundred animals in his charge including a cow who had just been bitten by a rattlesnake. He raises wheat for diversion, and the threshers were now at work, putting through the wheat crop. At table we had just sixteen men, including ourselves, and not including Polly, whom we always shut up in the parlor at meal times.

As the sun lowered, the Professor and myself went out back of the house to a small creek. I pointed out a solitary sandpiper about ten rods distant. Says the Professor: "I see a white spot on that black mud—is that it?" "Certainly it is," I replied. I don't believe there is another white spot in this whole section. After grave deliberation and several trigonometrical calculations, he fired; the sandpiper rose up and coming over, I killed him. The Professor affirmed that he had killed his bird; what

grounds he had to think so I could not imagine, but going down to investigate, sure enough he found it lying dead upon the mud. "What do you mean," enquired he, "by calling this bird a 'solitary sandpiper,' when there was another with him? I think you had better get a piece of sand paper and polish up your ornithology." At the report of our guns six wood ducks started out of the creek. They went down before going far; we struggled after them through the high grass and reeds, and as they rose I killed two. They turned back, giving me two more shots. The first one came down dead, the other going off, hit very hard, taking along the creek towards the prairie and out of sight. Polly retrieved the three, and we worked out and towards the higher ground, it still being so fearfully hot that we were completely exhausted. There we found S. E. J., and as good luck would have it, he had seen the duck, and marked it down in a thick mat of bushes in the middle of the creek. After getting the bearings I went down with the dog. The clump was about twenty feet in diameter, and so thick that Polly, who immediately scented the bird, swam whining around it twice before she could force an entrance, but go in she did, and brought out the bird dead. We then lay down behind a knoll and wished for it to become cooler. We then went to work at the stubbles, but for some reason did not find many chickens—four or five odd ones and one small covey. The Professor killed three, S. E. J. one, and I killed six. As we were returning to the house in the dusk of the evening a duck came flying over, which I dropped in a cornfield apparently quite dead. Polly went in to retrieve, when I heard a great flapping, and off went the duck to all appearance as wild as ever.

The next morning was cloudy—looked like rain. Converse provided us with a span of jackasses, and a heavy lumber wagon, with which we were to do as we pleased. S. E. J., who had sprained his ankle and could not work, was to do the driving. As we were getting ready one of the boys came in and said a large lot of chickens had just dropped in the stubble near the house. I went there. Three rose, giving me a double shot and two birds. Upon the next stubble, a strip of high grass lying between, I saw four or five sitting on the wheat shocks. I crept through the grass, but when I rose up near enough, all had disappeared. I walked out into the stubble field when up went at least thirty birds, all around me. I missed both barrels, firing too quick, but getting in a shell dropped one who had not started until a moment after the others. I was flurried, I must confess—there is something to say the least, surprising, to have a large covey of chickens flap up under your feet out of a stubble where there does not seem to be cover enough to conceal a quail. They flew across the prairie half a mile to a patch of poplars and hazel bushes. I walked right in among them and they got up on all sides, giving me fine shots as fast as I could get in the shells. Three went down dead, the fourth hard hit, at twenty rods, the other missed. The covey took a line directly back. When I got there I found S. E. J., the Professor, Polly and the jackasses. They had seen the chickens, but could not mark them on account of an intervening swell. I took Polly and searched for them half an hour, and would eventually have found them and had good shooting, but S. E. J. was anxious to get over to the farm where the birds were much more plenty than here. I foolishly consented, and we drove off across the prairie. No road, but they knew the direction. One of our jackasses got the rein under its tail and not one of us dared to pull it out, for the critters had a reputation for kicking, and we feared we should touch him off. So there we left it. About three miles, and we reached the farm. Converse had raised a crop of wheat upon a portion of it, and we went over the stubble, starting just three chickens. I killed one; the other which I fired at was hit hard—he flew forty rods, towered, and down he went. We marked the spot, but could not find him. We then explored the prairie around, collecting "rosin gum" and shooting hawks which at any time if we crouched down would come sailing along over to examine us. Not another chicken could we find—a heavy thunder storm was coming up from the south and S. E. J. thought it would be

prudent for us to retrace. It grew rapidly darker and darker; the thunder louder and louder; the lightning brighter and more frequent. An old cock chicken started ahead of the team and settled in the grass twenty rods off. I went after him, cut him down as he rose, ran back to the wagon and pitched him under the seat just in time to get him in out of the wet, for the rain soon came down in torrents with plenty of thunder and lightning for accompaniment. S. E. J. and myself sat upon the seat with the Professor in the bottom of the wagon. He wore a thin linen coat, and I insisted upon his taking my corduroy. He took it, but was not thankful—said all the water ran down his neck and collected in the coat tail and things—like sitting in a spring. Where we were it was very much like sitting in a river. But our guns, ammunition and chickens were covered up snug and we did not pity anybody, though the water felt very cold indeed. The off jackass still kept his tail tight down upon the rein—at every clap of thunder giving it an extra spasmodic squeeze. Passing a stubble a pair of sandhill cranes rose not ten rods away—the first I had ever seen. A mile and a half more through the heavy rain, and it held up just exactly as we drove into the yard at Converse's. Dinner was ready—had the game which we had killed the day before—but from the wonderful effects of cooking, we couldn't tell an old chicken from a young—a chicken from a duck, or any of them from horse flesh, which they all resembled—tough as though made of wire. The Professor twisted out two teeth, whereat he was delighted. "See there," said he, "what a saving—nothing to pay the dentist for pulling or filling. What a comfort to have them torn out without the dread of expecting it."

We had changed our clothes, and after dinner S. E. J. and the Professor were discussing business and seven-up with Converse. I lay upon the lounge trying to sleep, but working like an automatic wind mill in my frantic efforts to drive off the flies. One who has never been West as far as Chicago knows nothing about flies. They swarm in masses through the whole prairie country, a thousand times thicker than they ever did in Egypt.

The rattlesnake-bitten cow had died. Converse said the men often found the small moccasin snake under the wheat shocks when pitching them upon the wagon to carry to the thresher—sometimes as many as three or four in a day. They did not appear to mind them at all, but it made me nervous. S. E. J. said nothing, but I noticed after this that his ankle did not get better as fast as it should have done. One of the herders gave me half a dozen rattles which I stowed in one of my boxes.

Two o'clock—showering, but no heavy rain just now. One of the men who has come in says two sandhill cranes have just gone down upon a wheat stubble half a mile off. I went up stairs, and with my opera glass could make them out near some wheat stacks, but alas, I had nothing to wear. The suit I wore in the morning was soaked through, and corduroy don't dry in a minute—and as yet it had not dried at all—everything was wet out of doors, and more rain coming. I did not dare to wet my reserve suit; must have dry clothes to come home in. Not one among those sixteen men had an extra pair of breeches. At last, after much and determined entreaty, Mrs. Converse hunted up a pair of old overalls in a frightful state of dilapidation. I took them, and with the white pieces of cotton cloth which I had brought with me to clean out my gun, I put a big patch upon each knee, and a bigger one on the seat. Now the things would hold together, and were ornamental at the same time. The Professor was inclined to be facetious; asked me if I "had been sitting in a flour barrel, or on my knees in a flour barrel, or both at once? Don't let the Indians see you," said he, "those patches would make conspicuous marks, a bullet through one of them, especially the big one, would make you hop, or stop hopping. Why don't you fill in the dark places with more white—the cranes would take you for their long lost brother, with a strawberry mark on his arm. Try a frog, Frank; I believe they always swallow them whole."

I gravely replied, "my dear Sir, your craneological development in imperfect."

As I bolted out of the door, he sent after me "yours isn't," determined to have the last word. I crouched and crept and crawled across the intervening stubbles, going plump into the middle of a fine covey of chickens—brought the wheat stacks between the cranes and myself—hurried up to them and around the side, but no cranes to be seen. When they left I know not. As I returned S. E. J., the Professor, Polly and the jackasses came gaily driving out of the yard. We took the direction in which the chickens had gone. I stumbled on to five of them in a small patch of grass, and killed them all in about half a minute, before Polly could get back to me. Just then, fortunately—she having taken one of her wildest ranges—she found two more, the Professor getting one of them. Upon the stubble we had hunted the day before we flushed a covey of twenty or more—I getting up just in time to get the last bird. The rest took off towards some of the highest ground of the prairie, a large knoll covering perhaps eight acres. Going slowly ahead, we starting four more, of which the Professor got one. As we struck the high ground beyond the stubbles, up went three birds at ten rods. By good luck I killed the double shot. These were part of the large covey, and within ten minutes Polly routed them all out of the grass where they were well scattered, giving me four more wild shots of which I dropped three. Twenty rods beyond, just over the highest part, we found a lot of "old cocks" who were lying all about, and never getting up any more than one or two at a time. Polly would strike the scent, draw on rapidly, point, and dash in. I was helpless, except to get as near as I could and are away at twelve or fifteen rods. I hit two of them, but they were too far, and I gave it up in despair. We must have started at least twenty of these old ones; how many were left I cannot say. With a steady dog I should have easily bagged upon this knoll from thirty to fifty chickens. I thrashed and scolded Polly until I was tired and hoarse, and that was all the good it did. She would either not hunt at all, or hunt wild. I know now—I did not know then—that I should have shot her and kept shooting her until she either changed her tactics or was ready for a funeral. S. E. J. and the Professor sat in the wagon and thought how much better they would have managed it; and when I went to them for consolation they I "had better charter an express train to follow after Polly with, if I would hunt those chickens; could sit on the cow-catcher, and if it ran over her so much the better." We rested and then turned back to the stubbles. I told the Professor he might do the halloaing, for I shouldn't say another word to Polly. Indeed I could not speak above a whisper. The team jogged along slowly, and when Polly struck game the Professor and I hurried up as fast as we could run, and when the chickens rose banged away. One covey I missed with three barrels, the Professor getting his two birds, which pleased him mightily.

So it went on until dark. Upon the last stubble the infernal brute stirred out at least fifty birds without giving us a chance. Our bags footed up thirty-two; it should have been a hundred. We were wet through again and thoroughly fagged out. The next morning we were all as stiff as fence rails; the walking and the running and the wetting had affected us. The weather was fine, but we felt little disposed to hurry. The jackass team came round and we all embarked for a ride over the prairie. I hadn't courage to attempt following Polly among the chickens, and we were hunting just enough to satisfy our consciences. We rode perhaps three miles through the prairie grass, then struck an outlying wheat stubble. We covered part of the ground with the long-eared animals, Polly the rest. The Professor and I sat in the bottom of the wagon all ready for any chicken that might chance to fly over. Two men were straightening up the wheat shocks, and we stopped to speak with them. Polly came round, and a big dog belonging to the men savagely pounced upon her, and before we could interfere chawed her up badly. The men hurried up and booted off the big dog, but poor Polly was done for; she wouldn't chase any more chickens for many a day. She couldn't walk a step, or even stand up. We put her carefully in the wagon, and with a feeling of great relief, for we had gone through one solid day's shooting with her and dreaded another. Now the thing was settled, and we were happy. We drove home in time for dinner; I took off my wet shoes and things and was comfortable in my reserve suit and slippers. For dinner we had corned beef, tough and half cooked, and more than half decayed. We made our meal of potatoes and bread and milk. One of the men said the pigeons were plenty on the other side of the timber. S. E. J. proposed that we ride over to see the country and to use up the time. Not ten rods from the house the near jackass shied and backed, and we heard the whirr of a rattle. S. E. J. and I were delighted, and told the Professor to get out and kill it. He had boots, while we had slippers and exposed ankles. With the whip in one hand and a gun in the other, he marched upon the enemy's position. The reptile gave one more shake of his musical extremity, but no more, though the Professor tramped down pretty much all the grass for five rods square. We turned into the branch and followed a very rough and stumpy road through quite a forest for a mile, when we came out upon the prairie again, with a wheat stubble upon the left. A queer, outlandish, indescribable sound, something like the death gurgling of a ventriloquist choked in the middle of a performance, broke upon our ears, I thought it came from under the fence within two rods. "What on earth is that?" I enquired. "That," replied S. E. J., "is a sand-hill crane." "Then he is right under this fence." "No he isn't; more likely a mile off." We stood up in the wagon, and we soon made out a pair of the lanky birds at least a hundred and fifty rods distant, standing perfectly still among the wheat shocks. I thought I could stalk them and started, taking through a strip of bushes, and stepping high, expecting every moment that a rattle would grab me by the ankle. When I got where I could look out, the cranes were gone. They had flown across the road about thirty rods ahead of the wagon, not five minutes after I left. The pigeons came into the stubble feeding upon the wheat shocks, a dozen or more together. They were very wild, and we killed but one.

At supper we each had a bowl of milk and a cup of tea. The bread we couldn't eat, and there was nothing else. During the night—it was very warm—Polly whined, the flies buzzed, the Professor and S. E. J. groaned, and I kicked and thrashed, dreaming of rattlesnakes, and was thankful when daylight appeared. At breakfast each drank a cup of coffee. There was plenty of ham cut up in chunks and fried. It was salt and tough, and one mouthful was enough for present purposes and something

to be remembered forever. It was a remarkable coincidence that all three of us at the same time enquired of Converse how far it was to Austin. We hadn't discussed the matter, or said a word to each other about starting home, but each one had made up his mind to get out of this and into civilization. We were not inclined to be particular, but we couldn't get anything fit to eat or digestible. Arranging my things preparatory to packing up, I tipped out the rattles which I had placed in one of the boxes. They went off with a sudden whirr, which made me jump with a yell into the middle of the floor, and the Professor fell backwards over the little box stove. Nobody bitten—I had forgotten all about them. Converse hitched up and drove us over to Austin, where we bid him farewell, and went straight to dinner at the hotel, and then straight aboard the St. Paul train, and straight home as fast as we could go, where we arrived that evening, to the great astonishment of all our woman kind. For a week after our poor stomachs were very captious and exacting. Polly picked up rapidly, and S. E. J. sold her for a ten dollar bill. I hope her new master will prove to be a merciful man—merciful to himself, and then he will blow her head off the first time he goes chicken shooting. ALIQUIS.

For Forest and Stream.

THE SARANAC ROUTE.

(Concluded.)

MY second trip to the Saranacs commenced in a pouring rain. But no matter, the day appointed and impatiently awaited (May 18th, 1868,) had arrived; any change would be for the better. I should be far more comfortable in the cars than at home, in the circumstances; if I went I might get a little wet, if I remained it would be very dry; a fisherman should not be afraid of water; the evening would find me far forward on my winding way, so it did find me at Whitehall. It was too early in the season for a night boat, so I had to make myself comfortable at Hall's Hotel till noon of the next day, then onward in the steamboat Canada, which brought me and others similarly destined to port at 8 P. M. Stopping at Keeseville over night, in the morning there was quite a large party of us, affected with trout on the brain, who were about to try the Adirondack water cure. We all started off together, and had a pleasant day of it; no dust, wind, rain or mud; only good roads, salubrious air, fine prospects, and abounding jokes. At Bloomingdale we parted, some being bound to Smith's and others to Martin's. Of the latter there was a Mr. Banks of your city, a very agreeable gentleman and brother sportsman, whose kindness and attentions I have never forgotten, and which it is a pleasure now thankfully to acknowledge and recall. At Martin's I also met my friend and companion of other days, G. D., (very guessable initials) who has since caught a salmon, and who, at the time, was purposing to draw out some leviathan with a hook. This gentleman called my attention to a pun that he was about to perpetrate. Some one preparing for an expedition had just set a demijohn in the boat. G. D. thought it strange that a man should carry liquor with him, "for," said he, "he is all the time running it down."

The day after arrival it rained steadily. I was content, after three days' passage, to remain within, and Martin commended my wisdom in doing so. But Mr. Banks, who was under appointment to meet others elsewhere, moved on under an escort of coats, overcoats, wrappers, and overalls, suggestive of inflation, which greatly enlarged the sphere of his influence, both in diameter and circumference, and made him waterproof. The next day it drizzled, but this was insufficient to detain me. So taking a guide I went up the lake to the river, and down it again to the Cold Brook Junction, and I if I didn't have sport there I never did. My diary reminds me that I took sixteen trout that weighed 13½ pounds; among them was a three pounder, which I welcomed aboard at the confluence of waters. I had to take them trolling, for it was too early and cold and the water was too high for fly-fishing. I was pleased to find that my luck was sensational, even at Martin's, and I set down the day with a good mark in my piscatorial experience.

I cannot further proceed with this narrative without introducing the well known and highly esteemed name of R. G. Allerton, Esq., of your city, now one of the champion Maine fishers, who was my companion—the sharer and promoter of my joys throughout the excursion. Meeting at this point, with similar tastes and purposes, we readily joined forces, or, "like kindred drops, were mingled into one." This gentleman had an extensive outfit of gutta percha, and I was surprised to observe in the case to how many useful ends the article can be applied. His blanket, havelock, pillow, cup, brushes, combs, pencil, match box, business card, etc., were all of this material, and he had a havelock and pillow for his friend. This rubber seemed to me well adapted to such use, as it would not soil, or washed easily, and was impervious to water. We planned our excursion for the following Monday; but when it arrived we had to wait till afternoon, because the passage was completely blocked up with rolling lumber. And here I have to notice another of the extraordinary phantom statements of Rev. W. H. H. Murray, which I have never yet seen criticised. On pages 16 and 17 of his marvellous performance, he expatiates on the lumber question, giving the reason for his preference of the Adirondacks to Maine. "Go where you will in Maine, the lumbermen have been before you, and lumbermen are the curse and scourge of the wilderness," etc., etc. "In the Adirondack wilderness you escape this. There the lumberman has never been. No axe has sounded along its mountain sides, or echoed across its peaceful waters. No logs obstruct the rivers." Mr. M.'s book appeared in 1869. Here were we in 1868, precluded from ascending in the morning, and barely making the ascent with difficulty in the afternoon, because of obstructing logs and nothing else. And on the Raquette River we were continually assailed with these threatening runners. Franklin Falls, on the Saranac River, was built up chiefly by its saw mills, and in 1860, when I was there, the logs had preceded me. I conclude that either Mr. Murray has, in this instance, again drawn on his imagination for his facts, or that by the "North Woods" and "Adirondack Wilderness," he means Murray Island and the parts adjacent.

We reached Bartlett's in time to see a fifteen pound laker fresh caught from the Upper Saranac by Dr. Romeyn, who had worked perseveringly for such a prize, and to congratulate him on his luck. He appeared very happy and delighted, enjoying the satisfaction which belongs only to the self-made man. By the way, this was exactly the

weight of another caught by a lady in the lower lake, of which Mr. Headley writes, who played the fish successfully with skill and care, and finally captured it with her own unaided hands, though the guide sought to relieve her. (chapter 36, page 318) In the morning we launched for the head of the Upper Lake. Having selected a choice place for encampment, we spread out tent and feathered it with hemlock. In the afternoon I proceeded onward to the head of the lake, where, winding nine times around the little island in front of Hough's, I took as many lakers. Here I was joined by the ever welcome presence of Mr. A., who, however, cared little or nothing for lake trout, devoting all his energies to the capture of what he calls the "angler's pride." In this he was very successful. We called at Hough's, who was there for the first time, about to open his house, but was hardly yet prepared for the reception of visitors. We recorded our names, however, and thus headed the list of a long succession who were to follow. After a good night's rest our destination for the day was Raquette Falls. We moved onward in sunshine, taking fish occasionally. In one of the ponds beyond the carry we were shown the place where a man performed a remarkable feat. He had first put a stove in his boat. Then he poured liquid fire into his stomach, and having made these preparations, he rowed unsteadily for awhile, when he made his boat turn a somersault, emptying its contents into the depths below. Arrived at the river, we realized more and more that it had not rained for nothing lately, the waters being very high and opposing, and our prospects for good fishing essentially lessened. But our guides understood their business, and persevering through submerged branches, against counter currents, we safely reached the Falls. There we found the kind-hearted Mr. Banks, seated in his boat, with two attendants. He had also a long string of trout, but they were not caught there. No one of the three, to the best of my recollection, had any success at the Falls. Our guides amused themselves in running the rapids. They did not ascend very high, however, and exhibited no specially "royal sight to see." N. B.—Mother Johnson and her pancakes were yet in the future.

May 28th, *Facilis descensus*.—We made good progress down the river to Folingsby's Lake, where we found enchantment and fine sport, catching *quantum suff* of each variety. I have before (FOREST AND STREAM, Sept. 24th, 1874,) fully expressed an opinion respecting this living water, and need not now repeat. Proceeding, we paused on our way to see something new. A hound had attacked a hedgehog, and though the latter got the worst of it, he had presented the hound in recognition of his attentions with a bristling pair of mustachios, of which his owner was relieving him. Every time a quill was drawn it was acknowledged with a cry; yet I was told he would attack the next one he saw with dogged persistence. I suppose we may as well

"Let dogs delight to bark and bite, for 'tis their nature to."

Tupper's Lake was enraged as we entered it, but whether it was owing to our good behavior or otherwise, it soon was calmed down, and remained so till our departure. We bivouacked on a sheltered island, high above the waves whence we proceeded right and left on our excursions. Allerton is a singer, possessed (*sotto voce*—don't tell him I say so—) with a melodious voice. Perhaps it was this that so quieted the lake, for he approached singing. One morning, ascending the lake, he took the left shore and I the right. He soon broke forth into singing, and if all the trees of the woods did not clap their hands, it was only because they had no hands to clap with. I have an ear for music at all events, and greatly did I enjoy the clear sound of his voice, as from a silver horn, as it floated across the water. One morning on the heights he addressed himself to an imaginary enemy on the opposite shore, having no real one to contend with. I cannot recall all he said, but well do I remember the emphasis with which he uttered the *ne plus ultra* of his terrible wrath, saying, "You're another."

Mr. A. asked me here whether I would rather catch a twenty-five pound laker, or a five pound brook trout, adding that he would have no hesitation in deciding for the five pounder. Having reflected a little, I think I would prefer to catch them both. Though this is not strictly answering the question, it is the only way in which I can answer as he did, without hesitation; and it occurs to me that there is no just occasion for so limiting myself to the one fish. Why not catch them first, and then decide on their respective merits, on the principle of Mrs. Glass' receipt for cooking a hare—*first catch your hare!* The next year he went to Maine, and his ideas were enlarged. At this time neither his thoughts or mine had extended much beyond a three pound trout. Now, I have caught my four and a quarter, and he looks down upon the fives. In 1869 he would not count a three pounder; but his famous list of thirty, weighing 180 pounds and more, caught by his party, begins with three four pounders. It is from no lack of kindness and attention on his part, that I, too, have not visited Maine. He has done all he could to induce me to accompany him, and I thank him from my heart. But I might as well rest contented at one time as another. Though I should catch these Maine ones, I still would not have caught a salmon, and my ambition rather inclines in this direction; but to catch a salmon would cost at the least estimate \$200 or more. I think I could more advantageously and wisely invest that amount. Here is a noble park right at my very doors, superior in every respect but one to any that Maine can offer, and in some respects not to be surpassed in the wide world. Great as is my love of angling, attached to it as I am through life as a No. 1 pastime, I yet do not regard it as the "chief end of man," and am thankfully content with what the Empire State can do for me. The trout of New York are as much superior to those of New Hampshire, as those of Maine are to New York. I have filled my basket brimful in the White Mountains more than once, and yet I never saw there a trout that would weigh half a pound. Besides, we have the Thousand Islands, with their bass and pickerel and mascalonges. I have caught bass by the bushel with a party, and pickerel till surfeited with them, one of them weighing eleven pounds, but have never yet tempted or attempted a mascalonge. I have a design in that direction now, and purpose to go for one of them (or more) as my centennial fish. A ranting minister, describing the animals that entered the ark, spoke of the zebra, that had three hundred stripes around his body—more or less, depending upon how many stripes he had—and of the giraffe, that could eat hay off of the top of a barn—depending upon the height of the barn. Now, a mascalonge, you know, weighs forty pounds—more or less, depending upon how much he weighs.

Utica, N. Y., Sept. 13th, 1875.

AMATEUR.

TROUT FISHING IN THE DOMINION.

I LEFT Boston July 12th at noon in the steamer Alhambra, and reached Halifax, Nova Scotia, 5 at o'clock on the morning of the 14th. Here we landed many of our passengers, and sailed again at noon, reaching the Strait of Canso at 4 o'clock on the morning of the 15th, and Port Hawksbury at 8 o'clock. This is a thriving village on the Cape Breton shore of the strait, with considerable shipping at anchor; mostly American fishermen bound to the Gulf for mackerel. Such handsome vessels have they that I took them for a fleet of New York yachts, which indeed some of them had been. Left at 9 o'clock A. M. in company with half a dozen of the pretty crafts, which having a fair wind, held way with us very well. We left here a party of young fellows from Boston, with guns, rods and camp equipage, who were going into the woods. From Port Hawksbury to Pictou, eighty miles, we steam in eight hours. Some thirty sail of vessels there loaded with coal. Leave Pictou at 7 o'clock P. M. and arrive at Charlottetown, Prince Edward Island, about 6 o'clock A. M. on the 16th. After a slight examination of my trunk, (in Canada a fishing rod or gun helps one easily through the Custom House) I went to the Osborn House, kept by Mr. Davis, an angler, and a good fellow. Davis tells me that in June they catch sea trout, *S. Canadensis*, at the harbor mouth about three miles off, from a boat by casting with a fly, and this up to three pounds weight. In July they are in the fresh water up the river.

Friday July 18th.—At 2 o'clock P. M. this day, Mr. Davis and I started in a buggy for Wilkie's River, about fourteen miles north, or across the Island. The road ran perfectly straight over a succession of hills and valleys—soil a red clay, quite fertile, with good crops of oats, grass, potatoes, and some wheat. The road was mostly bordered with farms, houses of wood, and small. No large timber, but a second growth of maple, white birch, and spruce. As well as I could judge, the farms are small, and fairly cultivated. The people we met were in light one-horse buggies, or heavy carts drawn by one horse. I saw no oxen, or two horse teams. The principal stock kept seem to be sheep; few cattle were to be seen. These roads when dry are very good and pleasant to drive upon, like those of the prairies. We crossed two or three small streams in the valleys, and at 4 o'clock P. M. we arrived at our destination. There were a few small houses and a tannery at the bridge which crosses the river. We stopped at a sort of tavern kept by a Mrs. Baens, who seemed to be friendly, though dirty. Here the sea is about four miles away, and the tide ebbs and flows up above the bridge to a mill dam. Davis commenced fishing below the bridge; the river here was at high water, thirty or forty yards wide. I went toward the mill, guarded by a boy, who appeared on the scene, and took a lively interest in our movements. There was a mill pond, said to contain trout, but it was full of logs and stumps, so I began to cast in a pool below the dam. My first brace were pounders, then I got five or six of smaller size—sea trout. I then went down and fished toward the bridge, where Davis had half a dozen, also taken with the fly. When the sun went down the trout rose more briskly and we got in all twenty-six of fine size—perhaps averaging half a pound. At Mrs. Baens' we got a fine supper and turned in.

Saturday July 19th.—We rose at 4 o'clock this morning and I went to the pool at the mill, while Davis fished below the bridge. The pool seemed full of trout, and I had fine sport for an hour, but when the sun began to shine on the water, they stopped rising. I got twenty-four trout from the pool that morning, and twice I got two at a cast, using three flies. I found the claret fly the most killing, and then a brown hackle; the red ibis, so taken in many waters, they would not touch; my string weighed about eight pounds, or three quarters of a pound each. Davis got six this morning, two of them pounders. Our whole catch numbered fifty-five, averaging three to the pound. We arrived in Charlottetown at 10 o'clock A. M. and the next evening went aboard the steamer Princess of Wales at 7 o'clock P. M. but she did not start till Tuesday morning at 5 o'clock A. M.

Tuesday July 22.—We arrived at Summersville, sixty miles down the coast at 10:30. This a thriving town, with a large hotel on the American plan, and many visitors are here from the States. At 11:30 we cross the straight of Northumberland, to Shediac, where we arrived at 3 o'clock P. M., or rather Point du Chene, two miles from Shediac, where the lines of steamers connect with the railroad to St. John, 108 miles distant. The steamer Miramachi, from Quebec, arrived at 6 o'clock P. M. at the dock, which is the most complete in the Dominion, and at 7 o'clock we started. She is very long and narrow, having been built for a blockade steamer during the war, and in heavy weather must roll badly. The sea to-day was smooth and the night fine. The boat was crowded, but I got a good berth and turned in at 9 o'clock. The Captain, who was a Frenchman, sat playing his violin close by me. I turned out at 4 o'clock; the morning was beautiful, and we were entering the Bay of Miramachi, and arrived at Chatham at 5 o'clock. I went to Mrs. Bowser's, got a room, and afterwards a nice salmon steak for breakfast.

Thursday July 24th.—Left Chatham at 7 o'clock A. M. in stage wagon for Harris' on the Tabusintac, twenty miles. Woods most of the way, a few farms; land poor, with a thin growth of pine and spruce. All this region was burned over many years ago and it seems never to have recovered itself. Road straight and good; crossed three or four streams, tributaries of the Tabusintac, on good bridges; at the Ballyboge, the largest stream, the bridge was gone and we had to ford. I had one companion, a stout Irishman from Prince Edwards Island, a tavern keeper there, who was very sociable when he found I was an "American," as men from the States are called. He believed that all Canada must join the stars and stripes before many years.

I arrived at Harris' (now kept by Goodwin) at 11:30 A. M., fare from Chatham \$1 75. House tolerable, river quite low. An old man named Kane, who acts as guide to anglers told me the last time he went down the river with two men from New York, they got over a barrel of trout. The river banks are so covered with bushes that there is no beach to fish from, and you go to the pools where the trout are in a heavy dug-out, drawn by a horse who travels in the bed of the stream; this is often used on Canadian rivers, and is called a horse boat.

Friday July 25th.—Started in the horse boat with Kane at 7 o'clock A. M. We took pork, bread and tea with us, intending to camp at the "big pool," ten miles down.

Most of the way the water was not deep enough to float the canoe, which was dragged over the stones, a rough road, and perhaps good for dyspeptic patients, if there be any such among anglers—river from fifty to one hundred feet wide, with wooded hills down to the bank. About three miles down, coming to the first fishing place, the horse was stopped, and he stopped readily, either from fatigue, or perhaps from an interest in our doings, at any rate this veteran steed seemed to observe our casting with a critical eye, as one familiar with the art. Here the water ran about two feet deep under the bank, leaving on the other side a narrow strip of beach, from which I cast. I rose and killed one small trout here. Before we reached the big pool we stopped at three or four places and got a dozen trout between us, averaging half a pound. About six miles down we came to a beaver dam in process of construction, which was a curiosity to me. I had seen many old and abandoned dams all over the States, but not a recent one. The leaves of the alders of which this was built, were still green and fresh; it was about two feet high above the water, and woven together in a most ingenious manner, and strengthened with large sticks and cotton wood trees from six to eight inches in diameter, which had been cut down by the beavers (the marks of their teeth being visible) and worked into the dam, which was at least one hundred feet long, and three or four feet in thickness, so that a man could cross the river upon it. The water was set back into a pond several hundred yards long, and four feet deep, and Kane said it had all been built since he had passed there a week ago. Old Whitey managed to drag the canoe over the dam, assisted by the current. Kane showed me a place where the beavers had built a dam which he was obliged to pull down when last he came down the river, in order to get his boat through. They had now rebuilt at another place. He said also that he could show me a place not far off, where the beavers had dug a canal nearly 100 yards long, as described in Morgan's book, "The American Beaver and his Works."

We arrived at the "big hole" about 2 o'clock P. M. It is in a bend of the river, where a large tributary comes in, and is some two hundred feet in diameter and six or eight feet deep in the middle. There is a place just below the mouth of the brook where the bushes have been cleared away for a camp ground, with a small beach in front. Here we made our camp, and the trout not being in the humor to rise in the hot noon day, we got our dinner of fried trout.

About 4 o'clock P. M. I tried a cast from the canoe while Kane waded the stream. Presently the trout began to rise and we had fine sport for an hour, killing in that time about twenty-five fish from one to two pounds weight. I used a claret fly for tail and brown hackle for dropper, and hooked at one cast two trout of two pounds each. This was on my Scribner spliced rod, which worked beautifully, and in about ten minutes brought the pair well tired to the landing net, but Kane managed to lose one of them in getting them in. After this they stopped rising for a while, and Kane went down the river to a rapid, while I continued to fish from the canoe. Presently I rose and hooked a two pounder on the tail fly and as he rushed about the pool, one of one pound seized the dropper, and after about ten minutes play I succeeded in landing both fish without assistance on the beach. I got no more till about sunset, when I killed three good ones, and Kane, who waded far into the pool, continued to fish till after dark. Then we built a large fire which banished the mosquitoes, and we had a good night's rest.

Saturday July 26th.—At daylight (in this latitude about 3:30,) Kane waded out and began to cast, getting two or three of two pounds each, but I waited half an hour later, till I could see my tackle, and only raised one trout which did not fasten. They would not rise, though the pool was full of them. After breakfast we started up the river. When we came to the beaver dam, we found it built a foot higher than we left it the day before. There must have been a large working force to do so much in a short Summer night, for the animals do not work by day. It was with difficulty that the old horse could drag the boat over the dam. We fished the various pools and rapids as we went along, but although in several pools we could see great trout covering the bottom in schools, they would neither take fly or bait. We got only a dozen in returning, and arrived at the bridge about 1 o'clock P. M. with fifty-six trout from two and a half pounds to four ounces in weight; about forty pounds or an average of three-quarter pounds each. I packed a claret box of the best, hoping to take them to my landlady at Chatham, but as they have no ice here in Summer, though they are frozen up two thirds of the year, I did not succeed in getting them through in an eatable condition, the weather being very hot. Kane said that in twenty years in which he had fished this river, he had only known the trout to refuse to rise twice before this, and then it was before heavy thunder storms, and he predicted one within twenty-four hours. In fact, the next day as I returned to Chatham in the stage the storm came, with torrents of rain, and great electrical disturbance.

Most people who have been to the Tabusintac have wonderful stories to tell of the number and size of the trout they have taken; and probably they tell the truth. I give my own experience only.

Monday July 28th.—At Chatham, Mrs. Bowser's boarding house—a very comfortable place—board one dollar per day.

Tuesday July 29th.—Left in the steamer Rothsay Castle for Shediac, many anglers on board, returning from salmon rivers. Arrived at Point du Chene about 7 o'clock; train for St. John gone and we all had to pass the night here, quite filling all the hotels in the place, which, perhaps was the object in the delay. If so, our host of the Waverly was not equal to the occasion, for he only charged me for a good bed and breakfast next morning the absurd sum of thirty-five cents.

Wednesday July 30th.—Started at 7 o'clock, and arrived at St. John at noon—at Park Hotel till next morning, when I left in steamer New Brunswick for Boston July 31st and arrived there the next day at 3 o'clock P. M.

This trip consumed three weeks and cost \$75 00.

S. C. C.

—To estimate the quantity of shelled corn on the cobs in any given space, level them, and measure the length, breadth and depth; then multiply these dimensions together, and the product by four. Cut off the last figure, and the result will be the number of bushels of shelled corn and the decimal of a bushel.

Fish Culture.

For Forest and Stream.

CARP IN CALIFORNIA.

ORSERVING in your issue of the 2d instant, some enquiries from a correspondent signing himself "Doctor," concerning the importation of carp into this country, and your mentioning my name as being likely to give some information concerning their importation into California, I take pleasure in sending you all the information in my power concerning this fish here, although I fear what I can tell you about this matter at present is somewhat meagre. That it has thrived well here in some localities I can, however, speak with confidence, and that for some four or five years. I know that in some good sized ponds, supplied with fine spring water, near the town of Sonoma, in Sonoma Valley, on General Vallejo's estate, they have done, and are still doing very well. I can also speak from ocular demonstration that this same species of the most valuable European carp, are in fine health, and have enjoyed it for these two years in a compartment of the aquarium at Woodward's Garden, in this city. They have grown there to a good size—about four pounds in weight. I recollect well the circumstance you mention of Mr. J. A. Pappe, of San Francisco, bringing from Hamburg, Germany, to Santa Rosa, Sonoma Valley, in this State, some good sized carp. These I have heard have succeeded well in some ponds, if not in Sonoma Creek. The Valley of Sonoma is noted for the mildness, and in Summer, the warmth of its climate, causing its waters to be of sufficiently grateful warmth, particularly in its ponds, for this fish, which does best in water not too cold.

I understand that Mr. Rudolph Hessel, the German pisciculturist, has been sent to Germany this year by Prof. Baird, to bring over to this country the two more important and favorite kinds of German carp. I do not know whether they have yet arrived. This kind are known, I am informed, as the *karpfen-koenig*, or carp king, and the *spiegel-karppe*, which is called in England, the mirror or leather carp. My informant states that "the carp is as near a complete vegetarian as any fish we know of," and the Germans call it a fine fish, but they spice it so, and serve it with a wine-sauce in such a manner, as, to quote Frank Forester, "would make a kid glove palatable." I might here, perhaps, name another thing which is certainly very favorable for the flavor and relish of all fish, namely, that it is well known that the Germans keep all their fish in tanks before they offer them for sale, which makes them always fresh for the table. At any rate the carp is very highly esteemed among European nations for his edible qualities. This fish will not have a delicious flavor in still or stagnant ponds, where it is often found in England, as, probably, on the continent of Europe, but those fish are best, both in color and flavor, which are taken out of lakes and ponds of pure limpid water, which is continually changed by a placid current perpetually running through them, and the bottoms of which are covered with fine sand or pebbles instead of mud, as in Sonoma Valley, and in General Vallejo's grounds. The carp is certainly a very handsome fish. It lives to a great age, and in favorable situations will attain a very large size. Monsieur Pesson-Maisonneure, a high authority, thinks their size varies according to the places they inhabit, and the food they live upon. "In France," says he, "they reach ten or twelve pounds; in Germany, they become monstrous. They are taken in Pomerania, thirty or forty pounds in weight; and in Prussia, fifty pounds is not an uncommon size." I hope as we, in California boast, and with reason, of raising every thing, whether vegetable or animal, big and even monstrous, that I shall see some of these fish ere long as large as above stated, and I don't know why I shall not be as fortunate.

It is certain that the carp multiplies prodigiously—to use an expression which was more in vogue when I was a youth than it is now. A fish of half a pound in weight has been found on examination to contain 270,000 eggs; one of a pound and a half weight, 342,000, and one of nine pounds, the enormous number of 631,000 eggs. The carp is also very tenacious of life. In France it is said to be no uncommon thing to transport them to great distances, wrapping them in fresh grass and dipping them every twelve hours in fresh water for a few minutes.

The flesh of this fish is certainly soft, as are all the cyprinoids, but it is nourishing and should be eaten as fresh as possible. The head is preferred on account of its excellent flavor. Much depends, of course, on the cooking. I will make it one of my objects to learn more soon about this fish in California, and write you concerning it again, if acceptable.

E. J. HOOPER.

GRATIFYING RETURNS FROM FISH CULTURE IN RHODE ISLAND.—A correspondent whose official position is well known, sends the following pleasing letter from Providence, R. I., dated September 19th:—

EDITOR FOREST AND STREAM.

I would like to give publicity through the FOREST AND STREAM to the fact that the work of the Rhode Island Fish Commissioners in stocking our ponds and reservoirs with black bass is beginning to be realized in large catches and fine sport. As an instance I would mention that three of the members of our Fish and Game Protective Association—Messrs. Root, McCormick, and Hemperley—started for the northern part of the State last Friday evening for the purpose of dropping a line to the bass in one of the stocked ponds. They were hospitably entertained by that genial gentleman, Mr. Bellows, of Pascoag, and on Saturday morning, bright and early, with a cold northeast wind blowing quite hard, the party set out for the scene of operations. The result of the fishing,

which terminated at 4 o'clock, was 120 bass and two striped perch. After a good supper, gotten up by Mrs. Bellows, the party returned to Providence on the 6:53 train well satisfied with the efforts of the Fish Commissioners in stocking Rhode Island ponds with black bass. I might add that upward of a dozen Providence families had fried bass for breakfast Sunday morning. Yours piscatorially,
H.

FISH CULTURE:

PLANNING, LAYING OUT, AND THE CONSTRUCTION OF PONDS.

BY ICHTHYOS.—NUMBER EIGHT.

It would seem in collecting the experience of fish culturists, much more depends upon the quality of water, its coolness and purity, than upon the shape of ponds, as receptacles for the fish. Indeed, if pisciculturists in propagating trout and salmon, would imitate their native haunts the ponds would need to be constructed with very little regard to art. Hon. David H. Hammond, of Elgin, Ill., already alluded to in these papers, in arranging his fish farm, has constructed his ponds mostly upon the natural surface of the ground in a square or oblong shape, the sides being made of stone laid in hydraulic cement, thus giving a secure pond of three to five feet in depth, where salmon and trout may be seen as vigorous and thrifty as ever grew. These ponds are not affected by freezing, as the spring water rarely gets below 35°. So we can conceive that in many instances ponds of such shape and material, may be adopted and less expense incurred than in the choice of the oblong or pyriform shapes, especially so if stone abound in the neighborhood of fine springs or streams.

Such ponds for a private gentlemen, may be made not only quite profitable, but afford agreeable pastime in the study of the finny tribes, not the least interesting members of the animal creation. More than that, the pond runs itself without material expense to the owner, and with a small outlay of labor he can produce many fish, which are indeed pleasant to have upon the table of the peasant or millionaire. Thus it is possible for many persons to have at their very doors, by a trifling outlay, cheap and wholesome food. A supply of water that will fill a pipe four inches in diameter will produce at least fifteen hundred trout annually.

Some fish farmers cultivate in ponds set apart for the youngest fish, aquatic plants, for the reason that they powerfully aid in aerating the water. This is philosophically true, for fish in aquaria could hardly be sustained without the aid of water plants. There is but one drawback to this arrangement, the dead fish are concealed, and much of the food is lost among the plants, which together with the dead fish soon render the water impure and quite untenable for its inhabitants. But if the aeration of the water, through the use of plants affords more oxygen to the water than could be obtained in their absence, it may be desirable to cultivate them. In case they are used for this purpose, those best adapted are the hornwort (*ceratophyllum*) and the water starwort (*callitriche*), both natives of ponds and ditches. Stones, angular in shape, should be placed in all of the ponds for the fishes to chafe against, that they may rid themselves from troublesome parasites that often infest them. As has already been hinted in a previous paper, if midnight thieves prowled about the ponds in quest of fishy plunder, stakes may be driven into the ponds at near intervals, and sawed just below the surface of the water as a means of embarrassing poaching with seines, gill-nets and coop-nets.

Everything complete, the whole area included in the farm, should be surrounded with a tight board fence, strongly built eight or ten feet high. This will prove an excellent barrier against gangs of marauders, who steal, live and thrive, upon the products of toil and labor of honest men; "sharks on shore" who have a decided fellow feeling for the fishes, but care not so much for the *quid pro quo* as they do for the trout.

In the arrangement of ponds for trout, what has been said in that connection applies as well to the salmon, only that they should be more roomy and deeper, as this fish is a natural denizen of deep, as well as rapid streams. It is the highest type of this species, and though large, if ponds are constructed correspondingly large and deep, they can be as profitably produced. In connection with the production of the different varieties of the salmonidae, black bass, perch and pike can be as successfully produced as the salmon family. In all cases the pond should be arranged so that the different varieties cannot intermix. Bass ponds should be roomy, perhaps a series of them connected together and separated by screens would be more congenial to the habits of the fish, and admit of more seclusion during their spawning season, and when this is over they may be taken out and placed in another pond until the eggs are hatched and the fish obtain such a size that they may be able to shift for themselves. Perch ponds may be constructed in a series of small ponds connected by races, and if the formation of the ground is favorable, they may be constructed one above another at different elevations. The perch is a noble fish, both as regards its flesh and the avidity with which it seizes a tempting bait. Regulation anglers, however, scout the idea of taking such tame fish, as with them angling is not angling unless employed in the capture of gamey fish superior in agility and beautiful in form. The pike is also worthy of propagation, not only on account of gamey qualities, but from its flesh. They soon become accustomed to those who are employed about the ponds, and domesticate as easily as the trout. He is a predacious fish, and is decidedly a good liver, feeding upon chubs and tender minnows. But when angry he erects his fins in a remarkable manner, as the lion does his mane, or the porcupine his quills, but when caught he dies right regally, and when in the creel, we may count upon a dainty meal that a king might covet. The bass, perch and pike should be transferred to the artificial ponds and left to increase, for but little is known of their artificial production.

[Concluded.]

—We are requested by Professor Baird to inform those interested that should the promise of abundance of Mr. Livingston Stones' salmon eggs be realized, he (Professor Baird) will give to any applicant as many eggs as he may agree to hatch out. Nine hundred thousand eggs have been collected in one day, so that the supply promises to be almost unlimited.

TROUT CULTURE FOR MARKET.

PATCHOGUE, L. I., September, 1875.

EDITOR FOREST AND STREAM:—

I notice you indorse some of my views on fish culture by following nature. With your permission I will further elucidate my ideas. However necessary it may be for the full development of some kinds of fish, such as bass, perch, etc., the miniature ponds, (especially on small streams,) as far as brook trout are concerned, are not necessary or even desirable for raising fish for market. As ponds are desirable for casting the fly and for pleasure, I will note some of the conditions necessary to be observed in order to raise handsome, well-flavored fish in ponds:—First, ponds must be regulated according to size of stream, so as in no case to foul up in wet weather or freeze solid in cold weather. Ponds choked up the springs, hence it is best in all cases of small streams to excavate, as this increases instead of diminishes the volume of water. Sometimes fish will die in a new pond or canal from the presence of too much iron or other mineral substances, but it will soon settle all right. Many have vainly tried at great expense to maintain a sandy or gravelly bottom to ponds. This is an impossibility, owing to the law of gravitation. The color of trout will be regulated by the nature of the bottom; the flavor by the purity of the water and feed. The advantages of canals over ponds for raising trout for market are that you can fatten up those you wish to sell and take them out at discretion; you can maintain a sandy and gravelly bottom, making them light colored, and by giving the proper feed they will have that high flavor which is so desirable. A trout properly fattened is as far superior to a common brook trout as a Spanish mackerel is to a common black bass. You can have them under your eye at all times. The advantages of ponds are, then, to furnish more natural food, which in some locations is an item of account. The fish must have sand or gravel at the head or at some place where it will be kept clean, else the fish will be dark colored. Ponds are well enough if the fish can run up stream at will. If the bottom is springy they will do well enough. For a self-sustaining pond a stream or spawning race at the head is necessary. A self-protecting spawning race is best.

A. J. HINDS.

A FINE EXHIBITION OF FISH.

HARRISBURG, Sept. 18, 1875.

EDITOR FOREST AND STREAM:—

The display of fish at the Berks County Fair, recently held at Reading, Pa., was a decidedly valuable acquisition. There were many fine specimens of black bass of all sizes, salmon, etc., on exhibition, which attracted no little attention. The fair continued four days, and was attended by thousands, among whom were some of the most prominent men of the State and America. Our prominent pisciculturists, Messrs. John Hollenbach, Jonas J. Houck, ex-Sheriff Evan Mishler, Reese Davis, and Samuel U. Hollenbach, all assisted in making this department a success, and the public are under obligations to them, solely, for the excellent display.

PERE NIXON.

GENERAL SHERIDAN AS A FISH CULTURIST.

UNITED STATES SALMON BREEDING STATION, }
McCloud River, Cal., Sept. 19, 1875. }

EDITOR FOREST AND STREAM:—

Gen. Sheridan made us a visit to-day, together with his party, consisting of Mrs. Gen. Sheridan, Col. Sheridan and wife. The General showed a surprising familiarity with the processes of fish culture, and expressed very great interest in the work which the United States is doing here. We fortunately had seven millions salmon eggs in fine condition to show him. He impressed us all as a very genial and pleasant man, with a mighty reserve power to call out in case of emergency.

Very truly yours,

LIVINGSTON STONE.

Natural History.

SOMETHING ABOUT FROGS.

It has always been a matter of conjecture as to what becomes of the frogs in Winter. A correspondent of *Land and Water* relates an instance of what came under his observation many years ago on the Cumberland shore Ullswater Lake:

"I ought to premise that prior to the introduction of draining-tiles, drains were usually constructed in Cumberland by filling up the trench cut with broken stones. In some mountain meadows (where of course the plough was never used) the drains were so filled to the top, care only being taken to keep them out of the way of the scythe. Sometimes the drains became choked with soil and clay, and required to be opened out. In such duty a laborer was engaged when he suddenly struck his pickaxe into a mass of many hundreds of frogs. Had I written thousands I should not have exceeded the truth. For several feet in length of the drain were the animals closely packed among the broken stones. Their color was a dirty, corpse-like white, all the bright yellow, or russet, of Summer was gone. On exposure to the air, it was really a difficult matter to decide whether Froggy was living or dead, as no motion indicated the former state of existence. Questions suggested themselves to me at the moment, the solution of which has remained a puzzle to this hour. How did the frogs get there? It is not difficult to imagine that a stray member of the *ranal* community finding out so convenient a hibernating shelter, but how came such a multitude thither? Will this in any way account for what we are constantly hearing of—batrachians being found imbedded in rocks, timber, etc? These are generally solitary. Supposing, again, that the whole number should have perished *in situ*, and become fossilised, what would some Hugh Miller or Buckland of the future think of the discovery? Through the medium of your columns I would inquire if similar frog "holds" have been observed by others. The laborer who disinterred the lot in question was himself of an inquisitive turn, and immediately dispatched one of his young hopefuls in quest of me, and so afforded me the only chance I ever had of viewing frogs in a Winter state of existence. The manner in which they were packed amongst the broken stones was of itself sufficient to impair the efficiency of the drain as a channel for the surplus water of a very boggy mountain meadow."

We have frequently quoted frog's legs among the articles exposed for sale in our fish market, and are aware that there are parties in Canada who make a business of catching them for market. According to the *Troy Times* this is the way the supply is caught nearer home:

"I was out driving on Saturday, and a few miles from here found two men in a swamp by the side of the road, who seemed to be crazy, to judge from their movements. I watched them from the carriage some time, and finally made up my mind they were fishing, but how they could find water enough to fish in I could not imagine. Finally I called out to them, 'What are you doing there?' 'Come and see,' one of them shouted back. I hitched my horse,

and picked my way over the bogs to them. They were catching frogs. They would strike them with clubs where they could reach them, but the most of them they caught with a wire 'snare.' They had a large basketful, more than a hundred pounds, they said, and I guess they told the truth. One of them said he made a good deal of money catching frogs for the New York market. He said that in one month last season he caught 1,600 pounds of dressed frogs, for which he got thirty cents a pound, making \$480 for his month's work. Part of the time he had two boys to help him. Last week near Hudson he said he caught upward of 500 pounds and sold them for \$160, or at an average of thirty-two cents a pound. These stories seemed to me incredible, and yet he assured me it was truth. He can clear twenty-eight cents a pound, he says, easily. He seemed to be an honest man, and from the ease with which they caught the frogs I was led to believe that he had not stretched the truth much, if at all."

A SNAKE WITH EARS.—The Reading *Eagle* states that a correspondent in Robeson township sends it an account of a large swamp black snake, recently killed in that vicinity, that was found to have two ears about two inches apart, three inches and a half from the back of the mouth. The ears were about half an inch in length and shaped like a rabbit's.

STINGING JELLY FISH.—Probably the nearest approach to failure during Capt. Webb's great swim from Dover to Calais was where he came in contact with some stinging jelly fish. He relates that the burning and pain was most intense, and for days afterwards his neck was covered with a rash. We find in an exchange a statement from a writer to the effect that he had met with a similar experience while swimming. He suddenly felt as if thrown into a bed of nettles, his breast and arms smarting severely. On looking for the cause, he found himself surrounded by these tormentors, and a young friend swimming with him became so frightened from the attack, that both returned to shore faster than they left it. Calling on a chemist and druggist on their way home, they purchased a pot of cold cream, with which they anointed themselves and soon recovered.

The Kennel.

DISTINGUISHED ARRIVAL.—On the National Line Steamship Erin, which reached this port from Liverpool the 27th inst., came a fine setter consigned to "Ajax," by "Idstone." In color, a rich red; in strain, pure Irish; age, five and a half months; sex, the gentler. A bony, blood-like head; flat cheeks; high occiput; large dark lustrous eyes; dark nose; long muscular neck; oblique shoulders; straight front legs; girth large for her age; strong loins; tail commencing a comblike feather; hindquarters drooping, and hind legs remarkably "let down" and as flat as a knife; and the whole standing on the daintiest, firmest, cat-like feet; such is her appearance. And her pedigree, which we intend to publish next week, shows she comes honestly by her good looks. We are glad to welcome so rare a setter to our shores, and are confident that in the hands of the true sportsman who has imported her, she will develop into all of which a thoroughbred field dog is capable.

—Gentlemen proposing to send dogs to the Memphis Field Trials are notified that they will be forwarded from Louisville, Ky., free of charge.

—By reference to our advertising columns it will be seen that "Mohawk's" fine Field Trial setter bitch, Kirby in whelp to Mr. Raymond's Pride of the Border, is offered for sale. Kirby, whose pedigree has been published in our paper, is splendidly bred and will be an acquisition to any kennel.

SOMETHING ABOUT OUR GENERAL

EDITOR FOREST AND STREAM:—

General was a pup; he was bought at no mean price, and brought home curled up in his master's hat. He was a setter, beautifully marked, and came of a family high in reputation; therefore we considered ourselves fortunate when we became his possessor. But we stop just here to ask, did you ever raise a pup—a setter pup? If so, you know something about the trials that awaited us. We named the dog General, thinking in time he would deserve the appellation, but alas! for our hopes, he was ere long pronounced a *general* nuisance. The first few nights after his arrival were made hideous by his continual mournings for his mother, whom he was never more to see again. All sorrows come to an end, however, and kind treatment and good feeding soled out his puppy's feelings, and he soon became contented and happy. As soon as his four short legs could scamper around with his fat little body his mischievous pranks commenced. He from the first evinced the greatest fondness for brushes; carried away shoe brush, stove, hair and clothes brush each in turn, and with most untiring industry endeavored to pick them to pieces. He would pull at the bristles, and when they prickled his tender nose would bark with puppy-like fury and redouble his efforts at annihilation of the brush kingdom. A broom was another object of his love, and he would destroy one with the greatest delight. We once asked a little girl if she knew what the word peacemaker meant. "Yes, um," was the prompt reply, "all in pieces." According to this definition our dog was a genuine *piecemaker*, for he was ready at short notice to make any article all in pieces that could be thus rendered by his claws and sharp teeth. Woe to the boots and shoes that were left within his reach; he has hidden more than one pair where the owner never found them. A young lady came on a visit to the house and at first fancied General greatly, praised his glossy coat, fine head, and pretty brown eyes, expressed herself as being very fond of dogs, and thought she should like nothing better than a romp with the mischievous pup. The dog was nothing loth, and a romp they had, but poor Miss Flora came off with clothes soiled and rent, while General wagged his tail, shook himself, and was ready to tatter Miss Flora's wrapper more completely if she did not object. Miss Flora laid her pretty new hat in a chair, which was careless, we know. The pup, when unobserved, snatched it, took it to the grass plot, and was soon after found standing over its remains, seemingly delighted at his own destructiveness. It was very early Spring when Gen. came to us, therefore when the first broods of young chickens appeared he was old enough to fully appreciate fun. The first brood quickly vanished from our sight; how

we knew not. The clucking mother clucked in vain, and we searched and wondered also in vain. It was thought the rats had carried away the wee helpless things, but when the second hen mother came off with her flock of downy ones it was found that Gen. caused all the mischief. He would catch a chicken, roll it over and over, and toss it about till it was dead, and then discard it for another. And oh! what sport it was to torment the soft, small creatures as long as there was life in them. When first Gen. was given lessons in retrieving the amount of trouble he made is beyond describing. Repeatedly he caught a turkey that was almost grown, dragged it to his master and dropped it at his feet, at the same time wagging his tail as if pleased with what he had done. Of course the turkeys, which we all know are tender, died from such treatment. He served the hens in the same manner; would chase one until it dropped from fatigue, and then it would be taken to his master. Whipping did no good, the dog persisted in thinking it was better to carry live fowls than dead birds or a sawdust ball. But now Gen. is grown, and is one of the best dogs we have ever known. A general favorite is he—good at home and excellent in the field. This is all due to faithfulness in training; judicious management will accomplish wonders with a bird dog.

THE DOGS OF PORTSMOUTH.

PORTSMOUTH, N. H., Sept. 20, 1875.

EDITOR FOREST AND STREAM:—

In your last issue I saw a letter from this city giving a statement as regards some of the dogs owned here, and which was written hastily or from a want of knowledge of the dogs in our city. Capt. Eastman owns two fine dogs, both setters and well broken. Capt. Pickering owns a fine setter, and does a good deal of work in the field in the season. James Carroll has a fine pointer, and does probably more work than any of our sportsmen. John S. Sides owns a couple of dogs, a setter and pointer, and in the woodcock season gets more of those birds than any one else. Joseph Bell owns one or two dogs, and being a lover of the gun, has only fine stock. A. F. Thurston, Esq., has probably the finest six months old setter pup in the State, both for beauty and good points; he is also the owner of Pete, formerly the property of Dr. Day, of Warren, R. I. Pete is the father of the pup from Don, the well-known blooded setter of Frank Cozzens. Shot, another of his dogs, is a fine blooded two-year old, and was bought by the editor of the *American Sportsman* for him. Taken together, a better set of dogs are not to be found, and could they have been sent to the late Dog Show would have taken prizes, but Mr. T. was averse to sending them on account of the trouble involved, and wishing them to use during the shooting season in Nova Scotia. All these dogs are of considerable value, and were purchased on account of their excellent qualities in the field. Adolphus Nelson, a watchman in the navy yard, also owns a black and white setter, but I never heard much said about his qualities. Your correspondent spoke of this dog as being the property of Capt. Nelson, of the United States Navy, but there is no such officer attached to this station. John Young, another watchman, owns a fine-looking pointer, but is a curious dog, being of the most willful nature; will hunt when he pleases, and when not in humor wont move a peg for anybody. Yours,

A. D. W.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

Black Bass, *micropterus salmoides*, *micropterus nigricans*.
Striped Bass *Morone saxatilis*. Bluefish, *temnodon solitator*.

[Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—The better weather of the past week has had the effect of bringing in fish in more abundant supply. Bluefish of large size have appeared in great quantities on the south side of Long Island, and are also abundant on the Massachusetts coast. Our quotations do not vary much from those of last week. Striped bass from Rhode Island are worth 20 to 25 cents; green smelts, from Maine, 30 cents per pound; bluefish 8 to 10 cents; salmon, frozen, 50 cents per pound; fresh mackerel from Massachusetts, 25 cents each for large and 6 cents for small fish; weakfish, caught in this vicinity, 12 cents per pound; white perch, from Long Island, 12 cents; Spanish mackerel from New Jersey and Baltimore, 50 cents each; green turtle, 20 cents per pound; terrapin \$12 per dozen; halibut 20 cents per pound; haddock, 8 cents; kingfish, 25 cents; codfish, 8 to 10 cents; blackfish 8 to 10 cents; flounders, 10 cents; porgies, 10 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 8 cents; sheepshead, 25 cents; scallops, \$1 50 per gallon; whitefish, 20 cents; pickerel, 20 cents; yellow perch, 10 cents; salmon trout, 20 cents; ciscoes, 10 cents; hard crabs, 40 cents per dozen; soft crabs \$1.50 per dozen; frog's legs, 50 cents per pound. **BAIT.**—Shedder crabs, \$1.50 per dozen; shrimp, \$1 per quart; soft clams, 40 to 60 cents per 100.

—Another leather turtle was taken on Friday last near Orient, Long Island, and forwarded to Mr. Blackford, of Fulton Market, from whose premises it goes to grace a niche in the Smithsonian Institute. This makes the fifth of these monsters taken in our waters this Summer. There is something remarkable in this invasion of the *sphargis coriacea*. Mr. Blackford has also forwarded to Professor Baird, at Wood's Hole, a large "drum" and two smelt-like fishes which Professor Baird says are great treasures, being the saury of the Gulf of Mexico, (*sarvus fatens*) which he has not seen taken from our waters for twenty years past.

GREAT SOUTH BAY.—Fish are very scarce. Neither the professional fishermen or the rod and reel division are doing anything. Most of the pleasure boats have had their Summer cabins taken off, "cuddys" put on, and are now hard at work oystering.

NEW JERSEY—Barnegat Inlet, Sept. 18th.—Large schools of bluefish made their appearance to-day. Eight or ten yachts are among them. Captain Ridgway just landed with 77; others taking them in proportion. Striped bass are biting freely; blackfish and sea bass also.

MARYLAND, Frederick, Sept. 22d.—On Saturday, September 18th, over two hundred eels were caught in a single fish basket in less than twelve hours, in Lingamore Creek, which is not more than ten yards wide from bank to bank, the largest one weighing five pounds, and measured from tip of head to tip of tail, three feet four inches long. Who can beat this catch in such a run?

F. S.

COLORADO.—*Denver, Sept. 20.*—Fishing in the Cache-la-Poudre must be something remarkable. Messrs. N. O. Vosburgh, C. Stimson, Kelley, Brazee, Menkee and Connor caught 617 trout from one hole, and there are plenty left.

—E. Wiman, Wm. P. Raynor, and T. E. Leeds, city, together with H. P. Dwight, Tom Townsend, and others, making a large party of the Kayweambejewagamog Club, left Toronto the 20th on an extended fishing and hunting expedition in the extreme northern lakes of Canada. "Kayweambejewagamog" is the Indian name for Hollow Lake.

THE NEPIGON.—Fishing has been splendid during the season and all parties came away well pleased. The fish, however, have not averaged as large as usual, heaviest weighing from 4½ to 4¾ pounds. Any number of large trout could be seen in the deep water, but the small ones would only take the fly. The following is a list of visitors to the Nepigon River during the season of 1875:—

M. W. Reed, Cyrenius Hall, Milwaukee, Wis.; G. Germain, Dodge Co., Wis.; S. D. Burchard, Willie T. Burchard, Beaver Dam, Wis.; Ben. Robinson, Cincinnati, Ohio; Harry H. Brown, Cleveland, Ohio; Gen. W. D. Whipple, U. S. Army; M. K. Moorehead, Pittsburgh, Pa.; W. W. Herberton, Elkton, Ind.; E. P. Lewis, Cincinnati, Ohio; C. W. Miner, Twenty-second Infantry, U. S. Army; Hon. D. L. Gillis, Iowa; A. H. Evans, Washington, D. C.; C. V. Gillis, Penn.; Com. J. H. Gillis, Lt.-Com. A. G. Kellogg, H. D. McEwan, Wallace Graham, F. L. DuBois, U. S. Navy; G. Goodloe, Lexington, Ky.; C. H. Graves, Duluth, Minn.; F. H. Clark, Philadelphia, Pa.; Lt.-Col. E. W. Smith, U. S. Army; Ed. Rice, St. Paul, Minn.; J. Martin, — Gilpiling, — Pomeroy, C. R. Bushnell, — Langdon, Minneapolis; Dr. F. Carter and lady, C. L. Taylor, R. W. Clark, Jr., Rob Roy McNutty, Columbus, Ohio; A. V. Bogart, J. P., C. E. Lewis, F. S. Lewis, E. C. McFetridge, T. L. Newton, Beaver Dam, Wis.; E. E. Higbee, Mercersburg, Pa.; C. D. Murray, A. J. Avery, M. L. Hinman, Dunkirk, N. Y.; John McDougall, Hornellsville, N. Y.; J. V. Granger, H. M. Butler, A. Wright, St. Paul, Minn.

SALMON FISHING IN CANADA.—Reports, as a rule, have not been favorable from the Canadian rivers, but the following list, furnished to the *Field*, and vouched for by the Vice-Admiral Farquhar, shows that one individual has been successful. The stream from which the fish were taken is the Cascapedia, a small river in the Province of Quebec:—

	Fish.	Pounds.
June 25—31 pounds; only evening fishing one pool.	1	34
June 26—33, 32, 24, 29 pounds, and 2 kelts.	4	118
June 27—Sunday.		
June 28—13, 21, 23 pounds.	3	57
June 29—35, 40 pounds.	2	75
June 30—33, 13, 32, 31, 13, 21, 33, 36, 39 pounds.	9	250
July 1—12, 27, 36, 23, 39 pounds.	5	137
July 2—25, 25 pounds.	2	49
July 3—21, 32, 34 pounds.	3	87
July 4—Sunday.		
July 5—Blank; calm and clear all day.		
July 6—30 pounds; moving up river; only fished one hour.	1	30
July 7—35, 22, 20, 27 pounds.	4	104
July 8—Blank; calm and clear all day.		
July 9—36, 17, 20, 25 pounds.	4	108
July 10—28 pounds; only fished in morning before starting down river.	1	28

Total.....39 1,077
My score: Total, 39 salmon in 13 days' fishing; weight, 1,077 pounds; average weight, 27.6. U. F.

THE FISHERIES.—The number of fishing arrivals at this port for the week ending Sept. 23, was 60—24 from Georges, 7 from the Banks and 29 from mackereling. Amount of Georges cod brought in, 300,000 pounds; halibut, 20,000; Bank cod, 880,000 pounds. The mackerel seiners are still doing a slim business. About 2,300 barrels have been landed the past week, mostly tinkers. Recent news from the Bay is not of a very encouraging nature, and the prospect now is that the mackereling season will wind up exceedingly poor.—*Cape Ann Advertiser, Sept. 24.*

FLY-FISHING FOR BLUEFISH.

BOSTON, Mass., Sept. 20, 1875.

EDITOR FOREST AND STREAM:—

In answer to your correspondent of last week, I would say to him that reel fishing for bluefish is not a new idea. It has been in practice some time where it can be done. Bluefish, we all know, must have a moving bait. Now, wherever you have a swift tide if you anchor your boat and let your lines out it answers the same purpose as if you were sailing, the water rushing by the line giving the same effect. Do this and have a stiff bass rod with 300 feet line, and it is all you need. Of course bait and lines to suit yourself. To catch one ten-pound fish this way is more fun than a dozen by trolling, the meanest of all fishing where you have to pull against the boats sailing. This same rule will apply to weak fish. The best place on the coast for this kind of fun is at Barnegat Inlet, that being the strongest tide.

S. K., Jr.

A DAY IN GOOSE CREEK.

LEESBURG ACADEMY, Sept. 16th, 1875.

EDITOR FOREST AND STREAM:—

Having heard so much about the abundance of bass in Goose Creek I thought I would go and see for myself. Well, duly equipped with a Conroy rod, a fly-book, and a snack of cold mutton and buttered bread, I left my domicile at five o'clock and reached Goose Creek Bridge at sunrise. I made one cast and took a small bass; another, and hooked my fly in a willow behind me, breaking my second joint at the fern before I knew I was fastened. I was then in a pretty fix; sun getting higher and higher, and fish showing every disposition to be caught; but by splicing my tip on with part of my line, cut off with a sharp rock, I managed to fish thoroughly about three or four miles of the creek at the pools below every dam. The creek used to be a canal, and the old locks and dams form suitable water below for fly-fishing. My plan was to wade in when in sight of a dam, and fish up to it carefully, and I had very good sport—caught 22 fish in all, 16 bass, 3 fall fish, and 3 perch. Twice I caught two at a cast; once I fell in up to my neck, and altogether had a splendid trip. Towards evening I fished back over nearly the same ground, and just before coming away, at Mabin's Dam, the small bass were jumping out of the water at every cast. I lost several large fish by want of skill, and hope I'll find them some other day. All fish were taken with home-made flies tied by inexperienced hands. The fish, however, took them eagerly. The flies had red, green, white, yellow, and orange bodies, wrapped with silver tinsel, wings of red, white, black and lead color, and hackles brown, yellow, white, black and ginger from a game cock. They took any and every sort. I passed eight anglers fishing with the minnow. They seemed to have had poor luck. I've had twinges of neuralgia since, but don't regret my day on Goose Creek. Since Saturday last the anglers on the river have done well, three gentlemen getting 30 and other strings having from 5 to 20; one colored brother catching a good string, averaging, so they say, 2½ pounds. An anglo-manic friend will be our guest next week, and as he knows the use of the rod, we hope to show a good score. One fall fish, over 12 inches, fought as well as the bass.

T. W.

PERCH FISHING AT BETTERTON.

EASTON, Pa., Sept. 16, 1875.

EDITOR FOREST AND STREAM:—

A great deal has been written of the perch fishing at Betterton, but of such a general character as not to furnish data of the ground that the experienced fisher who is a stranger to it requires. Such was my experience, and I was even unable to get precise data on some points after prior correspondence with residents of the locality. Correspondents are too apt to desire to write too "interesting sketches," and facts and points suffer in proportion. For those who may be situated as I was I will give the result of my observation. Betterton is in Kent county, Md., on the extreme upper end of Chesapeake Bay, within sight of the mouths of the Susquehanna, Elk, Northeast and Sassafras Rivers. It is about eighty miles by water from Philadelphia and forty from Baltimore. It is reached by the Ericson steamers which leave both cities at 4 P. M., requiring for the trip about eleven hours from the former, wharf above Chestnut street, and four hours from the latter city. The fare from Philadelphia is \$1.50, which includes berth. Meals are fifty cents extra. The Delaware branch of the Philadelphia, Wilmington and Baltimore Railroad also runs to Still Pond, a station four miles from Betterton. The train leaves Philadelphia at 8 A. M., and makes the trip in four hours. Still Pond is also the Post Office, Betterton having only a few scattering dwellings and no Post Office. Thomas Crew keeps the house (not a hotel and without a bar,) and can probably accommodate twenty guests, for whom he provides bountifully. His rate is \$1.50 per day, and boats with captain and bait \$3 per day. The favorite fishing ground is about two miles from the house, and the water there is about thirty to forty feet deep. The ebb current runs about two and a half miles an hour, and the flood current about two miles an hour, or with about one-half the force of the current in the Delaware, hence a 10 or 12-ounce dipsey is heavy enough for a bow or hand line, and two ounces for a rod line. I used a bow line and hand line because I got the impression that the water was sixty feet deep, but shall use a rod the next time. A bass rod nine feet long, with multiplying reel, is the proper rod. The perch bite better at the turn of the tide—an hour before and after each the low water and young flood being the best. The perch season is in from the 1st of September until the middle of October, and the best time to select is those days when it is high water from 6 to 9 o'clock. Then you can get the benefit of both tides in one day. Earth worms and crabs are the only native bait provided, crabs being the main stay, as worms are scarce, owing to the dry nature of the soil. Minnows are better bait than either, but there is no appliance there for catching them. Shrimp are a capital bait, and clams are also good bait. It is not amiss to take some bait along—worm, clam, or shrimp, or a good dip minnow net. But fish are so abundant that they are not specially dainty as to bait, and I have no doubt that the very large perch would strike with avidity for minnows when they might pass other bait. That has been my experience in the Delaware. If a hand line is used, glove fingers are necessary, else any but the toughest hand will give out before a day's fishing is over. I saw several gentlemen binding their fingers with strips of handkerchief to shield their hands. The reports of the abundance of perch and the certainty of finding them upon any day, except when the water is muddy after a heavy rain have not been much exaggerated. They are so plentiful as to destroy any motive for the traditional fish lying. We—two fishing—caught in two tides three peach baskets full. Our largest perch weighed sixteen ounces, and the run was very fair, from six to twelve ounces, favoring the larger size. Our captain said the run or catch was not nearly up to a fair average, which we could credit, as there was a stiff wind blowing from the northeast, considered an unpropitious quarter. There were eight boats fishing the same day, containing forty-two fishers, all pursuing their sport within an area of less than 100 yards square. It is thought better to be grouped together, as it holds the fish. The entire party fishing one tide (with one exception,) caught at a reasonable estimate between 4,000 and 5,000 perch. The sport is satisfying to any craving. When I say that the bottom is a little sticky, with here and there a stone, and the locality being free from marshes is also free from mosquitoes, I will have embraced the most essential points, except that it would be difficult to find a spot where more sport of the kind can be had at such a comparatively trifling expense.

The tide tables of the Chesapeake are published in the *Nautical Almanac*. High water at Betterton would be about half an hour earlier than at Turkey Point. B.

TROUT IN THE MAGNETEWAN.

PHILADELPHIA, September, 1875.

EDITOR FOREST AND STREAM:—

In your issue of September 16th appeared an account of the experience of a fishing party on the Magnetewan this Summer, in which this river as a trout stream was condemned up and down. Now, Sir, will you listen to the other side of the question. What is said here can be proved, if necessary, by four persons—Mr. Edward Carnahan, of Philadelphia; Ed. Jenkins, of Magnetewan Village (1), and Theo. Haines and Mr. Champion, of Doe Lake, all of whom saw the trout. Mr. Carnahan, Jenkins, and myself went up the Magnetewan from Lake Sheesheep to the Forks, fished the rapid above there, or what is known as the Third Portage on the North Branch, in company with Mr. Walter Beatty, the Government Surveyor, who was camping above that spot, and in one afternoon took 140 trout, none (except two) of which were under half a pound, and from that up to two and two and a half. From there we returned and ascended the South Branch to Little Doe Lake, taking good trout out of each of the three rapids between the lake and the Forks. From there we went to the mouth of Ragged Creek, on the East Branch of the Magnetewan, or what is known on the map as Trout River, and on one Saturday evening at sunset the writer took thirteen trout, seven of which weighed twenty-one pounds and two ounces! The reason I say seven is that the remaining six were not weighed, being used for food. The seven largest were preserved by being sunk in cool running water until Monday, when we returned to Doe Lake and weighed them. I do not think I exaggerate when I say that there was not the difference of one pound in the whole thirteen, and it was hardly a matter of choice which to retain to show. I took off the heads of two, soaked them in salt, and after smoking them over the camp fire, brought them back to the city as curiosities. They can be seen at my room here. Theodore Haines told me he caught one that weighed over six pounds some few days before.

Although we had good fishing during the first ten days of our trip we only got the stragglers, for in July the water in the large river becomes very warm, and the trout run up into the spring lakes far above. When we returned to the first rapids two weeks later in company with Messrs. Richardson and Lyons, of Oswego, N. Y., George Ross, their guide, told me he had never in all his experience seen the water so low, and then we had no fishing at all to speak of. The Magnetewan is a dark, still stream in Summer, with few rapids, but in Spring, they tell me, is vastly different. When a river is low and the water warm, as it is in July in Canada, a man cannot expect to get good fishing. Major Blodgett, of New York, was in at the best time, but the black flies drove him away as soon as he touched at the first rapid, at Ross' Clearing. Messrs. Rust and Taylor, from Fulton, N. Y., were also there in a good time, but Rust fell out of the stage and had his leg run over, so that spoiled their fun, as they returned at once. Richardson and Lyons were in too late for the trout, as was also Mr. Osborne, of Philadelphia, and Carnahan and I just got the lag end of the fishing, but that was amply sufficient to satisfy me that the fish are there in any quantity to suit if tried for in season. Mr. George Johnson, of the White Manufacturing Company of Bridgeport, Conn., is at Horn Lake now, so you ought to hear from him in regard to September fishing. Jenkins is to send me a box of trout next May if all's well, and if they arrive safe I will convince you that there are trout in that river, and big ones, too, as he says he will send none under three pounds dressed, and some larger. Yours, etc.,

Musio.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

Date.	Boston.	New York.	Charleston.

FALL REGATTA OF THE SMALL YACHTS OF THE ATLANTIC YACHT CLUB.—The regatta of the Unas, (single sail open yachts) for a prize offered by the Flag Officers, and for the Champion Pennant, which took place on the afternoon of the 16th September, was held to be no race because the Vanita, as reported by its owner in turning the yacht Orion, used as a stakeboat, had touched the boom of the Orion, and the other yachts preferred to sail it again to taking a prize won by a fluke. The Commodore appointed last Saturday at two o'clock P. M. in Gowanus Bay, around the same course. At the time appointed the following yachts appeared and after some delay caused in getting Kaiser, one of the yachts to be used for a stakeboat in lieu of the Orion, into position, the gun to start was given, and in the five minutes given for the flying start the yachts got off as follows:—

Name.	Owner.	H. M. S.
Lapwing.	Secretary Morgan.	2 27 36
Vanita.	Carrington.	2 28 00
Ada.	Moffat.	2 29 11
Thayer.	Treasurer Hogins.	2 29 35

The first course was a dead heat along the shore to the Kaiser at anchor near the Bay Ridge Ferry, and the yachts took the first tack in shore towards Whitman's boat shop. On that first tack the Ada got ahead of the Lapwing, and the Vanita, but on the port tack the latter closed up the space between her and the Ada, and taking advantage of a severe knock-down of the little boat, when they had to let the main sheet run, easily got past, and from that time she steadily gained on the whole fleet. The others followed in the order we have named till they arrived at the home stakeboat on the first time around as follows:—

Name.	Owner.	H. M. S.
Vanita.	Thayer.	3 15 03
Ada.	Lapwing.	3 23 19

In coming down on the last course the Vanita was so well handled that she made it in one tack, while the others not having made due allowance for the severe current running up the river, drifted above the dock around the Gowanus Basin and had to beat quite a little space along it against a powerful tide. After passing the home stakeboat the Vanita having a good lead, went off on the second course but the Ada standing in too near the shore, the Thayer saw the mistake and coming about much sooner. When they came together near Hunt's dock the Thayer was ahead, which she kept till about half way between the Kaiser and Agnes, when the Ada slowly gained and passed her. This lead the Ada kept till the end of the race. On the second round the home stakeboat was passed in the following order:—

Name.	Owner.	H. M. S.
Vanita.	Thayer.	3 55 53
Ada.	Lapwing.	4 11 44

The last time around all kept in about the same relative position. The head boats adding, however, a little to the lead as the wind, which had been fresh, was gradually dying out. The finish was made as follows:—

Name.	Owner.	H. M. S.
Vanita.	Thayer.	4 40 01
Ada.	Lapwing.	4 57 29

The result of the race after allowing for start and measurement was: Vanita leads the Ada 12m. 3s.; Ada leads Thayer 2m. 15s.; Thayer leads Lapwing 12m. 16s. The Vanita consequently takes the prize and with it the champion pennant.

—The following named cat rigged yachts competed in a regatta at South Cove, Jersey City, on Thursday last, the course being eight times round the Cove:—

FIRST CLASS.

Name.	Owner.	Length.
Four Brothers.	J. Smith.	18 06
Ella.	Com. Johnson.	18 04

SECOND CLASS.

Name.	Owner.	Length.
Alice.	P. Dillon.	17 00
Teresa.	J. Quinn.	16 04

THIRD CLASS.

Name.	Owner.	Length.
Three Brothers.	M. Bradley.	11 11
Aunt Jerusha.	Geo. Everson.	11 10

The smaller yachts labored under some disadvantage from being repeatedly becalmed by the larger ones. After deducting the time allowance of thirty seconds to the foot, it was found that the Ella won in the first class, beating the Four Brothers 3m. 5s. The Alice won in the second class, beating the Teresa 45s., and the Aunt Jerusha in the third class, beating the Three Brothers 2m. 2½s.

—The Dorchester Yacht Club held their third and final championship regatta for the season on the 21st inst. The first prize for the second class centre-boards was won by the Fannie, in the third class by the Water Witch, and in the second class keels by the Ruby. Appended is a summary of the race:—

SECOND-CLASS CENTRE-BOARDS.

Name.	Owner.	Length.	Actual time.	Corrected time.
Mabel.	J. M. Roberts.	20.4	2:08:32	1:32:30
Wanderer.	C. E. Russ.	22.3	2:04:20	1:30:46
Fannie.	Benjamin Dean.	22.2	2:02:09	1:28:20

THIRD-CLASS CENTRE-BOARDS.

Name.	Owner.	Length.	Actual time.	Corrected time.
Bristol.	H. S. Mann.	10.7	2:18:23	1:41:18
Water Witch.	W. H. Gorman.	19.8	2:15:45	1:38:46

SECOND-CLASS KEELS.

Name.	Owner.	Length.	Actual time.	Corrected time.
Macduff.	H. Hilt.	20.11	2:19:23	1:44:08
Ruby.	T. W. Preston.	19.09	2:22:39	1:45:48

YACHTING ON LAKE ONTARIO.—The fine fleet of yachts whose matches at different points on Lake Ontario we have chronicled so frequently of late, met in another friendly contest on the 20th inst, the occasion being the Belleville regatta held at Massassauga Point. The course was laid out in the form of a triangle, which was to be sailed around three times, making a distance of nearly 40 miles. The starting yachts in the first class race were the Annie Cuthbert, Ina, Lady Standley, Brunette and Dauntless. Reefs were in order, and the Ina had her topmast

housed. On the last round the Brunette broke her tiller post, and was forced to retire from the race. The Ina took first prize, the Lady Standley second and the Dauntless third. In a race for second class yachts five started, the Leo winning first, the Enid second, and Katie Gray third prizes. In the third class race nine boats started, the Sunberry, of Belleville, winning first, and Troubler, of Cape Vincent, second prizes.

A CHALLENGE FROM THE MOHAWK.—Commodore Garner has addressed a letter to the Editor of the New York Times, in which he makes the following challenge:—

"Observing the remarks concerning the Mohawk in your editorial upon yachting in this morning's issue, and with a view of ascertaining if the yachting fraternity coincide with the opinions therein expressed, I will, during the next month, upon any day when an eight-knot breeze, or upward, is blowing, sail any yacht—keel or centre-board—twenty miles to windward and back, outside of Sandy Hook Lightship, provided that notice shall be given to your newspaper before the 1st of October."

[But why stipulate for an eight-knot breeze? It strikes us that the yacht which is good in all weathers is the best. It sounds as though a turfman should demand a muddy track on which to run his horse against another.—Ed.]

THE CHALLENGE ACCEPTED.—In reply to the above challenge of Commodore Garner, ex-Commodore Bennet, has addressed the following letter to the Editor of the Times. If the match is made it will be productive of more excitement in yachting circles than anything which has occurred of late:

To the Editor of the New York Times:—

In answer to Commodore Garner's manly challenge published in your paper to-day, I beg leave to say that I am prepared to accept his challenge in accordance with his letter, to sail the Dauntless against the Mohawk twenty miles to windward of Sandy Hook lightship and return, on any day during the last week of October, in accordance with the rules of the New York Yacht Club, for a thousand dollar cup. I am also willing to sail the Mohawk at any time between the 10th and 25th of November next, also in accordance with the rules of the New York Yacht Club, from Brenton's Reef lightship to Sandy Hook, for five or ten thousand dollars.

JAMES G. BENNETT.

—A Boston paper reports that the yacht America, on Friday-night last, coming from New York, made 240 nautical miles in sixteen hours, and during eight miles of that distance she was run under bob jib. Most of the time she was double reefed, working splendidly.

SEAWANHAKA BOAT CLUB.—This club had their fourth annual regatta on Newtown Creek on Friday last, the large number of seven races being on the programme. The results were as follows:—

First Race—Single scull shells for junior members. Nicholas Goldenkirch, Charles Searle and David Myerly started, Searle getting off last. Goldenkirch won the race in 11m. 55s., the other two boats crossing the line together in 12m.

Second Race—Single scull shells by senior members of the club for a valuable silver cup. Robert Orr and Wm. Wilson were the only two who started, Orr winning easily in 10m. 15s.

Third Race—Pair oared gigs for junior members. Two crews started. C. Searle, C. Heil and John Rankin, coxswain, won in 11m. 15s.

Fourth Race—Pair oared gigs for senior members. Two crews started, getting off well and keeping up a close struggle to the finish, Robert H. Orr and Michael Smith, with C. Searle, coxswain, winning by a length in 11m.

Fifth Race—Double sculls for two silver bouquet holders. Three crews started, C. Searle and C. Heil winning in 11m. 42s.

Sixth Race—Four oared shells for four silver goblets. This was the best race of the afternoon, three boats being entered, the Harry Moore, Charles A. Gerdler and Susan Nipper, the first named winning in 9m. 20s., the Gerdler crossing the line in 9m. 23s. The Susan Nipper ran into the winner, crushing her sides and almost drowning the rowers.

Seventh Race—Eight oared barges, won by the Arlington in 10m. 55s. The races were all one mile and three-quarters with a turn.

THE ARLINGTON BOAT CLUB.—This club held their second annual regatta on Newtown Creek, near Hunter's Point, on Wednesday last. The first race was for senior sculls, 1½ miles; R. V. Young, F. Pigeon, Jr., J. B. White and J. Rodgers were the starters. The last named won in 11m. 30s. The junior single scull race, same distance, was won by J. D. Wheaton in 13m. 45s. The third race was for pair-oared gigs, distance the same, between G. Thomas, bow; R. V. Young, stroke, with G. Lucas, coxswain, and F. Pigeon, bow; B. Briggs, stroke, with A. H. Baultman, stroke. Thomas and Young led during the entire race, winning by about three-quarters of a length; time, 14m.

The fourth and last race was an eight-oared barge race, between the married and single men of the club, sides being chosen by the married and single ladies present. The married crew were: A. J. Valentine, bow; C. J. Kennedy, stroke; J. D. Wheaton, F. Pigeon, Jr., R. V. Young, C. M. Wiske, C. W. Havemeyer, J. Cook, J. E. Rogers, coxswain. The crew of the single men consisted of W. H. Rexter, bow; J. B. White, stroke; E. F. Williams, H. S. Starr, G. Lucas, W. Logan, A. H. Baultman, J. Y. Van Wycklaw, G. M. Bennington, coxswain. The distance was the same as in the other races. The bachelors won in 12m. 45s.

ATLANTIC BOAT CLUB REGATTA.—This regatta was held on Monday last at Pleasant Valley, on the Hudson. Four races were rowed; the course for all racers was one mile and return. The Senior single sculls was the first rowed. For this there were three entries: P. C. Ackerman, Joseph Benson and James Reed. The first named won in 13m. 14s., Reed second. The next race was for Junior single sculls; entries: J. H. Allair, J. Devlin, and W. T. Reiley. Allair won in 14m. 15s., Reiley, second. The third race was for four-oared barges. Two crews appeared as follows:

Ding-Ding, Color, white—R. B. Taylor, stroke; W. Pollock, No. 1; R. Bryson, No. 2; R. Murray, No. 3; J. Bryson, coxswain.

Loreley, color, red—Mr. Wallace, stroke; J. Browne, No. 1; J. Devlin, No. 2; H. Clerk, No. 3; P. C. Ackerman, coxswain.

The race was easily won by the Ding-Ding crew; time, 14m., Loreley, 15m.

The last event of the day was the race between four-oared shells, for which there were two entries as follows:—

A. J. Dupignac, blue—P. C. Ackerman, stroke; James Reed, No. 2; C. Worden, No. 3; W. T. Reiley, bow.

Joseph Russell, white—Joseph Benson, stroke; J. H. Allair, No. 2; J. Bryson, No. 3; G. Hadley, No. 4.

Benson's crew won in 11m. 34s. The weather was pleasant overhead, but the water sufficiently rough to make it disagreeable for the oarsmen.

NASSAU VS. ATHLETICS.—A contest between the picked fours of these clubs was rowed on the Harlem on Saturday last, the course being from the powder schooner to Morris' dock, above High Bridge, a distance of three miles. The Nassaus got the best of the start but by bad steering allowed the Athletics to get even or a little ahead, the latter in striving to take their opponent's water fouled, and the Nassaus stopped rowing. The referee ordered both boats to proceed but on arriving at the finishing stake boat awarded the race to the Nassaus, the Athletic crew being clearly to blame for the foul.

—John Walker and Jasper Wells, on Wednesday last, of the Nassau Boat Club, rowed a match on the Harlem River, for the championship of the club. The course was the two mile stretch from High Bridge to the Railroad Bridge. Wells won the race by nearly three lengths in 15m. 23s.

Two interesting races were rowed at Bayonne, N. J., on Saturday. The first was between a gig and a barge, each four-oared, of the Bayonne Rowing Association; distance, two miles. The crews were composed as follows:

Gig—J. L. Beach, coxswain; I. Van Buskirk, stroke; W. H. Jasper, 3d; W. T. McIntyre, 2d; B. T. Mettam, bow.

Barge—G. S. Boice, coxswain; T. Mettam, stroke; E. E. Shaw, 3d; I. Cadmus, 2d; G. S. Stilt, bow.

The gig crew won in 13m. 8½s., the time of the barge being 13m. 15½s. E. W. Humphries, referee.

The second was a single scull race, between Fred Spring of the Argonauts, and W. E. Van Buskirk of the Bayonne Rowing Association. Spring took the lead, but Van Buskirk passed him and came in several lengths ahead; time, 14m. 12s.; distance, two miles.

—The Hudson Boat Club of Jersey City held their final regatta of the season in the South Cove, Jersey City, on Saturday. The first race was a single scull race between J. P. Hardenburgh, J. N. Gregory, and H. C. Pierson. Hardenburgh won easily in 13m. 30s. The next was a working boat race between W. Clarke, Jr., and H. C. Pierson. Clarke won in 19m.

THE TRITON BOAT CLUB held a regatta on the Passaic River at Newark on the 25th inst., when three races were rowed, the water being rather rough. The first race was for single sculls, four contestants appearing. T. E. Townley won in 14m. 45s. G. A. Small and J. A. Smith rowing a dead heat for second; distance one mile and a half with a turn. The second was a four-oared shell race, same distance. Two crews contested, the winners being Townley, Bruntzenhoffer, Beach and Smith, in the shell Bachelor; time 13m. 30. The last race was for six-oared barges over the same course; the Douglass, pulled by Rommell, Shipman, Hayne, Clarke, March and Van Ness won: time 11m. 55s. A tub race was also provided for the amusement of a large concourse of spectators.

ENGELHART AND O'NEIL.—The long anticipated race between these men was rowed at Saratoga on the 23d, resulting in a victory for Engelhart. The course was three miles and the time made 22m. 22½s. O'Neil had been suffering for some time with a cough, which broke out afresh during the race, and materially affected his rowing. Last year he pulled over the same course in 21m. 19½s., and has repeatedly beaten this time in practice. A large sum of money changed hands on the result, the stakes alone being \$2,000.

BINGHAMTON REGATTA.—This event was held on the 22d and 23d insts., in presence of a large concourse of spectators. The races opened on the first day with the four-oared race, three crews competing. The Argonauta crew won in 13m. 57½s. Watkins second, Binghamton third, but the race was ordered to be rowed again the next day, owing to a foul. Courtney won the single scull race easily in 15m. 5s.; distance, two miles. The sport on the second day commenced with the junior single scull race, two miles. There were three entries, R. H. Robinson, of the Union Springs Club, winning in 16m. 30s. The four-oared race did not fill, and the Binghamton crew rowed over the course alone. The double scull race was also a failure, and Courtney and Robinson walked over. The Binghamton junior single scull race was won by C. A. Lyon in 17m. 6s.

EDITOR FOREST AND STREAM:—

PRINCETON, Sept. 21, 1875.

The University Boat Club has purchased a fine new four-oared shell of Fearon, and are now open to challenges from any amateur club. A challenge has been sent to the Schuylkill Navy.

LOUNGER.

[The challenge, which has been accepted, was published in our Philadelphia correspondence last week.—Ed.]

—On Wednesday, Milliken and Pleasonton had their race from Rockland to Laurel Hill, one mile and return. Milliken won easily. Keep it up, Flip, there will be a second centennial.

SCULLS.

—The City Point Rowing Club, of South Boston, held their annual regatta on the 23d inst. Three races were rowed, resulting as follows:—

The first was a single scull race for a silver goblet. The entries were P. Corbett, Henry Nash and P. Welsh; distance, two miles. P. Welsh won in 19m. 10s., P. Corbett's time being 19m. 11s. The second race was for double scull working boats for a silver cup. There were three entries, Thomas Scanlan and W. G. Higgins, Henry Nash and Henry Wiggle, and Henry Phillips and P. Corbett. Scanlan and Higgins won the race in 19m.; distance, two miles. The third was for four-oared boats, two entries: H. Phillips, bow; Henry Wiggle, J. Costello, and F. M. Cambridge. The other crew comprised M. Driscoll, bow; W. G. Higgins, P. Welsh and H. Nash; distance, two miles with one turn. The Driscoll crew won the race in 12m.

—A two mile single scull race came off on Toronto Bay on Tuesday last, between Paul Patillo and James Douglass for \$300. It was won by Douglass by five boat lengths in 14m. 46s.

—In the single scull race over a three mile course at Halifax, N. S., on the 24th inst., Brayley beat Brown by ten lengths; no time.

—A single scull race has been arranged for a prize valued at \$500 and the amateur single scull championship, between Mr. Wilbur Bacon of the New York Rowing Club, and Mr. R. B. Bainbridge, of the Atlanta Boat Club. They are to row three miles straightaway on the Harlem River, on Oct. 26th. The course will be from the bridge to Morris Dock, above High Bridge. Bainbridge won the single scull amateur championship this Summer by defeating Frank Yates of Grand Haven.

—Another match has been made between Henry Coulter and Evan Morris for \$500 a side, to row a five mile single scull race over the same course on the Alleghany River as the last match was rowed upon. It is said that in this race Coulter will pull in the shell formerly owned by George Brown, and that it will be brought from Halifax for that purpose. The race is to come off on the 16th of October.

—A dispatch from Halifax, N. S., announces that another boat race has been arranged between St. John and Halifax. The boats will be double sculls, rowed by Bralley and Ross, of St. Johns, and Smith and Nickerson, who are fishermen, of Halifax. The distance is to be five miles and the stakes \$1,000. Neither place nor day is yet named.

Rational Baztimes.

THE CRICKET TOURNAMENT.

PHILADELPHIA, Sept. 27th, 1875.

EDITOR FOREST AND STREAM:—

The predictions that the Philadelphians would win their game with the British Officers in one inning were not verified. The officers made a hard fight in their first inning, but did not succeed in getting the requisite one-half, and were of course sent at once to the bat for the second inning. By beautiful batting and careful running they secured 184 runs, which, with the first inning of 98 (total 282) left the home team with 52 runs to make to tie. Cummings, who made such a hard fight in the first inning, making 20 runs, secured in the second 43, having been given a life at 21. Lieut. Cummings' batting was without doubt the finest of the tournament, although George Newhall's average was, up to the closing inning, pressing him hard, the magnificent score was made against bowling and fielding that was almost unapproachable. At 3:25 on Wednesday, the Philadelphians again began at the bat, and found the visitors ready, willing and able to contest it to the end. The fielding and bowling both seemed to improve, and four home wickets had fallen before the requisite 52 were scored. As at the Halifax tournament, the Philadelphians had carried away the championship cup and the bowling prize. The "average batting" had to go back, and it is to be hoped next year there will be an equally hard fight for the honors. After the game was concluded the presentation of the prizes was next in order, and the crowd gathered around a roped arena in front of the grand stand. Mr. A. A. Oterbridge, in appropriate speeches, presented the trophies, and the recipients replied in grateful and complimentary remarks. The general result of the tournament was as follows:—

Canada vs. Philadelphia—Philadelphia, first inning, 117; second inning, 114; total, 231. Canada, first inning, 68; second inning, 76; total, 144. Philadelphia winning by 118 runs.

British Officers vs. Canada—British Officers, first inning, 162; second inning, 191; total, 353. Canada, first inning, 123; second inning, 167; total, 290. British Officers winning by 53 runs.

Philadelphia vs. British Officers—Philadelphia, first inning, 230; second inning, 52; total, 282. British Officers, first inning, 93; second inning, 184; total, 282. Philadelphia winning by 8 wickets.

The bowling averages for the tournament were as follows:—

PLAYERS.	Innings bowled in.	Balls.	Runs.	Wickets.	Wides.	No balls.	Wickets per In gs.	Balls per wicket.	Runs per wicket.
Spencer Meade.....	2	162	42	10	1	0	5	16.2	4.2
Lieut. Howden.....	2	272	81	11	0	0	3.6	24.7	7.3
D. S. Newhall.....	4	446	166	19	0	0	4.7	23.4	8.7
Eberts.....	4	427	159	16	4	0	4.2	26.6	9.9

Laing.....	1	48	17	1	3	1	1.	48.	48.

SCULLS.

—There will be a match on Saturday, 2d prox., on the grounds of the St. George's Cricket Club, at Hoboken, between twelve Englishmen, residents of New York, and twelve Americans, composed as follows: Americans—Soutter, Stevens, Cashman, Moore, Westfeldt, Davis, Satterthwaite, Duer, Jennings, Robinson, Hosford and Sprague. English—Marsh, Jones, Moeran, Giles, Bance, Brewster, Sleigh, Gibbs, Roberts, Luske, Donald and Phipps. The wickets will be pitched at 11 o'clock sharp, and the proceeds will be for the benefit of the two well known professionals, George Gates of the St. Georges, and William Brewster of the Staten Island Club. All lovers of good cricket should be present.

BASE-BALL—THE PROFESSIONAL ARENA.

The following is the record of the clubs now playing in the professional arena whose games will count in the record. The table is up to Sept. 28. The Mutuals have played five games with the Chicagos, and they will forfeit their sixth, which was arranged to be played in Chicago in October, thereby completing their quota of six. The Hartford and Athletic Clubs will also play their quota of six games together:—

CLUB.	Boston.	Athletic.	St. Louis.	Hartford.	Philadelphia.	Chicago.	Mutual.	Games Won.
Boston.....	6	6	6	5	6	10	39	
Athletic.....	2	1	5	1	6	6	25	
St. Louis.....	2	1	4	5	3	6	21	
Hartford.....	0	2	3	4	3	8	20	
Philadelphia.....	0	2	3	4	3	6	15	
Chicago.....	2	1	5	4	2	2	14	
Mutual.....	0	2	0	2	5	3	12	
Games Lost.....	6	14	19	21	27	32	146	

The record of games played since our last is as follows:—

Sep. 21—Philadelphia vs. Hartford, at Cincinnati.....	13 to 8
Sep. 22—St. Louis vs. Philadelphia, at Cincinnati.....	5 to 1
Sep. 23—Philadelphia vs. Chicago, at Chicago.....	5 to 0
Sep. 24—Hartford vs. Mutual, at Brooklyn (exhibition)...	8 to 6
Sep. 24—Boston vs. New Haven, at New Haven.....	16 to 1
Sep. 25—Boston vs. Hartford, at Hartford.....	2 to 0
Sep. 25—Philadelphia vs. Chicago, at Chicago.....	15 to 6
Sep. 15—Mutual vs. Athletic, at Brooklyn.....	10 to 7
Sep. 27—Mutual vs. New Haven, at Brooklyn.....	4 to 2
Sep. 27—St. Louis vs. Philadelphia, at St. Louis.....	5 to 5

THE AMATEUR ARENA.

—A gathering of veterans took place at Hoboken, Sept. 27, on the Knickerbocker Club grounds which was specially noteworthy, the occasion being the twenty-fifth anniversary of Mr. James Whyte Davis's joining the old Knickerbocker Club. The weather was fine and the attendance large, a number of ladies gracing the scene with their presence and occupying a carpeted tent near the ball field. The contesting nines were Dr. D. L. Adams, aged 58, catcher; William Avery, 62, first base; R. F. Stevens, 43, pitcher; William H. Tucker, 58, right field; William L. Tolman, 57, third base; John Murray, 47, left field; W. P. Bense, 58, short stop; R. F. Purdy, 56, second base, and John Stanton, 44, centre field. The second nine was composed of younger men. They were J. Whyte Davis, 50, pitcher; S. H. Kissam, 43, short stop; W. L. Taylor, 47, second base; Dr. W. O. McDonald, 40, catcher; Robert Dorsett, 53, right field, and Messrs. Richter, Robinson, and A. and B. Kirkland, men whose heads have not grown white. The score is appended:—

VETERANS OF 1855.					YOUNGSTERS OF 1865.				
R.	B.	P.	O.	A.	R.	B.	P.	O.	A.
Dr. Adams, c.....	0	2	0	2	Davis, p.....	3	2	1	4
Avery, 1st b.....	0	1	5	0	Kissam, s.....	2	0	0	1
Stevens, p.....	0	1	2	1	Taylor, 2d b.....	1	1	4	0
Tucker, l. f.....	0	1	2	0	McDonald, 1st b.....	2	0	6	1
Tollman, r. f.....	0	0	1	2	Dorsett, r. s.....	3	2	0	1

RUNS SCORED.

Veterans.....	0	0	0	0	3	0	0
Youngsters.....	5	0	13	0	3	0	21

First base by errors—Veterans, 3; Youngsters, 10. Runs earned—Veterans, 0; Youngsters, 2. Time of game—1 hour 15 minutes.

Umpire—Mr. Chadwick.

After the game carriages took the guests to Duke's Hotel, where a collation was served. Handsome mementos of the occasion were presented to Mr. Davis, and a good social time was had.
